The Week.

IN an early number of THE NATION we expressed an opinion that the powers of mischief of the Southern malcontents were to be feared in the local legislatures as well as in Congress; that the great question really was, how to keep them out of the former—which called down upon us a good deal of indignation, particularly amongst our Baltimore friends, who were at that time greatly agitated by the alleged probability that the Clerk of the House would admit the whole Southern delegation to their seats before organization. Well, the Clerk of the House has done nothing of the kind. There does not seem to have been at any time the slightest ground for supposing that he would do anything of the kind. There is in Congress, as we then predicted there would be, a "powerful Northern majority," who will not consent to the re-admission of the South until it has given ample security for its good behavior. But what great difference does this make as regards the condition of Southern society? What the South wanted most of all to get back into Congress for, was its deliverance from military rule. That it is now securing without getting back into Congress. President Johnson is handing over the States one by one to the State authorities, and delivering to them the management of their own affairs. This to them is the essential thing. It gives them the control of the negro—within certain limits, it is true, but wide limits. It enables them by stay laws to bid defiance to their Northern creditors; by vagrant laws and labor laws, such as all the States are passing, to "keep the negro down" and "make him feel his inferiority;" and to build up on, in short, the ruins of the old social system a new one, very much better, no doubt, but still marked by features repugnant to the spirit of our institutions, and likely to prove a fertile source of trouble in the future. And what can Congress do to prevent all this? The exclusion of the Southern delegates does not interfere with it in the least. As far as we can judge, the delegates are willing to stay at home as long as the House pleases, provided the President refrains from interference; and the President has given, and is giving, the strongest proofs that his interference is nearly at an end. So that, important as the power of keeping them out of the House and Senate undoubtedly is, it is by no means all-important. The successful exercise of it does not, as we now see, enable us by any means to reach the core of the Southern difficulty. The mere adoption of the Constitutional Amendment does not do it, nor will the Freedmen's Bureau do it, unless it is supported by more force—brute force—than it has now at its disposal. It remains to be seen what can be done by enforcing the Amendment.

CARL SCHURZ is not responsible for the President's cheerful view of the condition of the South, nor did he advise relinquishing the national control of the States lately in rebellion. His report declared that the loyalty of the masses and most of the leaders at the South means merely submission to necessity; and that the freedman, in ceasing to be the slave of an individual, was regarded as still the slave of society. Mr. Schurz urged the President to recommend to Congress to send one or more investigating committees into the Southern States. Neither his testimony nor his advice being heeded, it is not impertinent to ask what are Mr. Johnson's grounds for rejecting them, and more of the same tenor, which he has published, as if in entire justification of his sudden course?

A PETITION from the women of the United States to Congress, asking for an amendment to the Constitution, "prohibiting the several States from disfranchising any of their citizens on the ground of sex," is in circulation, and has been forwarded to us for publication. We are unable to publish it, but we wish the movement all possible success. We think the women of the United States ought to have the franchise if they desire it, and we think they ought to desire it. But until they do desire it, and show that they do by a general and emphatic expression of opinion, we are opposed to their being saddled with it on grounds of mere theoretical fitness or justice. In any real democracy women ought to vote, but the position of disfranchised women differs in many important particulars from that of disfranchised men. The social emancipation of women must, in our opinion, precede their political emancipation. As long as they are socially dependent, as at present, on men, and do not generally desire or seek independence, the assertion of their political rights will be difficult or impossible. We should, for our part, witness without emotion the disfranchisement of all *men* who looked steadily and persistently to married life as a career or means of livelihood.

THERE are some Kentuckians who are silly enough to assert that slavery is one of the "reserved rights" of the States, and cannot be taken away by any constitutional amendment. We are glad to observe, on the other hand, how sensibly and humanely the Louisville *Journal* accepts the new order of things, and demands fair play for the emancipated. A similar spirit has been manifested by the Richmond *Republic*, and, except these two journals, by no others, not avowedly radical, that come to us from the South.

THE Massachusetts Fish Commissioners, after careful enquiry, have reported that by means of fishways to aid their ascent of the Merrimac and Connecticut, the salmon and shad that used to abound in those rivers may be enticed back again. But they must be bred at the headwaters in New Hampshire; the streams must be kept as clean as possible of chemical and other pollution; and there must be stringent laws concerning the time and manner of fishing. After all, manufactures must suffer to some extent, and it is a question if the moderate supply of fish anticipated is worth the outlay and damage. The report is a valuable one for reference.

IT was stated last week, in a paper read before the American Social Science Association in Boston, that a committee from the New York Prison Association had visited all the prisons in the United States, and would lay the result of their investigations before the Legislature of this State.

"Admiral" Semmes has been arrested, and is, it appears, to be tried before a court-martial for "violating the usages of war," in making his escape in the English yacht after having hoisted a white flag on board the *Alabama* and surrendered. In the specification he is spoken of as having been at the time of his escape "a prisoner of war;" but we believe it is by no means well settled that a prisoner of war may not escape if he gets a chance between the time of formal surrender and his actual transfer to the captor's custody. Thousands of such escapes occur after every surrender. Moreover, supposing it to be settled that such an escape is illegal, it would still remain very doubtful whether offenses, not in themselves immoral, committed by a man as such prisoner, would render him liable to trial by the enemy's court-martial after the war was all over. There are other incidents in Semmes's career, such as his decoying ships by burning others at night, which seem to us to furnish far stronger grounds for trying him than the charge now brought against him; and it ought not to be forgotten, in considering his protest against arresting or trying him for facts occurring anterior to Johnston's surrender, that we have allowed Pillow to escape the consequences of his crime at Fort Pillow under cover of a similar capitulation.

Mississippi and Virginia have passed stay laws, and it is not improbable that other Southern States will follow their example. There is nothing very singular in this. Where debtors are in the majority creditors must expect to wait. What is singular is that the States which are most addicted to stay laws are the very ones which are most in the habit of groaning over their want of capital, and wondering why "the solid men" of New York and Boston do not invest amongst them more freely.

The planters along the Mississippi propose that the Government should rebuild the levees which they themselves cut, with the amiable intention of "drowning out the Yankees," during the war, and at the time seemed to think the performance a very fine one. That the Government should render reasonable assistance towards restoring the South in the interest of the whole country is, we think, fair enough; but then a decent regard for justice requires that they who did the mischief should pay by far the larger portion of the damage.

We find we fell into a slight error in ascribing to Mr. Jay Cooke's pastor the "anti-climax" of which we spoke in No. 24 of The Nation. It was Mr. Cooke's former pastor who perpetrated it. It ought not to be necessary for us to say that the criticism of extravagant and absurd language used by public men on public occasions is one of the proper and most important functions of a newspaper; and our comment on the address, therefore, was not, and ought not, to be taken as an indication of unkind feeling to either its author or Mr. Cooke. To present Mr. Cooke as one of the "great men" produced by the revolution was, in our opinion, calculated to do mischief, as helping to create and uphold a standard of greatness essentially false and misleading.

We accuse the Cincinnati *Gazette* of the injustice which we attributed to it, though we feel under no obligation to search in its news columns for the credit which it failed to assign in the usual place. We must also question the exactness of the term "condensed," when applied to an article which was simply docked with one clip of the shears. "Curtailed" would have been free from ambiguity.

Leopold I., King of the Belgians, is dead. He was born at Coburg in 1790, and was the son of the Duke of Saxe-Coburg Saalfeld. His first wife was Charlotte, daughter of George IV. of England, who died without issue. Leopold was called to the Belgian throne in 1831, and the following year married the daughter of Louis Philippe, by whom he had three children. The eldest of these, Leopold-Louis-Philippe-Maria-Victor, Duke of Brabant, succeeds his father. The late King was a man of great sagacity, who made the interests of his people a profound study, and maintained them at home and abroad against revolution and against the cupidity of the larger powers, to which Belgium, fat, prosperous, and helpless, has always been a temptation. There is still danger of her position between Prussia, France, and Holland, danger which can only be averted by address and prudence on the part of her ruler. The young King is said to be much under the influence of the Jesuits.

Few kings are wiser in the art of keeping out of trouble than the late King of the Belgians, and his skill was so much admired that he was frequently made the umpire to decide upon questions of right and wrong in other people's troubles. But he refused every such office that involved even remote embarrassment to himself. When Mr. Secretary William Cornell Jewett went to Europe on his independent peace mission, he flatteringly offered to Leopold to make him umpire between the United States Government and the Rebellion. "And what would the King say?" enquired the person to whom Mr. Cornell related the fact. "He said," answered the independent peace missionary, with charming candor, "that he would n't put his fingers between the bark and the tree."

The Belgians are now looking somewhat uneasily to the East to see what attitude the Emperor will take in regard to Belgium. This will be friendlier than most people believe if, as the correspondence of the *Independance Belge* says, it be true that Napoleon proposed to recognize the Duke of Brabant the day after his father's death. The duke, however, while expressing his gratitude for the mark of sympathy, begged the Emperor to delay the recognition until he had sworn fidelity to the Belgian constitution and had been proclaimed king according to the fundamental law, which was wise and just in the duke, and produced a good impression at the Tuileries.

The Austrian ministry is beginning to experience the difficulties of settling the constitutional question originated by the Emperor's patent of September 20. There are seventeen provincial diets in the empire, and thirteen of these are now deliberating upon the question. Upper Austria, Lower Austria, Styria, Silesia, and Carinthia favor the maintenance of the constitution of 1861, suspended by the imperial patent; Moravia remains neutral; Galicia and Istria felicitate the Emperor on his course; Bohemia, Carniola, Salzburg, Vorarlberg, and Bukowina have not yet declared themselves decidedly; Tyrol, Dalmatia, Görz, and Trieste have not even taken the question under consideration yet. In Upper Austria the authorities warned the Diet that blame of the Emperor's patent suspending the constitution would be unconstitutional. The Diet blamed it, and now the ministry propose the simple and natural expedient of dissolving the Diet.

The speech of the Austrian Emperor at the opening of the Hungarian Diet recognized the necessity of self-government in Hungary, but recommended that the laws of 1848 should be revised so as to make them compatible with the unity of the empire and the rights of the sovereign.

It is probable that the Queen of Spain will deliver the usual speech this year at the opening of the Cortes. Her majesty is said to have an invincible repugnance to alluding to the recognition of Italy by Spain, which was very distasteful to her personally.

A minute trouble has arisen about the representation of Schleswig-Holstein in the Paris Exposition for 1867. The poor little duchy wished to be represented in her own name. Prussia refused; and it is finally settled that Schleswig shall exhibit in the Prussian department and Holstein in the Austrian.

It seems possible that the dispute between Spain and Chili, which has so long threatened to end in slaughter, may end yet in salutation. The English and French Governments have amicably intervened, and it is proposed that Spain shall give back to Chili the ships captured, and that Chili shall demand no indemnity. In the first instance, the Spanish admiral arrogantly declared that he would not treat at all with the Chileno authorities unless they fired a salute to the Spanish flag; but it is now suggested that negotiations may begin without loss of Spanish dignity after the firing of an alternate salute; that is, the first

gun from the Chilenos, the second from the Spaniards, and so on by turns. This is a very simple and satisfactory way out of the affair; but it is not yet certain that Spain will agree to take it.

It is said that the Roman and Italian Governments have agreed together upon measures for the "pitiless" repression of brigandage on the frontier. In the meantime, a brilliant feat of brigandage has startled the people, not of the frontier, but of Rome itself. There a young man, abounding in broad silver *scudi*, paid successful court to a beautiful girl, and on the day appointed for their marriage begged to take her for a drive outside the walls. This was reasonable. About two miles from the city the pair alight for refreshment at an inn, and find there a party of the lover's friends, who, when they rise to return, mount into the carriage with them. The horses take the road away from Rome—the poor girl is in the hands of brigands, and her lover is their chief.

The editor of *Il Panaro*, a Modenese journal, has lately been shown a machine for the composition of types by which he was enabled to set up five lines of poetry in nine seconds, each line containing thirty letters. The editor is convinced that by the aid of this machine speeches may be reported *verbatim* in type.

The reform of the Swedish Constitution, alluded to in The Nation of last week, has been approved by the Diet, and there is consequently great rejoicing in Sweden. The reform involves abolition of the right of the clergy to seats *ex officio* in the Diet, and reduces this body from four branches to two.

Great joy is said to prevail among the inmates of Clichy, which, as Mr. Yellowplush says, is French for Fleet, or Queen's Bench. The prisoners have been informed that a law abolishing imprisonment for debt will be proposed in the French Senate during the session of 1866.

The Italian Minister of Finance proposes to reduce, by augmentation of taxes, the deficit in the budget from 265 to 100 million *lire* or francs.

The publisher of Renan's "Life of Jesus" is about to publish (by way of antidote?) the second volume of Guizot's "Meditations upon the present state of the Christian Religion."

The *Unità Italiana*, which was the organ of the Mazzini party in Italy, has died for want of subscriptions—a fair sign of failing strength in the party of action, and of growing content with the government measures.

It appears that the Papal troops, which replaced the French on the frontiers, have already entered upon their life-long service of fighting the brigands. A good feeling exists between them and the Italians, but it is probable that the robbers will, as heretofore, outwit all the military combinations against them.

CONGRESS.

Washington, Dec. 29, 1865.

The Christmas holidays find about half the members of the Senate and two-thirds of the Representatives absent from the capital. Enough remain to forward the more important financial measures in the Committees on Ways and Means and Appropriations. It begins to be very apparent that no general revision will be given to our present very complicated and onerous tariff at the present session, and that but little if any reduction will be made in the rates of duty. The House Committee of Ways and Means is presided over by Justin S. Morrill, of Vermont, whose name has been for years linked with the highest of high tariffs, and a majority of the committee are decided protectionists. In one aspect, at least, it is unfortunate that the body which originates all measures for raising revenue is unlikely to disturb the existing tariff to any considerable degree. I refer especially to the enormous extent of articles taxed, which reaches between two and three thousand, thus greatly enhancing the trouble and cost of collecting the revenue. Great Britain raises a revenue of about £23,000,000, or one hundred and fifteen millions of dollars, annually, by a customs tariff on 44 articles only. The United States collected but $85,000,000 last year on our extravagantly large list of articles taxed. Would it not be wiser to look to a less number of articles, and those chiefly luxuries, for a revenue, letting articles which are necessaries come in free, or at low rates of duty, which, as the experience of nations shows, produces the largest revenue?

The President's anxiety to hurry the political restoration of the late rebel States is shared by an extremely small number of the party now dominant in Congress. The moderate Republicans are mostly as unwilling as the Radicals to admit the South now to their old seats of power, though for somewhat different reasons. While the advanced party are disposed to demand equal and universal suffrage as a condition precedent, there is a growing determination among Northern men of more moderate views to insist upon a constitutional amendment reducing the South to her just quota of representatives in Congress, as based upon voting population, before recognizing her claim to participate in the federal Government. It is felt that this is a condition to which even those to whom negro suffrage is distasteful cannot possibly object. On the re-assembling of Congress the bills heretofore introduced embodying this amendment are to be pressed with vigor, and, as there is not a shadow of doubt as to the result, this will afford a safe rallying-point on which to contest the immediate admission of the Southern members. It is believed that this plan will not encounter the opposition of the Executive, and it is certain that it would be an entirely safe issue for this Congress to go to the people upon. It would postpone action upon the exciting question of reconstruction until another fall, when a new election for Congressmen is to take place, and the joint committee upon the condition of the late rebel States will have made their report. Perhaps a sufficient number of State Legislatures will adopt such an amendment during the winter to make it a part of the Constitution; but this is now doubtful, depending greatly upon the time of its passage through Congress. It would afford, too, a partial test of the sincerity of the South in its professions of loyalty to the Union. Speculation apart, it is certain that the majority in Congress is too firm to be shaken from its purpose by anything short of an unmistakable popular verdict pronounced against its course. It will resist alike the importunities of the compromising, the thunders of the opposition press, and the blandishments of Executive power.

THE FREEDMEN.

The dreaded holidays have passed with even more than the usual order at the South, in spite of the forebodings of a negro insurrection which found expression in almost every quarter. Candid and honorable men there are renewing their acknowledgment of the good conduct of the colored population, at this time as during hostilities. But, to be fair, some credit must be given to the whites also, for not allowing their suspicions and apprehensions to overthrow their self-control, and make themselves the authors of the catastrophe. Alexandria alone was an exception to the general quiet; and it seems to be well ascertained that the riot there on Christmas, involving the loss of several lives, was a concerted attack of whites on blacks, incited partly by the old pro-slavery and rebellious malice and partly by an abundance of bad liquor.

—The Virginia notion of a happy New Year for freedmen was embodied last month in a pretty general intention, so the Bureau was informed, to turn the infirm and helpless out of doors on the 1st of January. Col. Brown, on the 21st, gave warning that "the late owners will be required to provide for their former slaves, who are helpless and dependent on them for subsistence, until the overseers of the poor of the counties to which they belong shall have made arrangements for their care and support." Gen. Howard approved this order on the 26th, and added that any citizen making the attempt should be reported by name, in order that his case may be immediately laid before the President. This the *Times*, of this city, stigmatizes as a "sumptuary edict," although complaining that it will *increase* the expenditures of the "first families." It wonders that the Government did not wait till the expul

sion actually took place, and protect the negro from actual, rather than presumptive and prospective, wrong. This is quite in accordance with the views of that paper concerning reconstruction, but the proverb which prizes prevention above cure is more akin to wisdom.

Minor Topics.

A LADY FRIEND of THE NATION, who writes this journal her felicitations for the New Year, and makes us a number of compliments on our manifest superiority to contemporaries (we suppress the compliments), complains of a feeling of disgust and dissatisfaction with the manner in which, obediently to a cruel law of custom, her first day of 1866 was passed. Her letter is dated the 2d, and breathes, from the rarified atmosphere of Madison Avenue, sentiments of the most just and laudable despair for the degradation of the beautiful old Manhattan usage of New Year's visits into an absurd riot of calls, with all the wild excess of the carnival and none of its picturesqueness. She writes, in fact, fatigued to death with the social drudgery of the previous day, but resolved, in spite of her fatigue, not to let the folly pass without her vehement protest. She is so weary of it, she confesses, that she would be willing to have New Year's Day hereafter come only once in a century.

If all our lovely readers dealt as frankly with themselves as our correspondent, would there not be a general admission that New Year's calling has become an abuse and a bore, pleasing and profiting nobody? Once, it must be allowed, the custom meant something, and without doubt it first grew out of a good and amiable instinct. We suppose it to have been prompted originally by the feeling which draws friends naturally together in the presence of an event so grave for the old, so joyful for the young, as the advent of a new year. At such a time humanity is glad of sympathy, and we can imagine that in the old days our fathers (or, more properly speaking, our adopted stepfathers, since in New York nobody can be said to have actually descended from anybody) paid New Year's visits in a spirit of real friendship, and intended the expression of a hearty and kindly sentiment by them. Then the old gentlemen probably called upon ancient dames and exchanged cheerful convictions of the superiority of the New Year's Days of their youth over the upstart New Year's Days of later date, which were making the world old before its time with their profligacy of recurrence; and then stout young Dutch gallants visited the plump Dutch maidens and talked over the gaieties of the past year and the promise of the present, and impressions were made on tender hearts, and old quarrels were ended, and possibly a troth or two was plighted. But everything was decent and sincere, and if, according to the simple customs of the Arcadian people who settled the Bowery, a stray kiss was dropped behind the door, no harm was done where none was meant, and the New Year's was all the happier for the little sin. As the visitors went from house to house they ate mightily, no doubt, of stout luncheons and drank glasses of honest gin, and, before night, here and there one might have grown thick in his speech without ceasing to be seemly in his tipsiness. But can anybody suppose that the young New Yorkers of that day made their calls as they do in this? Imagine Peter Stuyvesant, and Wouter Van Twiller, and William the Testy whirling together through the streets in a buggy, which is stayed before Mrs. Van der Trollop's door long enough for those young men to rush in and say, "How de do, Mrs. Van der Trollop? Happy New Year! Ah! can't stop, thank you. Ever so many calls to make. Good-bye!" and so rush out again.

Or is it to be believed that Mrs. Van der Trollop aspired to number her New Year's callers by the hundreds, and cared nothing for their quality, hardly that they should be acquaintance, and not at all that they should be friends? This is now the ambition of the ladies, as it is similarly the ambition of the gentlemen to make as many calls as possible, no matter upon whom. The latter, therefore, call in threes and fours at houses where only one is faintly known, and so swell the list of the lady's visitors and add her name to their visited. In this way it is quite possible for a party of utter strangers to receive the New Year's hospitalities of any house they choose. They need only be bold and resolute, and go rather late in the day; a good address would be a matter of indifference or even of suspicion, for by three o'clock all addresses are alike bad. Our correspondent has reason to think that she entertained a party of such pilgrims, who entered her drawing-room with easy nonchalance to wish her the compliments of the season. The spokesman of the party gracefully recalled himself to her protesting memory: "Mr. Smith, madam. I wish you a happy New Year." "Oh, thank you, Mr. Smith! A happy New Year! I did n't recognize you at first"—nor at last, the amiable hypocrite! "Not surprising," consents Mr. Smith, sweetly; "so many callers. *I* do n't remember half the ladies I call upon. Allow me to introduce my friends, Mr. Tom, Mr. Dick, Mr. Harry." "Mr. Tom, Mr. Dick, Mr. Harry," repeats the lady, "let me offer you some refreshments." The gentlemen, already too much refreshed, further restore themselves, declare that they cannot stop, and fly from the house. The lady remains to receive Brown, Jones, and Robinson, hardly better known to her, and does not begin to suspect before she sits down next day to express her discontent with New Year's calls to THE NATION that she has perhaps been the subject of a social experiment. Who knows? The experiment may not have been premeditated. At three o'clock on New Year's Day one brown-stone house looks much like another; and our correspondent's unknown friends may have found themselves in an unfamiliar presence without intending it, when they would have at once discerned that nothing but a daring course could save them.

In the meantime Bridget was receiving her friends with as lavish a hospitality in the basement, where a table was set, and where all day long the endless number of her cousins was seen to come and go. Men who may yet hold high government offices in the Republic of Ireland visited Bridget (whose money they had frequently taken and used for the liberation of her country), and drank a glass of whiskey to the welfare of Erin, and then passed to other basements for the celebration of like jovial rites. It is said that Bridget had made it the hard condition of her engagement that she should be allowed to receive New Year's calls, and that she would have scorned to enter a house where the arbiter of domestic destinies was denied this simple right. There is no harm in giving it that we know, and we are sure that Bridget will be sensible and proper in its exercise, as soon as her mistress reforms her own New Year's hospitalities, which, indeed, we do not despair that she shall yet do, restoring an idea happy and good in itself to something like propriety and sense, if not beauty and grace, in its expression.

IF a foreigner, taking notes for a work on the manners and customs of this country, had been strolling down Clinton Street, Brooklyn, in the place of Mr. Hugh Allen, he could have witnessed, on the Saturday before Christmas, a scene so bloody and so farcical that he might very excusably have entered in his diary: "An American, in walking out with a lady, sometimes shoots the fair partner of his promenade. In fact, the national passion for the use of fire-arms makes them, with young people, the natural appeal from the cruelty of a snub or the injustice of coquetry. I learn, in regard to the gentleman whom I saw shooting a lady in Brooklyn, the other day," what the diligent reader of the daily papers already knows.

Would it not have been, indeed, a curious bit of drama if represented in any other civilized country? Even here, where we are somewhat habituated to violences uniting the morals of Paris to the manners of Arkansas, this Brooklyn affair is startling, and presents aspects which are anomalous, to say the least. Before now, sensitive girls have taken vengeance on seducers, and, being brought to trial for murder, have been acquitted, and triumphantly kissed out of court; but we believe this is the first time we have heard of a heart-broken lover retaliating the injuries of flirtation by an attempted assassination and suicide. If the Cockney already supposed should say to us: "Now, 'pon my soul, do you know, I think this is very odd," we should hardly have the courage, we fear, to tell him that he did not understand our institutions.

Consider for a moment the remarkable scene of which we suppose him to have been witness, in the place of Mr. Hugh Allen: A lady and gentleman are walking together, when the report of a pistol is heard,

but their manner is so unconcerned, as they continue their walk, that the attention of the spectators is not drawn to them. A second shot is fired, and a pistol is seen in the gentleman's hand. The walk still continues, and it is thought merely that he is amusing himself, in anticipation of the Christmas holidays, rather boisterously and foolishly. He fires his weapon a third time, and now the lady falls with three bullets in her brain, every one of the shots having taken effect. The bystanders rush to her assistance, and the assassin, advancing a few yards alone, places the revolver to his temple and shoots himself, the bullet passing out through his eye. He believes himself mortally wounded, and, returning, lies down at the side of his victim, to die there. But, finding himself equal to yet another shot, he rises on his elbow, and discharges his pistol at the lady's body. Throughout, the hideous farce has been as silent as a pantomime; now, however, the lady utters a faint scream. She is perfectly conscious; she gives her name and address; she gives the name and address of the assassin.

All this our Cockney friend would have witnessed in the place of Mr. Hugh Allen, and if he had been a tourist of common mind, and not strongly sustained by the purpose of making a book, might well have felt his brain reel under the pressure of the extraordinary facts. The sequent history of the affair is not less crazing: the assassin, discovering that his own wound is not fatal, and having now emptied his revolver, runs and throws himself into the river. But it seems that the water is too cold for suicide, and he succeeds in reaching the shore, where he is arrested and taken to the police-station, and, while an order is prepared for his removal to the hospital, he reveals the motive of his crime. It is merely that he loved the lady whom he had shot, and spent a great deal of money for her comfort and welfare in the belief that she would become his wife; that he found her fickle and ungrateful beyond endurance, and so resolved to kill her and kill himself. In the midst of this mad confession he is careful to protest that there is nothing against her character. Thus ends the second act of the murderous comedy.

In the third act, we find the heroine and hero, in spite of their wounds and of the hero's reiterated wish, in a fair way to recover, though one bullet is still left in the heroine's brain. A calm has succeeded to the violent action of the former scenes. Friends call upon the assassin in great numbers and get their names into print. "He is supplied with all the delicacies of the sick-room in the shape of marmalade, oranges, jellies, etc., and, indeed, anything his fancy may dictate." Under these affectionate influences he is almost melted into martyrdom. He conceives a tenderness for a particular custodian, and will receive nothing from the hands of anybody else. He even consents that if his victim really desires to live (as has been represented to him) he will have nothing to say against it, although he would rather she should die. At the same time he shows a great dislike for his doctor, or, in the more noble language of the reporters, he "evinces great repugnance towards his attendant physician." But that which will prove as incomprehensible and maddening as the rest to our Cockney friend, who is still far from understanding our institutions (as we get into the spirit of this affair, and feel how coherent and harmonious in all its monstrous features is the whole nightmare transaction, we recover the national quality of defiance), is that, as this assassin-martyr lies in the hospital, receiving the calls of sympathizing acquaintances, and surrounded by all the delicacies of the sick-room, the brother of the lady, whom he so pitilessly and persistently strove to murder, comes to pay him a little visit of friendship. At this interview we learn that "the recognition is quite warm and reciprocal, and evinces the fact that the attachment they had for each other before this affair remains unshaken;" that is to say, the brother continues the friend of the man who not only tried to kill his sister, but still desires her death, unless she wishes very much, indeed, to live. The assassin tells his victim's brother to take twenty dollars out of his desk in New York, and keep half, and the visit terminates, and all knowledge of the affair ends.

As it stands, it is a mystery on which we shall be glad to leave comment to our factitious Cockney. In his forthcoming book, however, at what shall he marvel the most: the assassin's determination upon a murderous deed from so slight a cause; or the young lady's more than stoical fortitude in refusing to cry out when shot three times; or her brother's more than Christian greatness in visiting a man stained with all the guilt, if not the fact, of murder, and evincing a friendship for him not to be abated by the mere passing assassination of a sister?

Seven or eight years ago there was a jolly English diplomatist at one of the small German capitals. He would have made an excellent (London) *Times* correspondent, for his wont was to jump conclusions and see everything from a grotesque point of view. Thus, having to chronicle some disturbances at Munich, he once edified Lord Palmerston by the following conclusion: "In my opinion, this state of things may be accounted for by the fact that, while some German populations habitually drink beer and others wine, the Bavarians indulge in both beverages."

There is much philosophy in laughter and much truth spoken in jest. Causes less important in their effects on national character than national drinks have often been made the subject of long essays and even volumes. It was, we seriously believe, a lucky day for America when the first American citizen of Teuton descent opened his lager saloon. We had nearly lost the Saxon institution of malt liquor. A few brewers there were, indeed, patronized by a select circle. Fidler & Taylor brewed good ale in Albany, and must have found customers to appreciate it, for Fidler retired on a fortune and changed his name to Howard. Mr. Squeers had ascertained that there was no act of parliament against a man's calling his house an island if he chose, and there certainly was no act of Congress or legislature against a Fidler calling himself a Howard. But the general public knew not malt. The festively-disposed among the masses drank fire-water (New England rum and "ammunition" whiskey); the soberly-disposed drank ice-water, more decent in its outward manifestations, but nearly as injurious in its ultimate effects. One reason why "the beer that renders the Briton so proud" never became naturalized among us was that its potency rendered it over-heady for our nerve-exciting climate. Very different are the soothing influences and associations of lager, reminding one, as it does, not of sturdy river-pulls and bargee-fights and Guy-Livingston-y runs across country, but of trim gardens and pleasant music and dances (in lager beer the hop naturally predominates) at rational hours of the day, and "Saxony, you know, where the pretty maidens grow," and Baden-Baden, where they don't grow, but the article is largely imported, and all that sort of thing. Though, singularly enough, the name *lager* is not common in Germany, common as the thing is. It seems to be a Teutonic-Americanism; yet it is good German, too. Does any unsophisticated reader hesitate about its meaning? We have known several who did, and with some pretensions to linguistic skill. One friend who had read about Wallenstein's Lager and seen the French *bière de Mars*, wanted to connect the two. But the French term means beer of *March* not of *Mars*, and the German word in this construction means merely a *store*. Lager beer is beer that has been stored long enough to give it some body; whence you may hear a *Deutscher* say that the beer has not been *lagered* long enough—in other words, that it is too new.

The beauty of lager is that a little makes a man comfortable, and a great deal won't make him drunk. If any one wants to see the general effect, let him look in upon the Germans of New York when they are Schützenfesting in Jones's Wood, or on any other occasion when they turn out in force. Of physical beauty the company cannot certainly make great boast. It is an unpleasant but unshirkable truth that the American and German cross, especially in the softer sex, seems apt to combine the ugliest points of both races. But "handsome is that handsome does," and the spectator who marks these peaceful thousands disporting themselves temperately and rationally, and considers what different results usually attend similar gatherings of another class of adopted citizens, is fain to bless the memory of Gambrinus, and avow his conviction that there are many worse things in this imperfect world than lager beer. Among its claims should not be forgotten the literature to which it has given birth, and we trust the public does not forget "Hans Breitmann's Sermon," the best humorous poem the country has seen these twenty years, always excepting the Biglow papers, for when it comes to comic rhyming, Hosea Biglow is always to be excepted—like the burgomaster in the story.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

EIGHTEEN HUNDRED AND SIXTY-FIVE.

There has probably been no year since the first of the present era which the civilized world will have hereafter so much reason to remember as that which closed last Sunday night. The year in which Rome was first entered by the barbarians was an awful year; the year in which Charles Martel stemmed the Saracen tide on the field of Poictiers was also a momentous year. The year in which Luther first raised his voice against Indulgences was another. Everybody who has a taste for what the schoolmen call the *Media Scientia* might weave an enormous web of speculation by picturing what might have happened if these things we have been mentioning had not happened.

What, for instance, would have become of civilization if it had been left much longer to the guardianship of the broken-down and enervated races in whose hands Alaric found it? Would they, even with Christianity at their backs, have been able to keep the flame alive in those deeper depths to which society in the last days of the empire was rapidly sinking? What sort of Europe should we have had, and what sort of America, if Charles Martel had given ground at Poictiers? Would Mohammedanism, if forced upon the vigorous races of the West, have met with a better fate than is overtaking it in the hands of the Orientals? Would the muezzin's call have fallen on more willing ears if uttered in London and New York than in Constantinople and Bagdad? And what kind of social and political system would have grown up in Europe had the Reformation never come? Should we have seen the whole family of modern nations pulverized into a sort of China, ruled by a theocracy, and supplied with books and ideas by a Propaganda, and making its boast from year to year and age to age that it was no wiser than its fathers?

Attempts to answer questions of this sort may seem idle enough, and yet it is difficult to form an adequate idea of the importance of any one of the great events of history without endeavoring to conjure up a picture before one's own mind of the possible or probable consequences of its non-occurrence.

If we exercise our wits in this way upon the events of the year which has just closed, we shall have no great difficulty in reaching the conclusion that, taken for all in all, no other year since the first of the whole Christian era has done so much, or rather revealed so much that was already done, as 1865. Anybody who paid much attention to the drift of European thought for the last twenty-five years must have seen that there had been a steady ebbing of the humanitarian feeling which reached its height about 1830. In England, the contemptibleness of weakness and poverty, the majesty and moral worth of force, even brute force, the duty of the strong to larrup the weak into industry, the grandeur of big crops and big buildings, and the worthlessness of the great mass of the human race for any purpose but obedience, had been preached so faithfully by Carlyle, that society, government, the press, and the bar were all infected by his ideas, and they at last found a fitting expression in the establishment of the *Saturday Review* and the clamor for interference in the late war on behalf of the South, and ended in producing a scarcely concealed contempt amongst a large portion of the upper classes for every movement which did not promise material results. On the Continent democracy, it is true, was making headway, but it was social not political democracy. The goal of political progress there seemed to be a state of things in which the incapacity of men to govern themselves would be laid down as one of the axioms of political science, and in which communities would be held to have attained their highest aims when one ruled and all had plenty to eat and drink. The ideas bred by the Imperial régime in France, and which the success of that régime seemed to place beyond cavil, were spreading rapidly over Europe; and even in Germany, the only road out of the slavery in which the people now grovel seemed to lead into a centralized despotism, to which Bismark or somebody like him was to give shape and consistency. Italy was freed, it is true, in great part from foreign domination, but not from foreign influence; and that influence was exerted and still is exerted in such fashion as to make her rather a warning than an example, to prove that free institutions are rather things to fly from than to fight for.

In this country the Southern school of economists and political philosophers had been for years preaching with considerable success "the failure of free society." Slavery was held up by them, and held up with a cunning and an eloquence to which the more cultivated classes at the North made but a feeble or imperfect resistance, as the sole solution of the great problem of human poverty.

A century more of such teaching and such progress, of this tranquil buying and selling, where should we have found ourselves? What would have become of our political, what of our religious ideas? What kind of progress would our progress hereafter have been? What sort of civilization would have been produced by the final triumph of labor over capital? Should we have entered on the road along which Rome marched to her ruin, or should we, after going down a little distance and losing much time and much of things more precious than time, have at last succeeded in retracing our steps to the point from which our descent began, to try once more, with dimmed eye and abated force, the old attempt to reconcile liberty with order and progress?

Unless one thinks a little on these things he can hardly form a just idea of the greatness of the salvation which the year that has just expired has brought to us, and, through us, to the civilized world. The guns that announced the downfall of the Confederacy announced not only that the civil war was over, but that modern society had entered on a new path—that a certain order of ideas had finally and conclusively assumed the mastery; that the future of modern society was to be democratic and not monarchical or oligarchic; that the existing divisions of society were conventional and evanescent; that, in short, an opportunity had at last offered itself, and a people had been found to use it, to prove beyond question that Christian principles could be successfully applied to the solution of political problems not only without injury, but with immense advantage to material progress.

Anybody who considers what might have happened if all this had not come to pass, will recognize the claims of 1865 to be for ever marked in all calendars as one of the most famous years of history. And nothing is more certain than that it is future generations and not we who will appreciate the full importance of all that it has done. The value of the past year's work will probably not be fully visible for a century to come. But even now we are sensible that it witnessed an immense step in human progress, perhaps the greatest ever made since that greatest one of all, 1865 years ago, of which the philosophers of the day took so little count.

We are the more earnest in dwelling on this view of the crisis from which we have just emerged, because it is a view which is not by any means universally received amongst us. There is, unquestionably, still a large class at the North who do not believe that the events of the past year have really any such meaning as we have ascribed to them, and who believe that all the wisdom, if not all the right, lay, in the late contest, with the South; that the war was a gigantic evil, and only evil; that it has ended better than was expected, but that the duty of patriotic men is now to labor to efface all traces of it, to consign the ideas which it brought into prominence to oblivion, and to restore the old Southern theories of government and society to their old supremacy in men's minds, and to fix in them that there is no such thing as political progress possible in America, that we got as near perfection at the time of the Revolution as we can ever get, and that our business now is to secure, if not the return of the country to the point then fixed, at least to prevent any further departure from it. And, unless we are greatly mistaken, it will be found that the men who feel in this way about the results of the late struggle will resume, as the memory of it becomes fainter, a portion at least of their old social influence, and will still need watching and counteracting.

A CHRISTMAS BOX.

In 1864, the captain of the great march made over the city of Savannah, and, in effect, the Confederacy, as a Christmas gift to President Lincoln. A twelvemonth later the new President relinquishes the military control of the territory thus acquired, and restores self-govern-

ment, with the compliments of the season, to the States which were then in unsubdued rebellion. While the confident and united Republican majority in Congress were taking their usual holiday vacation, and mingling with the good cheer at their respective homes the thought that the "committee of fifteen" on reconstruction had removed all present anxiety on that subject, the committee of one, who has been most active in the work hitherto, proceeded to consummate his policy according to his own ideas. Mr. Johnson had already significantly reminded the Southern delegates that it was idle for them to hang up their stockings in the Capitol, and those who, acting on his advice, went home, may now congratulate themselves on their sensible behavior. The gift at their own doors is of more importance than that which they craved of Congress.

If the American people, owing to the peculiar relations of slavery to freedom, and, latterly, of the States to the federal Government, had not become familiar with paradoxes and anomalies, it would be worth while to dwell on the present confusion in our national affairs. The Executive, holding the view that the disloyal States must be reckoned among those competent to pass upon the Constitutional Amendment, extorts from a sufficient number of them their ratification, and proclaims the Amendment enacted by the voice of three-fourths of thirty-six (impliedly equal) States. After an arbitrary lapse of time, yet long enough to show that the spirit with which the South has recognized an accomplished fact is not that which is bent on securing justice and protection to all classes of her population, the President desists from exacting a condition of this sort, and judges that the time has come for a full restoration of civil rule. Gen. Grant approves of the restoration, but reinforces Gen. Howard in urging the continuance and increased efficiency of the Freedmen's Bureau. Congress, finally, has declared that the States which the President thinks capable of resuming their individual vitality and functions have as yet no claim to be represented in the national legislature. In this diversity of opinion the Executive has clearly the advantage, and his recent action in dismissing Perry, Sharkey, *et id genus omne*, has altered materially the problem before Congress, and will make a new review of their resources necessary.

Evidently, apart from the singularity of the spectacle, and whatever moral pressure may come of this, there is nothing to hinder Congress from persisting in its exclusion of the reconstructed States from the seats which they lay siege to. It is equally evident that its power over them has been weakened by the President's concession, and that, however unanimous may be its condemnation of his course or its remedial legislation, it may not anticipate the same submission from the South as a fortnight since it might have counted on. It may vote Perry better than Orr, and Sharkey better than Humphreys, but without the cooperation of the Commander-in-chief it can hardly recall them, and it is a very grave question how far Mr. Johnson himself, if he could be persuaded, might lawfully or prudently override the peaceful establishments of his own creation. The statutes of Congress may now be met by the counter-statutes of the States, and the immunities of citizens resident or immigrant are exposed to the nearly untrammelled will of the new rulers of the South. For the freedmen there indeed remains the Bureau, or would remain if the President favored its continuance, which it is not doubtful that Congress will order. But the Executive favor is not certain, and his opposition would be fatal.

We deem it a matter of sincere regret that the President has been so precipitate, and has so little consulted the feeling and deliberate judgment of Congress, which he must know are likely to be at variance with his own. He cannot be said to have assumed a hostile attitude, but his seeming indifference is less creditable than the most determined resistance. If he intends after all to second the decisions of Congress, he has divested himself of the most potent means of carrying them into effect. He has not yet announced the end of war and the return of peace, with the consequent diminution of his own authority, but his strength is now confined to the suspended *habeas corpus*, and the normal operations of the War Department with the Freedmen's Bureau appended. We say is *now* confined; but it is difficult to predict that it would be, if the President were to take a more enlarged view of the question. In these times it is too much to insist that even our magistrates should be logical; but we may be allowed to hope that Mr. Johnson's inconsistencies will not always be to the detriment of the republic, though, in saying all this, we cast no imputation either on his honesty or his sincerity. But it is evident we are just getting to a point where good intentions will not be enough for our purpose. The consequences of any mistake in the decision of the questions now before the country would be so serious that we protest against any one man's undertaking to solve them on his own responsibility. Not one of them ought to be settled by any less power than the whole government. If the restoration of the South should prove premature, it will be a very small consolation to us when the mischief is done to know that the President was imposed on in 1865.

THE "LIBERATOR" RELEASED.

THE *Liberator*, representative of the original abolitionists, has deceased, or rather has been translated; for its end was not so much an extinction as a disappearance in the light which it heralded and helped to bring in. It expired last Friday in the arms of victory. The Constitutional Amendment, which declared that slavery no longer existed in the United States, was publicly ratified in season to be duly announced and welcomed in the issue of December 22, Forefather's Day, leaving the last issue free for the final words of memory and jubilation. The paper has finished its course because it has reached its goal; but if its goal had been set a century further on, nothing would have finished its course till the goal had been reached; for it was supported by its principle; it lived on its nerve. If want of money could have killed it, the paper would have been starved out long ago. If hate and loathing could have destroyed it, it would not have lived a twelvemonth. All the packs were in full cry after it the instant it was discovered, and it seemed a very small thing to kill. A more insignificant enemy than it looked to be thirty-five years ago it would be hard to imagine. We have before us, as we write, the first number of the paper, published in Boston, at No. 6 Merchants' Hall, January 1, 1831. The sheet is a span and a half long and a span wide. The editor declares that he will be "as harsh as truth and as uncompromising as justice;" that he is in earnest, that he will not equivocate, that he will not excuse, that he will not retreat a single inch, and that *he will be heard*. The publishers, on their part, proclaim their determination "to print the paper as long as they can subsist on bread and water, or their hands can find employment." The paper has not much more than doubled its size since then; but steadily, week by week, never failing in a single instance to come to time, it has dropped its water upon the nation's marble heart. Its tenacity has been as wonderful as its intensity. The abolition of chattel slavery was its aim, and it never for a moment lost sight of it. There was a stern monotony in its issues that was like the pressure of fate. It was an unvarying soliloquy thirty-five years long. Line upon line, precept upon precept, was its rule and method. Other matters found place in its columns but they never distracted attention from this. The poetry was somewhat lacking in poetic art, but it was all inspired by anti-slavery conviction. The literary criticism was not delicate, but it was always honest and earnest. Many of the contributions were rough in style and crude in thought, but they were contributions to the main cause. Every strange reform found a voice in its columns, but their currents came in as tributary streams to swell the tide of moral sentiment which was to carry away the one gigantic wrong of slavery. The editor, from year to year, kept his pledge—he never did equivocate, excuse, or retreat. He knew no distinction of persons; he knew no difference of times or seasons. Justice does not vary with policies or events. Other newspapers might change hands and principles; parties swung round to opposite sides; great political issues appeared and disappeared; statesmen filled the public eye and vanished; cabinets went in and out; administrations rose and fell; elections again and again convulsed the country and altered the old sea margins of opinion. The editor of the *Liberator* never took his eye from the slave nor cared where other men fixed their eyes, save as they smiled or frowned on the slave. It is, perhaps, the most remarkable instance on record of single-hearted devotion to a cause.

We are not of those who think that the influence of the *Liberator*

was either feeble or circumscribed. On the contrary, we believe that it was deep and broad. It did not do the whole work of abolishing slavery, by any means. Providence never entrusted a great task to a single instrument. A thousand causes, industrial, social, political, conspired to bring about the magnificent result which we are so happy in beholding to-day; but among those causes the *Liberator* was one, and it was a most important one. Its effect on the political movements of party organizations was not appreciably large, perhaps. Its effect on the conspicuous classes in society, the rich, cultivated, and aristocratic, was very small indeed. But its effect on the moral sentiment of the country was exceedingly great. It went straight to the conscience. It did not say: Slavery is a mistake, an industrial blunder, a financial stupidity, a social solecism, or political folly. It said: Slavery is a sin. Addressed to a Puritan community, that argument told. The *Liberator* slowly but steadily educated the religious convictions of the people to the detestation of a guilt. The sigh of the slave was heard, first timidly in prayers, then tremblingly in sermons. Afterwards the cry broke out audibly in both. It divided parishes; it dispossessed preachers of their pulpits; it caused agitation throughout the churches. Especially in the country villages and in the larger towns this paper was read and pondered. Its influence was not of the kind that makes noise; it was silent, but it was radical, and it did more than any one thing beside to create that power of moral conviction which was so indomitable an element in the later political campaigns.

A paper so small and of circulation so limited would have failed to do the work this did, if it had not been the organ of a single mind charged with a single conviction. The *Liberator* was Mr. Garrison; Mr. Garrison was the *Liberator;* and Mr. Garrison was a man to make himself felt. He was the man for the work at the time the work was undertaken. The providence that shapes tools for its uses shaped him admirably well. A man of genius might have lacked the sober steadfastness which was required. An enthusiast might have been dazzled by false lights. A political tactician would certainly have been seduced by prospects of immediate success, to be secured through delicate management which would have involved compromise. A person of fine imagination would probably have distorted by overcoloring the dreadful facts, which were more impressive in their bare, gaunt outline than any painter's art could have made them, and by over-exciting the moral sensibilities would have failed to educate them. A man who was capable of keenly suffering from the adverse opinions of his fellowmen would have found it difficult, if not impossible, to maintain the inflexible calmness which the work demanded. The thing called for was conscience—a clear, definite, absolute, overpowering feeling of right and wrong, such as, in the language of Goethe, "penetrates the body, and puts it in a state of activity that repels all hurtful influences." This was Mr. Garrison's attribute. He was all conscience; he was rectitude itself. The moral sense was light to him and heat. One could hardly determine what his other qualities were, so deeply were they tinged by this element. Was a thing right or wrong? He could see that; and seeing that, it seemed of little moment whether he saw or failed to see anything else. He knew no shades of right and wrong. Right and wrong were absolute—the same in all lights and in all shadows. He knew no degrees of justice and injustice; he made little account of atmospheres; he was not nice in moral perspective. Sins were all the same size, and there were no little ones. Every slave apologist was a slaveholder. Every one who turned away from the slave's appeal was a hater of his brother; and every one that hated his brother was a murderer. The "categorical imperative" supplied the logic. It was the logic for the occasion. Nothing less, probably, would serve. The ploughshare must needs have been sharp and well driven that was to make a straight furrow through a moral world so stubborn. It would not do to look to the right hand or to the left, or to turn out of the way for violets.

But Mr. Garrison, though an unswerving and pitiless reformer, was no bigot. The cause owned him; not he the cause. He had no wish to arrest Providence and make God wait on his newspaper. The Spirit led him whither it would. His moral sense running along the line of naked principles, gave him that singular prescience which men call prophecy. As surely as he knew when to begin his work, he knew when his work was finished. His announcement that the time was come to stop the *Liberator* and dissolve the association, took some of his warmest friends by surprise. They remonstrated with him earnestly, representing to him the utterly unfinished state of the enterprise he had undertaken. The President's proclamation had not abolished slavery. The State laws were extant still and in force. The system was in active operation in every Southern State, and under it outrages terrible as ever were perpetrated. The Constitutional Amendment was not ratified, nor greatly in the way of being so. A large class of the most faithful abolitionists profoundly distrusted Mr. Lincoln, and still more his cabinet. They were not sure of the constancy of the public conviction, and felt that the hour demanded of them redoubled efforts under their old banner. But Mr. Garrison had more faith than they; more faith in the people, in the President, in the inevitable tendency of events. He decided that the work of the *Liberator* was finished.

De Maistre urges as an argument for the divine institution of war that it leaves unbrutalized in manners and affections the men who make it their profession. By this test Garrison's mission will stand grandly vindicated. He comes out of his warfare completely unspoiled. Doing his battle for God and not for himself, the conflict left no stain upon him. Terrible as his earnestness was, fierce as were his invectives, deadly as was his assault on the popular prejudice, there was always something abstract and impersonal about them. He wrote and spoke, not out of his private feeling, but out of his moral conviction. While his enemies thought him a bloody-minded fanatic, and the world generally regarded him as a ferocious demagogue, his friends knew him, and know him still, as one of the sweetest tempered, kindest, simplest, most unambitious and retiring of men; modest, quiet, domestic, fond of children, mirthful, overflowing with human charity, and, with unaffected naturalness, losing himself in the world of workers.

It was a rare sagacity that told this reformer when one phase of his career was ended; it was a rare truthfulness that told him the ending of this phase was not the ending of the career; and equally rare is the devotion which impels him instantly to take up the old work under its new and less exciting aspects, by joining heart and hand with those who are laboring to clothe and educate the negroes, whom he gave the better part of his life and the whole of his soul to make free.

THE NATIONAL HIGHWAYS.

In an article on this subject, printed November 16, we endeavored to show that the railroads of the country, forming as they do a connected and organized system overspreading and connecting all parts of it, are, like our rivers and lakes, national highways, and therefore within the jurisdiction of national authority.

It is satisfactory to find this opinion expressed in the message of the President. He says: "The Constitution confers the right to regulate commerce among the several States. It is of the first necessity for the maintenance of the Union that that commerce should be free and unobstructed. . . . It is best while the country is still young, and the tendency to dangerous monopolies still feeble, to use the power of Congress to prevent any selfish impediment to the free circulation of men and merchandise." The principle thus announced is applied by the President to taxes imposed by a State on the transit of men and merchandise within its limits, or to the denial of a choice of route. In such cases Congress, under its power to regulate commerce, may interfere. This power, however, includes all causes by which commerce among the States may be obstructed, and surely none can be more efficient than danger to life and limb. The House of Representatives seem to be of this opinion, for they have just (Dec. 11) by unanimous consent agreed to the following resolution:

Resolved, That the Committee on Commerce be instructed to enquire what legislation is necessary for the safety and protection of persons travelling upon railroads in the United States, and report by bill or otherwise."

It being thus settled that there is a power legally competent to govern the railroads, the next question is, What ought this power to do?

The subject has become of grave importance. The annual destruc-

tion of hundreds of valuable lives, which might be avoided, is a reproach to the Government. The percentage of injury is so great that it inspires a sense of insecurity. It is not so in Europe, where the railroads are subject to the control of government. How that control is exercised we have not at hand the means of ascertaining. That it is exerted and with good effect, is enough for our present purpose. The committee of Congress to whom the subject has been referred will doubtless seek information, and the various means employed abroad may, perhaps, furnish materials for a system that will be applicable to the circumstances of our country. These vary so much that it would be difficult to frame rules suitable for all. A very large staff of officers would be necessary to enforce any system on our long lines of railroad. This would add greatly to the patronage of the Government, already so exorbitant and so dangerous, and the morale of our politics affords little hope that the persons appointed would always be able to resist the influence of these powerful corporations.

The subject is surrounded by difficulty, yet something must be done or attempted, for the evil is becoming too serious even for our proverbial American recklessness of life. Since our last article on this subject was printed, nearly one hundred people have been killed or wounded on railroads. It is a terrible thought that all this misery might have been prevented. By whom? Not by the railroad companies; else why is it not prevented? why does the evil increase? The reason is that the railroad companies have not a sufficient motive to prevent it. Occasional accidents are cheaper than the very expensive means necessary to prevent them. An engine or a few cars are broken or destroyed once or twice a year. Claims for damages are rarely made except by those in the humblest walks of life, and they do not often travel on railroads. A very honorable feeling of delicacy prevents the wounded or the representatives of the killed from demanding money for sufferings for which money is no compensation. We arrive thus at the conclusion that the railroad companies cannot, because of their nature, do more than they are now doing to make travelling safe, and for the reason that it will not pay.

And now the question arises, What ought Congress to do? As already stated, there are obstacles and ills connected with the creation and execution of any system of preventive measures that must be enforced by the Government. We venture to suggest one that would have the merit of executing itself. It is indicated by the natural law of railroad companies, because they, like fire and steam, iron and granite, acid and alkali, can be governed and used only by recognizing and obeying the natural law of their being; for, as Lord Bacon said, "Nature is only subdued by submission."

Railroads are dangerous because safety will not pay, and profit, by the law of its nature, is the only object of a money corporation. The remedy, therefore, is obedience to that law. Let the Government make safety pay by rendering accidents expensive. The law might do this by providing that for every person killed or wounded on a railroad the company shall pay a certain sum, not by way of punishment, for it is absurd to talk of punishing stockholders for injuries they never intended, but merely as a means to attain a desirable end. In order that this plan may be effectual, it should be as certain in its operation as a law of nature, which, because it is inexorable and affects alike the just and the unjust, no one disregards.

> "When the tall arch is nodding from on high,
> Shall gravitation cease if you go by?"

Gravitation is, therefore, respected and obeyed by all. No excuse, however just and reasonable, should be received, but the penalty should follow inevitably the simple fact of injury. If a plea were admitted in any case, "the ingenuity of counsel" could, in the majority of cases, prove a sufficient foundation on which to build the defence of diligence, or even of extraordinary diligence, which the law requires. The whole object of the proposed plan would thus be defeated, which is, to render danger costly—more costly than safety.

There is no injustice in this rigor, because the penalty imputes no criminality to any one. Grant that there was due diligence in the particular case, the object of the law is to secure such diligence in all cases that the number of accidents shall be the fewest which the nature of railroads permits. This can be done only by rendering accidents more expensive than a wisely organized system of precautions to avoid them. If the companies knew beforehand that a catastrophe, by which ten were killed and as many maimed, would cost $150,000, such events would be much less common than they now are, when the expense is only $20,000 or $30,000.

Thus we see that the natural law ot railroad companies points out the way to govern them. They are corporations engaged in business, and as such their only motive is profit. Make, therefore, the utmost care to avoid accidents the essential condition of profit. As they are not men but corporations, no malice or intention to do injury can be imputed to them. Attach, therefore, to every injury a pecuniary penalty, from which there can be no escape, so that the company may regard it merely as a loss to be avoided, like other losses, by the general good management of their work.

We cannot give the details of a law to carry these principles into practice, but suggest that it contain the following provisions:

1. It shall be the duty of the president of every railroad company, whenever an accident occurs, to make a report thereof to the district attorney of the United States of the district wherein is situated the principal office of the said company, which report must contain a statement of the time and place of the event, the number of persons killed and wounded, with their names and places of residence, and the nature of the injuries received by the wounded.

2. It shall be the duty of the said attorney, immediately upon receiving this report, to enter judgment against the said company for a sum equal to —— dollars for every person killed, and —— dollars for every one wounded according to said report, and in —— days thereafter to issue execution for the same, unless it be previously paid.

3. The money thus collected shall be paid into court, and shall remain there —— months, during which time any one mentioned in said report, his or her agent or legal representative, may claim respectively the sums before-mentioned to be paid by the said company for each person killed or wounded on its road. After the expiration of —— months from the entering of such judgment, the money unexpended shall be paid into the Treasury of the United States.

4. No company which has paid, in the manner above-mentioned, the amount required, shall be liable for damages at the suit of any one, or the representatives of any one, mentioned in the said report.

The railroad companies know better than any one else how to prevent accidents. If these were more costly than the means necessary to avoid them, the companies would use those means without expense to the Government.

It may be thought by some that the proposed plan is inconsistent with the fifth section of the amendments to the Constitution, which declares that no person "shall be deprived of life, liberty, or property without due process of law." But this section was intended for "criminal cases" only (Story's Com., 1789). It does not, therefore, apply to corporations, who are (2 Kent's Com., 226) immortal, invisible, intangible beings, who cannot perform a personal act, nor commit a crime, nor be arrested or punished. The experiment is, at all events, worth trying, and the subject is certainly worth discussion.

A MONKISH LEGEND.

Beautiful stories, by tongue and pen,
Are told of holy women and men,
Who have heard, entranced in some lonely cell,
The things not lawful for lip to tell;
And seen, when their souls were caught away,
What they might not say.

But one of the sweetest in tale or rhyme
Is told of a monk of the olden time,
Who read all day in his sacred nook
The words of the good Saint Austin's book,
Where he tells of the city of God, that best
Last place of rest.

Sighing, the holy father said,
As he shut the volume he had read:

"Methinks if heaven shall only be
A Sabbath long as eternity,
Its bliss will at last be a weary reign,
And its peace be pain."

So he wandered, musing under his hood,
Far into the depths of a solemn wood;
Where a bird was singing, so soft and clear,
That he paused and listened with charmèd ear;
Listened, nor knew, while thus intent,
How the moments went.

But the music ceased, and the sweet spell broke,
And as if from a guilty dream he woke,
That holy man, and he cried aghast,
"*Mea culpa!* an hour has passed,
And I have not counted my beads, nor prayed
To the saints for aid!"

Then, amazed, he fled; but his horror grew,
For the wood was strange, and the pathway new;
Yet, with trembling step, he hurried on,
Till at last the open plain was won,
Where, grim and black, o'er the vale around,
The convent frowned.

"Holy Saint Austin!" cried the monk,
And down on the ground for terror sunk;
For lo! the convent, tower, and cell,
Sacred crucifix, blessèd bell,
Had passed away, and in their stead,
Was a ruin spread.

In that hour, while the rapture held him fast,
A century had come and passed;
And he rose an altered man, and went
His way, and knew what the vision meant;
For a mighty truth, till then unknown,
By that trance was shown.

And he saw how the saints, with their Lord, shall say,
A thousand years are but as a day;
Since bliss itself must grow from bliss,
And holiness from holiness;
And love, while eternity's ages move,
Cannot tire of love!

PHŒBE CARY.

DRESS AND ITS CRITICS.

IT has recently become popular, if not fashionable, to promulgate diatribes against the extravagant toilets of American women. On the other hand, many foreigners have openly remarked, and not a few natives more quietly observed, a growing inattention to dress, a tendency to shabbiness and slovenliness, on the part of American men. The misogynist would probably explain at once that the former phenomenon was the direct cause of the latter; the lords of creation cannot attire themselves properly because the ladies of creation—their wives and daughters—spend all the money for their own adornment. But the complaint against female extravagance is as old as imperial Rome, nay, as republican Athens; it has often coincided with the greatest displays of male dandyism; and besides, this hypothesis omits all consideration of unmarried men.

Many of the distinctive features of modern male dress may be explained on the obvious principle of convenience and common sense. Take, for instance, the trousers of to-day as compared with the breeches of our great-grandfathers. By-gone wits in various languages have handed down to us several descriptions of the beaux in former centuries getting into their breeches; an operation which took nearly as much time and trouble as it now does to launch a man-of-war. For a later example take the cloak. Men by no means old enough to be grandsires can remember when they sported the "full circle," with its dozen yards or thereabouts of blue cloth. Elegant and graceful it was, and, for a carriage ride to a full-dress party, very convenient, but for all other purposes very inconvenient, wherefore it has everywhere given place to some form of great-coat. Even the "stove-pipe" hat is gradually yielding to the "wide-awake."

Influences like these affects all nations; but something further seems to be at work among ourselves. It would hardly be safe to accept as gospel the dicta of all foreigners, such as Prince Napoleon's friend, who asserted that tailors proper were unknown in the land: "the American buys his clothes at a slop-shop and wears the same suit till it is worn out;" or the more recent writer in the *Revue des Deux Mondes*, who says that the millionaires of St. Louis dress like hodmen, and the only decently attired males in the West are the professional gamblers; but, after paring down these exaggerations, there is a very positive amount of truth in the charge, and it is the more singular from the fact that, till within a few years, Americans were noted for the very opposite quality, too great attention to dress. (*Vide* Thackeray's "Kickleburys on the Rhine," and almost any foreign visitor's book between 1840 and 1860.)

Shall we say that this change is merely another illustration of our national tendency to run from one extreme to another? If so, why do not the women participate in it to a greater extent? Or is it a necessary result of the war? Hardly; for the war has not put down equipages, or dinners, or many things that cost quite as much as a man's wardrobe. Besides, the deficiency is one of care rather than expense; a lack of wash-tub and brush rather than of new broadcloth. Still, war-prices may well have had their share in the result. A comparatively minor expense may change all a man's habits of dress. If he has to pay three dollars instead of one for his dress-gloves, he will begin to economize in them, and, from wearing shabby gloves, he comes rapidly to neglect other details.

One of the main causes of negligence in dress doubtless is the increasing size of our cities and the want of any decent transport for persons of moderate means. Men will not dress themselves carefully to go to places of public resort if they have no reasonable prospect of making a cleanly voyage thither; hence the very rusty appearance presented by the pit, not merely of our best theatres, but even of the opera. Another is the increasing pressure of the public demands upon every man whose labor is of any value to the public. He is obliged to take the shortest cut to his business, in dress as in all other things. He cannot afford the time necessary to take precautions against soiling his clothes. He does not change them or buy new ones as often as he ought to for the same reason.

But whatever be the cause of the evil, we decidedly maintain that it is *not* inherent in the modern shape and style of dress; and we cannot join in the condemnation of that dress often uttered under artistic pretences. Thus, it is frequently said that our attire is "unpicturesque," which really means little more than that we are too familiar with it. Homer praised the beauty of a formal garden because the *uncivilization* of his day made it a rare object. The want of color is a commonly urged fault; but we must remember that grave tints for gentlemen's wear are no modern invention; the Spaniards adopted them centuries ago. One strong objection to colored upper garments is their glaring shabbiness when ever so little worn or faded; an old claret-colored coat, for instance, is ten times seedier to view than an old black one.

But, then, there is no need of men's wearing either a claret-colored coat or a black one. The love of black broadcloth is, perhaps, that weakness of the Yankee character which is best known to foreigners, and has afforded foreign tourists most opportunities of making little jokes in their diaries upon the personal appearance of the American traveller. Not that there is any inherent impropriety in wearing black. On the contrary, there is, perhaps, no color so suitable to the great mass of men. In some sorts of material—velvet, for instance—it furnishes the most becoming suit for almost any kind of wear ever devised by the wit of tailor. But the fact is, it is a bad working or lounging color, the worst that ever a man amused himself or did business in. The consequence is that it has been discarded in Europe for morning wear, and is now there mainly restricted to clergymen, notaries, and tradesmen in their best clothes, and gentlemen in deep mourning. A person presenting himself at a great London house to make a morning call in a full suit of black, would, probably, be received by the footman as a person who had come to take my lady's measure for a pair of boots; and in Paris a *flâneur* who appeared on the Boulevards in such melancholy attire would be set down by his friends as being engaged in a "lark" or an intrigue, or, in fact, as having some special reason for disguising himself.

And this conventional prohibition of the color has, like nearly every other fashion in modern dress—such, for instance, as the low collars and light cravats of our day—a certain basis in common sense and convenience. Modern life is not the stiff and stately thing that it was when Vandyke and Velasquez painted noblemen and grandees in lace and ruffles and black velvet doublets. Men, even gentlemen, are now-a-days all *actively* engaged either in business or in pleasure. They are either hard at work in offices,

or in the fields, or in libraries. They flit about muddy streets on foot, ride in dirty hacks, or stand in dirtier cars, exposed to mud, dust, tobacco-smoke, and all the other plagues of modern life. They are constantly rubbing against something with back or elbows. Consequently the grand requisite in their clothes is that they shall not soil easily, show the dust readily, or wear out rapidly. Black cloth, however, grows seedy-looking sooner than most other colors, and shows stains sooner, and dust sooner, and, therefore, has been most wisely discarded by "good society," except for evening dress and state occasions, when dress is a subject of great care and a matter of importance. Through a large portion of the United States, however, this distinction is unknown, black broadcloth being considered the proper thing to wear to church; at home it is considered the proper thing to wear on all occasions when a man wishes to appear "dressed," no matter at what hour of the day. Consequently, when the untravelled American goes to Europe, he arrays himself carefully in the usual color, and appears at all the railway stations and hotels as black as midnight.

At the South, where, owing to the wild life led by most of the population, one would expect black to be rarely seen, it is, or rather was before the war—we presume now any color is welcome—the color *par excellence* which a "gentleman" was bound to wear, and, as every white man is *ex officio* a gentleman, everybody who could afford it wore black, the other colors being left somewhat scornfully to stage-drivers and such like. Every keeper of a wretched tavern in the Southwest did his best to dawn on his guests every morning in a full suit of black and patent-leather boots, and many a Northern traveller will remember being consigned to the state-room over the boiler on a Mississippi steamboat, owing to the shabby appearance which he presented in a good suit of travelling grey to the "polite and gentlemanly clerk," who sat behind the window black as a crow, but resplendent with diamonds. The fact is, that as there is no country in which there is so much work and so much travelling done as in this, in which men's lives are so intensely active, there is none in which black broadcloth as an everyday dress should be more carefully avoided by everybody who does not wish to look both dirty and shabby most of his time. The same remark applies to patent-leather and prunella boots with patent-leather toes, to which third-rate "swells," and, for some inscrutable reason, young farmers, most of whose time is passed in muddy or dusty fields or roads, are greatly addicted.

Long hair is another piece of personal ornamentation which, in old countries, is being gradually laid aside by the class which devotes most attention to personal appearance. And yet amongst us those who, being least able to take care of their hair, are least entitled to wear it long, are the very men who cling most tenaciously to it. It may be laid down as a general rule, with regard to all matters of dress, that a man's first duty is to be clean, and to look clean and neat. Therefore, if he insists on having ringlets down on his shoulders, he ought either keep them clean himself or have a valet to do it, or ought not to expose them to the dust and dirt of everyday life. Moreover, if he considers it his duty to grease them every day, he ought not to let them lie on the collar of his coat, as the shiny appearance assumed by woollen cloth after repeated applications of pomatum is not pleasing, to say the least. By soldiers and men actively engaged during the day, with any real love of work and any real dislike of dirt, the scissors ought to be unsparingly applied to their "luxuriant locks," which ought to be kept at such a length that a brush and a sponge will keep them in order. In other words, we, as a nation, ought to be as remarkable for the shortness of our hair as we are for its length.

Timothy Titcomb, in one of the bits of advice which he gives to young men, lays it down somewhere, that there should be in every man's dress some central point, from which everything else should radiate, and this point he declares to be the shirt-front, which he would, doubtless, have of expansive dimensions and snowy whiteness. But in this Timothy must have spoken without due consideration. Snowy linen and plenty of it is a pleasing spectacle, but it is a species of display in which nobody should indulge who has not time enough or money enough to change very frequently, or whose occupation is of a nature to soil or ruffle his shirt-front rapidly. And yet, in this matter, as in the matter of hair, we are apt to find that those who can bestow least attention on their shirt-fronts are the very men who make most display of them. No class, probably, wear so few buttons in their waistcoats as street-car conductors. The fact is that workers should button well up, and if they show any more linen than their shirt-collars, they should show only as much as they can fairly protect from being soiled. The whole question of modern dress is in fact, or ought to be, determined by the exigencies of modern life. In this, as in other things, we are growing daily more practical.

A LITTLE GERMAN CAPITAL.

I THINK if I could remember ever to have read a word about this little capital I should not write of it now. I approached it with the freshest feeling—indeed, I had but just come to Europe, and have not since lost the impression that I have the claims of a discoverer upon it.

The natives did not flock to meet me at the railway station, as natives are wont to crowd to the spectacle of their discoverers. The only inhabitant who made any demonstrations of reception was the coachman of the inn of the White Rose. He, however, bade me such a civil good evening, that I could do nothing but go with him to the White Rose at once.

I was glad when all the porters, who had so undignified and diminished my poor luggage by their numerical and individual disproportion, left it and me to the solitude of our sleeping-room, for I was very tired, and I went to bed instantly. If you have never slept between the feather mattresses of a German bed, you as yet know nightmare only by the name. I think that all the ghosts and phantoms that trouble German song are attributable to the dreams dreamed in such beds, and that the sceptical tendency of German philosophers may be traced to the same source. Who, indeed, could preserve his faith, sleeping half-smothered, night after night, under a mountain of feathers? It is clearly impossible.

But not for all the abominations of the bed would I miss praising the delicious coffee they gave me at the White Rose in the morning; neither would I forget the good red wine I drank, blushing to be sold for so mean a sum of kreuzer as it cost me. I had even thought of praising the good looks of the maiden who sharply reckoned the accounts at the restauration; but the vision of her uncompromising ugliness has risen up to reproach me, and I tell the truth of her. She was not beautiful; and if I did not see many women in Germany who were beautiful, I am not to blame; for I diligently looked for them. Heaven has given the German poets a fervid imagination that they may more easily feign in German women "was die Natur versagt."

It was, doubtless, in compensation for my disappointment in this direction that I was suffered in my little capital to see the king—a white-headed old man, of a comfortable habit of body, whose movement, assisted by a cane, did not seem to me very majestic, but, on the contrary, struck me as being of that kind of progress which I have heard called pottering. He was, as one may say, my first king, and I felt jealous that he should come up to the royal standard in my mind. But I say he did not look a very awful king, and I regarded him not only without palpitation, but with so great freedom from the wish to see him revolutionized against that I took off my hat as he went by—I, democrat of the crimson and combustible. As for his subjects, they flocked to their doors to look at him with a curiosity not wholly unmixed, I thought, with affection; and some of his liege urchins seemed even to meditate a procession in his rear as a mark of their loyalty, but they did not follow him far; and presently a barber, in front of whose shop I stood, left a patron holding a basin of soapsuds to his chin, and ran out to tell me that it made the old king very angry to be followed or taken great note of in the street. He walked quite alone to his palace, no staff of office preceding or coming after him, and it seemed a very pleasant little spectacle. His people loved him, no doubt. They told terrible scandals about him. He—but how many sovereigns in America are no better? I do not suppose they will record his errors on the monument to be erected to his memory when he is dead, and his virtues may be very properly held up for imitation.

The folks in his capital slander their king, but they say no better things of each other; and, if I could believe them, I must think that the state of morality was but low in that little capital. They attribute a popular want of virtue to the corruptions of the court, and perhaps these are bad enough There are cakes and ale everywhere, but here I was given to know that they are the chief meat and drink; and, indeed, the accounts which I had of social life in this German city made me wonder if the Germany which Thackeray describes so well is wholly of the past yet.

Oh, civilization of the New World! at thy worst thou art purer and better than this of the Old. Thou comest not down from kings and courts, but forth from each man's heart and brain, and spreadest from level to level, giving to the civil equal all the light of the social and moral superior. And, to get out of the apostrophe (which I have always found a difficult thing to manage), one must come to Europe to learn this, and to regret sincerely all the wrong done in heart to the excellence of the New World life. It was not *mal du pays* (though I felt that) which, I think, brought me early to contrition for unpatriotic thoughts entertained at home. I believe it was rather a willingness to judge candidly of what I had read so much, and to compare American civilization with that of Europe, and to note the startling differences that appeared after the first semblance of similarity between

things essentially unlike had worn off. The two civilizations are unlike, because one is the civilization of individuals and the other the civilization of classes. We happily have no classes in the hopeless European sense. Where there is division among us it is by natural segregation, and not by legal and conventional separation. The well-worn sentiments of national self-praise are marvellously revivified by knowledge of Europe; and is it not worth the journey thither to learn that the Fourth of July orations are true?

Do I moralize to the verge of tediousness? Some things have to be said; but I was going with you that moment to the king's gardens, which are

"So royal-rich and wide,"

and in which you are never out of the gleam of sculptured marbles. The park is not unlike other parks in respect of trees and drives and ponds. The latter are for skating in the winter and for ducks and swans in the summer, and there the people feed these to that fearful extent to which the wretched birds are gorged by the public in all the parks of the known world. But this garden has one notable feature in its noble avenue, two miles long, where I saw the queen in her carriage, and where the people walk and the fat Suabian dandies gallop violently up and down. You see these latter in all the finer streets and squares, and they are always spectacles of wonder and interest, not less from the nature of their horsemanship than the ineffectual dandyism of their dress. They do not show very splendidly in that city, however, for it is military, and the young officers of the garrison have never had anything to do but to make fine appearances since the wars of the first Napoleon, if I except several of those revolutions to which the enduring governments of Europe are so liable, and which are so coolly handed over to us as the peculiar weaknesses of republics. It is a good thing, I say, to see these warriors strutting through the streets of the little capital, with their moustaches newly dressed with fixature, with their neat little waists that betray the corset, with their tight pantaloons and the insufficient tails of their brief coats, and their spurs and scabbards making music as they go. I could not wonder that the cabbage-roses deepened in the broad cheeks of the maidens upon whom their glances fell; and I perceived that a meek melancholy possessed the civil bucks in their presence. The city is so small that it is easy to be distinguished there. When the French or the English ambassador, or any of his children, walk abroad, everybody is conscious of the fact, and people make it the subject of conversation. When a Russian prince arrives, on his way to Baden-Baden, they know of his arrival and are grateful for the sensation. So it seemed to me that the lives of these soldiers must be existences of unmixed ease and celebrity, and I could only admire anew the systems that repeat them everywhere in Europe and make them the first political and social element.

But I liked even better than these men of valor that royal garden whereof I but spoke, and wherein all classes of the people seemed to walk about on Sunday. The sun shone with a feeble November lustre, and barred the avenues with long lines of light, and trembled upon the plumes in the hats of the maidens, and, besides doing all the other things that the sun does in descriptive writing, fell upon the numerous statues in the garden, and drew my wandering attention to them. The marbles were good, perhaps. The subjects were certainly classic, and dealt with fables and feelings as dead to that people as the stone from which they were hewn. Some of them were in the French *renaissance* taste, and made one think of powdered hair and ruffles and hoops and patches. I wonder if, when the sculptors begin to look for the statues that are to adorn our public places in America, they will find nothing in the blocks of marble but the trite Greek celestials, who seem always to be lying in wait there to spring out on a bewildered modern public. Ambrosia is good, but it is hardly a drink to the present taste. Italy is the only land where the old classic themes have any living relation o the people. There, where they swear yet by the Body of Bacchus, and the saints have only changed their names, links of unconscious sympathy may bind them to the days when gods were very common things, and the little domestic *désagrémens* of Olympus formed the sensations of an age in which divorce trials were not reported. But in this German town nothing struck me as so exotic, so foreign to all popular feeling and knowledge, as these poor deities freezing in marble under the dull gaze of the mortals about them. What did Gretel know of Diana? Or thou, Hänsl, of Apollo? Nay, since in the Old World the people are nothing, what interest, æsthetical or otherwise, could even the High-well-born have in such immortals?

It was better in that palace through which I passed, and where noble frescoes celebrated the history of the wars and the heroes of the kingdom. But here the people could not come freely, and I began to think I discerned that this civilization, old and rich, was more wholly destitute of art and the things that reveal and reflect the beautiful, than even that new order of the West, which truly has made the wilderness to blossom like the rose, but has not as yet found time to adorn its usefulness with the final grace of art. Then I began also to doubt the value of certain theories that I had built at some cost of speculation as to that more *thorough* life which men must live in Europe, with a thousand years of history behind them, and

"The fair, the old"

all round them, making precious the breath drawn in such presence. Seeing how men lived and died unconscious of these things, and how little they served to adorn daily life—satiate already with that antiquity of which we are so fond at home, but which is common as the unbuilded dust in European streets—vexed with sentimental disappointment and defeat—did I err in reverting to an opposite faith, and prizing above history, art, and the poetry of association that social and civil order which permits every life to be at once grand and simple, that makes man superior to classes and only subject to freedom? Was I wrong to hold the darkest probability of the American future at greater worth than all the past and present of Europe?

Palaces I did not find all what I expected them to be. I wonder if, being set down in Aladdin's palace, we should altogether like it? For my part, I consider splendor not nearly so good as comfort, and I should have been better satisfied with this palace if it had not been so cold. It was full of wonderful things, but it had not that grand simplicity which I had observed to characterize palaces when represented in the theatres, though it was in places bare enough. I remember a chair there which, when you sat down upon it, played music; and there was a contrivance for weighing yourself—things which I had not expected to find in a royal residence. I do not speak much of the pictures and statues in this palace, for I do not very distinctly recollect them; and besides, seeing afterwards another palace devoted solely to these things, that has naturally the first place in my mind. But, in the very ecstacy of sternutation, and conscious that I was taking a frightful cold, I observed with compassionate interest that the royal beds were contrived upon the principle of that I had slept in and under the night before.

In common with other contributors to periodical literature, I have a good opinion of my own ideas, for I know that they are stolen from the best authors. When I saw the royal gallery in my German capital, I felt no occasion to change the views I had adopted from Hawthorne concerning the nude in modern art. I would fight shy (if I may introduce the expression to good society) of all discussion of the subject but for some thoughts that occurred to me at the time referred to. (Or, perhaps, they only occur to me now, for I have known travellers to invent in cold blood, long after the object has passed from sight, the vivid impression received on seeing it, and the reflections then suggested.) I had an uncontrollably absurd recollection, as I sauntered through this gallery, of an incident in my American life, likewise concerning pictures, which would relate itself to the present occasion, and intimate the same fantastic idea of haste in regard to the production of these works of art. I was in a print-shop one day, at Cleveland, contemplating with the just interest certain portraits there exhibited, which were severally placarded with announcements that they had been painted in one hour, in half an hour, etc. Perhaps the celerity of the artist was more apparent than his skill, I thought (timidly, for I do not like to criticize the works of art); and I was going away quietly when I saw a young man near me—possibly the young man from Boston "called John"—who was rapt in observation of a lady's portrait, painted extremely *décolleté*, and done, I believe, in twenty minutes. "Hello!" said this vulgar young man at last, "painted *her* so quick he had n't time to put the clothes on her!" There are several portraits in this royal gallery of living beauties (there is a certain frankness in German dissoluteness not always engaging) even less draped than that, and the greater part of the ideal beauties were not associated with clothes at all. The mere nakedness was all that struck you in most of these paintings. There was no sentiment in them to dignify or redeem them—no vivid emotion even of a bad kind. They were perfectly executed, and were coarsely and simply sensual in purpose. Not that one really received any hurt from their contemplation; the antidotal ugliness of the old Suaberin who showed the gallery was such as to render all these lavish charms incredible. But because I had often heard honest people reproached with false modesty for objecting to the nude in art—honest people who had only their instincts and the decent amenities of our American life to guide them—I have since been willing to see how far they were blameworthy, and I have been glad to find that the hardly more than instinctive repugnance with which I regarded these pictures has only been confirmed by acquaintance with nobler art. To this they are as the ballet is to the opera—muscular merely, and soulless. They gave me but a bad opinion of the sort of civilization which produced them, and the appetite—it can hardly be called the taste—which enjoys them. I did not care if our country "guarded its strangeness"

to all art, rather than ever have such art as this; and I trust we may never have the culture necessary for its admiration, nor the bad *naïveté* which sees nothing wrong in it. For my own part I like not over-ripe sausages and far-smelling cheese, nor their principle as developed in morals and æsthetics.

If I say anything to hurt the tender feelings with which any German-American regards his fatherland, I honestly crave his forgiveness. But it did not seem to me that the life in that little German capital was such as one need want to live a great while. If he must do it in that town, I believe one would hardly insist on taking out his full threescore and ten. The American would miss first, and above all things, his sensations. There are no sensations there—no healthful collisions of sentiment, no shock of opinion, no journalism. They have a good opera and a theatre, and the statues and pictures of which I have been speaking. On Sunday the people turn into the garden, as I said, or assemble at the beer-houses, where they have beer and smoke and music and dancing. It was quite a wonderful spectacle, this lusty Teutonic pleasure-making, and it was touching to observe how a very little joke could make a great laugh among these honest folks; and yet I thought, in their place, I should presently be weary of their amusements. It seemed to me here, as elsewhere in Europe, that the people were only children as yet, and that they contented themselves with many things that Americans despise. I do not mean native Americans alone, for I found several of our naturalized citizens here who had returned temporarily, and who were sadly disappointed with their old home after having known the wider, freer, higher life of the New World. They had grown into the manhood of freedom in America, and they could not shrink back again into the childhood of the old European subjection.

In this little capital I believe that objects of interest were not in great number. They had an old church which might have been seen, but I did not go into it. I was a very young traveller, and I had not yet learned that the object of interest is the most transitory of human things—that you must see it at once if you would see it at all. Having this old church before me, I felt that I could go into it at any time, and so—I did n't.

I went and walked quite aimlessly about the city, which was perhaps just as well. The new town (all German cities are now divided by epochs of growth into the new town and old town) was very handsome and uninteresting, with broad avenues and fine houses. In the old town it was much better. All the streets were very narrow and crooked and dirty, and built up with houses that bulged, like respectable middle-aged gentlemen, at the second story, and grew, finally, into the most lawless vagaries of gable-peaked roof and dormer window. The shops seemed to be devoted chiefly to the dissemination of sausage, which numbers of yellow-haired maidens were everywhere buying. Commonly the front doors of the dwellings stood open, and one saw all the domestic life within: little, hideous old women, bent and brown, always contemplating something on the fire in a pot; plump old men sitting at chimney-corners in the society of inseparable pipes; uncomely but productive housewives moving about their household work, and impeded by their own flaxen-haired multiplication—just exactly as in all the pictures and story-books.

Let me be far from mocking at such people, knowing, as I do, the thrifty, busy, honest lives they live at home, and the industrious, honorable race with which they have helped to people America. They are much better than their betters in Germany, I thought, as I wandered through one more palace, not far from the city, built by a late luxurious king, and much decorated with frescoes representing the pleasure he had taken in the chase. His majesty hunted over all those walls, with falcon or horse and hound, and in one place he was depicted in the dull butchery of deer driven into a narrow close, where the king and his nobles gave them "the satisfaction of a gentleman," and shot them down at ten paces. He had other passions besides the chase, this king. His temper was violent, and he was habitually in wine. His palace was adorned with the portraits of many frail and fair, his favorites. Was not his a noble life to lead?—a long career undistinguished by any great event, an existence of idle luxury and debauch, unlimited power used to gratify appetites and whims. "The life of a king," God bless us! I hardly wonder that they raised monuments to his virtues; it is but human to tell amiable lies of the dead. But I wonder that it is possible for such hideous wrongs to perpetuate themselves, and that peoples can only be saved from anarchy by surrender to misrule.

I went from hall to hall in this great palace, and was weary of it, when the custodian came to a window which he threw open. It looked out upon a distant village, where a great poet was born, and now a little strip of sunshine fell athwart the houses there. Then I forgot the kings and their paces, and stood only in the presence of that pure and lofty genius, so far above all royalty and state.

"*Seid umschlungen, Millionen!*"

The great poets are all for you, and they will share their inheritance of the hereafter with you.

But it is a pity that the world cannot be divided again more justly, and none of us have masters any more.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXII.

COLUMBIA, S. C., Dec. 11, 1865.

THE town of Newberry, northwest of Columbia and forty-five miles distant, I have recently visited, rather because it is comparatively easy of access than for any other reason. The journey may be made by way of Hope Station in about twenty-five hours, and in returning, if one chooses to forego sleep, he may go by rail as far as to Alston, and, then taking a hack and riding and walking all night, reach Columbia in fifteen hours after leaving Newberry. The railroads are very slow to recover from Sherman's visitation, and, as yet, none of them enter the city, so that the traveller in whatever direction must at first take passage by one of the many stage-lines to some distant way-station or ruined bridge. Into this service are pressed carriages of every kind—coaches, buggies, carryalls, ambulances—and the teams and equipments are as various as the vehicles. From the price of a ticket at the hour of starting to the delivery of luggage or the price of a lodging at the end of the trip, all the accessories and arrangements of this stage travel are excessively and needlessly bad. But, for the time being, the passenger forgets his discomfort in his danger. The loss of sleep is submitted to, and he is willing to go hungry and thirsty and to creep along in the dark at the rate of two miles an hour when he knows that the driver has no lantern and that only a fortnight before, for lack of a lantern, the coach was upset and three passengers killed in one of the enormous gullies by the roadside.

It was in the middle of a cloudy forenoon that we at last got away from the city and set out for Hope Station. The inside passengers were five in number, and an old negro sat swinging his legs over the edge of the roof. "That cousin thar 's got to be car'd somehow," the driver said, when I asked for a box seat, "and there 's too much load on top a'ready." But at last I so far prevailed on him as to be allowed an outside place on condition of getting down when the road began to be dangerous. By the time we were ferried across Broad River and were fairly on our way the privileged ill-humor of a coachman compelled to make a late start had given place to a better frame of mind, and he was not indisposed to conversation.

"Dog me, now, but this is cussed mean coachin'. A kind of a drat, no-account team, anyhow. That hoss Dutch, he 's a hoss, but the other three a' n't nothin'. Never did believe in puttin' one good hoss with a lot o' poor ones. Git 'em nigh about one thing and let 'em work together. I 've coached in Alabamy and in Massissippi, and I druv a hack in Texas when I 've had to git off and spade the mud out o' the wheels. Every few rod, sometimes, we 'd have to prize out with rails. But, you understand, we had hosses. Look at them leaders, hey? Git up, durn ye! Thar, ye 're like a piny woods pond—all over creation."

"How did you like Texas?"

"First-rate. That 's the country for a poor man, sir. A year from now and I 'll be back thar, too. What do you think o' greenbacks? Good? I mean, will they keep good?"

"Yes, they 'll be good as long as the United States is."

"No; I do n't believe it. Won't be worth a copper in two years. You never see any war-scrip that was. The Yankees 'll call it all in, you see. This 'corn-fed,' as we used to call it, I never had no confidence in it. Some was very confidential, but I war n't. I 'm as big a fool as anybody, but I never had no confidence in that, nor in the Southern government nuther. My old uncle in Greenville told 'em just how 't would come out, and durned if it ha' n't. They wanted to hang him. The first time ever I see our scrip was in Vicksburg, and I told the boys the very first I see: 'Boys,' says I, 'this yer stuff right now it a'n't worth one copper.' And the greenbacks are jest the same. If I thought they 'd come out right I 'd know better how to do. I want to go to Texas, and take up some Government land, but I 've got to have some money. Three years ago I had nine hundred dollars, and now I ha' n't got nothin'. 'Stead o' keepin' it I loaned it out to a fellow; all in silver. He was rentin' a good place down below, and I considered I was safe. But bein' off in the army, only my wife was here, and he jest up and

refugeed. That 's the last I see o' him. He got up into Illinois somewhar' I know whar he is, though, and he 's good, I know, for I 've heerd of him, and I can exactly put my hand on him. But if I was to sue him now I 'd be obleeged to take greenbacks, and I do n't want 'em. I 'll wait a while and see."

He should settle in the north-eastern part of Texas, he said, and raise small grains. Cotton he 'd have nothing to do with, nor niggers, either. What the darkies would do now he be dogged if he knew. Starve, he reckoned. "Mornin', cousin, whar ye bound?" he called out to a negro woman, who dropped us a courtesy as she passed us on her way to the ferry. "Goin' down to Columby after your 'free,' be ye? Well, go on." She was a middle-aged woman, and appeared to be accompanied on her pilgrimage by her family. A little boy was following her, a little girl she led by the hand, and on her back was an infant slung in a shawl. A heavy bundle was balanced on her head. They all seemed weary as they trudged along through the mud, and their clothing was too scanty for the winter weather. Within the space of eight miles, over which we passed while I was outside the coach, I counted thirty-nine of these forlorn-looking people travelling to the city, and the driver said he met many every day.

The way to Hope Station lies through the northern part of Lexington district, and is one of the roads traversed by Sherman in advancing on Columbia. For the whole twenty-nine miles there were never, I think, more than fifteen or sixteen dwellings within sight of the road, and of these eleven still remain. Chimneys and heaps of ashes mark the places of the other four. No negro cabin seems to have been destroyed. On the Alston road, too, which lies in Fairfield and Richland districts, the devastation was far less complete than I had supposed, the proportion of burned houses being about the same.

The country through which we travelled was broken and hilly. The road, at first heavy with sand, soon became steep and filled with a stiff red mud, for the soil changed its character with the surface. The pines were still the predominant trees, but mingled with them, and contrasted with their tall purple stems and evergreen branches, were the several species of oaks with black limbs and withered foliage. For five years no care has been bestowed upon the highways, and driving over them is a trade to be learned. They are full of deep ruts and holes, and fence-rail bridges more dangerous than the sloughs beneath them. Often the wheels were axle-deep in mud, and if both were buried at once we thought ourselves fortunate, for when one alone goes down it is necessary for the passengers, close packed as they are, to throw themselves in a mass towards the opposite window. Mules plastered with mud and cotton wagons broken down were not unfrequent. After three hours I was obliged to go inside. In the course of the day I discovered that my fellow-travellers were a Charleston merchant, a judge, a rich planter, a doctor of divinity, and a wounded man, addressed as captain, in the uniform of the Confederate service. The order relative to Confederate military insignia is not so well carried out here as in North Carolina and Virginia, and the Palmetto button is a common sight. Since leaving Virginia, in my journey through the South, I have almost always been taken for a Southerner, though usually it is supposed that I am a native of some other State than that in which I happen to be, and conversation when I am present is generally quite unreserved. When I am known to be a Northern man, sometimes I am made to feel that my company is not desired, and sometimes there is amicable talk and argument. When I took my place in the coach the doctor was reading a newspaper. "Judge," he said, "here is an ominous erratum. 'Grand chance for Yankee enterprise and *thift*.' The printer has omitted an *r*, and it looks too much like a grand chance for Yankee enterprise and theft. He was thinking of Butler, I suspect, and made the mistake purposely."

By-and-bye the doctor spoke again: "Judge, I see that the writ of habeas corpus is restored except in those States recently in insurrection. Could n't Mr. Davis's friends effect his liberation by means of it? What would be the process?"

"Well, they would apply for a habeas corpus, and it would be the duty of the judge to examine the facts and see if he was committed by virtue of a warrant regularly issued. If not, the writ might be granted."

"But he 's at Fortress Monroe," said the captain. "Yes, Mr. Davis is at Fortress Monroe, and that 's in Virginia."

"Ah, well then—" the doctor said.

"Yes, I think you 'll find," said the judge, "that the Yankee Government has taken special good care to put all its prisoners into a place of safety before it issued that proclamation. But he will never be harmed."

"Oh, no," the captain said; "that would rouse up the South more than anything else that could be done."

"Shock the whole world, sir," the judge told him; "not the South alone, but foreign nations; the whole civilized world."

The doctor continued the perusal of his paper, while the rest discussed the policy of the Government and the probability that it might be better now that the President had delivered his message, which, according to the telegraph, was favorable to the South.

"A great many men are trying to dispose of their land," said the doctor. "I wonder if they find purchasers readily?"

"Well, yes, sir," said the merchant, "I believe some of them do. Many of the Yankees want to try if they can raise cotton. They think they can do better with the negroes than we can. And they will do well, I expect. They 're making money at Port Royal. They hire the negroes and pay them thirty cents a task—what we call a task, you know—and then the Yankee keeps a little store on the plantation and gets the money all back again. They have a great ambition to be cotton planters, sir, and I expect a great deal of our lands will change hands, sir."

"That 's true," said the doctor; "I noticed that at Augusta. They have a great ambition to be called South Carolinians. On the hotel books there they registered themselves from 'Port Royal, South Carolina.' Fellows that perhaps had n't been three weeks in the State."

The conversation throughout the day embraced a great variety of topics. The doctor of divinity had been a professor in some college, and he and the judge talked of literary matters. Hobbes's "Leviathan" was mentioned, and the "Mishna" and "Albertus Magnus." Lord Macaulay he considered a brilliant but inaccurate historian. The judge must be mistaken about Bacon's having written upon English history; it was Hume's work that treated of Henry the Seventh. Charles James Fox, too, had tried historical writing, but his mind was not of the historical order. The planter remarked that Fox was a bit of a blackguard and dissipated; probably made some of his good speeches after stimulating. The judge said Canning used to take a very odd stimulant; never spoke in parliament without drinking a glass of right hot water. The captain agreed with Dr. Johnson that the best stimulant was two or three cups of right strong coffee. Not coffee, the planter said—tea. While he had Bourbon he had no use for tea or coffee. He suspected Canning put a little French brandy into his hot water. It was two years since he had drank a dish of tea. His supply gave out in '63, and he never cared to renew it, and he bought no coffee either. He did well not to renew it, the doctor thought; he paid over two hundred dollars for his last lot of tea. The judge had now fifty thousand dollars in Confederate money. He heartily wished it had been invested in good green tea. The planter was an old man, who smoked all day and told innumerable stories of his old acquaintances, their marriages, their family plate, their drinking bouts, their horses and hunting, their duels, and other adventures at home and abroad, and his reminiscences called forth similar stories from the judge, so that it was late in the afternoon before the merchant and the captain fell asleep, and the rest of the party gave themselves up to expectation of the end of the journey. It was accomplished just after six o'clock, in safety and not unpleasantly. All the travellers seemed disposed to make themselves mutually agreeable. The judge insisted that the planter should not give up his pipe nor the doctor his cigar, for, as he said, he was a great tobacco-chewer himself. The minister was not disturbed at the planter's swearing, and the merchant and captain furnished a lunch for all who would partake.

The house where we stayed at night was that of a farmer living convenient to the station. To every two guests he gave one bed, in which they got what sleep was possible. The house was full of travellers, and some of them chose to sit up till two o'clock, the hour at which the return coach started for Columbia. For an hour after midnight I listened to a discussion of the question whether or not the sun travelled over the earth faster in high latitudes than in low. This was left unconcluded; but it was decided that a fire burns better in the night than in the day, and that sunshine on a fire tends to put it out. Passengers for Newberry were called down stairs at five o'clock, and one after another we washed our faces in a tin basin which was in the porch, and, having been hastily packed in the dark into a coach, were slowly driven down to the railroad. It was dark and cold, and the train was not due for three-quarters of an hour, so wood was collected and a great fire made on the ground, round which we sat till sunrise. The talk was about stage-horses and staging.

It was n't all profit, the landlord said. All the Government transportation he had to do for little or nothing—soldiers and parties that the Yankees wanted in these nigger cases.

"I would n't do it, Mr. H.," said the doctor; "refuse."

"Yes, but here 's the thing, doctor. I had a couple of carriages all ready for some gentlemen that had spoken to me several days before. They were all in the house ready going to start that night. Last week it was. But

just that evening down came a Yankee lieutenant with three soldiers—two Yankee soldiers and one o' ours—all wounded they was, and told me they must go down. I told him how it was; I could n't take 'em; there was the parties in the house all ready; but he just took possession of the baggage-wagon, and they had to go sho' enough. Now, what can you do under these circumstances?"

"That 's it," said the captain. "Oh, we 'll never get even with these fellows, Mr. H., till we get a chance to provo' it over them."

"Tell you what, that 'll be a long time, first, though."

The doctor made enquiries about the boats plying on Broad River. He had some freedmen up in Greenville—not his, but some that were moved up during the war; they had belonged to a gentleman in Barnwell, and he had undertaken to get them moved back. The men could walk, but to move the women and children and their things three wagons would be necessary. Five wagons, they estimated; but he thought twenty could go in a wagon. But the wagoners wanted six and eight dollars a day, and the people could hardly afford that. From Columbia the Government would transport them; but to get them to Columbia was the point. If the boats were cheaper, that would be the way to do it.

He was asked if they had a prospect of getting work and homes in Barnwell. They could get work, he supposed. They wanted to go back there.

The train arrived a little after its time, and in something more than two hours we accomplished the sixteen miles to Newberry. It is a muddy, shabby little village, built irregularly on very uneven ground, and seemed to be full of business. It is the centre of a productive cotton region, and has besides sent to market within the last five months a great number of bales accumulated there during the war. For wagoning cotton out of the district it is estimated that $300,000 in gold have been paid since Johnston's surrender. Trade, therefore, is active in the village stores, the square is seldom empty of country wagons, and the farmers purchase largely of the supplies from which they were cut off by the war.

The garrison commander is also the agent of the Freedmen's Bureau, but having occupied his position only a few days he could give me little information. During the hour that I was there his office was a very busy place. The most important cases were one in which a negro complained that he had done some bricklaying for a certain man, and had been paid twenty dollars in worthless money; another, in which a negro was charged with stealing four bales of cotton from the depot; and one in which a white woman, escorted by one of her neighbors, demanded that the negroes on a plantation near her house should be deprived of firearms: they did n't care where they shot. An investigation of the circumstances was promised her. The alleged thief was put in charge of a little German soldier and marched away to jail. The bricklayer declined emphatically to carry a letter from the lieutenant to the person who had defrauded him; he valued his life too highly; so the summons was entrusted to a soldier, to be given whenever the man should come to the village.

The lieutenant said he had superintended the division of the crop on several plantations, but as yet knew of no agreements having been made for the coming year. The Newberry newspaper, I noticed, urged the need of a district convention of planters, and offered for the consideration of its readers one of those proposed forms of contract between farmer and freedman that now begin to be printed in most of the South Carolina papers.

Alston, the most easterly point to which trains are running on the Greenville Railroad, is several miles nearer Columbia than Hope Station, and I returned by that route. Leaving Alston, after eating what was pronounced "a right genteel supper," we rode all night, and made the trip to the city in twelve hours. The vehicle was a carryall drawn by two mules, and the company consisted of four passengers and the driver. Whenever we came to a long hill we got out and walked. At one particularly bad stretch of road we halted for half an hour, and at last succeeded in making a sputtering fire with wet rails. Then, each taking a couple of brands to light the way and waving them into a blaze when they went out, we picked our steps for a quarter of a mile along the edge of a miry pool, while the carriage was dragged through the middle of it. All my fellow-travellers were young men and had been Confederate soldiers, and the night was chiefly spent in talking about their campaigns and generals and companions in arms. In the midst of a story about old Jubal, who "certainly could just exactly swear," and who, if he believed there was a Providence, could never have expected to win a fight, the driver suddenly interrupted the narrator by stopping the mules and asking us in a low tone if we were armed. It happened that there was not a weapon in the carriage. "That 's bad," he said; "however, gentlemen, never mind; when I begin to talk about my pistols you must all say something similar. We 're coming to a pretty bad place here. On the next plantation the niggers are a very unruly set, and some of them have guns. We must look sharp." One of our company had several thousand dollars about his person, and, having a very bad opinion of free negroes, he evinced a good deal of anxiety and trepidation. It was to him, therefore, that we left the duty of responding to the driver. Soon the conversation between them began, the driver directing his voice towards the right-hand side of the road and the passenger towards the left.

"Yes, it 's the prettiest rifle powder you ever saw. I would n't take any money for it if I could n't get any more."

"I prefer the cartridges; they 're so much handier. A cartridge is always sitting up."

"Oh, well, I always can have twelve shots, you know, and there are always pistols in the coach."

"A man would be a fool to travel these times without his pistols."

"Should n't think of it."

"I say, driver, I would like very much to see any six men attack this coach to-night."

"Well, now, they would have a very sorry time of it, sir. But there 's no trouble of that kind on this road."

By-and-bye we were informed that the danger was past, and then for awhile the negro was the theme of discourse. My three companions and the driver represented four districts, and each reported it as an undoubted fact that the freedmen were forming themselves into companies and holding meetings at night for the purpose of drill. I enquired if many of them had arms, and was told that every nigger had a gun. The niggers round the driver's house could n't get ahead of him, for he had two that told him everything. Of General Ely, Acting Assistant Commissioner of the Freedmen's Bureau, who has charge of fifteen districts in Northern South Carolina, I made enquiries in reference to this matter. His attention, he says, has frequently been called to it. In one instance the assertions were so positive and seemed so well supported that he rode out himself to the plantation in order to make an investigation on the spot. Having been posted where he could see and not be seen, he was an eye-witness of the whole parade. Negroes to the number of thirty or forty men, women, and children had gathered themselves together near their cabins and were drawn up in line. Some shouldered sticks, some had gun-stocks, some gun-barrels, some guns, and some were empty-handed. They marched and counter-marched and halted, and marched again in straight lines and curves for nearly half an hour, their evolutions being interspersed with dancing and rough play, and accompanied by much laughter and noise. When he had witnessed these manœuvres for some time, the general went out and had an interview with the people. They said they were only having a frolic imitating the soldiers. None of the firearms were serviceable. In several other instances he had made an examination of the facts and had found them similar to these. Stories about negroes drilling are not worthy of serious consideration.

As we drove along, the driver pointed out a little hill which he said was the prettiest situation for a house in all Fairfield. In 1861 he had intended to build there, and had engaged the carpenter. "But the war came and broke me up, and then the Yankees done me so bad that when I came back from the army I had n't a bushel of corn nor a dime in the world. Yes, sir, the woods were just blue with them devils, my wife told me. One regiment from Pennsylvania, Col. J.'s regiment, camped on my place, and the old colonel made my house the headquarters. My wife thought the house would be burnt before he came. They took everything, even down to my little girl's doll-clothes; and they did n't leave the child a rag but what she had on her back. They took eleven mules and horses, and killed all the poultry and hogs. Just took everything. My wife begged they 'd leave her some fodder, but they told her she would n't have no use for it; and sure enough they carried off the animals. She told 'em that little corn would n't keep her and her family. 'Yes, I reckon—' no, 'Yes, I raythe guess it will,' the Yankee colonel told her. That G—d-d—d trifling old, cowardly—excuse such language, gentlemen; but it makes my blood boil to think of him. Oh, if I can ever come across that —, if I do n't shoot him! Yes, sir, I 'm going to seek a personal difficulty with that man. And, if you 'll believe me, he wanted to take my little girl to raise. He 'd educate her and bring her up, he said. Why, I 'd send her among the heathens first."

"No," said one of the passengers, "we do n't wish to affiliate with them I suppose it would be more Christian to forgive them, and to let all vindictiveness die out, but we never can forget how they have treated us."

"Well," said another gentleman, "I 'd like to make a New Year's call on old Sherman, and blow his brains out."

Not long after this conversation occurred, we turned from the main road and pursued our way through a large plantation. It was necessary for some one to take an outside place with the driver, for there were four field

gates to be opened, and I undertook the performance of that duty. Talking with him, as we sat together, he by-and-bye enquired where I lived, and so discovered that I was a Northerner. "Well, now," he said, "a great many of your people are perfect gentlemen. It was n't the real Yankees that did so much mischief in this country; it was them low-down foreigners and Irish. You know there 's mean men in all armies."

ENGLAND.

LONDON, Dec. 16, 1865.

OUR Government has acted with more promptitude in the Jamaica business than I was disposed to hope. Not only is Sir Henry Storcks sent out, by Monday's mail, as head of the Commission of Enquiry, but he is also to replace Eyre as Governor. Of course, the apologists of the present Governor try very hard to persuade the public that this measure is simply temporary, and that their hero is not prejudged. But, in reality, the blow is felt to be a very heavy one. Instead of receiving the thanks of a grateful country for having, in the words of his admirers, "saved Jamaica to the empire," the Governor finds himself deposed and ordered to remain in the island to furnish evidence to a commission appointed to enquire into his conduct. Personally, I own, I am hardly satisfied with this; there are cases, in my opinion, in which Jedburgh justice is really the most righteous; and I should have wished the Governor recalled to take his trial in England for the wholesale massacres he has ordered, or, at any rate, permitted. But such a course would not have been consonant to English feeling. Since the announcement of the intentions of the Government, the public meetings, summoned to meet in almost every town of England, have been adjourned, and the party which insisted on enquiry considers, and I think justly, that it has carried the day. In one respect I am glad of this cessation of the popular cry for justice. The rump of the old anti-slavery party had thrust themselves forward as leaders of the agitation, and had, as usual, done everything to render it absurd. This week London has been covered with placards with sensation headings, and announcing, amongst other startling facts, that in Jamaica there were "eight miles of dead bodies!" Such exaggeration as this simply helped the cause of those who sought to hush up the matter, and did more harm than all the anti-negro leaders of the *Times*.

I have reason to believe the resolution of the Government to displace Eyre was arrived at before the final outburst of indignation. Had it not, there would be very little credit to be ascribed to the Ministry. Very little political experience was required to perceive the symptoms of one of those political storms which no government in this country can ever resist. For once the religious world was united; and when united it is absolutely irresistible. The only joke I ever heard attributed to Lord Shaftesbury was not a good one, but conveyed a profound truth. It was at the time when Lord Llanover, then Sir Benjamin Hall, had induced the government of the day to allow the military bands to play in the parks on Sunday. Right or wrong, the Sabbatarian feeling of the country was outraged, and indignation meetings were summoned far and near. On this occasion somebody asked Lord Shaftesbury whether the Government would persist in its resolution. "No," he answered; "Exeter Hall is stronger than Ben Hall." So it has proved always, and, on the whole, it is good for England it should so prove. All the clubs in London, and all the newspaper writers, and all the governing classes, are powerless on those rare occasions when, as at the present time, the great Dissenting communities and the Evangelical party in the Church are decided upon action.

Of Sir Henry Storcks very little is known to the general public; but he has a considerable reputation amongst what I may call the administrative world. He has held a variety of subordinate Government appointments; the most important being the governorship of the Ionian Islands, after the embarrassments caused by Mr. Gladstone's ill-advised negotiations with the Phil-Hellene party in the Septinsular commonwealth. He is supposed to be a martinet, certainly not a man of very tender sympathies; but as long as he is just and fearless, as he is believed to be, the country has no cause to grumble at his appointment.

In politics there is very little stirring. The only noteworthy feature of the last few days has been Mr. Bright's speech in Birmingham, in which he went out of his way to express his confidence in the Ministry and to prophesy the success of reform. In the whole course of his life the great Radical orator never made a more brilliant speech than the one in question. The despondent tone which of late years has characterized his utterances was laid aside, and he spoke like a man who knew he was advocating a winning cause. And what is, perhaps, more significant, he alluded distinctly to the possibility of his some day being called to office. How far this confidence is justified, I cannot altogether tell. I know that during Lord Palmerston's lifetime Mr. Bright attached what I considered an exaggerated importance to his personal antagonism to reform; and I fancy that now he exaggerates the advantage to the cause of reform resulting from the fact of Lord Palmerston's removal from the stage of public life. My own opinion always has been that Palmerston was omnipotent not to any great extent from his personal qualities, but because he really represented the dislike of the governing classes to change. No doubt the party averse to interference with the established order of things has lost, in him, a most valuable supporter; but I am not sure at all that the ruling classes have become more enamored of liberalism, or the enfranchised classes more ardent in their desire for the suffrage, than they were during the days of the Palmerstonian Parliament. The Christmas holidays are now at hand, during which nobody has time for politics, and the interval between the New Year and the opening of Parliament is too short an one for any effective popular agitation to be set on foot. So we may, I think, safely reckon that the ministerial reform bill will be presented to Parliament unsupported by any strong outward excitement.

As a rule, the end of the year is a very active time in all literary and theatrical matters, but this year there is singularly little stirring. A new magazine has appeared, called the *Argosy*, of which Miss Isa Craig, the poetess, is editor, and wherein Mr. Charles Reade commences a new novel. It is the first experiment of a sixpenny illustrated magazine, and it is hard to see how there can be any margin of profit at such a price. Messrs. Moxon, the publishers, are said to be about to bring out a high-class magazine. In truth, if the present system goes on, it will soon be hard to find any large publishing firm without a magazine of their own. With the immense development of circulating libraries, and the extraordinary demand for novels at the present time, the publishing trade is, I suspect, changing its character. Nothing is so profitable to publish as a novel. Good or bad, it is run through the libraries as a certain sale; and if good or successful, it will run through edition after edition and fill the publisher's pockets. Moreover, experience has shown that the publication of a novel as a serial story in a magazine hardly, if at all, injures its sale as a complete work. The consequence is that publishers are anxious to realize the double profit, and start magazines for the purpose of bringing out the novels they have bought. Altogether this is a golden age for English novel-writers. Great as the supply of fiction is, the demand for it is still greater, and seems likely to increase. A thousand pounds is by no means an exorbitant price now-a-days for a novel from an author of any note; and far higher prices are frequently given. Miss Evans, for instance, is reported to have received £8,000 for "Romola," and possibly did receive at least half the amount. This popular passion for novels is leading to one odd alteration in our social literature. Signatures to magazine articles are already becoming more common. The competition between different magazines is so great that each wishes to attract the public by the names of its writers as well as by the matter written. The advertisement of a novel by a popular writer will send up the sale of a magazine at once; and, when the rule of anonymous writing is broken through in one instance, it is almost impossible to maintain it at all. Whether the change will prove altogether beneficial to literature I am not certain; but there is no doubt of its improving the prospects of the writers.

At the theatres the only Christmas novelty is the comparative decay of pantomimes and burlesques. For many years there has not been a Christmas when so few new pieces were announced as about to be brought out. At the Adelphi, Mr. Jefferson is still playing "Rip Van Winkle" with wonderful success. All the best judges agree that his impersonation is one of the finest pieces of acting we have seen for a great length of time in London. Whether, like Mr. Sothern, he is essentially a one-part actor, remains to be seen. Miss Bateman, after a fairly, though not brilliantly, successful provincial tour, appears in London next week for one farewell performance, and, I suppose, will not come back till "Leah" is forgotten and can be reproduced as a novelty. In any other character she has failed lamentably. Miss Adah Isaacs Menken's second season in London was a complete *fiasco;* and, after the "Child of the Sun" had been played for a short time, it had to be withdrawn for "Mazeppa," but without success. The "fair equestrienne," as the play-bills call her, is said to have gone to Paris to see whether the Parisians are as susceptible as Londoners and New Yorkers to the spectacle of a woman riding a horse without the usual conventional appendages of dress. Mr. Fechter, whose career has been one series of failures since he became sole manager and sole actor at his own theatre, is going to make another trial to secure the popularity he won so rapidly and lost so easily. He comes out at Christmas as Edgar Ravenswood, in the newly dramatized version of the "Bride of Lammermoor."

So much for the theatres, which have all been filled to overflowing this

week, owing to the cattle show which has been held at Islington. The papers are filled with doleful accounts of the cattle plague, but I never saw so many farmers in London as there have been this year, and the show itself is above the average.

THE UNSETTLED STATE OF EUROPE.

BELGIUM.

PARIS, Dec. 15, 1865.

I FULLY intended to add a letter concerning the state of Belgium to my recent ones on the general state of European affairs; but I did not expect that the death of King Leopold would give so much significance to the observations I was about to present to you on that little kingdom—small, indeed, by its size, but so important by its geographical position; by its ties with France on one side, and with Germany on the other; but, above all, by the nature of its political institutions. Belgium, since the revolution of 1851, which brought a Bonaparte to the French Empire, has remained an oasis of freedom between despotic and military governments; and no one can remain indifferent to the destinies of a nation which, since 1830, has proved capable of preserving its free institutions. The task was easy enough as long as Louis Philippe was on the throne of France; he had refused the crown of Belgium for his second son, the Duke de Nemours, in order not to alarm the jealousies of Europe; but the king chosen in place of the Duke de Nemours married one of his most accomplished daughters, the Princess Louise, whose memory is cherished in every Belgian heart. During the eighteen years of constitutional government which followed in France, Belgium remained, as it were, a satellite of its powerful neighbor; its liberties were the liberties which the French people then enjoyed; its constitution a copy of the French constitution; its parliament an obscure echo of that great parliament where sounded the voices of Guizot, Thiers, Barrot, De Tocqueville, and so many others now, alas! almost forgotten. After the convulsions of the revolution of 1848 and the usurpation of a new Bonaparte, Belgium found itself isolated, and imperilled by its isolation. It was only saved by the necessity under which Napoleon III. found himself placed of winning the alliance of England. The Crimean war gave a new lease of life to the little kingdom—the character of the king, not unjustly called the Nestor of European monarchs, was also a powerful obstacle to all schemes of French annexation.

I will not here attempt to describe this sovereign, who has succeeded in preserving his crown among so many perils. His political wisdom was great, but it was more founded on scepticism than on principle; his obedience to the will of the majorities ensured his power, but it was inspired by indifference and almost by contempt for the passions of those who surrounded him. A stranger among his people, imbued with all the prejudices of 1815, an English prince and a German prince at the same time, he preserved parliamentary institutions in his country while he despised parliamentary life; he cared more for England and for Germany than for the little country which had given him a crown; he was the voluntary and active servant of the treaties of 1815, and he owed his own aggrandizement to a violation of these treaties. He had no ambition, in a certain sense, and never tried to strengthen his prerogative. He had, at the same time, all the ambitions of a prince. He was proud of the importance he had acquired among the kings and emperors of Europe, and anxious to leave crowns to his children. It is not generally known that he took a great part in the preparations of the Mexican war, simply because his daughter was married to the Archduke Maximilian. He constantly remained one of the supporters of this unpopular enterprise. The Belgians knew him well; they knew that he looked upon them with the coldness of an astute and old diplomat; they knew that his mind was more often at Windsor or Coburg than at Brussels; they knew that, in the solitary palace of Lacken, surrounded by the walls of the most punctilious etiquette, he spent his hours in schemes which went far beyond the limit of their interests or their territory. But if they had but a cold sympathy for the man, they liked and respected the king who was the faithful guardian of their liberties and the impersonification of their nation. No sovereign in our times will have such a funeral as that which Brussels will witness to-morrow. The Belgians feel that they must stand around the memory of their first sovereign, if they wish to preserve their own independence. Already rumors are heard of French annexation; these rumors have excited great indignation in Belgium, and the enthusiasm which the people manifest at the present hour is mixed with feelings of fear and distrust. I do not think myself that the present ruler of France has any idea of annexing Belgium, to rob this small kingdom as a thief robs a traveller on the high road; he must wait. He will wait for the first blunders of the new King Leopold II., a young prince educated in aristocratic ideas, unpopular, in ill health, ill prepared for his new duties; he will wait till the actual fervor of enthusiasm is calmed; he will wait till the temptations offered to the Belgian army will have corrupted a part of it. This army, condemned to neutrality and to peace, is a source of weakness rather than strength to Belgium. If it should be merged in the French army, every officer would dream of great victories, of glorious expeditions—every soldier would feel in his knapsack that *baton de maréchal* which is said to be hidden in every French soldier's knapsack. He will wait, also, for the chances of the struggle of the two Belgian parties, the Catholics and the Liberals. Till now, the King has skilfully kept the political balance in perpetual motion, but if the royal prerogative is thrown altogether on one side, the other party may feel tempted to destroy the government. He must wait, also, till the working classes of Belgium feel interested in the suppression of all duties between the industrial districts of the little kingdom and the great consuming provinces of France.

Such are the elements upon which the ambition of the French Emperor can work, with the help of time and circumstances. For the present, he will do no more than to put them in action; he may, however, find himself obliged to act with decision, if his exterior policy and the general circumstances of Europe altered the present situation of France. Suppose, for example, that his policy should suffer a decided check in Mexico, that his army should be obliged to evacuate that territory after some reverses, he could not long remain under a sense of humiliation, and he would at once throw France into a great war and take Belgium as his first spoils. Suppose, also, that the policy of Bismarck should be triumphant—that Prussia should increase her territory and annex the greater part of Germany—France would probably be tempted to follow that example. The great danger of Europe lies in the fact that all suppositions are possible; the most foolish dream may be realized to-morrow, and the opinion of the wisest statesmen may be baffled. For there is no more any law of nations; the law of the strongest is the only law now recognized. Treaties are considered worthless the day after they have been signed. The cynical ambition and selfishness of the Second Empire has corrupted everything, nationalities as well as sovereigns. The only god now recognized is chance—a god which no honest heart ought to worship, for it helps the meanest as well as the noblest designs, and adds its irony to the bitterness of defeat. Montaigne speaks somewhere of the "âpre plaisir de braver dans son coin plus fort que soi." This pleasure even is refused, for we can despise, but we cannot brave, our tyrants. Belgium, in her little corner, can neither brave nor despise the man who, at two hours' notice, and without consulting any counsellors, can invade her whole territory and submit her to that intelligent, perfect, and crushing tyranny which has almost destroyed the intellectual and moral life of France.

Correspondence.

LOUISIANA LOYALTY.

BOSTON, Dec. 30, 1865.

TO THE EDITOR OF THE NATION:

I send you two more letters from our correspondent, in the hope that you will find them of sufficient importance to publish, in addition to those which I have already furnished you from time to time. E. A.

ALEXANDRIA, Louisiana, Dec. 6, 1865.

DEAR SIR: I propose, in this letter, to give you the result of my observations, and consequent impressions, regarding the opportunities and inducements for Northern men to engage in the culture of cotton. There is no lack of plantations in fair order, with fences up, quarters in good repair, gins, cotton-seed, fodder for mules, and, in many instances, abundant stock and agricultural implements, which can be had either by lease or purchase. Prices vary of course, very much depending upon the condition the place is in, its general locality, and proximity to market. Thus, the best places, those which are above overflow, and immediately upon the Mississippi or its tributaries, are held now at from sixty to one hundred dollars per acre, to sell; and for ten to fifteen dollars per acre, to lease. Back in the interior, however, places can be purchased for twenty-five, fifteen, or even ten dollars, when situated at some distance from a market, and where supplies are obtained with greater difficulty. The Northern man who engages in planting next season will have certain advantages of considerable importance over the Southerners, in the fact that the freedmen place far more confidence in the former; they will, almost without exception, trust a Northern man until he proves himself unworthy of the faith they place in him; their confidence once obtained is easily kept, and they will choose, everything else being equal, to work for and with the Northern man. Again, a very great advantage, so long as the military remain, is the fact that provost-marshals, their assistants and subordinates, will assist and protect a Northern man. This, however, will but prove a serious *dis*advantage if the soldiers are withdrawn. Against these advantages are to be set off the general and almost unanimous hostility of the natives. At present this is to a certain extent

suppressed and even disavowed, but it is none the less apparent to the most superficial observer that the Southerners, notwithstanding their professions, are, as a class, *exceedingly* hostile to "Yankees" intending to raise cotton, and Northern men must be prepared to expect obstructions of any kind that a jealous and envious malignity can suggest to be opposed to their success in planting. This opposition, however, can be overcome by perseverance and courage as long as the United States troops remain. The Northern man, however, will labor under a decided disadvantage in lacking experience in the raising of cotton, which, like everything else, requires years of practice to be perfectly understood. Those persons, therefore, who imagine that there is not much to be learned, and that they can master all difficulties in a single season, are very apt to find themselves mistaken, and in this matter of experience the Southerners possess an immense advantage. My own opinion is, that although considerable cotton will be raised next year, say a million bales (I do n't think it can exceed it), yet at least nine-tenths, and probably ninety-five per cent., will be raised under the supervision of Southerners. Many Southern men will make large fortunes next year without doubt. All those planters who were kind masters under the old system, and possess sufficient sagacity to take advantage of the surrounding circumstances, and by adapting themselves to the new order of things, and giving *their own personal* attention to the labor and welfare of their former slaves, manifest their hearty and willing approval, and honest and sincere adoption, of the new labor system now being inaugurated, have the greatest opportunity ever offered to mankind, I firmly believe, to enrich themselves beyond what they could ever have expected under the old system. There are many such men, and their number is being increased daily. The grand objection is the lack of adequate labor. There is an abundance of capital, but, at the outside, I calculate that not more than twenty-five per cent. of the negro labor available for cotton planting before the war can be got to work next season in the field. As a general thing the women will refuse to work in the field, which deprives the South of nearly half the labor it formerly possessed. Then among the young men (colored) so many have been killed, entered the army, and been drawn off into other fields of labor, that, as I said before, I cannot bring myself to believe, taking into consideration the desultory way in which the freedmen will labor under the new system, that more than twenty-five per cent. of the work done in the cotton-fields in 1860 will be accomplished in 1866. I have not alluded to the danger of a negro insurrection, which some people believe to be possible, because I am satisfied that there is no possibility of anything like an extended and organized plot among them. If they intended "to rise," they would be up to-day, so great are the injuries inflicted upon them in one or another manner.

Very respectfully yours,

A. W. K.

RED RIVER, near Alexandria, Dec. 1, 1865.

DEAR SIR: As an evidence of the state of feeling on the part of the people of the South towards Northerners, I desire to make known to you a circumstance which occurred in the city of New Orleans only last week. An officer of the United States Army went to the last new hotel opened in New Orleans—the St. James. Having occasion shortly after he had gone to his room to require the services of a waiter, he rang his bell; no one answering, he rang again and again, until, finding he could obtain no response, he went down and enquired the reason, when he was informed that the waiters had received orders from the steward not to wait upon Northern men or officers of the United States service. He demanded to see the steward, and asked if he had been correctly informed, and the steward replied that he *had* given such orders in obedience to instructions from the proprietors. He at once reported the case at headquarters, and a summons was issued for the proprietors of the St. James to explain their conduct. They did not *attempt* to conceal or deny the fact, but stated plainly and openly that they kept the hotel for *Southerners*, and did not desire or intend, if they could prevent it, to have any Northern men at the hotel. As might have been expected, and as the proprietors of the St. James undoubtedly expected, the St. James has become, in consequence of this event, the popular and fashionable hotel. It was certainly an admirable idea to obtain custom, but I mention it to show the public sentiment that will not only sustain, but defend and justify, such conduct. This is a *fact*, and is in every one's mouth. Mr. —— told me he had the particulars directly from one of the staff officers in New Orleans. The social ostracism which exists on the part of the people toward men from the North or officers of the army or navy, is perfectly well known, and a matter of frequent boast among the natives. Not a day passes but some Northern gentleman is grossly insulted; at all public meetings, places of amusement, etc., etc., they are sure to be marked as "Yankees," a term of opprobrium not to be equalled in the Southern vocabulary. In railway cars, on the steamers, everywhere, they are made to feel the hatred and detestation in which they are held. I rejoice heartily at the prospect of getting out of their miserable country, as I feel assured I could not remain here six months longer without being killed or killing some one myself; and as I do not desire either to have any one's blood upon my hands or to die down here, I am very glad to be able to get away.

I only repeat the language of nearly every United States officer with whom I have conversed, when I say that if ever the officers who have been stationed down South since the surrender (so called) have to do the work over again, they will go to work with a hearty good-will, and there will be none of the "rose-water policy" that formerly prevailed. They make us feel at every step that they are our bitter, relentless enemies, and most of the United States officers "accept the situation." The feeling of indignation among officers and men down here is very great and quite unanimous. Notwithstanding our army conducts itself with the utmost propriety, I sincerely believe that there is less of the Union sentiment among the leaders of society in New Orleans, Memphis, and in fact all their principal towns and cities, than when the war broke out. As for the country, Governor Brownlow's letter speaking of Tennessee will do as well for Mississippi or Alabama. I feel in as much danger as at any time during the war. Every one goes armed, even the brakemen on the railways wear revolvers. There is a smoldering volcano down here that needs a deluge of cold water before it will be safe to build upon. So far as the concession of negro suffrage from the people of the South is to be expected, there is quite as much chance of Massachusetts adopting slavery as a permanent institution. If these States are not held as conquered territory, they cannot be held beyond the next Presidential election, except the North be willing to receive them back again in the same character (omitting slavery alone) as they assumed before the war; that is, admitting the arrogant assumption of Southern superiority.

Very respectfully, A. W. K.

Literature.

LITERARY NOTES.

MESSRS. MOXON'S elegant little series of "Miniature Poets" has met with great success in England. To this, perhaps, the attractive style of their typography and embellishment has much contributed. The feeling against selected portions of an author's works is very strong among book-buyers here. Probably in England, where the high copyright price of modern books generally limits their circulation among the masses, it has less weight; and any part of the writings of men like Tennyson, Browning, Wordsworth, and others is regarded as a boon, when offered at a moderate price, by those who have little chance of ever becoming possessed of the whole. The above-mentioned poets are included in the volumes already published. Browning's volume is accompanied by a fine portrait, showing a strongly marked and very characteristic head, though to a casual observer there are few signs of the poet visible in the sturdy and resolute countenance. The selections from Wordsworth are made with great taste and feeling by Mr. Palgrave (editor of "The Golden Treasury," etc.), who has prepared a memoir, sanctioned by the family of the poet. The next volume will comprise "Selections from the Poetical Works of Thomas Hood," edited by Mr. Samuel Lucas. Each work is issued in shilling numbers in the hope of reaching the less elevated classes, and in a handsome miniature quarto volume for five shillings.

—It is impossible to resist a smile at the advertisement of an auction sale for the 16th of this month in the London literary journals. It might appropriately be headed, "Disposal of the stock-in-trade of a would-be Diplomat no longer of any use to the owner," as it comprises "the important Documentary and other State Papers, the property of the Hon. J. Slidell, minister of the Confederate States, etc., etc., including United States Public Documents and State Papers (a most valuable series of public documents), 310 volumes, 1853–9; American Archives, 9 vols. folio, 1837–53; American State Papers (rarely to be met with in Europe), 21 vols., 1833–4; 'United States Statutes at Large,' edited by Peters and Minot, 11 vols.; 'The United States Debates in Congress' (the American 'Hansard'), 126 volumes; 'Jefferson's Works,' 9 vols.; 'President Adams's Works,' 10 vols., etc., etc." The selection of this valuable diplomatic outfit does credit to Mr. Slidell's taste. How much of it was honestly come by is another question; most probably Uncle Sam's money paid for the greater part of it.

—The new edition recently issued by Messrs. Routledge of "Men of the Time: A Biographical Dictionary of Eminent Living Characters," is the most successful attempt we have seen in England to furnish a record of contemporaries distinguished in the various ways that bring men's names before the public and excite curiosity respecting them, which it is the main object of a work like the present to gratify. Though not comparing in bulk or number of names commemorated with the great French work of a similar character by Vapereau, the list is extensive, and comprises in its eight hundred and fifty pages accounts of nearly three thousand English, Continental, and American celebrities—the latter treated with a precision and correctness unusual in English publications. Omissions of names in every department may, of course, be detected, as perfection is impossible. The sketches are well condensed, chiefly confined to facts, omitting unnecessary expressions of opinion, and consequently leave little room for criticism. As a specimen of the kind and manner of the information conveyed, we extract the notice of a gentleman who deserves well of Americans:

"Vernon Harcourt, William George, second son of the Rev. W. Vernon Harcourt, and grandson of the late Archbishop of York, was born in 1827. He was educated at Trinity College, Cambridge, of which he was a scholar, and where he graduated in high honors in 1851. He was called to the bar at the Inner Temple in 1854, and goes the Home Circuit. He is a rising member of the parliamentary bar, and in December, 1863, he conducted the defence of Colonel Crawley when tried before a court-martial at Aldershott. He is known as one of the original contributors to the *Saturday Review* and as the author of various political pamphlets, and he is the writer of

'Letters on International Law' in the *Times*, published under the pseudonym of 'Historicus.' He married a daughter of the late Rt. Hon. Sir Geo. Cornwall and Lady Theresa Lewis."

—An examination of the one hundred and odd illustrated specimen-pages of the Christmas number of the London "Publishers' Circular" enables one to speak, almost as certainly as the books themselves could do, of the general aims and attractions of the embellished books produced for the usual purposes of the season. A few general remarks are suggested by them. The materials employed are exclusively wood engraving, photography, and color printing from stone or wood blocks, line engraving for all such purposes being practically dead. Never before in England has such varied talent been employed on designs for wood engravings. From the Royal Academician, Millais, downward, the best artists avail themselves of this medium without any of the sense of degradation that would have formerly been attached to the profession of a book illustrator. Every day, indeed, brings forward the names of new draughtsmen of merit who find an ample field for employment in the numerous illustrated works circulated through the country by myriads in penny numbers. While the drawing has improved, wood engraving is stationary, if not retrograde. A hard, scratchy style of affected realism, the corruption of Pre-Raphaelitism, has succeeded to the unmeaning prettinesses that adorned books a few years since, that will, if persisted in, soon grow disgusting to the public taste. As a few large establishments almost monopolize the business of wood engraving, there is too great a sameness of style and manner visible in the products. One concern alone, that of Messrs. Dalziel Brothers, executes more than two thousand of the cuts made use of in the illustrated books of the present season. In literature the old standards maintain to the fullest extent their accustomed supremacy. The "Pilgrim's Progress," "Don Quixote," "Robinson Crusoe," the "Arabian Nights," etc., "hold undisturbed their ancient reign," and the most eager rivalry of publishers is engaged in bringing out competing editions of them. Next to these, volumes of poetical selections are most in demand, and, for the young, books of natural history, adventure, travel, etc., in tropical and far-off countries. There is a comparative smallness about all English undertakings of this kind. The concentration of capital and energy that gives birth in France to the extensive and costly editions illustrated by Gustave Doré, and other similar books, seems entirely wanting in Britain, and a number of ephemeral works fritter away the means and talent that would, if united for the production of one grand object, produce something that might descend to coming ages.

—To the former varieties of European tourists in the United States is now added the graphic or artistic traveller, by the publication of "Transatlantic Sketches, or Sixty Days in America," a slim quarto, just brought out in London, containing thirty etchings of scenery, social life, and the closing incidents of the rebellion. They are connected together by a thin thread of journalism of no literary pretensions. The drawings show some talent, but the subjects are not selected with sufficient artistic skill to make them generally interesting. Two of them, representing the circumstances of the assassination of President Lincoln, have been deservedly censured by the London press. To judge from No. 7, "A New York Ferry-boat," their accuracy might be considered questionable, as the drawing entirely omits the paddle-boxes, paddles, etc., of the boat. Some of the scenes "in front," "in the trenches," etc., have more merit, and will acquire an historic value with time.

—That indefatigable man, Dr. Colenso, not satisfied with launching five solid octavo volumes full of abstruse arithmetical and philological criticism at the heads of his opponents in the space of three years, has signalized his departure from England by the publication of a learned work, "The Worship of Baalim in Israel," translated from the Dutch original of Dr. H. Oort, and enlarged with notes and appendices. Dr. Colenso gives as a reason for his book the want of familiarity of English students with the language and literature of Holland, and asserts, what will be new to many readers, that "some of the most valuable critical works of the present day on the Old and New Testament are only to be read in Dutch originals." The subject of the present book has great interest for all students of early Asiatic history from the light it throws on the pre-Mohammedan religion and state of Arabia. Its object is to prove that the ancient sanctuary of Mecca was founded about the time of David by a body of expatriated Israelites, who then established the great festival, etc., honored throughout the Eastern world when incorporated by Mohammed in his religion, the main object of which was to restore the ancient belief in Arabia, in opposition to the idolatry then current. It is unnecessary to say that the recognition of such a radical connection between Judaism and Mohammedanism would elucidate many phenomena now considered inexplicable, and open a new source for investigation. T whole subject is examined with great learning by Dr. Colenso, who maintains an independent position, occasionally dissenting from his author's conclusions.

—The second volume of a "History of the American War of the Rebellion," by Lieut.-Col. Fletcher, Scots Fusilier Guards, just issued in London, is occupied with the second year of the contest, 1862–3, ending with the campaign of Gettysburg—regarded by the author as the turning-point of the whole war. The book is well illustrated with maps and military plans, abundantly fortified with references to authorities, and has the outward appearance of a fair and unbiassed book, though in so extended a field for narration, where every incident has been subjected to microscopic scrutiny, many errors and misconceptions will undoubtedly be found. Col. Fletcher bears the testimony of a competent witness to the improvement wrought in the army by experience in the field. In reviewing the position at the close of his volume, he remarks that, at that time, "the young men who, at an earlier period of the war, had been promoted to high commands, had gained experience, their characters had become sobered, and after two years of training in the field, and in such rapidly recurring battle-fields as those two years had produced, they had acquired the gravity and *savoir faire* of older generals, combined with the strength and enterprise of youth. The staff had learned their duties, and in all the accessories of an army that of the Potomac offered a pattern which many military nations might do well to study."

—The author of "The Gentle Life" has just brought out a very prettily printed and embellished volume, containing the marrow of "Montaigne's Essays," in a style so similar to that in which his own lucubrations appear, that it would seem as if he desired to provoke comparison with the illustrious Gascon. The neat volume and beautiful typography will probably tempt many readers who might be repelled by the uncouth form of the old editions of Montaigne. The version given is that of Cotton, revised and corrected by the original. All the most interesting biographical essays are included, and all that come most nearly home to men's business and bosoms, and occasional notes by the editor help to free Montaigne from some of the obscurities that collect around an author of three centuries' standing. The attempt to re-introduce Montaigne from the study to the drawing-room is a laudable one, and will no doubt be successful.

—The rumor current in the newspapers respecting the last copyright decision of the English courts proves to be incorrect. No new principle was involved in the judgment of the Lord-Justices Turner and Knight Bruce, on the appeal from the Vice-Chancellor, who had decided that Miss Cummins's residence in Canada at the time of the publication of her book in England was sufficient to entitle her to the privileges allowed by the copyright act to an alien who first publishes his book in the British dominions when actually resident there. This action was confirmed by the Lord-Justices, and may be considered a fixed fact so far as any certainty can apply to this very cloudy subject. The copyright which an alien from any foreign country can thus secure is the same as a native enjoys, and the two are precisely on the same footing. Certainly, if summer travel during the next season sets towards the North, there will be a good and sufficient reason for it, as probably one man (not to mention women) out of every five has rushed into print on some occasion or other, and is good judge enough of the value of his own works to desire all lawful means of benefiting by them. Some acute Yankee might undoubtedly make money by the establishment of a new hotel or boarding-house across the frontier, specially adapted for the wants of authors. A sort of literary lying-in-hospital, well furnished with unlimited supplies of Maynard & Noyes's "best black," Gillott's pens, paper in large or small quantities, books of reference, and a few of the handy, indispensable men, publishers' hacks—never heard of, but whose work is everywhere visible—to assist in the final throes of composition, and ready to turn their hands to anything, from a title-page to an index. Seriously speaking, however, the advantages so easily gained have so much value that we imagine few books that bid fair for extended popularity will be issued without some attempts to secure them, when once the state of the case is generally known.

—The list of new periodicals started in England with the year still admits of extension. Two new ones are just announced, "The Household," a monthly magazine of domestic economy and home enjoyment, published by Messrs. Groombridge, and *The Working-Man*, a weekly, issued by Messrs. Cassel & Co., intended to form a record of social and industrial progress and a medium of communication between the thinkers and the workers of the present day who are now so prominently engaged in forwarding the true interests of the working-man. The leading idea of "The Contemporary Review"—which is to be a monthly, selling for half a crown, and a first-class magazine of criticism, theological, literary, and social—is that its contributors under the editor, Dean Alford, while holding loyally to belief in

the Articles of the Christian faith, are not afraid of collision with modern thought in its varied aspects and demands, and scorn to defend their belief by mere reticence or the artifices too commonly acquiesced in. Of the established magazines, the "Cornhill" will replace Mrs. Gaskell's nearly completed story with a new novel by Anthony Trollope. Mrs. Norton appears for the first time in the same monthly arena, a new tale by her, entitled "Old Sir Douglas," being announced as the chief attraction for "Macmillan's Magazine." "Good Words" depends on a story of modern English life by Mrs. Oliphant called "Madonna Mary." The newest venture of all, "The Argosy," puts forward Charles Reade's novel, "Griffith Gaunt, or Jealousy," reprinted here in the "Atlantic Monthly."

—Among the important enterprises silently under way among our publishers, demanding both time and large expenditures for their completion, Messrs. D. Appleton & Co. are engaged on one which, though not the greatest in bulk, has demanded a larger amount of editorial labor than any book previously undertaken in this country. It is not connected with their most successful "New American Cyclopædia," though it in a measure grew out of the former, as, unless the materials had been collected for that work, the design would probably never have been entertained. As "Webster's Dictionary" is a word-book of the language, so Messrs. Appleton's forthcoming work may be called a name-book, including under one alphabet every personal and geographical designation that the widest extent of reading could find occasion to refer to. From the great amount of matter, the explanations are condensed as much as possible, and it was intended to confine the whole in one volume similar in size to "Webster," but it is found, on trial, that two such volumes are absolutely necessary. The biographical portion will contain every name found in the great biographical collections of each nation, including every monarch that has reigned in any country or dynasty under the sun, and all the living celebrities of the world. In geography will be given every town in the United States, every English parish, and all the local names contained in the most extensive gazetteers, with innumerable additions and corrections in each department from private sources and researches. Repeated trials have led to the adoption of a style of typography admitting of a concentration of information on a single page really marvellous. In the smallest possible space the work will form a complete key to the past and present history of the world. Three years have already been employed on it by the editor and a competent staff of assistants; three more will very likely be required before it is ready for publication.

—Miss Catherine Macready, daughter of the eminent tragedian, will shortly appear as an authoress, with a volume entitled "Cowl and Cap, and Other Poems," dedicated to Henry Taylor. Mrs. F. A. Kemble Butler is preparing a collection of her poems, "with some never before published," in one volume. Miss Christina Rossetti's new volume of verse, "The Prince's Progress," will appear immediately, with designs by her brother, W. M. Rossetti, the Pre-Raphaelite artist.

—The list of announcements of Messrs. Hurd & Houghton, who are removing from Broadway to Broome Street, with the special object of concentrating their attention on their own publications to the exclusion of miscellaneous business, contains several new books in addition to the large number of illustrated Christmas and juvenile works just issued by them. The reprinted books are: "The Letters of Mozart," translated by Lady Wallace, in two vols. post 8vo; a "Brief Biographical Dictionary," by Rev. Charles Hale, with additions and corrections by William A. Wheeler, the American editor; "Essays on Art," by Francis Turner Palgrave, 12mo; and "Tales and Extravaganzas," by Thomas Hood. The works apparently original are: "The Poems of Miss Edna Dean Proctor," 16mo; "Driftings from the Stream of Life," a collection of fugitive poems, by Elizabeth Bogart, 12mo; "Poems of Truth and Affection," by Mrs. W. H. Milburn, 12mo; "Across the Continent," by Samuel Bowles, 12mo; "The Pilgrim's Wallet; or, Scraps of Travel gathered from Scotland to Switzerland;" and "Shakespeare's Mental Photography: A Companion for the Fireside," 16mo.

—That a man who for fifty years has occupied so conspicuous a place in public and private affairs as M. Dupin, *aîné*, the elder of the Dupins, should pass away comparatively unnoticed, is a proof how little men who outlive their contemporaries have to expect from the self-engrossed energy of the succeeding generation that knows them not. The successor to the chair of Cuvier in the Académie Française, one of the most distinguished orators of the day, a writer whose indefatigable pen attempted almost every branch of literature and produced works of distinguished merit in his own profession, an advocate and jurist of the very highest rank—the career of M. Dupin imperatively suggests a parallel with that of his friend, Lord Brougham, and it is impossible to avoid being struck with the many points of resemblance between them. M. Dupin was the junior by four years of Lord Brougham at the time of his recent death in his eighty-third year. Like him, his mental powers were enjoyed without perceptible failure to the latest moment, after an amount of labor—professional, political, etc.—perhaps never equalled by an individual. His capacity for work was enormous. Many years since the list of cases in which M. Dupin had been concerned in the law courts, most of them of great importance, exceeded four thousand in number, and his unpublished professional pleadings, opinions, etc., printed and manuscript, formed sixty large volumes in quarto. Though as ardent a politician as Lord Brougham, and richly gifted with an eloquence of the same species, fearful in sarcasm and rebuke, M. Dupin always subordinated politics to law in a greater degree, and thereby, possibly, showed the same prudence, in a country so unsettled in its government as France, that caused him to acquire the largest property ever amassed by a legal practitioner. His support was courted by all political parties, and was freely given to each as they gained the ascendency. He was a minister of the First Napoleon, the Restoration, Louis Philippe's Citizen Monarchy, the Republic, and the Second Empire, without compromising himself seriously as a partizan of either. His best known literary work, which was also of a professional caste, is his treatise on the legal aspects of the trial of Christ, "Jesus devant Caiphe et Pilate" (1855), written in answer to M. Salvador.

—Mr. Wm. J. Widdleton announces for speedy publication "Reminiscences of Printers, Authors, and Booksellers of New York," by Dr. John W. Francis—to be printed in uniform style with the author's "Old New York." It may be remembered that Dr. Francis was in his youth a printer, and one of his most favorite recollections was his professional connection with the then new art of stereotyping, for which, we believe, he claimed an American origin. The book will embody and preserve many fragments of the past that would, without it, soon perish from memory.

MILL ON COMTE.*

This book consists of two essays reprinted from recent numbers of "The Westminster Review," in which Mr. Mill, as one of the early English admirers of M. Comte, passes in review the two careers of this distinguished philosopher, re-stating and vindicating the fundamental doctrines of M. Comte's earlier work, the "Philosophie Positive," and breaking, for the first time, the long silence which his English admirers have maintained concerning his later performances.

Mr. Mill's judgment in regard to the "Philosophie Positive" is that, while it contains a few capital errors, its fundamental positions are essentially sound, and form a valuable original contribution to philosophy; but on the later speculations of M. Comte this judgment is reversed. These are regarded as in the main false and misleading, though filled with valuable thoughts and suggestions of thought in detail.

In Mr. Mill's first essay we have a very interesting discussion of the doctrines of positivism, both in the larger sense which this word has acquired since its introduction by M. Comte, and in the special sense in which it denotes what was original with M. Comte himself. The foundation of positivism was laid by M. Comte's predecessors in the school to which Mr. Mill himself professes allegiance, and, though now often referred to under the name of positivism, does not belong exclusively to M. Comte or his followers. This foundation is the doctrine of the relativity of human knowledge, which denies to human intelligence the power to know anything except phenomena and their orders of co-existence and sequence; which denies any other knowledge of causation than the facts of observed invariable and unconditional sequences in the orders of phenomena; and denies any other knowledge of substance than observed permanences in the groupings of phenomena. But M. Comte made this doctrine peculiarly his own by the use he made of it, and by the complete definition he gave of it in relation to older doctrines. This was done in his famous historical law, by which he traced the growth of the clear scientific or positive intelligence out of those earlier forms of philosophic belief which he called the theological and metaphysical philosophies.

Instead of using the term "theological," Mr. Mill would prefer to speak of the personal or volitional explanation of nature, touching those beliefs which ascribed the events of nature to the volitions of supernatural beings, and he prefers the term abstractional, or ontological, to the term metaphysical, used by M. Comte to designate those beliefs which ascribe the events of nature to the agency of essences, powers, forces, natures, and occult qualities, or, in a word, to "realized abstractions." And, instead of the term positive, Mr. Mill prefers phenomenal for its objective aspect, and for its

* "The Positive Philosophy of Auguste Comte. By John Stuart Mill." Boston: William V. Spencer. 1866. 8vo, pp. 182.

subjective the word experiential. But while he deems these changes of nomenclature desirable, he recognizes the right of an author to have his thoughts set forth by his critic in the terms he has chosen. Accordingly, in his further expositions, Mr. Mill adheres to M. Comte's nomenclature, but proceeds to set free the doctrine from certain misconceptions, which these terms have tended to confirm, not merely in the opponents of positivism, but in M. Comte himself.

Positivism is opposed to the theological conceptions of causation, not because these are proved false, but because they are neither self-evident nor capable of proof, and do not, therefore, involve in them any real knowledge. The volitional explanation of nature, whether in the form of fetichism, or under the more advanced conceptions of polytheism, or even under the final form of monotheism, must ever stand on conjecture and doubtful analogies, and can admit of nothing like proof or verification; and such conceptions are destined, M. Comte thinks, to die out with the advance and diffusion of positive science. With this latter opinion his critic does not agree, but, on the contrary, is anxious to free the essential positions of positivism from any such implication. In his inability to remain on the neutral ground of positivism, M. Comte lacked one of the virtues of a true philosopher, which his critic possesses in a marked degree—the power to maintain that commonly painful mental attitude, a suspended judgment. To entertain open questions was wholly opposed to M. Comte's tendencies as a thinker, and, accordingly, in his later speculations he does not hesitate to substitute a refined kind of fetichism in place of the current theism, not, indeed, as a true doctrine of science, but as a view of nature which we ought to entertain in our poetical and religious contemplations of it. The barrenness of science, its inability to satisfy the emotional side of our nature, is M. Comte's apology for the religious speculations to which he devoted his second career; but he is betrayed into calling his religious poetical views of nature by the name of "beliefs," thus sacrificing, at least in his language, the fundamental position of positivism.

In condemning the metaphysical or realistic explanations of nature, M. Comte excluded from legitimate science much that is called metaphysics, but which ought not to be regarded as such in M. Comte's use of the word. The science of logic considered as method, and the theory of association in psychology, are omitted from his classification of the sciences, though they do not fall under his description of metaphysical philosophy; that is, they do not suppose any abstract entities or independent realized abstractions as their foundation. Allowance being made for these omissions, his critic accepts his classification of the sciences, and defends its principle from the strictures of his opponents; this principle being to exhibit the sciences in the order of their dependence in their progress towards the positive or purely scientific state. Misconceptions of this classification have arisen, because this dependence does not exist while the sciences are in their empirical stages, and before they possess demonstrable truths.

The most admirable portions of M. Comte's earlier work, according to his critic, are those which trace out the historical development of society and philosophy. M. Comte's powers as an historian are second only to his philosophical powers as a systematizer. "Whoever disbelieves," says Mr. Mill, "that the philosophy of history can be made a science, should suspend his judgment until he has read these volumes of M. Comte. We do not affirm that they would certainly change his opinion; but we would strongly advise him to give them a chance."

But Mr. Mill "fails to see any scientific connection between M. Comte's theoretical explanation of the past progress of society and his proposals for future improvement." Excepting his analysis of history, "he has done nothing in sociology which does not require to be done over again, and better." M. Comte's attempts at a reformation of society belong chiefly to his second career, "in which the *savant*, historian, and philosopher of his former treatise came forth transfigured as the high priest of the religion of humanity." The essay in which Mr. Mill treats of this portion of M. Comte's speculations is one of the most admirable of his many admirable writings, and we earnestly recommend it to the serious attention of our readers. As keenly alive as any opponent could be to the ridiculous character in which M. Comte here appears, and really as much opposed to the general aims of his speculations, Mr. Mill does not, therefore, condemn or desert him; but, by an admirably just and discriminating analysis of his writings, seeks to trace his errors to their source, and to disengage from them the substantial merits of his views of social progress and religion.

A peculiar discipline, "*hygiène cérébrale*," by which M. Comte kept his mind isolated from the influence of other thinkers in this later career, and a "gigantic self-confidence" in which M. Comte surpassed even those philosophers whom he most nearly resembled, and another circumstance of a personal nature, his passion for Madame Clotilde de Vaux, and her influence in producing in him a "moral regeneration," explain in part the difference between his second career and his first. But the chief causes of his aberrations were philosophic. He fundamentally misconceived the proper office of a rule of life, an "error which is often but falsely charged against the whole class of utilitarian moralists; he required that the test of conduct should also be the exclusive motive to it;" that the good of others should be the sole aim as well as the supreme guide of conduct. This error arose from his passion for "unity," and his belief that all perfection consists in "unity" and "system;" and that the object of all morality is to reduce human life to a system in which there should be nothing arbitrary. All individualism was therefore to be sunk in duty, which should consist of complete self-devotion to the happiness of others; or, in M. Comte's language, egoism should give place to altruism. The Golden Rule was not enough for him. To do as we would be done by had, with him, the nature of a personal calculation. His morality had, therefore, all the austerity of asceticism, was as rigid as the Calvinism which teaches that "whatever is not a duty is a sin." Though adopting most of the features of his religious ceremonials from Catholicism, his morality was Protestant in its austerity, with no middle ground between salvation and saintship, no room for conduct which, without being obligatory, might be meritorious.

It is difficult to conceive how a religion which renounces all the common motives and incentives to a virtuous life could be efficacious in realizing any morality, even one less severe than M. Comte's; "but this is exactly the point," says Mr. Mill, "on which a doubt can hardly remain in an intelligent reader of M. Comte; and we join with him in contemning, as equally irrational and mean, the conception of human nature as incapable of giving its love and devoting its existence to any object which cannot afford in exchange an eternity of personal enjoyment."

The later portions of this essay are devoted to an account of the details of M. Comte's religious observances and rules of life. His love of "unity" and "systematization" and his "frenzy for regulation" carry him to the absurdest lengths; but, in spite of all this, Mr. Mill is willing to allow M. Comte's own estimate of his rank as a philosopher:

"M. Comte was accustomed to consider Descartes and Leibnitz as his principal precursors and the only great philosophers (among many thinkers of high philosophic capacity) in modern times. It was to their minds that he considered his own to bear the strongest resemblance. Though we have not so lofty an opinion of any of the three as M. Comte had, we think the assimilation just: these were, of all recorded thinkers, the two who bore most resemblance to M. Comte. They were like him in earnestness, like him, though scarcely equal to him, in confidence in themselves; they had the same extraordinary power of concatenation and co-ordination; they enriched human knowledge with great truths and great conceptions of method; they were, of all great scientific thinkers, the most consistent, and, for that reason, often the most absurd, because they shrank from no consequences, however contrary to common sense, to which their premises appeared to lead. Accordingly their names have come down to us associated with grand thoughts, with most important discoveries, and also with some of the most extravagantly wild and ludicrously absurd conceptions and theories which ever were solemnly propounded by thoughtful men. We think M. Comte as great as either of these philosophers, and hardly more extravagant. Were we to speak our whole mind, we should call him superior to them, not intrinsically, but by the exertion of equal intellectual power in a more advanced state of human preparation, but also in an age less tolerant of palpable absurdities, and to which those he has committed, if not in themselves greater, at least appear more ridiculous."

THE BELTON ESTATE.*

HERE, in the natural order of events, is a new novel by Mr. Trollope. This time it is Miss Clara Amedroz who is agitated by conflicting thoughts. Like most of Mr. Trollope's recent heroines, she is no longer in the first blush of youth; and her story, like most of Mr. Trollope's recent stories, is that of a woman standing irresolute between a better lover and a worse. She first rejects the better for the worse, and then rejects the worse for the better. This latter movement is final, and Captain Aylmer, like Crosbie, in "The Small House at Allington," has to put up with a red-nosed Lady Emily. The reader will surmise that we are not in "The Belton Estate" introduced to very new ground. The book is, nevertheless, to our mind, more readable than many of its predecessors. It is comparatively short, and has the advantage of being a single story, unencumbered by any subordinate or co-ordinate plot. The interest of Mr. Trollope's main narrative is usually so far from being intense that repeated interruption on behalf of the actors charged with the more strictly humorous business is often very near proving altogether fatal. To become involved in one of his love stories is very like sinking into a gentle slumber; and it is well known that when you are

* "The Belton Estate. By Anthony Trollope." Philadelphia: J. B. Lippincott & Co. 1866.

aroused from your slumber to see something which your well-meaning intruder considers very entertaining, it is a difficult matter to woo it back again. In the tale before us we slumber on gently to the end. There is no heroine but Miss Clara Amedroz, and no heroes but her two suitors. The lady loves amiss, but discovers it in time, and invests her affections more safely. Such, in strictness, is the substance of the tale; but it is filled out as Mr. Trollope alone knows how to fill out the primitive meagreness of his dramatic skeletons. The three persons whom we have mentioned are each a character in a way, and their sayings and doings, their comings and goings, are registered to the letter and timed to the minute. They write a number of letters, which are duly transcribed; they make frequent railway journeys by the down-train from London; they have cups of tea in their bed-rooms; and they do, in short, in the novel very much as the reader is doing out of it. We do not make these remarks in a tone of complaint. Mr. Trollope has been long enough before the public to have enabled it to take his measure. We do not open his books with the expectation of being thrilled, or convinced, or deeply moved in any way, and, accordingly, when we find one to be as flat as a Dutch landscape, we remind ourselves that we have wittingly travelled into Holland, and that we have no right to abuse the scenery for being in character. We reflect, moreover, that there are a vast number of excellent Dutchmen for whom this low-lying horizon has infinite charms. If we are passionate and egotistical, we turn our back upon them for a nation of irreclaimable dullards; but if we are critical and disinterested, we endeavor to view the prospect from a Dutch stand-point.

Looking at "The Belton Estate," then, from Mr. Trollope's own point of view, it is a very pleasing tale. It contains not a word against nature. It relates, with great knowledge, humor, and grace of style, the history of the affections of a charming young lady. No unlawful devices are resorted to in order to interest us. People and things are painted as they stand. Miss Clara Amedroz is charming only as two-thirds of her sex are charming—by the sweetness of her face and figure, the propriety of her manners, and the amiability of her disposition. Represented thus, without perversion or exaggeration, she engages our sympathy as one whom we can understand, from having known a hundred women exactly like her. Will Belton, the lover whom she finally accepts, is still more vividly natural. Even the critic, who judges the book strictly from a reader's stand-point, must admit that Mr. Trollope has drawn few better figures than this, or even (what is more to the purpose) that, as a representation, he is an approach to ideal excellence. The author understands him well in the life, and the reader understands him well in the book. As soon as he begins to talk we begin to know and to like him, as we know and like such men in the flesh after half an hour of their society. It is true that for many of us half an hour of their society is sufficient, and that here Will Belton is kept before us for days and weeks. No better reason for this is needed than the presumption that the author does not tire of such men so rapidly as we: men healthy, hearty, and shrewd, but men, as we take the liberty of declaring, utterly without mind. Mr. Trollope is simply unable to depict a *mind* in any liberal sense of the word. He tried it in John Grey in "Can You Forgive Her?" but most readers will agree that he failed to express very vividly this gentleman's scholarly intelligence. Will Belton is an enterprising young squire, with a head large enough for a hundred prejudices, but too small for a single opinion, and a heart competent—on the condition, however, as it seems to us, of considerable generous self-contraction on her part—to embrace Miss Amedroz.

The other lover, Captain Aylmer, is not as successful a figure as his rival, but he is yet a very fair likeness of a man who probably abounds in the ranks of that society from which Mr. Trollope recruits his characters, and who occurs, we venture to believe, in that society alone. Not that there are not in all the walks of life weak and passionless men who allow their mothers to bully their affianced wives, and who are utterly incompetent to entertain an idea. But in no other society than that to which Captain Aylmer belongs do such frigidity and such stupidity stand so little in the way of social success. They seem in his case, indeed, to be a passport to it. His prospects depend upon his being respectable, and his being respectable depends, apparently, on his being contemptible. We do not suppose, however, that Mr. Trollope likes him any better than we. In fact, Mr. Trollope never fails to betray his antipathy for mean people and mean actions. And antipathetic to his tastes as is Captain Aylmer's nature, it is the more creditable to him that he has described it so coolly, critically, and temperately. Mr. Trollope is never guilty of an excess in any direction, and the vice of his villain is of so mild a quality that it is powerless to prejudice him against his even milder virtues. These seem to us insufficient to account for Clara's passion, for we are bound to believe that for her it was a passion. As far as the reader sees, Captain Aylmer has done nothing to excite it and everything to quench it, and, indeed, we are quite taken by surprise when, after her aunt's death, she answers his proposal with so emphatic an affirmative. It is a pleasant surprise, however, to find any of Mr. Trollope's people doing a thing contrary to common sense. Nothing can be better—always from the Dutch point of view—than the management of the reaction in both parties against their engagement; but to base the rupture of a marriage engagement upon an indisposition on the part of the gentleman's mother that the lady shall maintain an acquaintance of long standing with another lady whose past history is discovered to offer a certain little vantage-point for scandal, is, even from the Dutch point of view, an unwarrantable piece of puerility. But the shabbiness of grand society—and especially the secret meannesses, parsimonies, and cruelties of the exemplary British matron—have as great an attraction for Mr. Trollope as they had for Thackeray; and the account of Clara's visit to the home of her intended, the description of the magnificent bullying of Lady Aylmer, and the picture of Miss Aylmer—"as ignorant, weak, and stupid a poor woman as you shall find anywhere in Europe"—make a sketch almost as relentless as the satire of "Vanity Fair" or the "Newcomes." There are several other passages equally clever, notably the chapter in which Belton delivers up Miss Amedroz to her lover's care at the hotel in London; and in which, secure in his expression elsewhere of Belton's superiority to Aylmer, the author feels that he can afford to make him still more delicately natural than he has made him already by contrasting him, *pro tempore*, very disadvantageously with his rival, and causing him to lose his temper and make a fool of himself.

Such praise as this we may freely bestow on the work before us, because, qualified by the important stricture which we have kept in reserve, we feel that it will not seem excessive. Our great objection to "The Belton Estate" is that, as we read it, we seemed to be reading a work written for children; a work prepared for minds unable to think; a work below the apprehension of the average man and woman, or, at the very most, on a level with it, and in no particular above it. "The Belton Estate" is a *stupid* book; and in a much deeper sense than that of being simply dull, for a dull book is always a book that might have been lively. A dull book is a failure. Mr. Trollope's story is stupid and a success. It is essentially, organically, consistently stupid; stupid in direct proportion to its strength. It is without a single idea. It is utterly incompetent to the primary functions of a book, of whatever nature, namely—to suggest thought. In a certain way, indeed, it suggests thought; but this is only on the ruins of its own existence as a book. It acts as the occasion, not as the cause, of thought. It indicates the manner in which a novel should *not*, on any account, be written. That it should deal exclusively with dull, flat, commonplace people was to be expected; and this need not be a fault; but it deals with such people as one of themselves; and this is what Lady Aylmer would call a "damning" fault. Mr. Trollope is a good observer; but he is literally nothing else. He is apparently as incapable of disengaging an idea as of drawing an inference. All his incidents are, if we may so express it, *empirical*. He has seen and heard every act and every speech that appears in his pages. That minds like his should exist, and exist in plenty, is neither to be wondered at nor to be deplored; but that such a mind as his should devote itself to writing novels, and that these novels should be successful, appears to us an extraordinary fact.

BUCHANAN'S POEMS.*

One has not to read far in this collection of Mr. Buchanan's poetry to see that he is a poet, but one should read it through before deciding on his defects and merits. This is due to him as well as to most young poets, the present transition school of verse reflecting so positively the characteristics of two or three of its masters that originality is about the last thing we look to find in a new disciple. Mr. Buchanan is an original poet, the reader will discover, but not to any great extent in his first volume, "Undertones," which contains nineteen poems on what may be carelessly considered classical subjects, exclusive of the poet's prologue, "To David in Heaven," and his epilogue, "To Mary on Earth." The former of these superfluous productions is commemorative of David Gray, the young Scottish poet, who came up to London with Mr. Buchanan some half-a-dozen or more years ago, with the wildest notions of what he would accomplish, looking for nothing less than immediate reputation, and, finally, a monument in Westminster Abbey, but who, poor fellow, soon died, leaving his unpublished verse to the tender care of Lord Houghton, Mr. Buchanan, and the pity of the English public. As a tribute to the memory of his friend, the prologue does honor to Mr. Buchan-

* "Poems. By Robert Buchanan." Boston: Roberts Brothers. 1866.

an's feelings; as a poem, it is scarcely more than a bad compound of the mannerisms of both the Brownings, particularly of the peculiar cadences and rhythms of Mrs. Browning, the jarring imperfection of whose double rhymes it caricatures. What can be worse, for instance, than such rhymes as "also" and "falls so," "you thought" and "truth ought," and "silence" and "mile hence?" The enthusiasm of the poem is of a cheap order, and, of course, vastly overrates the dead poet who is its subject.

About one-half of the classical poems are on mythological themes, and it is not so much the fault of the poet as of the time that they are not informed with the true Greek spirit. A good deal of supposed Greek poetry has been written in England within the last forty or fifty years, but we can recall only two poets who seem to have been Greeks by nature—John Keats and Walter Savage Landor, the latter a perfect pagan in more senses than one. We should include, perhaps, in this catalogue the Tennyson of "Enone" and "Ulysses," Mr. Matthew Arnold, whose little-known tragedy of "Merope" is a noble antique, and Mr. Algernon Charles Swinburne, whose "Atalanta in Calydon" is a notable production for a young man. As these poets, however, and others who might be named, have achieved their greatest successes in the school of romantic art, they can hardly be added to the list of really Greek poets. What the present rage for Homeric translation will end in cannot be foreseen, but hardly, we conjecture, in a new race of Greek poets in England. The defect of most of the modern attempts at Greek poetry comes from what may be called the reflective character of the modern mind, which is not content to exercise itself upon the simply sensuous element of Greek literature—the beautiful fictions of its divinities and the more or less historical legends of its heroes—but is fain to find something deeper in both, to impart some of its own tendencies to them; in short,

"To point a moral and adorn a tale."

This is a grave mistake, however skilfully it may be concealed, and, of course, Mr. Buchanan shares it in common with his contemporaries. The first of his semi-mythological poems, "Proteus," is not an endeavor to embody the old Greek ideal of a for ever changing deity, as the reader might naturally expect from its title, but an attempt to indicate on a broader scale the play of the eternal law of change, especially as shown in human creeds. Even in this it is not successful, since it is too brief to touch upon even the strong points of the ancient and modern mythologies. The theme of the next poem, "Ades," is much finer, but its execution is in no sense Greek, though it is certainly meritorious from the stand-point of the present schools of verse. Its chief faults are an entire absence of the dramatic, and an overwhelming presence of the descriptive, faculty—Ades, the speaker, never for a moment reminding us of himself, but always of the poet, whose puppet he is, and who makes him describe, in detail, his subterranean kingdom, the appearance of Persephone above him, how the earth looked around her, how he felt, what she did, etc., etc., through forty pretty stanzas. So abundant, indeed, are the details that the poem, as a whole, leaves no definite impression on the mind.

"Pan," which is in a higher mood, is a fair specimen of Mr. Buchanan's blank verse, which flows smoothly, after the luxuriant models of the day. It is picturesque as a matter of course. "The Satyr" would be a genuine Greek poem but for an occasional gleam of the over-refining modern element. The wild, rambling melody of its verse is well handled.

"Polypheme's Passion" contains some very clever writing, but can hardly be considered successful. The trivial part of Silenus is much better done than the more ambitious one of Polypheme, who may have been "spoony" on Galatea, but not to the extent that Mr. Buchanan portrays when he makes the grim old Cyclops say:

"That I have learned to tremble and to blush,
To drop this eyelid modestly, to flush
All over at the tiniest whispering sound,
To pick small dainty steps upon the ground,
As if I saw, and, seeing, fear'd to crush
Some crawling insect or the crimson-crown'd
Small daisy-flower that, wheresoe'er I pass,
Shuts up its little leaves upon the grass,
And thinks the shadowy eve has stolen down."

This is pretty poetry, certainly, but it does not suit the mouth of Polypheme even in love. Note, too, the excessive detail of this description of himself, which illustrates a vicious species of elaboration now very much in fashion:

"Unto the beach
I wearily strode, with great head bowed, and dragg'd
Foot echoes after me; and with no speech
On yonder shore, weedy and wet and cragg'd,
I stood, and in an agony of pain,
Look'd out with widening eyeball on the main."

Equally false and absurdly Gothic for a Greek poem is this picture of a sea-nymph, who is clearly the modern mermaid:

"I saw, far down upon the brown sea-strand,
A nymph, who held aloft in pearly hand
A white-toothed comb, and comb'd her locks of gold
Over a dank and shipwreck'd sailor lad."

"Penelope" is, perhaps, the best sustained of all Mr. Buchanan's would-be classical poems. The blank verse is often majestic, though it lacks compactness, and occasionally lets the reader down with such atrocious lines as these:

"Grown like the sampler coarse-complexionéd."
"Of tannéd haycocks and of slanted sheaves."
"And not a marinere, or man, or boy."

And such patent Tennysonisms as these:

"The ships
Have dipt up moistly from the under-world."
"Hast pluckt upon the windy plain of Troy."

Excellent as "Penelope" is, on the whole, an American poet—Mr. E. C. Stedman—has managed the same theme more artistically in a volume of "Lyrics and Idyls," published by him some five or six years since, and to which we refer the reader who may wish to compare his mode of treatment with Mr. Buchanan's.

"The Siren" is the most melodious piece of versification in the "Undertones," its minor ditties being as perfect of their kind as the exquisite little lyrics which Shelley seemed to write so easily. The conception of "Pygmalion the Sculptor" is, in some respects, fine, but the execution is quite bad, suggesting the earlier poetic writings of Mr. Alexander Smith. The fourth section, which depicts the awakening of the statue unto life, is much the best portion of the poem. "Fine Weather on the Digentia" is a rollicking bit of heathenism, which is very pleasant reading, though we are not certain that we like its over-fluent measures.

Enough, however, in the way of quotation from, and quotation upon, Mr. Buchanan's "Undertones," which we leave to his readers for whatever they choose to think them worth; except as poetical promises they have no value in our eyes. Very different are his "Idyls and Legends of Inverburn," a series of short pieces, mostly in blank verse, and on the commonest of themes, pages and chapters selected almost at random from that large and never-finished volume of tears and smiles,

"The short but simple annals of the poor."

We can recall nothing precisely like them in English poetry, and we have not forgotten the early idyllic flights of Wordsworth in such poems as "The Brothers," and one or two episodes in "The Excursion," the few good blank verse pieces of Coleridge, as "The Nightingale," "Frost at Midnight," etc., and the idyls of the Laureate, who has surpassed both these poets in idyllic writing, as he has most of the singers of his time, delineating the ordinary life of the English people with Flemish fidelity in "Dora," and that of the upper classes with almost an Italian richness of color in "The Gardener's Daughter." To say that Mr. Buchanan's idyls can be read with pleasure after Tennyson's, is to bestow high praise upon them. It speaks well, too, for his poetic growth since the "Undertones," and for the native strength of his genius, that his manner of handling his subjects is entirely his own, and generally just what a correct artistic taste would have dictated. His verse is fresh, natural, and apparently unstudied, flowing along as musically as a country brook. A slight flavor of his native tongue, in the shape of a few expressive Scottish phrases, which hardly need the glossary that he has given, adds, we think, to its charm, and imparts an air of reality to his creations, the best of which are invariably those which are the least ambitious. "Willie Baird," for instance, the story of an old Scottish schoolmaster whose favorite pupil, Willie Baird, was lost in the snow, is a model of the simple and pathetic in narrative verse; as is likewise "Poet Andrew," a touching idyl on the life and death of David Gray; and, better still, "The English Huswife's Gossip," a bit of cottage-chat about a weak-witted, tender-hearted natural, crossed in love. As a faithful study of character, we know of nothing finer in the whole range of English poetry. Admirable, also, is "The Two Babes," in which we have a glimpse of the canny side of the Scottish character, and "The Widow Mysie," which is the best thing in the way of humor that Mr. Buchanan has yet done. The more romantic pieces—as "Lord Ronald's Wife," "White Lily of Weardale Head," "The Fairy Foster-mother," "The Green Gnome," "The Legend of the Stepmother," "The Minister and the Elfin," and "The Legend of the Little Fay"—please us less, partly because they do not seem to have come so naturally as the idyls, and partly because they suggest other poems and poets. They are better, however, than any of the rhythmical pieces in the "Undertones," and show that Mr. Buchanan is learning the musical part of his art with commendable rapidity. "A London Idyl," which the American publishers have added to their reprint from the pages of the "Fortnightly Review," is a remarkable poem, in which the poet has completely triumphed over the difficulties of his subject—the vexed question of "the social evil"—producing a worthy companion-piece to Hood's famous "Bridge of Sighs," if not, indeed, surpassing that pathetic work of art,

That we think highly of Mr. Buchanan the reader may, perhaps, infer from what we have written, despite the fault which we found with him at the beginning. He seems to us one of the few young singers of the day who is really a poet, and who has a future before him.

THE ENGLISH REFORMATORY SYSTEM FOR CRIMINAL CHILDREN.*

It is one of the evidences of that slow-working but profound influence which Christianity exerts on the world, that such care and thought and effort have been bestowed on what once appeared the most worthless class of society—the abandoned and orphaned children of the street.

If one would best gauge the progress of mankind under the inspiration and teachings of the divine life passed eighteen centuries ago in the hills of Judea, he must compare the public market of Trajan, where the children of the street were exposed to sale to pimps and witches and slave-dealers, with the "colony" of Mettray, the Rauhe Haus of Hamburg, the Reformatory of Bristol, and the elaborate and kindly charities for children of New York and Boston. For the little outcast and vagrant, who was only thought good enough in Rome for the brothel, and the witches' cauldron, and the slave-market, there are now stately asylums, pleasant little cottages, carefully devised machinery for his improvement and health, and a devotion and effort which have scarcely a parallel in modern benevolence. The rich offer their means, and those of moderate incomes their time and thought, to redeem a class which at first sight appears hopeless and worthless.

Two conceptions naturally underlie the manifold efforts of modern society for the children of the poor—one the Christian idea of the value of the individual, and the other the democratic sense of the importance to all communities of raising up the lowest class. In England, the danger to society from the utterly degraded and vicious and destitute classes outweighs all other dangers, though the British public itself seldom regards it thus, and in all probability will be entirely inapprehensive of any explosion until the moment in which it breaks out.

The problem in Great Britain of treating the outcast and criminal children has far greater complication than it has here. The incredibly vast numbers of these unfortunate creatures, the close competition of labor, the little space and abundant supply of workers, and the constant danger of nurturing paupers, or of injuring the honest poor by helping the dishonest, are incessant obstacles in the way of a complete national system for improving the children cast out, vagrant and street-wandering. Then the sectarian differences come in—different creeds not being able to work together, as they do here, for practical ends; and, more, there comes the indifference which fixed distinctions of classes are apt to breed toward those at the bottom.

Still, an immense deal has been attempted and successfully accomplished in Great Britain for this class. In the efforts there as here there may be said to be two different schools or methods of treatment: one the congregated system, and the other the individual. The one, for convenience, encloses a large number of these children in a building, teaches them in mass, and supplies them by machinery (as all large establishments must be supplied), practising them usually in some very common industrial branch, and giving them common religious instruction; after eight or ten years, turning them out to such trades or places as they may be able to find for them. This may be considered to be the most convenient system. A greater number of children can be brought at once under its influence; but the effects are not so happy. The children have not what they demand most of all—*individual influence;* they are managed in mass; their virtues, like their teaching, become mechanical; they have not strength of character when they come forth, and are very open to temptation. Being supplied by machinery, they do not acquire the experience in the details of common households (the bringing water, cutting wood, taking care of lights, etc.) which they will need hereafter. Then such masses of little ones teach each other many things which had better never be known, and thus counteract the influence of teachers; they communicate, too, many physical maladies.

The other plan makes small households of children, under the close direction of teachers, who watch each child, adapting every method to the nature of the pupil, and who can put together those best fitted to influence each other favorably. Such a system naturally leads to small houses and gardens and to agricultural or garden work—the best of all for a poor child. Instead of being taught a trade which, like shoe-making or chair-bottoming, can never be of the least use to the boy, he is trained in the care of a farm or a garden—in which in all countries he easily obtains employment. Open-air life brings a healthier mind as well as body; the lad's temptations are less; he is allowed to earn and encouraged to save; he can, to a degree, choose how he will spend his money, and thus is really exercised in virtue. He grows up more as other boys do, under individual influence; his associations are better, and he has acquired the practical experience belonging to a small house or garden, which will be invaluable to him.

A girl is placed similarly in a small circle, and is taught plain housework—to wash and scrub and sew and dust and cook, and possibly, also, garden labor.

We need not be surprised that the family system, whether in Germany, or France, or England, works far better than the other.

In Great Britain the large refuges and asylums for poor or criminal children are decreasing, and smaller ones are being instituted, though the change is not going on as rapidly as could be desired. There are in England, in the country districts, 32 certified reformatories for boys, in each of which the average number of children is 80; and 13 for girls, in which the average number is 58. There are 21 certified "industrial schools" (where destitute children are lodged and supported) in which the average number is 52.

In London, the average is much larger, being in 25 boys' reformatories and industrial schools, 120; though in 24 similar institutions for girls it is only 49. It is worthy of notice that in one district of London (Middlesex) the congregated system is carried to its extreme—there being 800 boys in one institution (at Feltham). But on turning to the report for 1865 of the Inspector of Reformatories in Great Britain we note an instructive fact bearing on this. Though the number of adult offenders had decreased in 1864 as compared with 1863, being 116,149, against 121,068, the number of juvenile offenders for the kingdom had increased, being 8,857 in 1864 against 8,459 in 1863, and the increase is mostly made up in Middlesex and other portions of London, the increase in the former being 438 of boys, while the decrease is usually in those counties where the family system is most used.

This report gives the result of the whole system for Great Britain during 1861, '62, and '63. Out of 2,515 boys and 601 girls on the list of the reformatories, 52 boys and 18 girls have died; 538 boys and 92 girls are returned as unknown; of the remainder, 1,513 boys are doing well, 141 are of doubtful character, and 271 have been convicted. Of the 491 girls remaining, 358 are doing well, 90 are doubtful, 43 are convicted, or are known to be living in vice. The statistic results are thus stated: Boys from Protestant schools—Doing well, 68 per cent.; doubtful, or relapsed, 16 per cent.; unknown, 12 per cent. Girls from same—Doing well, 61 per cent.; doubtful, or relapsed, 18 per cent.; unknown, 18 per cent. Boys from Catholic schools—Doing well, 51 per cent.; doubtful, or relapsed, 30 per cent.; unknown, 16 per cent. Girls from same—Doing well, 55 per cent.; doubtful, or relapsed, 34 per cent.; unknown, 7 per cent.

In general, it may be summed up that about *seventy per cent.* of the criminal children brought under the influence of the English reformatories are saved to society. Greater results than these will, we believe, be obtained here when we abandon our stately buildings and machinery and masses of children with unprofitable trades, and erect little cottages on large farms, with small groups of children engaged in gardening and agriculture after the manner of the Hamburg Rauhe Haus, and under the great Christian principle of *individualization* of treatment.

The French are introducing the family system, or, as they call it, "agricultural colonies," in the treatment of all their youthful offenders. Why should not we in America recognize and adopt this reform?

* "Eighth Report of the Inspector for Reformatory and Industrial Schools in Great Britain." London. 1865.

THE MAGAZINES FOR JANUARY.

The passages from Hawthorne's note-books, given in the "Atlantic," form a deeply interesting study of the character and operation of great genius. It cannot be strange to any acquainted with the lives of men distinguished in the imaginative arts that Hawthorne should have sought constantly among ordinary men and things about him for the materials of his wonderful creations; but, after all, the effect upon us who behold the revelation of the simple means of magic is startling. As we read these passages, written with too great absorption in the final purpose to be consciously eloquent, and yet touched into beauty by the hand of one who could do nothing ill, it is as if one entered the laboratory of an alchemist and beheld the charcoal and the base metals he had chosen and prepared there for transmutation into gems and gold. Of course, the mysterious process cannot be revealed; the secret of that died with Hawthorne; but it is much to know how humbly and diligently he strove to master the knowledge of his craft by mastering the knowledge of his own life and other men's, and endeavored to find under the vulgarity of everyday appearances and things the viewless and subtle relations of humanity to nature and the supernatural.

Like Da Vinci, he went about the streets, studying the types of men he encountered, and swiftly and strongly sketched them in his book when he returned home; this would do for the face of a tormenting demon, and should grow after awhile into Roger Chillingworth; that woman's eyes, rich and passionate, would serve to express the sensuous delight and anguish of some such nature as that of Hester Prynne, or Zenobia, or Miriam; yonder visage, rapt and remorseless, would answer well as the guise of a blind, unconscious egotism like Hollingsworth's. Among the sketches of life in the note-book are indicated, without order or sequence, such plots and ideas for fiction as suggested themselves to the mind of the writer, and again there are fragments of reminiscence, and here and there an isolated thought or reflection. In all these is that tone of gloom which is characteristic of Hawthorne's books, and the germ of that peculiar incident, fantastic and inexplicable in one light and commonplace in another, which may be called the invention of his genius, while gleams of his tricksy and pathetic humor, more heart-breaking than the tragedy of other men, play over the sadness of the whole. We are beginning to arrive at some faint sense of Hawthorne's greatness—immeasurably vaster than that of any other American who ever wrote; and the day will no doubt come when these notes of his will have that supreme value which should attach to the records of a man as little likely to be reproduced in literature as Shakespeare is.—We take the Russian story of "Beauty and the Beast" to be Bayard Taylor's, and we think it one of the best things he has written. The introductory part is not graceful, but the story itself is admirably told, and the character which it develops is doubtless true to the last-century life of a people as yet only corruptly civilized on the surface.—There is no recent intelligence in "The High Tides of December."—There is little event and little development of character in the second part of Reade's story of "Griffith Gaunt," but the reader's interest is sustained by skilful artifices, and his animation is suspended for another month, before the lapse of which time he cannot know whether it is Gaunt or Neville has fallen in a duel.—We have not found either the remaining articles or the poems in this number of the "Atlantic" very interesting.

Imprimis, the verses in "Harper's" are, one and all, rubbish, including those "Five Minutes' Late" taken from "London Society," and printed, according to an amiable custom, without acknowledgment of their origin. "The Wishes Shop" is appropriated on the same principle, and it is hard to say whether "Fated Words" is or is not also borrowed. At any rate, it does not amount to a great deal; nor does a kindred essay on "Typographical Errors." The best original article is "Mr. Dod's Six Shots," which is written with a good deal of quiet humor, and concerns a variety of American life (that of the South-west) which we have always thought would be found most available for the purposes of an American novel, should an American novelist ever be born to write it. "An International Affair" is cleverly written, and there is some success in the way Captain Trevannion's character is indicated as that of a race of men almost unknown out of England:

"Trevannion was one of those anomalous men who exist elsewhere as curiosities, but whom the philosopher must visit England to see in their full development and possessing a normal status among mankind—not wondered at because they are universal. Nobody is surprised at elephants in Africa; nobody would look twice at Captain Trevannion in England.

"With us ignorance of everything beyond the blissful scope of one's own clique stands the outward and visible sign of thorough meanness of nature; enormous self-complacency, without the slightest effort to hide it or the least suspicion that it is a perpetual challenge to ridicule, is, *prima facie*, inconsistent with one's being an accomplished man of the world. But the average high-born Englishman lives in a portable and impenetrable Grosvenor Square. Its railing is not cracked by the summit frosts of Mount Blanc nor melted by the sun of the equator; the Grand Lama himself, without an introduction, cannot speak to him through its bars. He goes down in a diving-bell and wonders what 'our fellows' would say if they were there.

"All this seems episodical, but is not; for it has amounted to a generic description of the typical Englishman Trevannion, and leaves me nothing to describe save his *personnel*.

"He was six feet high. His hair was a handsome wavy blonde, parted in the middle. His moustache was yellower than his hair, his military whiskers a modulatory tone between the two. His manners were those of a great, green, conceited boy, 'brought up by hand' by the relentless Mrs. Joe Gargery, of British tradition. His life was one long chronic sin against the canons of natural good-breeding; but he would sooner have been unjointed alive than to have offended against those artificial regulations which proved his blood, gave him his entrée at Almack's, made him liked in his club, or secured his position in his regiment."

The story does not end in this number, and it has the fault that so far the author does nothing to solve the doubt whether he is telling a horse-story or a love-story.

We learn from the title-page of "The Catholic World" that it is a monthly eclectic magazine of general literature and science, as far (we observe in looking at the selections) as these may be studied in agreement with the principles of Romish belief. These selections, we must say, are judicious and interesting, and what original writing there is in the magazine—it is all confined to the notices of new publications—might be far worse in temper and something better in literature than it is. In fine, "The Catholic World" is liberal to Protestantism, considering that the editor believes we are all justly doomed to perdition; and as a literary magazine it is respectable, and all the more respectable because it is very handsomely printed.

A curious error in the title of "The Old Guard" will suggest itself to any one turning over its pages and observing the character of its contents. It gives a steel-plate engraving of the likeness of General Robert E. Lee, a man who has endeared himself to the nation by doing more than any other to destroy it; and, after the engraving, the magazine contains nothing but vulgar ribaldry concerning whatever is best and purest in our national life. In a word, the thing is Copperhead, and is all the more virulent because there is no longer any vulnerable part in the body politic for it to strike. As literature it is not to be considered, having no existence in that sense.

The "United States Service Magazine" opens with an article by Gen. T. J. Wood, entitled "Military Organization," in which we understand the writer to argue in favor of an effective system of conscription instead of voluntary enlistments for recruiting our army hereafter. He also advocates the strict observance of routine in the management of the military service, and declares that those who cut red tape during the war were not the great leaders, like Grant and Sherman, but the smaller sort who succeeded in nothing. The article on "Soldiers and Suffrage" opposes the voting of the military, on the ground that improper influences can be made to affect the soldiers' use of the franchise, and that the army, becoming accustomed to cast its vote in a body, would acquire a balance of power, and familiarize itself with a strength which it might, on some fatal occasion, be tempted to assert by violence. An officer, late of the Prussian army, contributes a paper on "New Military Organization in Prussia." The remaining papers are only military in their character in so far as they relate to incidents of the war. Oddly enough they outnumber the martial articles in a periodical peculiarly devoted to the interests of arms as a profession. Even a military magazine is not safe from the literature of the ladies, and one of the best of these secular articles in the publication before us is from the pen of a woman.

Of "Hours at Home" we scarcely know how to speak, further than to say that there is an evident purpose in the conductors of the magazine to improve its quality, to which we wish all success.

Obscure Diseases of the Brain and Mind. By Forbes Winslow, M.D., D.C.L., etc. (Henry C. Lea, Philadelphia.)—*On Wakefulness.* With an Introductory Chapter on the Physiology of Sleep. By William A. Hammond, M.D. (J. B. Lippincott & Co., Philadelphia.)—Dr. Winslow's object in publishing his treatise was to call the attention not only of practitioners, but of the public, to a much neglected branch of practical medicine. Diseases of the brain, though apt to manifest themselves suddenly, are generally found to have been long developing, and to have been early attended by symptoms which, if they had been understood by the intimate friends of the patient, would have given timely alarm and warning, and permitted measures to resist the growth of the malady. It is these incipient signs of the fatal disorder which ends in insanity, paralysis, apoplexy, or death which the author undertook to describe, with the motto *Principiis obsta*. His invaluable work has reached in England a third edition, and the second American is before us. This fact is proof of his success in making popular a subject which, spite of special effort to the contrary, is still invested with more or less of technicality. The order of treatment is as follows: 1. Morbid Phenomena of Intelligence; 2. Morbid States of Motion; 3. Morbid Conditions of Sensation; 4. Morbid Phenomena of the Special Senses; 5. Morbid Phenomena of Sleep and Dreaming; 6. Morbid Phenomena of Organic or Nutritive Life; 7. General Principles of Pathology, Treatment, and Prophylaxis. Under these heads is included almost every species of cerebral derangement, which is, whenever possible, compared with exceptional phenomena to be met with in healthy bodies. The discussion involves a mention of many important physical, psychological, and social problems. In chapter 19 is considered the question which divided MM. Bouillard and Velpeau last summer in the French Academy—Does the control of the organs of articulation reside in the anterior lobes of the brain; and can there be a lesion of these lobes without any impediment of speech? The authorities cited by Dr. Winslow seem to disprove the connection which M. Bouillard, in common with Gall, Combe, and other phrenologists, affirms. The loss of memory suggests the manner in which it may be strengthened, and also the disastrous consequences of overtaxing it, as is frequently the result of an unwise school discipline. Citing Emerson's pleasantry, that he "knew a witty physician who found theology in the biliary duct, and used to affirm that if there was disease of the liver the man became a Calvinist, and if that organ was sound he became a Unitarian," Dr. Winslow observes:

"Many a man has considered himself spiritually lost whilst under the mental depression caused by long-continued hepatic and gastric derangement; and instances occur of persons imagining themselves to be condemned to everlasting punishment, subjects of Satanic presence, and to hold *personal* converse with our Saviour, owing to the existence of visceral disease, and a congested condition of some one of the great vascular or nervous centres."

The painful character of the theme proposed fails to rob it of decided interest for the reader, and is offset as far as may be by the humanity of the writer, his agreeable style, and learned breadth of illustration. In the concluding chapter he has shed all the light now possible on the means of preventing and curing the insidious diseases already defined. The book ought to be in the possession of every intelligent family. It solves many a dark domestic mystery, and relieves of moral culpability the actions of a large class of irresponsible unfortunates.

Dr. Hammond's modest work is an elaboration of an essay published in the "New York Medical Journal" for May and June, 1865, afterwards circulated as a pamphlet, and now, deservedly, preserved in the form of an elegant book. It might properly be mainly incorporated under the fifth of the heads enumerated above. The purpose of the introductory chapter is to show that in sleep the brain is comparatively destitute of blood; whence it follows that the immediate cause of sleeplessness is an excess of blood in that organ. The treatment depends upon the nature of the cerebral congestion, whether it be active or passive; in the former case sedatives, in the latter stimulants, being employed. Dr. Winslow's treatise is often cited, and it is remarkable that, in the preface to the latter, Admiral Fitzroy is instanced as a prophet of the weather, whom the philosophical physician should imitate in announcing the premonitory symptoms of brain-disease, while Dr. Hammond's last word adduces the same distinguished personage as a solemn warning against disregarding the laws of our being. The admiral committed suicide last May under the depression caused by sleeplessness consequent upon overwork.

Richard Cobden, the Apostle of Free Trade. His Political Career and Public Services. By John McGilchrist. (Harper & Bros., New York.)—This little volume affords a very good outline of Mr. Cobden's life, and, while satisfying the immediate desire of the general reader in this country, will prepare a welcome for the grander biography, the truer study, which we may reasonably expect from some of that great man's associates and admirers. It is not simply as a friend of America, still less as an apostle of free trade, that the Sussex farmer's son invites our careful regard. The story of his progress to wealth and political influence, which he never abused, has an inestimable moral value for the young men of every land. The record of the Anti-Corn-Law League, which he inspired and sustained so liberally, contains the secret of all popular reforms for all time to come. We must not measure the achievements of that body twenty years ago, and in a country where newspapers were subjected to the burthen of stamps, by those of our own anti-slavery and loyal associations during the past five-and-thirty years. Thus it is not contemptible that in 1843–4 the League "had held a hundred and fifty meetings in parliamentary boroughs, and fifty in other places; fifteen thousand copies of the *League* newspaper—a most potent agent in the agitation—had been published weekly; more than two millions of tracts had been distributed; and in one year thirty thousand letters had been received, and three hundred thousand despatched." Chapter 7 sets forth Mr. Cobden's position in regard to the ten-hour bill, and deserves to be read by the advocates of the present eight-hour movement. Other chapters treat of the Crimean war, the China war, and the French treaty. To a great extent Mr. Cobden is made to speak for himself by extracts from his speeches, as was evidently judicious in Mr. McGilchrist, who seems to have had no access to private materials.

The Resources of California. By John S. Hittel. Second Edition, with an appendix on Oregon and Washington Territory. (A. Roman & Co., San Francisco; W. J. Widdleton, New York.)—The high-sounding, Virgilian preface in which Mr. Hittel tells us what he undertakes to write—meaning write about—must not prejudice the reader of this compact and useful volume. The wonders and the natural advantages of California, and its incalculable resources, may well lend an air of enthusiasm to a really business-like enumeration of them. At any rate, the author means clearly to state the sober truth, being very conscientious in referring to his authorities, and displaying an experience of the State which he describes that invites, and will secure, confidence. He treats, of course, of her topography, climate, geology, scenery, botany, zoology, agriculture, commerce, mining, and other industrial pursuits. He has not omitted, besides, to sketch her constitution and laws, and the present condition of her society. These latter chapters will be found as curious as that in which the attractions of the Yo Semite Valley are set forth. They show how the heresy that ours is a white man's country has vitiated the legislation and corrupted the manners of the Californians, placing negroes, Indians, and Chinamen under a social ban scarcely less grevious than that which rested on the free people of color in the late slave States. It is proper to remember, however, the peculiar circumstances in which the territory was settled, and to allow for the unprecedented immigration of a vast male population not yet nearly balanced by the opposite sex. If we find there great looseness of morals, we must attribute it not to the fact that marriage requires neither priest, magistrate, witnesses, nor consent of parents, nor to the ease with which a divorce can be obtained. The inequality of sexes is the chief and primary cause, both among the white and the other classes. As, in Cuba, there are 34,046 male to only 24 female Chinese, so in California there are 50,000 male to only 1,000 females of the same race. What wonder that "nine-tenths" of the latter "are prostitutes of the lowest class?" What wonder that every part of society is affected with a dearth of virtue proportioned to the dearth of women?

The Martyrs and Heroes of Illinois in the Great Rebellion. Edited by James Barnet. (J. Barnet, Chicago.)—*The Patriotism of Illinois.* By T. M. Eddy, D.D. Vol. I. (Clarke & Co., Chicago.)—Mr. Barnet's compilation, we infer from the preface, is composed of biographical sketches furnished at his request by the friends of the deceased, and obtained little more "editing" than the corrections of an intelligent printer. There is, therefore, no gradation of narrative, eulogy, or length of notice, and the coarse portraits on wood display no enterprise either in collecting or executing them. Apparently those only were engraved which were sent to the editor, or were easily procurable because of the notoriety of their originals. There are other evidences of a want of care and taste, but we need not dwell on them. President Lincoln and Gens. Farnsworth and Ransom are the three most distinguished personages on the roll; but it is worthy of remark that not one of these was a native of Illinois. In fact, less than a quarter of those enumerated were born within the State.

Much broader is the scope of Dr. Eddy's work, which awaits completion in another volume. He undertakes the civil and military history of Illinois during the war, comprising the relation of the State to the federal Government and a general survey of those campaigns in which her soldiers participated—chiefly, as it happened, in the West and Southwest. Narrative, biography, and obituary are thus blended. The author's plan of not confining himself strictly to chronology involves some repetition, but was perhaps the only practicable one, and might even be preferred from deliberate choice, as the scenic artist may for effectiveness prefer the diorama to the panorama. Eight chapters suffice for the first division of the subject, and the remainder treat either of battles or of heroes. It is the latter which have an especial local interest, and are, doubtless, the freshest and most valuable portions of the work, being based on official documents. The carefully composed and clearly printed text is accompanied by steel portraits which speak well for the Western Engraving Company of Chicago. Occasional typographical errors imply haste in publishing—*formerly* for formally, *explosives* for expletives, *our's* for ours, etc. But the volume as a whole is creditably issued.

Dynamic and Mechanic Teaching. By Wm. P. Atkinson. (Sever & Francis, Cambridge).—The pamphlet before us is, in substance, the lecture delivered by Mr. Atkinson before the American Institute of Instruction, at New Haven, last August. It arraigns the present mode of teaching—so largely from books, so little oral—as a sort of mechanism which tends to suppress the native instincts of childhood, its admiration and curious investigation of nature, and makes the study of science in later years repulsive and difficult. As opposed to this, the lecturer advocates the dynamic theory, best exemplified in the so-called object-teaching, which is now beginning to find favor. Here the instructor begins "the right end foremost," introducing ideas before the signs of ideas, and stimulating thought before loading the memory. This system, as Mr. Atkinson observes, is quite old, though but just obtaining recognition. It is Socratic in its operation. Rousseau embodied it in his "Emile," and it has had many supporters from his day to the present. We noticed not long ago Mr. Warren Burton's excellent treatise on this subject. To Mr. Atkinson we can cheerfully accord a high place among the reformers. He constantly reminds his hearers that his views will, probably, be considered utopian, but he as constantly shows that he is a very practical thinker, and is not so enthusiastic as to lose his footing on the earth. Every conscientious primary-school teacher must have felt how superficial are his qualifications for his profession, even judged by a much lower standard—botanist, naturalist, physiologist, physical philosopher, artist, religionary—than Mr. Atkinson's; and none but will be grateful for the wise suggestions and lofty encouragement of this admirable discourse.

An Address on the Limits of Education, read by Dr. Jacob Bigelow before the Massachusetts Institute of Technology, in November, has been printed by E. P. Dutton & Co., Boston. The lecturer glances rapidly at the prodigious development of the natural sciences during the present century, and concludes that the sphere of individual knowledge has been proportionally contracted, and will continue to grow less every year. The value of a collegiate education has consequently been greatly diminished, while the precious time consumed in just affording a glimpse of the vast field of human investigation might have been profitably devoted to a thorough and practical acquaintance with some part of it. The study of Greek is especially condemned as unserviceable, though not, as it seems to us, quite aptly before an institute of *technology.* Dr. Bigelow agrees with Mr. Atkinson about consulting the natural talent of every human being before deciding what his or her training shall be. His idea of general education is, that it should resemble that now furnished in our common schools, immediately after which should follow the peculiar education that is to prepare the pupil for his professional career. In other words, he would anticipate by one stage, at a saving of several years, the selection which usually succeeds the college course. The argument is a strong one, and is forcibly stated in the pamphlet before us. We notice a few inaccuracies, and one conspicuous example of bad taste. Not even a physician of the old school at the present day can courteously class homœopathy and Mormonism together, as is done here on page 12, under the head of "pseudo-sciences"—certainly as unphilosophical as insulting co-ordination.

READ WHAT THE PAPERS SAY:

"*It already excels every children's paper that we know of in this country.*"—*Chicago Evening Journal.*

THE LITTLE CORPORAL.—The *Pittsburg Christian Advocate* says: "The best paper for children published in this great country of ours, is *The Little Corporal.* It is a gem in the catalogue of monthlies."

Forney's Philadelphia *Daily Press* says of it: "*The Little Corporal is destined to become the great children's paper of America.*"

"*We cannot say too much in favor* of this beautiful paper."—*Bryan* [O.] *Press.*

"*The Little Corporal* sparkles all over with vivacity and entertainment. It is, without doubt, the best and cheapest children's gazette published anywhere."—*Marshall* [Mich.] *Statesman.*

"THE LITTLE CORPORAL.—Though modestly calling itself by a subordinate title, it is really a very major-general among the children's magazines."—*Chenango Telegraph* [Norwich, N. Y.]

"*The Little Corporal* is the most interesting and instructive monthly in the Union."—*Louisville Democrat.*

"*The Little Corporal* is universally admitted to be the best juvenile paper now in existence."—*Dubuque Daily Times.*

"We like it better than ever."—*N. W. C. Advocate.*

"It strikes the right key, and is admirable—neither heavy nor silly, but simple, fresh, buoyant, and earnest."—*Adams* [N. Y.] *Visitor.*

"Its influence for good can never be estimated."—*Grand Haven News.*

"Indeed, there is no paper of the kind published that approaches it as a juvenile journal."—*Poughkeepsie Daily Press.*

"Of all the children's papers which are competitors for the patronage of the public, we know of no one which so nearly approximates to our standard of what such a paper should be. The terms are most liberal."—*Batavia* [N. Y.] *Republican Advocate.*

"The children will be better and happier from reading it."—*Henry* [Ill.] *Courier.*

"*The Little Corporal* really excels any child's paper we have seen. The premium picture is of itself worth a year's subscription."—*Sandusky* [O.] *Reg.*

"We consider it the best, decidedly the best, journal of the kind for children that we ever saw."—*Star of the Valley* [Newville, Pa.]

"We have the first two numbers of *The Little Corporal*, which are edited with unusual ability. They sparkle with originality, and are attractive on every page."—*Worcester* [Mass.] *Palladium.*

"*The Little Corporal* is the most readable and interesting and instructive paper for children we have ever perused."—*Farmington* [Maine] *Chronicle.*

"It is the cleverest thing of its kind yet realized in America."—*Roxbury* [Mass.] *Journal.*

"THE LITTLE CORPORAL.—Certainly, we have seen nothing in the shape of a child's paper which could compare with this, which comes to us from over the prairies."—*Portland* [Maine] *Daily Press.*

The above are only a tithe of the many beautiful notices our young soldier has received.

FINANCIAL REVIEW.

Nation Office, Saturday Evening, Dec. 30, 1865.

The year closes on dull markets in general merchandise as well as produce and stocks. Prices show no material decline, but there is little disposition to purchase on speculation, and, were sales forced, current quotations would hardly be maintained. Without exception, the leading articles of general merchandise show a marked decline from the close of last year—when gold was nearly 100 per cent. higher than it is. The following table is interesting:

Articles.	Dec. 31, 1864.	Dec. 30, 1865.	Decline.
Hay, per 100 lbs	$ 85	$ 1 65	$ 80
Mess Pork, per bbl	40 50	31 00	9 50
Prime " "	35 00	24 00	11 00
Lard, per lb	22	17½	4½
State Butter, per lb	54	40	14
Cheese	19	15½	3½
Iron (Scotch), per ton	62 50	54 00	8 50
Copper, per lb	49	42	7
Cotton (Middlings), per lb	1 18	54	64
Crude Petroleum, per gal	50	40	10
Tobacco (Ky.), per lb	26½	18	8½
Sugar (Cuba), per lb	19¾	12	7¾
" (refined) "	26¼	16¼	10
Coffee, Java, per lb	48	37	11
" Rio "	43½	23½	20
Coal (anthracite) per ton	10 50	11 50	$1 advance.
Tea (Oolong), per lb	1 40	1 30	10
Wool (American Fleece), per lb	1 00	70	30
Shirtings, bleached, per yard	57	36	21
Flannels, per yard	70	46	24
Oak Leather, per lb	51	39	12
Hides (Buenos Ayres), per lb	35	18	17
Tar, per bbl	5 05	3 75	1 30

As a general rule, there has been a decline in dry goods during the year. But the rates of duty are so high that several classes of goods are nearly as high as they were. Owing to the influence of New England members, who are charged with being directly or indirectly interested in factories, the tariff has been so arranged as to exclude foreign competition altogether in several important branches of dry goods, and the consequence is that the price of these fabrics is nearly as high as it was when gold was 225, and the New England manufactories are declaring dividends of from 50 to 80 per cent. per annum. Woollen clothing, carpets, and druggets are named as articles which are still maintained at unnaturally high prices, through the protective operation of the tariff. As a general rule, the domestic dry goods interest is in a highly prosperous condition, and could well afford to confront competition from abroad. Some complaints are made of the harassing nature of the internal revenue system, and it is possible that by simplifying the arrangement of the taxes, and imposing one tax on the fabric manufactured instead of half a dozen on each process employed in the manufacture, the manufacturer might save time as well as money, and the revenue might not lose. The subject is already under the consideration of the proper committee of Congress.

Navigation on the canals ceased with the second week in December. The receipts of wheat and flour at tide-water for the year show a heavy falling off from previous years. The figures are:

	1863.	1864.	1865.
Flour, barrels	1,560,800	1,198,000	1,014,000
Wheat, bushels	22,206,900	15,916,700	10,579,200

Reducing the wheat to flour, the deficiency this year is rather over 1,250,000 barrels as compared with last year, and 2,872,340 barrels as compared with 1863. This is the result of speculation at the West, generated and fostered by the paper-money issues of the Government and the national banks. Formerly, the West sent its produce forward to tide-water as fast as it could be carried; now, farmers are rich and hold off for high prices; and at Chicago and other cereal centres speculation in food is rampant, and national banks grant speculators the means of holding back produce for a considerable time. It must be remembered that wheat is very much higher, in gold, at New York at the present time than it was a year ago. The receipts at tide-water of corn this year were 18,699,900 bushels, against only 10,352,400 bushels in 1864, and 20,693,600 bushels in 1863. It will be remembered that in many parts of the West the corn crop was a failure in 1864. This year the crop is believed to have been a full average. Of barley and rye alone the receipts this year have been in excess of those of 1864 and 1863. Oats, like wheat, show a deficiency. In provisions, cheese shows an increase; other items a deficiency.

In consequence of the accumulation of money at this point for the January dividends, the banks made an excellent report last Monday, showing an increase of $5,000,000 in legal tenders, and over $2,000,000 in deposits. The consequence has been a further relaxation in the rate of interest, and call loans must now be quoted at 6 per cent., with exceptions at 7 on miscellaneous collateral, and at 5 on Governments. Money is offered to the brokers at 7, with the condition that it shall lie two or three months. The idea is generally entertained in banking circles that we shall have very low rates for money in January and February; but should the Secretary avail himself of the advance in 5-20 bonds to float new "funding loans," these expectations would be very quickly disappointed.

Gold continues to flutter between 145 and 146¼, without animation. The Sub-Treasury is understood to have sold some parcels early in the week, but its operations have not been noticed since. It is probably calculated that the payment of the January interest will suffice to prevent a scarcity of

specie. Exchange remains about 109¼ for bankers' bills, and 108¾ to 109 for good commercial signatures. Notwithstanding the heavy importations, the demand for bills continues light, partly in consequence of the continued export of securities, and partly from the feeling among importers that, sooner or later, gold must fall materially.

The following table will show the course of prices during the week in the stock, exchange, gold, and money markets:

	Dec. 23.	Dec. 30.	Advance.	Decline.
United States Sixes of 1881	107⅛	108¼	¾	....
5-20 Bonds, old	103¼	105	1¾	....
5-20 Bonds of 1865	100⅝	102	1⅜	....
10-40 Bonds	92¾	93⅝	1⅛	....
7-30 Notes, second series	98	97⅝	⅝	....
New York Central	95⅛	96¾	⅞	....
Erie Railway	95¼	97⅛	2	....
Hudson River	108⅜	109	⅝	....
Reading Railroad	107⅛	106⅝	....	1
Michigan Southern	74⅝	74⅝	....	....
Cleveland and Pittsburg	84⅜	84⅛	....	⅜
Chicago and North-Western	35⅜	35¾	¼	....
" " " Preferred	61⅝	61⅞	¼	....
Chicago and Rock Island	107	108⅛	1⅛	....
P., Fort Wayne and Chicago	105¼	106	¾	....
Canton	45⅜	45⅞	⅜	....
Cumberland	44⅜	45	⅝	....
Mariposa	14¾	14¾	....	....
American Gold	145⅜	144¾	....	¾
Bankers' Bills on London	108¼	109¼	1	....
Call Loans	7	6	....	...

There was no material variation in prices till Friday, when a general upward movement was inaugurated. Governments took the lead with a general advance of 1¼a1¾ per cent. This was in part due to the advices, per *Australasian*, of an advance of 2½ per cent. in 5-20 bonds in London, consequent upon the receipt of the President's Message. It seems that our British friends—like some people here—took it for granted that the President would berate either England or France, or both, and had sold 5-20 bonds short in anticipation of a decline. When they discovered their error, they became buyers, and ran up the price nearly 1 per cent. a day for three days successively. A further advance is predicted in the private letters from England, and indeed it is reasonable to suppose that as Europeans come to understand this country, our bonds will not continue to sell at a price which yields the buyer thrice as large an increase as the same investment in consols. In the railway share market, dulness has been the rule during the week. On the regular Stock Exchange the bear interest predominates, and the theory is that the decline in railway earnings (of which the receipts of the Rock Island and Michigan Southern already show proof), combined with the actual commencement of contraction, must sooner or later lead to a heavy fall in prices. Among the Street speculators, and in the Open Board, the bull interest seems to be in the ascendency. These operators rely for success upon the actual expansion of money, which they consider more important than theoretical contraction in the future; and likewise upon the excessive sales of the bears. Every prominent railway stock is being "over-sold," and the chances are fair that the worse a concern's prospects are, the higher its stock may rise—in consequence of the "over-sales" of the bears. Erie was made scarce again on Friday, and the prices are now advanced to 97 in consequence. To-day the deliveries have been very slow indeed; perhaps not over one-fourth of the stock contracted to be delivered has actually reached the buyers' hands. Cash stock has been worth ¼ per cent. till Tuesday. Under these circumstances, higher prices are expected next week, which may enable the bull clique to dispose of some of their stock. No one believes that Erie, with its floating debt and enormous expenses, is worth 97. But if people will sell stocks which they have not got, and cannot get, intrinsic value will cease to govern market price. Pittsburg sold down to 81⅝ on Thursday, rallying to-day to 84½. The clique which put this stock up to 99 is understood to have sold out. A new party is understood to have been formed in Rock Island, and the price, which was 106¼ on Thursday, is now 108½, in the face of a decline in the earnings equal to $100,000 for the month. Michigan Southern is dull and neglected. New York Central has been manipulated with vigor; sales were made on Thursday as high as 97 per cent. No dividend of over 3 per cent. is expected. A movement—the usual winter movement—in Cumberland is predicted in certain circles; the company is not, however, in any better condition than formerly, and the stock, if it rises, will probably fall before long to the old figures.

Insurance Scrip.
WILLIAM C. GILMAN,
46 Pine Street, New York,
BUYS AND SELLS INSURANCE SCRIP.

GIFTS FOR CHRISTMAS AND NEW YEAR'S.

The interchange of presents among friends is the very surest cement of friendship. To confer a gift proves forethought, a desire to please, to serve, to be useful to a friend. Every one desires to be thought of by his or her friends when absent. To provide a present for a friend who is at a distance, is the most certain proof that you are thinking of that person.

If to think of our friends' present tastes, when at a distance from them, is to show a sincere concern for them, how much more strongly would this concern be manifested if we showed that our interest in them extended away into the future, and provided not for their mere personal gratification, but for their permanent welfare.

No better time could be chosen for advancing the generous principle of Life Insurance as applied to a provision for a wife or family.

If you stand in the relation of parent, can you manifest your affection for a married son or daughter better than by presenting him or her, as a gift, with the means of effecting a Life policy, for the protection of the young family?

If you stand in the relation of a wealthy brother or friend, can you not find an opportunity of making such a gift in a manner that will render it an acceptable compliment and an enduring benefit?

THE UNION MUTUAL

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom, and disinterested philanthropy. It offers superior advantages to the life-insuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy-holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies, by receiving a note for one-half, when the premium amounts to over $30.

THE UNION MUTUAL LIFE INSURANCE COMPANY.

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the policy-holders.

This Company will continue, as heretofore, to insure respectable parties against DISASTER BY FIRE

At fair and remunerating rates; extending, according to the terms on its Policies, the advantage of the

PARTICIPATION PLAN OF THE COMPANY,

pursued by it for several years past, with such great success and popularity, and profit to its customers: whereby

(75) SEVENTY-FIVE PER CENT. (75)

of the Profits, instead of being withdrawn from the Company in Dividends to Stockholders, is invested as a "SCRIP FUND," and held for greater protection of its Policyholders; and Scrip, bearing interest, is issued to Customers therefor: thus, IN THIS COMPANY, those who furnish the business, AND PAY THE PREMIUMS, derive the largest share of advantages; and when the accumulations of the SCRIP FUND shall exceed

FIVE HUNDRED THOUSAND DOLLARS,

the excess will be applied to PAY OFF the Scrip IN CASH in the order of its issue.

☞ The liberal and prompt adjustment of Claims for Loss, WHEN FAIR AND SQUARE, is a specialty with this Company.

NOTE.—This Company does not insure on the hazards of RIVER, LAKE, or INLAND NAVIGATION; confining itself strictly to a legitimate FIRE INSURANCE BUSINESS.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, or body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features; and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

It embraces among its regular or occasional contributors the following names:

HENRY W. LONGFELLOW,
JAMES RUSSELL LOWELL,
JOHN G. WHITTIER,
SAMUEL ELIOT (Ex-President Trin. College, Hartford),
PROFESSOR TORREY (Harvard),
DR. FRANCIS LIEBER,
PROFESSOR GOLDWIN SMITH (Oxford),
PROFESSOR CHILD (Harvard),
HENRY JAMES,
CHARLES E. NORTON,
JUDGE BOND (Baltimore),
EDMUND QUINCY,
PROFESSOR W. D. WHITNEY (Yale),
PROFESSOR D. C. GILMAN (Yale),
JUDGE DALY,
PROFESSOR DWIGHT (Columbia College),
PROFESSOR TAYLER LEWIS (Schenectady),
N. TOURGUENEFF,
AUGUSTE LAUGEL,
JUDGE WAYLAND,
FREDERICK LAW OLMSTED,
REV. DR. MCCLINTOCK,
REV. DR. JOS. P. THOMPSON,

REV. PHILLIPS BROOKS,

GROVER & BAKER'S

SEWING MACHINES

WERE AWARDED THE HIGHEST PREMIUMS

At the State Fairs of

New York,	Illinois,	Virginia,
New Jersey,	Michigan,	N. Carolina,
Vermont,	Wisconsin,	Tennessee,
Pennsylvania,	Iowa,	Alabama,
Ohio,	Kentucky,	Oregon,
Indiana,	Missouri,	California,

And at numerous Institute and County Fairs, including all the Fairs at which they were exhibited the past three years.

The GROVER & BAKER ELASTIC-STITCH SEWING MACHINE is superior to all others, for the following reasons:

1. The seam is stronger and more elastic than any other.

2. It is more easily managed, and is capable of doing a greater variety and range of work than any other.

3. It is capable of doing all the varieties of sewing done by other machines, and, in addition, executes beautiful embroidery and ornamental work.

GROVER & BAKER S. M. CO.,
495 Broadway, New York.

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars
They are more fire-proof.
They are more burglar-proof.
They are perfectly dry.
They do not lose their fire-proof qualities by age.
Manufactured only by

MARVIN & CO., 265 Broadway.
721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

COLLEGE HILL MILITARY SCHOOL,

POUGHKEEPSIE, N. Y.

OTIS BISBEE, A.M., PRINCIPAL.

"The Poughkeepsie College Military School paid a visit to this city yesterday (April 3). The pupils were uniformed in blue military style, and numbered between fifty and sixty in line. It was a beautiful affair, witnessed by thousands, many of whom are of the opinion that the cadets are under better discipline, and, in the military exercise, far superior to the celebrated Chicago Zouaves who visited our city some years ago."—*Albany Express.*

"Yesterday afternoon (April 3) the College Hill Cadets, of Poughkeepsie, visited our city on a pleasure excursion, and for the purpose of paying their respects to the Governor. After the review the Governor briefly addressed them. He said he was glad of the opportunity to welcome the company to the Capital of the State, and thank them for their visit. He was glad of this evidence of the success of the teachers, and the proficiency of the taught."—*Albany Evening Journal.*

FINANCIAL REVIEW 60

Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

ALMOST every governor of a loyal State whose message to the Legislature has thus far appeared, has favored a change in the basis of national representation from population to the number of legal voters. Governor Andrew, in his very fresh and original argument for reconstruction embodied in his valedictory last Thursday, takes ground against it. He holds that it would be to surrender our right to urge the voluntary enfranchisement of the blacks upon the white men of the South. Nor does he believe that the monopolists would prefer a larger representation for the State to complete control of the little that they have. Meanwhile the freedman would be an anomalous encumbrance, being *in* the community, but not *of* it. He would be in the way of white immigration, which would increase the political power of the State. Hence the present animosity against him is likely to be deepened, and his sufferings to be indefinitely prolonged. This view, it seems to us, is sound, and ought to be regarded. The proposed measure may be a clever political expedient for the present emergency, but it lacks the foresight of statesmanship, and does not deserve a place in the Constitution.

PROVOST-MARSHAL GENERAL FRY has furnished Congress with certain tables, in which he undertakes to show the number of men enlisted from each State under the several calls of the President. His figures are of little value. The absolute number is not known, nor will it ever be. The various terms of service allowed of re-enlistments to an indefinite extent, and no pains were taken to distinguish on the records the raw recruits from old campaigners. Neither is it possible to credit every State exactly with the total of her proper citizens who entered the army, owing to the latitude with which regiments were filled from any quarter of the country. Bounty-jumpers and deserters add to the confusion. In the latter months of recruiting, when money took the place of enthusiasm, one out of every three enrolled, in some places, cheated those who hired him, and escaped with his plunder. Between seven and eight hundred million dollars were expended in bounties by states, counties, cities, etc., and it is seriously proposed that the nation shall adopt this indebtedness. It would be a singular piece of economy in the Government to add to its present load of three thousand millions another thousand, incurred in avoiding the draft which it lawfully imposed.

FEW deaths of public men have been more sudden than that of Henry Winter Davis on Saturday week, and few have more to be regretted. He was of a very intense and resolute nature, well fitted to lead, but not always safe to follow. His successes while in Congress were brilliant, and generally by *coup de main*. He was the most devoted advocate of the Monroe Doctrine, and his views on reconstruction were no whit behind those of the foremost radical in Massachusetts. Differing from them as we did in some respects, we were glad to present them recently to the public through the columns of THE NATION, for they were those of an able, conscientious, patriotic man. They would, perhaps, have been little changed in expression if their author had foreseen that they were to be his last testament to the country, but they now have a value because of this fact which they did not have then.

THE message of Gov. Anderson, of Ohio, is chiefly remarkable for its onslaught upon the Monroe Doctrine. The governor objects to the retention of Ohio troops in service along the Rio Grande, now that the end of the war has been reached in the overthrow of the Confederacy. He has a very poor opinion of Mexico, and a very considerable respect for France; he thinks "Mr. Monroe was doubtless a very good, sensible, honest, old-fashioned sort of a President, according to the measure of his abilities;" while Washington was "the only really and truly grandly great man" that ever filled the same office. We are also told that "the age of American statesmanship has passed." There are worse historical and rhetorical mistakes than these. The authorship of the Monroe Doctrine is erroneously ascribed to Mr. Canning, and the argument against a war with France reposes on the assumption that the Doctrine binds us "to establish and usurp the office of a universal wet-nurse to all the orphan republics in the world." It is tolerably well understood that Mr. Monroe's intention was not republican propagandism, but resistance to despotic interference of the Old World with the New. It was a defensive policy, of which the motives were, nationally speaking, selfish and not philanthropic. Its strength consists not in any absurd notion of honor about standing by the declaration of a former President, but in the wisdom and logic of its conception. For all that, it is a grave matter to determine when attack is the best or the only defense, and the thoughtless will gain some instruction from Gov. Anderson's discussion.

MR. TIMOTHY DAVIS writes to us to say that if the "whitewash piece" (meaning our comments on Mr. Sumner's attack on the President) "cannot be washed or whitewashed so as to appear very different," he must give up reading THE NATION; which we consider an excellent illustration of the spirit in which large numbers of people read and think upon nearly all public questions. They not only do not want to hear, but carefully avoid hearing from any quarter, anything which does not exactly accord with their own previously formed opinions, and treat the expression of any such views in a newspaper for which they have subscribed as either a fraud or an insult. The state of mind into which men get by long persistence in this course, we consider most unfortunate, both in its influence on politics and on the national character; and one of the great objects of THE NATION is to do this very thing which Mr. Davis finds so objectionable—namely, to present him and others with the conclusions of writers whose first object in the composition of their articles is the expression of their honest thought, and not the concoction of doses to "suit" subscribers.

OUR readers will remember the surprise of the London *Spectator* at the pains our Southern correspondent has taken to describe the habits, manners, and scenery of the country through which he has been jour-

neying. The reason of Northern ignorance of the South, albeit a fragment of our common country, was in part the existence of slavery, and in part the vast extent of the region, with its comparatively few facilities for travel. How much we have to learn concerning other sections is shown in Mr. Bowles's account of his tour across the continent. The Mississippi River, even, has but just begun to be surveyed in an authentic manner. The Coast Survey improved the opportunities of the war to map about ninety miles of its course, from Cairo up to St. Mary's, and about forty-five miles above and below Vicksburg. The Tennessee River was mapped from its mouth to Muscle Shoals, and the lower Ohio from Paducah to Cairo.

A LARGE meeting was held on Saturday night at the Cooper Institute for the purpose of pressing the Monroe Doctrine on the attention of the Government—a very desirable thing to do, but one which needs to be done with great care. The pressure of public opinion is, in free countries, a most useful force; but then the Mexican question is in a stage when dexterity is of even more importance than strength. The meeting was in every way a most satisfactory one, or would have been, if Mr. Tomlinson had not allowed his rhetoric to run away with him, by prescribing for this republic the little job of preventing the establishment of monarchies on this continent under any circumstances. We should like to know what becomes of "the sovereignty of the people" if they may be restricted by foreign force to one form of government.

JEREMIAH QUINN, the clerk of the House of Delegates of the Irish Republic, has written a note to the daily papers which furnishes another striking indication of the scarcity of grammar amongst the Fenians. He says, "*All* reports appearing in the papers are not authorized by this Congress," meaning no reports, etc., are authorized by this Congress; and then gravely adds, "Nor will this House of Delegates recognize any such reports." We are informed, too, by one evidently sympathetic reporter, that the report of the Secretary of the Treasury was highly "sarcastic."

EDWARD B. KETCHUM was sentenced to the State Prison, last week, for four years and a half—an absurdly mild sentence compared either with the gravity of the offence he committed, or with those passed on criminals whose temptations were far less and ignorance far greater. The incident, however, would not be worthy of much notice, if it were not for the extraordinary motion made in arrest of judgment on behalf of persons whom Ketchum's evidence would save from considerable pecuniary loss. We are informed that an application for his pardon has been made, or is about to be made, on the same ground, the idea of its supporters evidently being that the public has no interest in his punishment whatever, and that if he can be made to save a few speculators a few thousands of dollars, all the ends of justice will be satisfied. We hope Governor Fenton will treat the petition, if it is ever offered to him, as it deserves; though the reasons he assigned for granting a commutation of punishment in a recent murder case indicate that he is in rather a bemuddled state of mind as to the nature of the pardoning power.

THE skating season has set in with all its rigor, the winter having tardily fulfilled its promise by giving us weather cold enough last week to freeze all the ponds in Central Park and out of it. As our friends the reporters have justly and gracefully said: "The ice-god's freezing kisses on those placid waters required to be frequent, and his embrace strong, to prison them up in their glassy bounds;" but the ice-god (whoever *that* deity is) having complied with these requirements, the sport of the skaters has begun. Naturally, there is burning of calcium lights, and on one of the ponds, near the Park, a band makes music to skate by until a late hour at night.

MR. INGERSOLL, of Illinois, has moved for a committee of enquiry, to find out whether any, and if so what, legislation is necessary to put down polygamy in Utah. Polygamy is, we believe, a common law offence, and if so, no legislation is necessary to warrant the prosecution and punishment of persons guilty of it wherever United States courts sit and have jurisdiction. The toleration which has been extended to it in Utah has been a scandal to our civilization, as well as to our jurisprudence. It cannot be attacked too soon, and in fact there is every reason to believe that it is rather to our indifference than Mormon tenacity that it now owes its existence.

THE chief-engineer of the monitor *Monadnock* reports that she is a perfect success in every respect. She is seaworthy, as impregnable as any of her class, and leads them all in point of speed. Lately she visited Havana, but so complete is her ventilation that the thermometer never ranged above a hundred degrees, and generally averaged three or four below. Her constructor was Mr. Hanscom, whose resignation is said to be now in the hands of the Navy Department. It ought hardly to be accepted.

ON New Year's Day, for the first time in the history of the Government, colored citizens of Washington paid their respects to the President.

THE Southern golden age, having suffered a temporary eclipse by the cloud of war, seems to have dawned again upon Richmond. The editors of the *Examiner* and *Enquirer* met in the hall of the State capital, and arranged a little difficulty concerning the public printing by an appeal to their revolvers. Six shots were exchanged, and the tassel of the cane carried by the marble statue of Washington was shot off. Except this damage to the fine arts, there was no harm done.

SOME unscrupulous persons have been offering to collect the "extra bounty," amounting, as they say, to from two to three hundred dollars, for soldiers who enlisted in 1861 and 1862, and at all other times when only one hundred dollars were paid. Comptroller Broadhead warns soldiers who enlisted before June 25, 1863, not to part with their discharges under this delusion. Addition legislation is necessary before the payment of any extra bounty can be authorized. A petition to that effect is in circulation in this city; but to ask is one thing, and to receive, another.

THERE is the same dismal outcry about houses in Boston as in New York. The scarcity is great, and the ordinary law of supply and demand does not seem to work. We are surprised there has been as yet no outcry raised against the "speculators" for keeping the price of houses up. If there be any truth in some of the politico-economical disquisitions to which the public has been treated during the past year, the capitalists must have refrained from building houses during the past year from a malignant desire to see rents high. Possibly, however, the high price of materials and the prevailing uncertainty as to the future of the currency may have had something to do with it.

MR. ROMERO has called the attention of Mr. Seward to a decree issued by Maximilian, establishing a system of peonage in Mexico, as part of a scheme for inducing Southerners to migrate to that country. Mr. Seward has called the attention of the French Government to it. It does not differ in principle from the laws which are being passed in most of the States of this Union, lately in rebellion, for the government of the freedmen and the regulation of labor.

IT is hard to surrender Mr. Ruskin to the company of Carlyle and Brougham, but his latest manifesto about Jamaica shakes our remaining respect for his moral vision. It is dreary enough to read the antitheses in which he pronounces happier the black slave in America, whose wife and children are torn from him, than the white Englishman who is prevented from marrying because he cannot support a wife. And there is something sadly ludicrous in his climax:

"Of all dishonorable and impious captivities of this age, the darkest was that of England to Russia, by which she was compelled to refuse to give Greece a king, when Greece besought one from her, and to permit that there should be set on the Acropolis throne no Governor

Eyre, nor anything like him, but such a shadow of a king as the black fates cast upon a nation for a curse, saying, 'Woe unto thee, O land! when thy king is a child.'"

THE English papers are becoming quite philosophical over the progress of events in America. The *Pall Mall Gazette* reads many of the others a lecture for not seeing things as they are sooner. But this is hardly fair. The writers in the *Times* really said, in 1860, as true things about the state of affairs in America as they say in 1865. The blindness which followed was wilful.

THE disaffected portion of the French Canadians are, it seems, about to follow the example of the Fenians, and establish a "Canadian Republic" in the State of New York, making Elmira the capital. This plan of setting up people's own republics, monarchies, and so forth, in foreign countries, will hereafter rank, next after the representative system, as the greatest invention of the political art made in modern times. Until now persons whose country was pining under a foreign yoke, or suffering from the rule of a tyrant, had either to suffer on in silence or else commit themselves to the dark and dangerous ways of conspiracy or revolt. But hereafter all they will have to do, not only to procure relief from their sufferings, but to restore their nationality, will be to move to the United States, hire a house, hoist a flag, and buy an assortment of office furniture. It makes one very sad to think how many patriots during the last eighty years have gone down to the grave broken-hearted through ignorance of this simple and cheap device. At present it seems likely that the American people will shortly have an opportunity of studying all forms of government at their own doors. Unless we are greatly mistaken, the various ousted monarchs will not allow the republics to monopolize the advantages offered by this country, and we may expect to see the King of Naples, the young Duke of Modena, Henry V. of France, all living in palaces in Fifth Avenue, with Swiss guards at the door, and the whole machinery of their governments in full operation. And we take the liberty of saying that it will reflect little credit on the Orleans princes if they suffer this opportunity of restoring the throne of their father to escape them, as we believe several furnished houses with all the modern conveniences, and suitable for any form of government or size of nationality, are still to be had on application to Homer Morgan or any other prominent real-estate agent—rent, of course, payable quarterly, in advance.

THE last news from Jamaica proves the accuracy of the accounts which we published in the earlier numbers of THE NATION of the political condition of the island. The late massacre resolves itself more clearly, the more that is known of it, into an attempt on the part of an unscrupulous oligarchy to monopolize the government of the island in form as well as in fact, and make the bondage of the lower classes hopeless as well as grievous. The Home Government has now at last taken the island into its own hands, and the blacks will have a tribunal to appeal to over which religion and humanity still retain some control.

THE commercial treaty recently concluded between Austria and England will take effect on the 1st of January, 1867. The two powers agree to treat each other on the footing of the most favored nations, and the Austrian tariff is to be gradually modified according to the principles of the Anglo-French commercial treaty. It is supposed that the new treaty will give particular satisfaction in Hungary, where the ideas of free trade prevail, and where most of the Austrian wines are grown, which will now be introduced into England.

A MURDER inspired by religious scruples has lately taken place in Paris. The head cook of a restaurant, named Domec, was stabbed to the heart by one of his assistants, who immediately called the police and gave himself up, saying that he had no motive in killing Domec, but that he had long been haunted by a desire of suicide, and that he had done this murder that he might be condemned to death, and be brought to repentance. This circuitous route to a contrite spirit will doubtless suggest the Chinese mode of roasting a pig by setting fire to a house in order to cook the suckling in the adjoining sty. The murderer of Domec was condemned to twenty years' imprisonment.

ALEXANDRE BIXIO, a well-known French statesman, is recently dead in his fifty-sixth year. He was a man of liberal views and strong character, and of such singularly good health that, until his last sickness, no malady had ever prostrated him, though he was obliged to keep his bed after receiving, in the June battles of 1848, a shot that entered his stomach and came out of his back.

LAMARTINE is again passing round the hat for help towards that "definitive settlement" which so persistently eludes the embarrassed poet. This time he attacks the subscribers to his *Journal pour Tous*; but there is no probability that it will be *une fois pour toutes*.

MADAME LOUISE COLET writes to the *Journal des Débats* rather more particulars concerning her troubles at Ischia than people generally will care to read. Madame Colet's trouble arose through the suspicion of the natives that she had brought cholera into their island by her love for poisoning. This was rather cruel to Madame Colet, for she was far more inclined to praise than poison Italians, and the worst thing she ever did was to write the silliest imaginable book in their honor, which was called "L'Italie des Italiens." She had come to live in Ischia because she adored the Italian character, and at the moment the mob summoned her to leave the island, she was writing verses in celebration of its beauty and her life there. Being a Frenchwoman and an authoress, she refused to stir, and was besieged in her house two days by the superstitious and furious populace, who threatened her life. At length succor arrived from Naples, but only to bring Madame Colet away from Ischia, where she could not be safe. How the suspicion against her arose is not known.

THE *Correspondencia* newspaper of Madrid declares that the Queen of Spain has no idea of asking the Cortes to take the oath of allegiance to the Prince of Asturias, with a view to possible abdication. Majesty in this case forms no exception to the rule by which office-holders are governed: "Few die and none resign."

THE trial of the brigand chief Ciardullo, and several members of his band, took place at Salerno, in Naples, on the 10th of November, and on the 12th the wretches were all shot. The testimony developed horrors of crimes not unfamiliar to those acquainted with the history of brigandage, but such as we hesitate to recount here. Some of the witnesses against the robbers were men who had once been their prisoners, and who exposed in court the mutilations they had suffered; cropped ears, amputated fingers, and the like. Three women appeared against the brigands, who had killed their sons by throwing them upon the ground and dancing upon their abdomens, till the entrails burst forth. Other witnesses had seen women ravished by the whole band of robbers, and then put to death. Ciardullo alone questioned the testimony against himself and his fellows, who remained perfectly mute and impassible in the midst of the furious people. According to the Italian military law against brigandage, the robbers were shot in the back.

CONGRESS.

WASHINGTON, Jan. 6, 1866.

THE thin aspect of both Houses of Congress yesterday gave token that the holidays are not yet fairly ended. Not more than seventy-five out of one hundred and eighty-two representatives, had returned to their legislative duties. After a brief session, rendered still briefer than customary by the inexorable Thaddeus Stevens, who holds the business of the House in the hollow of his hand, and who stopped the running fire of resolutions, bills, and motions by moving to go into Committee of the Whole, the House adjourned (as the Senate had already done) till Monday. No business, in fact, could have been done without a quorum.

There are some indications that the President is about to follow up the blow he has struck in behalf of a speedy restoration of the South by turning the powerful engine of federal patronage in the same direction. This would tend to complicate the issue, and some predict that

it would at once lower the tone of leading Congressmen were they to find their interests arrayed against their principles. But, however great the temptations of winning or keeping federal office for their political friends, there is little prospect of a majority being found fickle enough to surrender their deliberate convictions to such considerations as these.

It is very true that the President has the power to make a most sweeping and proscriptive attempt to overcome the opposition in Congress. He can begin by reconstructing his Cabinet to-morrow, and in a few weeks he could have all the offices under the Government, except the elective ones and those held during good behavior, filled by men of his own way of thinking. The only check upon this lies in the modicum of executive power confided to the Senate, of confirming or rejecting the appointees of the President. The patronage which is virtually at the disposal of the Executive is prodigious, and is far greater now than at any former period.

The Treasury Department is having much trouble in finding Southern revenue officers who can take the test oath of 1862. It appears from Secretary McCulloch's reply to Mr. Sumner's resolution of enquiry, that many of these offices are vacant, and that about fifty officers who have received their commissions have not taken the oath, or have subscribed to it with omissions or qualifications. No salaries, however, have been paid these recusants, except, inadvertently, in a single instance; and, indeed, the act expressly prohibits any such payment. The Secretary asks for an immediate modification of the act, so as to remove this disability, as he "has not supposed it would be the policy of Congress to subject the people of the South to the humiliation, or the revenue system to the odium, of employing Northern men to collect federal taxes in the Southern States." This presents an embarrassing question to the body which so recently voted, by an immense majority, that this obnoxious oath ought to be maintained in its full force. On the one hand, the difficulty of finding men of any standing in the South who have had no share in the rebellion to fill the various federal offices is insurmountable; on the other hand, the repeal of the law would render it extremely difficult so to discriminate as to avoid bestowing office upon the bitter enemies of the Government.

There is one aspect, the importance of which cannot be overrated, in which the speedy re-admission of the Southern States might have a disastrous result. It is the united testimony of observers and travellers in that region that the people everywhere are against any taxation for the payment of the Federal debt. Now it is neither very unnatural nor very wicked that these people, who have so lately been forced to succumb to a power they have been fighting against for four years, should object to being taxed to pay the cost of their own defeat. But, viewed as a practical matter, what would be the effect upon Government securities of the immediate admission to Congress of 58 Southern Representatives and 22 Senators, nearly all of whom could be counted on as determined repudiationists? It would hardly be a safe thing for the national credit to have such a body of men in Congress, reinforced, as they would probably be, by a considerable number of Northern men ready to go for at least qualified repudiation.

DIARY.

Friday, January 5, 1866.—In the Senate, Mr. Sumner presented petitions from colored citizens of Alabama and Mississippi, praying for protection and the right of suffrage. Also a petition from colored citizens of Colorado, remonstrating against the admission of that territory as a State with a constitution disfranchising negro men. All were referred. Mr. Lane presented resolutions of the Legislature of Indiana against foreign interference in Mexico. Referred. Mr. Sumner offered a bill to provide for the revision and consolidation of the Statutes of the United States into a single volume. Referred. Mr. Trumbull offered a bill to enlarge the powers of the Freedmen's Bureau, investing its officers with judicial functions in certain cases. Referred. Also, a bill to protect all persons in the United States in their civil rights [in pursuance of the second clause of the Constitutional Amendment abolishing slavery]. Referred. Mr. Sumner offered a proposed amendment to the Constitution, for the protection of the national debt and the rejection of the rebel debt. Referred. Also, a resolution enquiring of the President respecting Provisional Governors in the rebel States, their instructions, salaries, and oath of office; also, asking for copies of all communications to and from them, and of all constitutions, etc., purporting to have been adopted in such States. Passed. Adjourned to Monday, January 8.

In the House of Representatives, Mr. Ingersoll offered a resolution looking to further legislation for the suppression of polygamy in Utah. Referred. Resolutions were offered looking to the continuance of the Veteran Reserve Corps, and its attachment to the Freedmen's Bureau; also for the extension of the provisions of the Homestead Law to all the public lands in Mississippi, Alabama, Louisiana, Arkansas, and Florida. Referred. Mr. Spalding, of Ohio, spoke in favor of universal suffrage, expressing confidence in the President, but regretting that he had dismissed his provisional governors without waiting for the action of Congress, and claiming for that body the sole power to admit new States into the Union, and to guarantee to them a republican form of government. Adjourned to January 8.

THE FREEDMEN.

Gen. Gregory, just returned from a tour of seven hundred miles, most of which was performed on horseback, into the interior of Texas, reports as follows:

"I believe we have an abundant supply of subsistence to meet the demands of all, white and black, for the coming year. The cotton crop, although not probably more than half as large as it has been some previous years, was so well gathered, and demands such high prices, that it will bring more wealth into the State than any which has heretofore been thrown into the market.

"This has been accomplished principally by the labor of freedmen, and at a time, too, when under the excitement incident to their transition from bondage to freedom, and while they were more or less unsettled and undecided in their purposes. If such results have been produced by free labor, trammelled as it has been during the period of its inauguration by innumerable adverse interests and prejudices, may we not reasonably expect from it, when fully and thoroughly established, still greater and largely increased crops, and a corresponding increase in the wealth of the nation? Many schools have been opened in Texas, and they are all self-supporting. The health of the freedmen is generally good. There are no cases of small-pox reported.

"In some portions of the State, and especially is it the case where our troops have not been quartered, freedmen are restrained in their liberty, and slavery virtually exists the same as though the old system of oppression was still in force."

General Strong, Inspector-General, has newly arrived from Texas, and gives a deplorable account of the state of things in the interior. Armed men, wearing the late Confederate uniform, are wandering about the country, robbing and plundering. In a great majority of cases there is no change whatever in the condition of the negro from that before the war. The negroes do not understand their status, and their masters do not care to inform them. This, of course, is where our troops had not been stationed.

The attention of the Bureau has been called to the reports of outrages practised by the Indians upon the negroes formerly held as slaves by them in the Indian Territory. These reports are becoming numerous, and already Gen. Reynolds has sent a force of men to repress the violence complained of.

In Alabama it is estimated by the "Committee on Destitution and Supplies" of the State Legislature that there are 130,000 destitute persons amongst the whites alone. They are not fed by the Bureau. Gen. Swayne thinks a better feeling for the freedmen is taking root in many portions of the State. Some outrages are, however, committed in rare instances. He is seeking out the perpetrators, and will have them brought to justice if found. He says, "Christmas has passed without the slightest difficulty being reported so far."

Officers are now engaged in taking the census of the colored population of Washington.

Col. Brown's "Summary Report of Virginia" is a very clear statement of what has been done under his vigorous administration from June 15 to Dec. 1. Operations have been much embarrassed by the frequent changes of officers detailed to serve the Bureau, "few assistant superintendents having occupied their positions for three consecutive months." Full protection has been accorded to the freedmen, and "it is believed that there is not within the State a person who does not understand and successfully assert his rights to freedom." The irritation between whites and blacks has greatly abated, and instances of personal violence are becoming rare. The freedmen are laying aside their disposition to roam about and to seek the towns and camps. In South-eastern Virginia they have shown remarkably their capacity to take care of themselves. Out of 70,000 gathered there in extreme destitution, less than 4,500 are now receiving Government aid, and about one-half of these are soldiers' families. Comfortable homes have been rented and purchased, and about 5,000 children attend school, neatly clad, and owning their books.

Circular No. 22, issued by Gen. Howard Dec. 22, calls the attention of Assistant Commissioners to the evils complained of in General Grant's report of Dec. 18. The Bureau has never been made "inde-

pendent of the military establishment." On the contrary, the Commissioners must act in subordination to, and co-operation with, the Department commander, keep him supplied with such information as they possess, and obtain his formal approval, when possible, of all orders and circulars issued by them.

—Gen. Fisk issued, Dec. 26, an address to the freedmen of Kentucky, informing them of their emancipation under the Constitutional Amendment, and exhorting them to industry and sobriety, to make contracts if possible with their former masters, and to avoid flocking in to the cities. On the same day he issued a circular (No. 10) in which he formally extended the charge of the Bureau over the same persons, and invited the co-operation of the civil authorities and all good citizens in the work of re-adjustment. There has been trouble in Christian County, and Gen. Palmer ordered thither the 2d Battalion of the 2d U. S. I. The blacks, alarmed by the numerous deadly assaults upon them, have fled into Tennessee in great numbers.

—Gen. Gideon J. Pillow was among the earliest of the few Southerners who cheerfully met the Bureau half-way, and promised to support its measures for the welfare of the colored population. A letter which he wrote to Gen. Howard, Dec. 22, is worth reproducing entire:

"It affords me pleasure to inform you that I have been successful beyond my most sanguine expectations in engaging labor for all my plantations in Arkansas and Tennessee. I have already engaged about four hundred freedmen, and have full confidence in making a success of the work. I have given in all cases the freedman a part of the crop of cotton, and I allow him land for the cultivation of vegetables and corn for his own use, without charge therefor. I could have engaged one thousand laborers if I had needed that number. My brother, who adopted my plan of work, succeeded in engaging laborers for three places he is working. I have put one large plantation under white laborers from the North upon precisely the same terms I engaged freedmen. I feel anxious to try the system of white labor of that character for the plantation. Knowing the interest you feel in the success of the system of the freedmen, and feeling grateful for your kindness to me, I feel it to be a duty to communicate the result of my work thus far."

Gen. Fisk, in forwarding this letter, states that he has abundant testimony to the same effect from intelligent, wealthy planters who have ceased to kick against the pricks, and have undertaken to deal justly with their laborers.

Minor Topics.

In "Punch's Almanac" for the present year of grace a broken-hearted beauty with dark hair is represented as saying to her hair-dresser: "Oh, Mr. Irons, can nothing be done for my unfortunate black hair?" "Well," replies the artist to whom she appeals, "we might wash it red, miss, but what 's the use of 'aving the c'rrect colored 'air, if you 'ave n't got the c'rrect horder of feature?" The idea is worth the consideration of American loveliness, to which the present Parisian passion for blonde hair has only come as yet in vague newspaper rumors, and has not taken any authentic shape here from fashion. Each lady who does not happen to have been blessed by nature with correct colored hair, should reflect seriously whether her face would go well with violet locks, and decide, before the mode reaches our shores, whether she shall take any measures to dye her tresses red, or boldly defy fashion, though, of course, we do not expect her in any case to do the latter, but do expect her to color her hair, whether it becomes her or not.

There is no doubt that yellow hair is very beautiful. All ladies who have it will agree with gentlemen whose wives and sweethearts are blondes, that it is infinitely lovelier than black hair, though The Nation is not prepared to take this uncompromising ground. However, it is known that in all ages blue eyes and golden hair have been chosen by the arts to represent celestial beauty. The Greeks loved the violet hair which has saved so many sonnets from despair, and the sculptor Gibson, who loves the Greeks, stains the marble locks of his statues to that tender hue with such ravishing effect that to look upon his Hebe is to be taken with shortness of breath and palpitation of the heart, and the other symptoms of a disordered digestion. In the exquisite frescoes at Pompeii (about which a contributor has already told the readers of The Nation something) the pretty goddesses and nymphs and heroines are all painted blondes; and in the Museo Borbonico, at Naples, you may see in old fragments of sculpture how our classic friends used to stain the tresses of their statues yellow. Reviving art refused to color the statues, but we all know how the Italian masters painted the sweet Madonnas and charming Magdalenes with golden hair, until at Venice the ladies themselves took a hint from Titian, and invented a yellow hair-dye. At this period a lady, famed in the annals of love and passion, was famous also for the golden hair which nature (tender in Italy of lovers and poisoners) had given her. They keep some long strands of it in the Ambrosian Library, at Milan, where you may look at it, lying in a sunny coil across the page of an old missal, and figure to yourself what must have been the dangerous beauty of Lucretia Borgia.

The Venetian method of dyeing the hair yellow was simple enough, and has been many times described. The illustrissima of that day, when she would be blonde, dipped her hair in a certain solution, and combed it out carefully over the broad brim of a crownless straw hat, and then went to the roof of the palace at noon-day, and, removing the trap-door, sat there and broiled her delicate brain in a sun which knows how to shine with fervor. Repeating this expiation several days, her hair became of that rich ruddy yellow which we admire so much in the paintings of Titian and Paolo Veronese; no doubt the Bella of Titian herself, the fair Violante Palma, had been thus dyed and grilled before she sat to her father for Santa Barbara, and to her lover for his ideal of lovely woman. No doubt—

"But the certain solution—the certain solution! What was the solution in which the Venetians dipped their hair before broiling?" demands the multitudinous treble of the fair who hang upon these words, already resolved, if blonde hair becomes the mode, to undergo any degree of broiling to achieve it. And here, if we were cynical, we should refuse to tell; and if we were sensational, we should coolly write

"To be Continued,"

and leave the whole subject to another week. But we are neither cynical nor sensational, and we have happily found in a French journal the recipe of the solution in question. Beauteous beings, desirous to have the heavenly-golden hair, must stoop to facts and apothecaries, and take three drachms of rock-alum, three of sandarac, one of saffron, four of madder, and two of grape-vine ashes. Let them then pulverize the ashes and the madder together, and boil them to one-half their bulk in water, and mix the residue with the alum, the sandarac, and saffron. The precious mixture must then be applied with a sponge, and when the hair is dried (in the Venetian manner), let it be washed with a decoction of trefoil, barley, cummin, and soap. So shall the most midnight beauty surprise the secret of the noon, and wean away the captive sunshine in her radiant locks.

In the age of its invention the mode of dyeing the hair yellow spread from Venice to Rome, to Naples, to Paris. Now it is revived in Paris, and its approach to these shores is as little to be doubted as that of the cholera itself. When it really comes to be the fashion, we should all adore it, as we should powder and patches if they became the mode again. We shall soon find something to admire in the artificial *blondissance* of the fair who have not the correct order of features for that style. Calm, sweet Dashinda, having availed herself of the secret revealed by a too-indulgent Nation, appears with violet tresses floating above her dark, dark eyes and jetty brows and lashes; shall we not be reminded of the like type of Irish loveliness? And even if her sister, whose eyes tend in hue from

"Green to gray, from lively to severe,"

comes forth in yellow hair, we shall doubtless find something to praise in her resemblance to the Spanish blondes (who have likewise

"*Los hermosos ajos verdes*")

and to Becky Sharp.

But, while we have nothing to say against the yellow hair of art, we beseech the ladies not to suffer themselves to encourage a fashion which, it is said, a foolish hair-dresser has sought to introduce in New York, by striping the natural dark hair with locks of yellow, and blonde with locks of black. Better that all hair should be black for ever than that this grotesque fancy should prevail; for, as Mr. Browning says:

"Yellow or black may be better or worse
In the human head; but the mixture of each
Is a marvel and a curse."

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of The Nation *should be addressed to the Editor.*

OUR MINERAL RESOURCES AND TAXATION.

The great development which has taken place in the mining industry of the country since the outbreak of the war, and the great influence which it is likely to exert, not only on our own trade but on the currency of the world, will make it a very prominent topic of discussion for some years to come. Its importance has been already recognized by Congress in the introduction of a bill for the establishment of a much-needed Mining Bureau, and by several of our principal colleges in the establishment of schools of mines, in which engineers can be trained in sufficient numbers to meet the probable wants of the great mining regions, without resorting to the European schools. And what is more, a very large portion of the public, including many who ought to know better, are flattering themselves that in some mysterious way, it has never been clearly explained what, the gold and silver mines of the West will largely help to pay off the national debt —that is, will do far more towards it than any other branch of the national industry.

But we cannot help thinking that it is now high time for everybody who desires to see our financial system placed on a permanent and sure basis, and regulated by clear and sound ideas, to do what he can to dissipate the current delusions as to the probable influence of our mines upon the national wealth. We shall not resort for this purpose to the historical argument, much warning of the most impressive kind as we might draw from it. It would be easy enough to make out a strong case against gold and silver mines, by calling attention to the fact that every country in which they have abounded, and which has relied much on them as sources of wealth, has eventually become impoverished both physically and morally. The economical facts now presented by our own experience are amply sufficient for our purpose. Our attention has been strongly called to them by the very clear and useful letter recently addressed to Mr. Bowles, of the *Springfield Republican*, by Mr. Ashburner, the mining engineer of the California State Geological Survey, and printed by the former as an appendix to the second edition of his book, as well as by the other facts bearing on this subject collected in the work itself. There is no question whatever—the figures leave room for none—in the minds of practical men familiar with the risks of mining enterprises, either here or in Europe, that the profits on the total amount of capital invested in mining are, to say the least, no greater than on capital invested in other branches of industry. Of the incorporated gold and silver mining companies whose central offices are in San Francisco, we believe that not one-tenth of one per cent. have ever paid a dividend from actual earnings, and at this time not two dozen of them are of sufficient promise to be ordinarily recognized in the Stock Exchange of that city. Of these the majority are based on the silver mines of Nevada Territory. The actual outlay upon several of the non-dividend paying mines has been from half a million upward. One, at least, has cost over two million dollars.

If it be asked how it happens that, under these circumstances, so much capital flows, year after year, into mines, the answer is simple enough. Great hits are sometimes made and enormous profits realized, and the effect produced on the popular imagination by these is, of course, far greater than that of three times the same number of failures. Few people hear anything of the mines which fail. The unlucky projectors generally keep the story of their misfortunes to themselves, while the fortunate ones are never weary of publishing the news of their success. It is not only pleasant to make money for the money's sake, but because it raises one's character for foresight and sagacity. So that it may be stated, as a fair deduction from the history of mining enterprises, that the aggregate wealth of the country has not, and is not likely to be, materially increased by them, although the quantity of the precious metals undoubtedly is increased—the larger portion of the labor and material invested in them being irretrievably lost. Those who think silver and gold the principal and, in fact, only kind of wealth will probably not be affected by this argument, but to them we have here nothing to say. We, for our part, doubt very much whether either a gold or silver dollar is now added to the currency which does not cost the nation two or three dollars, though, of course, the individuals who dug it out may have made a profit on it. The country, in counting up its profits, however, has to take into consideration the labors of those who dig and find nothing, or too little to pay for their labor, as well as of those who dig and find much.

Out of the popular delusion on this subject has grown another, which might, at one time, when we were running up debt very fast, have proved very mischievous, but which, now that we are retrenching, may perhaps be somewhat less dangerous, though if our Southern brethren should, as seems not unlikely, take it into their heads to ask us to pay for all the damage done to their property during the war, and should receive the support of their Democratic allies at the North in doing so, it might be again revived for our confusion or ruin. We allude to the wide-spread reliance on the mines as a means of paying off the national debt. There could hardly be a better proof of the haze through which many sensible, and otherwise well-informed, men see questions of political economy, than the jubilation there has been in the press and on the platform over our mineral wealth as a means of discharging our national liabilities. We have seen elaborate calculations in print, from the pens of "statisticians," showing the probable yield of the Western mines in a certain number of years, from which, added to the total amount of the national wealth of other kinds, the total amount of the national debt was gravely deducted, and the very respectable balance joyously held up as proof of the folly of those who were troubled by the amount of our burthens.

Now, no kind of national wealth is of the slightest value for the discharge of public debts, unless there be some way of getting it into the public treasury. There are three ways by which the property of individuals can be transferred to the public treasury, and three ways only—lawful taxation, loans, and plunder. For the purpose of paying off our liabilities only the first of these, it will be generally admitted, is now open to us. Government can only get hold of the gold and silver of California, Nevada, and Colorado as it gets hold of other portions of the national wealth, by leasing the mines, working them itself, or lawfully taxing the earnings of others who do. Now, if it works them itself, it does so under the same conditions, or rather under worse conditions than private persons or companies. It would certainly work them more wastefully, and whether the aggregate profits of individuals engaged in this species of industry are greater than, or not so great as, those of persons engaged in others, we may be quite sure those of the Government would be very small, if there were any whatever. It might better attempt to raise revenue by farming or cattle-breeding or running railroads.

If, on the other hand, it relies on getting its share of the gold and silver by taxing the earnings of the miners, it must regulate its scale of taxation by the average rate of profit, or it will drive capital completely away. The element of uncertainty enters so largely into the miner's calculations, that it would be an act of gross injustice to claim a large sum from the yield of a vein which, on any particular month, happened to yield well. No mine known yields remarkably well over a long series of years. In hundreds of cases during the last two years, mines which have been yielding a fair profit one month have come short of paying expenses the next; and in taxing the capital engaged in the business account has to be taken of this uncertainty. If any large portion of the products of lucky hits were carried off by the tax-gatherer, there are very few men who would encounter the manifold risks of mining. Government will, in short, have to content itself with about the same rate of revenue from mines as from other branches of industry, and the mineral wealth of the West is not one whit more valuable for the payment of the national debt than the corn of Illinois, or the strawberries of New Jersey, or the cotton of the South. Many of the calculations which have been put forth on this subject have been the product of an excited imagination, combined with considerable ignorance of economical laws.

Nor can we too carefully guard against that other wide-spread de-

lusion, that all the property of the country can be drawn on to meet the public liabilities. The figures one sees so often paraded on this point are pleasant but delusive reading. No people ever yet submitted to the appropriation of all their goods and chattels to the payment of their creditors, or ever will. Nor is it right that they should. Considerable inroads on their annual profits is all that the most upright (commercially) nation the world has yet seen—the Dutch—has allowed the tax-gatherer to make. Every people's first duty is to take care not to lose its own place in civilization; to preserve the means of continuing its progress, material as well as moral. No people which handed over even half its property to its creditors could do this. Any people would repudiate long before its capital was touched. And, in fact, a little consideration of things and less of words would set this matter before everybody in its true light. One question dissipates the whole illusion. How is the property of a whole people to be seized? Who will be the sheriff? who the auctioneer? Where will the buyers be found for it? How, in short, could its creditors turn it to account were its debtors ever so willing to sacrifice it?

MORE FETTERS TO BE BROKEN.

It is to be hoped that the Senate will, without unnecessary delay, confirm the action of the House in regard to railway monopolies. *Teucro duce*—since the President has taken the initiative—there is no tolerable excuse for hesitating in a measure of such urgency and importance. Between the cry of the people for relief, and the voluntary encouragement of the Executive, what have our legislators to fear? Nothing so much as their own procrastination. Soulless as corporations proverbially are, they are still too nearly immortal; and the particular one whose discomfiture and abasement are sought, remembering the peril which it barely escaped at the hands of the last Congress, and having had the double warning of the President's message and the House bill of the present session, has assuredly not wasted the holidays in feasting or slumber. It will be active to the end in the only kind of tactics it ever employs, not doubting, till it is beaten, that with corruption, as with calumny, if one is only prodigal enough, there will something stick.

The case is really too plain for argument. The grievance is national, and so must the cure be. Everywhere it is manifest that the railroad interests are the most formidable in any community, and that they tend to poison the politics and control the government of the State. So vast is the host of employees and dependents, so extensive the tract of which the railroad is the artery or nerve-trunk, that the president and directors are unavoidably invested with a power which they would be simple not to perceive, and less than human if not tempted to exercise, and by which they can marshal at a moment's notice the largest and best disciplined body of subservient voters, to whom their will is law. It is small consolation to point to the present condition of New York and New Jersey, for example, which neither the Central nor the Camden and Amboy road now controls at the ballot-box. The recent triumph of good morals in these States rested on the general question of loyalty to the cause of the nation, and was not a final proof of the ability of either State to free itself unaided from the coils of an open or a virtual monopoly. But it must not be forgotten what and how long we suffered before achieving this precarious victory; how the principles which had to be fought out and established on the battle-field were early obstructed in their peaceful dissemination along the lines of our great thoroughfares; how mobs were organized successively, with all the appearance of a spontaneous epidemic of violence, from Boston to Albany, and from Albany to Detroit; and how conventions that licked the feet of slavery were packed by the same contrivance of a free transit, and the same signal from the managers of railroads and caucuses. It was with the railroads that the contest was carried on, and is still to be carried on in more States than one, concerning the rights of colored passengers. It was owing to the cupidity and exclusiveness of some of them that the operations of the late war were hampered, and ultimate federal triumph postponed, at immense cost to the whole country.

New Jersey is at once the strongest instance of the impotence of a State in the clutches of a monopoly, and the physical and moral detriment resulting from such a humiliation. Everybody knows that the reason why she lingered so long in the unclean bosom of the Democracy was not the failure of fair argument in a free discussion to convince and convert her population. It was because the animating spirit of that party was in harmony with that of the chief railroad corporation of the State—because monopoly, in choosing sides and supporters, could not espouse liberty, which is competition itself. Hence, to speak against the party or the institution which nursed it, was to speak against the corporation; and the public conscience which consented to the privileges of the latter, was easily pacified with a profuse dispensation of passes and offices. There was, therefore, little or no independent thought or utterance in New Jersey, nor was it welcomed from any quarter; and her reputation justly deteriorated, to a degree, we suspect, not commonly appreciated in its influence on her material welfare and advancement. The war inserted the lever which was to pry up the old incubus. Our

> ——"great cause, God's new Messiah,"

like the Revolutionary struggle, parted the sheep and the goats—showed the foremost of patriots, bravest of soldiers, and meanest of tories. The consequence has been that the good and upright citizens have learned their strength and numbers, banded them together, and redeemed the reputation of the State by the rout of their adversaries. Whatever of native manliness protested against imposing on the citizens of other States who crossed the New Jersey border the civil burthens that ought to have been borne at home, will now be strengthened by her compulsory share in the national load. Expensive and demoralizing as is a wide-spread, ever-present system of direct taxation, it conveys more forcibly than any other to the citizen his obligations to the Government, and excites, in turn, a wholesome scrutiny of official and legislative economy.

The liberty of the person was a principal object in the formation of our Government. This liberty does not exist apart from the freedom of locomotion, by which the freeman is distinguished from the serf attached to the soil. In the interest of trade, the Constitution carefully prohibited any regulation bearing unequally upon the several States, and by confining duties to foreign importations declared the essential unity of the nation. That reciprocity of communication which it contemplated it was unable to secure. "The citizens of each State" never had "all the privileges and immunities" of their fellow-citizens in other States. The labor monopoly at the South turned away the streams of immigration, domestic and foreign, and contributed to the uneven growth and imperfect settlement of the republic. It established a passport system more odious than that of any European despotism, for it compelled the traveller to renounce every sentiment that was at variance with its own iniquity. It thus effectually obstructed the circulation of ideas, gave one hue to thought, one aspect to society, and fastened upon the aspiration of the North, all alive with the vigor of the age, the ignorant and contented conservatism of a semi-barbarous period. What happened there on a grand scale has been observed also in New Jersey, in consequence of its short-sighted policy in cherishing a monopoly of transportation between the first two cities of the Union. While inflicting incalculable annoyance on its neighbors, the State itself has incurred the natural penalty of its selfishness. Its physical resources have been retarded in their development, its enterprise been repressed, its intelligence restricted, and its political morality so badly damaged that it will long remain a reproach upon our democratic experiment. To save the State from itself, to emancipate it from a self-imposed bondage, and at the same time to guard every other State from a similar subjugation, is the province and duty of Congress. One thread runs through all the proposed amendments of the Constitution—equality, of States and citizens. We invoke the same principle in demanding the overthrow of railroad monopolies, for which no amendment is needed. We ask that the common domain shall be open to the free play of all the forces that give character to our civilization; that no countenance be given to local greediness or meanness in opposition to the clear advantage of the rest of the country. If strait-jackets are necessary for those who still think that they can injure others without injuring themselves, we ask, in their behalf, for strait-jackets. Above

all, we ask for the promptness which befits the case of an admitted, indefensible evil, in the presence of a power not more adequate to remove it than confessed to be adequate and lawful.

NEW YORK AND THE CHOLERA.

As it is generally expected by men of science, as well as by the public at large, not only that we shall have a visit from the cholera during the coming spring, but that it will first show itself in New York, and commit here its worst ravages, and from this spread itself over the country, along every line of railroad, it may be interesting to our country readers to get a glimpse of the preparations which are being made for its reception in this city.

The existing authorities upon the subject of public health in New York derive their power from the 275th chapter of the laws of 1850. These are full of confusions and contradictions. Paragraph 1 confers all *legislative* power relating to health upon the Mayor and Common Council. Paragraph 2 makes the Mayor and Common Council a Board of Health, any ten members forming a quorum; but as there are two branches of the Common Council, amounting to at least twenty members, there are material and authority for two Boards of Health, equal in power. Another paragraph creates a distinct board, known as the "Commissioners of Health," whose duty is defined to be to "advise the Mayor and Board of Health;" this board is to meet daily, while the former board meets only at the call of the Mayor. A health officer is created, who is to perform the duties which the Mayor and Commissioners of Health *or* the Board of Health shall order. The City Inspector may appoint, with the consent of the Aldermen, "so many Health Wardens and other officers" as the Common Council *or* Board of Health shall direct. The law of June 14, 1857, increases the confusion by making the City Inspector's power "pursuant to the ordinances of the Common Council and the lawful requirements of the Commissioners of Health and of the Board of Health;" and the 37th and 38th sections of the City Ordinances of 1859 declare that the Superintendent of Sanitary Inspections "shall, in all matters, be under the direction, control, and supervision of the City Inspector," and (in the same breath) that the Superintendent "shall also have, exercise, and possess all the powers and duties by law or ordinance conferred on the City Inspector."

It is not surprising that this double-headed arrangement, required to move in opposite directions, fails to move at all, and that the City Inspector has practically wielded for years, and still continues to wield, all powers relating to public health. The result of the system is seen in the past and present sanitary condition of the city; but before dismissing the present organization from discussion, let us make a brief synopsis of its component parts:

(1.) Any ten of { 17 Aldermen, 24 Councilmen, and the Mayor, } make a "Board of Health."

(2.) The President of the Aldermen,
The President of the Councilmen,
The Health Officer,
The Resident Physician,
The City Inspector,
} make "The Commissioners of Health"—the two Boards having equal power, and any ten members forming a quorum.

Then there are the City Inspector, the Health Officer, the Resident Physician, the Health Commissioner, the Agent of the Board of Health, the Superintendent of Sanitary Inspection, the City Registrar, twenty-two Health Wardens, and twenty-two Assistant Health Wardens. The cost of all this machinery may be deduced from a single partial annual estimate:

Salaries of City Inspector, and officers, clerks, and others connected with his department, ...	$138,160
Salaries of Resident Physician, Health Commissioner, Clerk of the Board, *et al.*, ...	5,345
Advertising, office expenses, etc., ...	20,000
Resident Physician, as Agent of the Board of Health, etc.,	5,000
Total, ...	$168,505

The Health Bill now before the Legislature is substantially the same as that of last year, except that it includes Brooklyn. All the above-described cumbrous organization is swept by it out of existence at a single stroke, and the following is substituted: The four Police Commissioners and four physicians are to form a Metropolitan Board of Health, the members serving—after the first board—eight years, and all serving as such without compensation. There are to be a Sanitary Superintendent and Sanitary engineer, whose salaries may not exceed $5,000 each; a Secretary, whose salary is limited to $3,500; and Inspectors, not to exceed ten, with salaries limited to $1,500 each. No member of the Board may hold, or be a candidate for, any political office or public trust. This Board shall perform all the duties of the present health officers, and the aggregate compensation of its members cannot exceed two-thirds what is now paid to those officers. Over against the table of expenditures above quoted place the fact that the annual expense of the Board of Health under this bill cannot exceed $46,000, and that the number of its employees cannot exceed twenty.

A very brief comparison will serve to show the gain acquired in other cities by improved sanitary administration. In Macclesfield, England, the adoption of sanitary measures reduced the annual mortality rate in ten years from one in thirty to one in forty of the inhabitants, the average of life being increased from twenty-four to twenty-nine years. At the end of the first five years, the Earl of Shaftesbury stated that "1,015 lives have already been saved, and 28,300 cases of sickness prevented." In Liverpool, where the mortality rate was one in thirty in 1847—at which time the Public Health Act went into operation—the rate, in 1860, was one in forty-one, representing for the last year alone a saving of 3,800 lives. London, whose Metropolitan Board of Works has, during the past year, completed a gigantic system of drainage, and is now preparing to utilize the vast body of *excreta* thus removed from the city, has a Central Board of Health, under which is a body of sanitary police, composed of a principal medical officer, subordinate to whom are forty-eight physicians. Paris has a "Council of Public Health and Hygiene for the Department of the Seine," consisting of twenty-nine persons, fifteen being physicians, six pharmaceutists, and the remainder engineers or architects. The London *Times* declares that the average of health in London is higher than that of all England, the mortality in England being 22.8 per 1,000, and in London 22.3.

The rate of mortality in New York is about half as large again as in London, for all ages; while for children under one year of age it is a little more than twice as great.

To sum up the argument for a measure like the Health Bill is a difficult matter—something like seriously arguing that a permanent society is impossible without the restraints of law. To tell men that any business should be managed by those who have made that particular business a study, is to insult their good sense; and yet people who, as individuals, would think themselves insane if they were to give their watches to blacksmiths for repair, or the curing of their physical ills to hod-carriers, will yet, when organized into a city community, stupidly permit the conditions of their health to be controlled by politicians. It is only, however, the usual political contradiction of the rule of mathematics, in this wise: the whole is less than the sum of all the parts. The health authorities of New York are practically the City Inspector's Department; and that is, and will be, notoriously a political machine, in spite of press, public meetings, public suffering, and public wrath combined. Anti-republican as the fact may be deemed, New York City has as yet obtained from the Legislature all her valuable public institutions. The Park, the Croton Water, the Police, the Paid Fire Department, all came through the Legislature; while for samples of the city's own work, take the Williamsburg Ferries, the Markets, the Harlem Bridge, the Custom House, and the Battery Enlargement.

The city has appealed to the State, through the Legislature, many times already for this measure, and now appeals once more. *Granted*, that public health is desirable, that we have not yet attained it, that the existing system will not give it, that the pending Health Bill will—these propositions, which no thoughtful person disputes, ought to be sufficient, but they are not. The great political engine which the bill will overthrow will contest its passage as heretofore, and every abuse, from actual municipal robbery down to the nuisances that nauseate the avenues, will strive, through its own representatives, to maintain the existing order of things. To counteract these, and to avert the dangers of another year's delay; to be ready for the probable germination, next spring, of the seeds

of cholera brought by the *Atalanta;* and to settle, in this crucial test, the question whether the moral elements of a great city can perpetually be overruled by those of misrule, New York appeals for the action, more than to the sympathy, of the intelligent classes of her population.

LEOPOLD, KING OF THE BELGIANS.

The centre-stone of an arch is not, necessarily, stronger than its fellows, but its absence entails the overthrow of the edifice of which it is the key. Leopold of Belgium was, to a great extent, the key-stone of the existing European fabric; and, therefore, his death possesses an importance scarcely due to his intrinsic merits. Few men have led more eventful lives, or have played a greater part in the world's history, with less, one would think, of individual power or capacity. If fortune had placed him in the ordinary ranks of life, he would have pursued his trade or profession, whatever it might have been, with energy; and his good sense, good conduct, and activity could not have failed to secure him fair average success. It was, as Joseph II. of Austria said of himself, his trade to be a king, and he succeeded in his trade. He was not a great man, he was not a very good man, he was not a man of any signal ability; and yet he was a leading actor in the chief events of the last sixty years. The story of his life is contained in the two facts that he was born a poor cadet of an obscure German house, and that he died uncle of the Queen of England, grand-uncle of the King of Portugal, father-in-law of the Empress of Mexico, kinsman by marriage of nearly every royal house in Europe, son-in-law of an ex-King of France, and King of Belgium. In truth, he was the impersonation of the Coburg race—a race which has risen to greatness not by any innate power, but by the genius of commonplace good sense. At the time of his birth the one noteworthy feature of his family consisted in the circumstance that the head of his house was the friend and patron of Goethe. Born in 1790, almost on the morrow of the great French Revolution, his youth was subject to all those vicissitudes which the Napoleonic wars inflicted on the minor princes of Central Europe. When almost a boy he served in the Russian armies, both when the Czar was allied with the great Napoleon and when he was fighting against him; he lived at Paris, by order of the Emperor, during the period when the first Empire was at the height of its glory; he applied for permission to enter the French service and was refused; then applied again for employment under the Czar, and was again refused; then lived in retirement till the outbreak of the German war of independence, when he threw in his lot with the allies. He fought at Lützen and at Leipzic, and, after his wont, acquitted himself creditably, not brilliantly; he entered Paris with the conquering armies in 1815, and came over to England with the allied sovereigns.

During his visit he won the affections of the young Princess Charlotte, the only child of the then Prince Regent; and after some opposition, on account of the inequality of his position to her own, the Princess carried her own way, and Leopold was offered the hand of the heiress to the British throne. The offer was accepted at once, and the Prince was deemed the most fortunate of men. From all accounts he was as deeply attached to his royal bride as it was in his somewhat cold nature to be attached to any one. At any rate he made her an excellent husband. Whether from inclination or judgment, he practised all those domestic virtues on which so much value is placed in England, and which were especially valued at a time when the private life of the Prince Regent was a scandal to the country. The good Princess Charlotte was the popular idol of the day, and the Prince shared in her popularity. He was made Duke of Kendal, with an allowance of fifty thousand a year, which was paid to him till the day of his death; though, after he became King of Belgium, he regularly repaid the amount to the English treasury, deducting, however, the expenses incurred in keeping up his residence of Claremont. The sudden death of the Princess, in her first confinement, destroyed the prospects of her husband, and from 1817 to 1830 he took no prominent part in public life.

At the age of forty he found himself once more within reach of a crown. The throne of Greece was offered to his acceptance, and, subject to certain conditions, he consented to become the sovereign of the kingdom so lately freed from the rule of Turkey. The conditions were not carried out, and the monarch-elect, whose ambition was never of an ardent character, grew alarmed at the representations made to him by Capo d'Istrias about the unsettled state of the Hellene kingdom, and declared his resolution not to leave England for the Hellespont. Within two years another crown was offered to him. After the vacant throne of Belgium had been proffered in turn to well-nigh every available candidate for royalty, and after each candidate in turn had been declared disqualified by some one of the great European Powers, Leopold was taken as a sort of *pis aller*. Belgium was, so to speak, a far better investment than Greece, and as such Prince Leopold regarded it. He had hardly, however, ascended the throne before Holland made one last vigorous effort to recover its lost provinces. The Belgian armies, under the command of the King, were utterly routed by the Dutch at Louvain, and the Prince of Orange would, probably, have driven the new sovereign out of his territories if Leopold had not appealed to France for aid. The appeal was responded to; the Dutch forces were obliged to quit the territory of Belgium; and, in return for this service, Leopold consolidated his alliance with France by marrying *en secondes noces* the Princess Louise, one of the daughters of Louis Philippe. Of his subsequent life as King of the Belgians there is not much to say. The internal feuds and dissensions of the Flemish kingdom are absolutely uninteresting and nearly unintelligible to a foreigner. The two great parties in the country are the Ultramontanes and the Liberals, the former being supported by the rural districts, in which the priests are omnipotent; the latter by the towns, where the commercial element is growing daily more and more powerful. Faithful to the constitutional maxim, that "the King reigns but does not govern," Leopold refrained from identifying himself with either party, and worked frankly with any ministry which for the time commanded a majority in the Chambers. Unlike Louis Philippe, he took no active interest in ministerial intrigues, and therefore no party regarded him as an obstacle to their success. On the other hand, he did a great deal to develop the material resources of the country, and always gave liberal principles and policy the benefit of his sanction and support. On the whole, Belgium has enjoyed an unusual share of freedom and prosperity during the three-and-thirty years of Leopold's reign; and the country, not without reason, felt that considerable gratitude was due to the wisdom and good sense of their sovereign. Moreover, the loyalty felt towards him was, doubtless, enhanced by his avowed indifference to the possession of royalty. With an almost cynical frankness, he lost no opportunity of assuring his subjects that he was perfectly ready to resign his claims on the throne if they desired any other occupant. As long, too, as the old King lived, it was deemed that Belgium was comparatively safe against foreign aggression; and thus the feeling of Belgian nationality, such as it is, became identified with Leopold.

Personally, however, he was never popular. A Protestant, he had to reign over one of the most devout of Catholic populations; a German, he had to rule a nation in whose veins there is no small portion of Celtic and Spanish blood. His cold, stiff manners repelled his Flemish subjects, and his vices were not of a kind to win popular affection. In fact, he had all the defects which rendered his nephew, the late Prince Consort, so uncongenial to English sympathy, while he had not those high moral excellences which, in the case of Prince Albert, commanded the involuntary respect of those who liked him the least. After he became a king, the sometime husband of the Princess Charlotte did not maintain the reputation of private morality he had earned in England. The second marriage was not a happy one, and the life of the Queen of the Belgians was said to have been embittered by the open preference shown by her husband to other women. Indeed, public feeling was so strong on this subject, that after the Queen's death the Brussels mob broke the windows of the house where the King's mistress was said to reside. Yet, in the ordinary sense of the word, it would be unfair to say that Leopold was a profligate man; he was too prudent ever to run to excess in anything, and even his bitterest opponents never accused him of prodigality.

His chief reputation, however, was better abroad than at home. Partly by age, partly by position, above all by temperament, he had become a sort of European arbiter. His advice was asked by kings in difficulty, and, what was more, was often acted on. He had fewer, probably, of the illusions of royalty than most sovereigns; he had no

great love for liberalism or popular progress, and he had a deep conviction that in the long run the popular side was always the winning one. He had little faith in abstract principles, but he believed firmly in accomplished facts. Of England and her royal family he was, probably, as fond as he was of anything in the world, except himself. He was a constant visitor at her court, and went to and fro without any state or ceremony. His last visit was only a few months ago. There can be no doubt that his loss is a severe one to all interests connected with the welfare of Belgium, and it may be doubted whether his kingdom will long survive his death. His eldest son, Leopold II., is a man of very feeble health and no great intellectual capacity, and is supposed to be completely in the hands of the priests. If this is so, there is trouble in store for Belgium.

WHERE WILL THE POPE GO?

It is growing daily a more and more curious problem to consider what is to become of the Pope when the last French soldier has turned his back on Rome. Will he consent to accept the succor of his disobedient and disinherited second son, Victor Emanuel, and receive earthly protection from one in whose face he has double-locked the gates of heaven? or will Austria despatch its two-headed eagle to perch as a bird of good omen on the triple crown of the successor of St. Peter? And if she be so minded, will Victor Emanuel consent to such hostile augury of the future of his coveted capital? In Spain the Holy Father has a devout and dutiful daughter, to be sure, but her own uneasy seat on her throne may well hinder her most pious dispositions to help hold him on his. The Pope is, indeed, fallen from his high estate when kings and emperors knelt at his feet and held his stirrup, and when he gave away the kingdoms of this world which did not belong to him with all the liberality of the devil himself. He can no longer command the public sentiment of the countries which acknowledge his spiritual domination; he is forced to obey it. Victor Emanuel is excommunicated, but regards the commination no more than if it had been a benediction that His Holiness had bestowed upon him. The excellent predecessor of the present Pope, Gregory XVI., issued a bull condemning and forbidding slavery, but no priest had stomach enough for martyrdom to try and carry it into effect in New Orleans. And at this moment, in the most priest-ridden country in Europe, the Irish Catholics give to the Fenian Brotherhood the fealty due to the Church, and that in the very teeth of the priests.

It is a painful contingency to contemplate that of the Head of the Church being forced to fly in fear of his life from the metropolis of the true faith. But as it is one which seems to be taken for granted on all hands as sure to happen as soon as the French bayonets are removed from under the Papal throne, it is a curious speculation to consider whither he will betake himself for safety. Italy and France seem to be out of the question. To accept the hospitality of the King of Italy would be to discredit the thunders of the Vatican and to abdicate the temporalities, and to resort to that of the Emperor would be a humiliation the Sovereign Pontiff could hardly stoop to without damage to what is left of his spiritual prestige. In the present state of the Italian question, it is doubtful whether Austria would choose to encumber herself with a guest whose presence might give not unreasonable umbrage to Italy and a possible occasion to France. Spain itself would not be a desirable abode in the present unsettled condition of its affairs, politically, and even ecclesiastically. It were odd, but by no means an impossible event, if the Head of the Catholic Church should have to accept the hospitalities of the successor of Henry VIII. as the Head of the Anglican Church! Stranger things have happened than that, strange as it would be. England has been the refuge of runagate kings ever since the trade of kingship has been subject to bankruptcy. Louis XVIII. at Hartfield, Charles X. at Holyrood, Louis Philippe at Claremont, not to mention Louis Napoleon in Leicester Square, have all sheltered themselves from the storms of fate under the wave-ruling trident of Britannia. It were no more strange that the Pope of Rome should seek the protection of the arch-heretic than that the King of France should flee to that of his natural enemy. What a spectacle would he be for the populace, and what a lion for May Fair!

There is yet another choice left to His Holiness which, if he will have the discretion to take our advice, he will do well to make. He can come to the United States, where he will be sure of protection and civil treatment. We can offer him the advantage of a country with no religion at all to perplex him as a city of refuge. Catholics and Protestants, Jews and Mohammedans, the worshippers of Fo and of Buddha, all stand on absolutely equal footing. He would be just as good as the Grand Lama of Thibet, and no better. But, for all that, what a reception he would have, especially should he select this city as his landing place! What committees of the Aldermen would wait upon him on board ship! What a procession would accompany him through the streets! Of what oceans of turtle-soup, and of what floods of champagne, would he be the occasion! The Governor's Room would be offered to him for the reception of his friends, and what hosts of friends he would have! We doubt whether the Japanese ambassadors or the Prince of Wales could boast of more. General Grant's hydraulic pressure at the Fifth Avenue Hotel were inappreciable alongside of it. We only fear that this new form of martyrdom might qualify him for the honors of canonization before his due time. But whether any or all these things come to pass, whether he be kept at Rome by foreign troops or driven out of it by his own subjects, whether he find shelter —in such case—under Catholic or Protestant or latitudinarian auspices, he will be, as he is indeed, a monument of the change which time works in the most inveterate ideas.

STRUGGLES FOR LIFE.

I STARTED up one winter's night,
All in a mighty flutter,
And vowed that I thenceforth would earn
My salt and bread and butter.

And *first* I thought I 'd keep a school,
And *then* I thought I would n't;
For cause I hate to try to rule,
And cause I knew I could n't.

And then I thought I 'd keep a store
In some great town or city;
For if I could n't measure silks
And laces 't was a pity.

But standing on my feet all day
Was more than pleased my fancy;
I feared to sink into my shoes,
Like Reuben's sister Nancy.

So then I thought I 'd write a book,
And be a famous poet;
This was the maddest scheme of all;
But then I did n't know it.

I went and bought a pound of tea,
Green as I could desi-re,
And made it strong, and drank it hot,
My genius to inspi-re.

It scalded as I forced it down,
But I was bent on trying
My project through, though it was hard
To keep myself from crying.

But when the hot and bitter dose
Was resolutely swallowed,
I sat all night with pen in hand,
And not one stanza followed.

Oh, it was hard! and on the theme
I do not dare to tarry;
My hopes were crushed, my courage gone—
What could I do but marry?

And so, when Reuben asked again
If he his wife might make me,
I really felt relieved, and said,
"Oh! yes, I thank you; take me."

AUGUSTA MOORE.

ELOQUENCE AT SECOND-HAND.

THERE is an amusing story of an Irish reporter who, having fallen asleep while Mr. Wilberforce was upon his thin legs in the House of Commons, was told by his mischievous companions that the philanthropist had been sounding the virtues of the potato and lamenting that he had not in his youth been nourished upon that homely vegetable. The poor man fell plumply into the snare, and the next morning he amused the British breakfast-table by printing the kindly gentleman's praises of the great Hibernian root. We may well believe that Mr. Wilberforce was surprised, perhaps even into a doubt of his personal identity; for many American speakers have found themselves in a similar dilemma, and have feverishly hesitated between an acquiescence in their destiny and a letter to the editor. The late Mr. Edward Everett, who was the nicest of rhetoricians and as finical in the construction of his speeches as Beau Brummel in the plaits of his cravat, endured so much anguish from slovenly reports that he adopted the expedient of sending fairly written copies of his chief orations in advance to the newspapers. Mr. Webster was frequently annoyed by the blunders of the reporters. He was fond of ornamenting his speeches with an occasional scrap or two of Latin, and classical quotations in the newspapers are always at the mercy of chance or ignorance. Thus, when he made his celebrated speech in Faneuil Hall, defending himself against those Whigs who censured him for remaining in place under Mr. Tyler, he exclaimed, very forcibly, "*Adsum qui feci—in me convertite ferrum!*" This was printed, "*Assum que face imo convert fere,*" and in every other possible way except the right one. Imagine the wrath at Marshfield! Mr. Choate once made a happy allusion to *Iago*, which a phonographer, relying, as the custom of his craft is, altogether upon his ears, wrote down and printed "I argue," thus turning into the forlornest nonsense one of the gayest of Mr. Choate's purple patches.

Very few public addresses are made of which the managers of newspapers care to furnish verbatim reports, partly because the columns of a metropolitan journal are always crowded, partly because printing-presses are like time and the tide, and partly because most speeches are of such quality that nobody can read them. Public palaver and private chat are of equal importance; and those who do not consider the views of the Honorable Smith to be any newer or sounder than their own would be, are naturally indignant to find six columns of Smith served with their early toast and tea. While the talk of the platforms is limitless, the area of the printed sheet is fixed, and only the great notables, upon great occasions, can hope for the honors of a broadside. The consequence is, that reporters give what it pleases them to call "abstracts" or "sketches." In the arrangement of an epitomized selection of the sublimities, the beauties, and the facts of a discourse, they are guided by their own notions, and these are not always either judicious or severe. Frequently they bring away only what they can readily remember, and what is not worth the pains of remembering at all. But their surest refuge is in the commonplaces of compliment. Mindful of the weakness of human nature and of their own, they merely present their confectionery of compliments to the speakers. Thus, "Mr A. followed *in* a few eloquent remarks, which brought down the house;" or, "Mr. B. in a short, humorous speech convulsed the audience;" or, "Mr. C. made the concluding address, which was well received." If A. and B. and C. are greatly pleased with this, there is reason in their rapture. *Omne ignotum pro mirifico.* The reader must take it for granted that A. was really eloquent, that B. was droll, and that the concluding C. was somewhat more than barely tolerated. A faithful report of what these speakers did say might bring them into swift, sure, and abiding contempt.

But if many are treated with unmerited kindness, there are others who have an indisputable right to complain. A clergyman, for instance, has preached a sermon which cost him many days and nights of patient thought and investigation. It is the elaborate product of his mind and skill; its method, manner, and proportion are necessary and not fortuitous; its parts are mutually dependent; it is a structure of which no specimen brick can give adequate testimony, and if it is to be criticized by those who did not listen to its delivery, its author may well protest against a judgment bottomed upon a crude conception of his theme, and resulting only in a desperate and abortive effort to reproduce fragments of his language. It requires a finer appreciation of his meaning and method to give simply a naked skeleton of his discourse than to furnish a mechanical and phonographic report; yet, in most newspaper offices, the task of providing what are called "abstracts" or "sketches" is committed to the cheapest and least practised hands. The result is unpleasant to contemplate. The most irritating nonsense is attributed to men notoriously sensible, the grossest error to the most accurate, petty vulgarity to the fastidious, damnable heresy to the orthodox, and Scriptural misquotation to those who know the Bible by heart. The only solace, under this grievous burthen of misfortune, is a declaration by the erudite reporter that "the reverend gentleman preached with his usual eloquence and ability," and even this is coupled with compliments to the choir, or, possibly, with a puff of the "gentlemanly and obliging" sexton. The meekest parson in all the churches may be allowed a little irascibility when this insulting draft is made upon his stock of forgiveness, for he is led captive, the victim of shameful calumny, into a limbo of dubious notoriety, that he may point a paragraph or adorn a column. We can imagine him shedding natural tears in the seclusion of his study, and privately bewailing the discovery of the typographic art.

But the clergyman is not, by any means, the only martyr. The judge upon the bench who never committed a legal blunder in his life is made responsible for law erroneous enough to evoke the ghost of Sir Matthew Hale. Lecturers who are prudish in their choice of language are held up to the world as recklessly and insanely defying the shade of Lindley Murray, and tempting it to revisit the world without its Quaker coat. Prodigies of science, capable of reconstructing from the smallest toe-joints a whole menagerie of antediluvian monsters, are represented as propounding physical theories which, if they should suddenly become true, would be followed by the immediate dissolution of the universe. Unhappy poets, who recite the prominent decasyllabics at the college festivals, are pilloried as rebels against the venerable and immutable statutes of long and short. Jokers of jokes read the reproductions of their drolleries only to find, with melancholy eyes, that the point has been taken out of this carefully constructed impromptu and the salt out of that. It is all a very dreary piece of business!

It is easier to point out an evil than to prescribe a remedy. It may not, however, be impertinent to suggest, unless a speech or sermon is to be elaborately reported, that nothing is gained by any pretence of literally reproducing the language employed. All orators whose fame is anything more than traditional have carefully written out their speeches for publication. Lord Macaulay, after a slovenly and inaccurate volume of his speeches had been published, was obliged either to print them himself, or go down to posterity as an utterer of nonsense, a blunderer, and a vulgarian. The preacher's fame, if he cares for it, must be protected and prolonged by the same expedient. The public, it is true, will grudgingly wait for the slow process of revision and of publication, but it might be less impatient if reporters would content themselves with an unadorned and coherent statement of the facts and opinions contained in a discourse. If speakers themselves would or could furnish to each reporter a brief and modest abstract of their remarks—although this is a trouble which we have no right to oblige them to take—they might save themselves from misrepresentation and mortification; but brevity, in such cases, would be the rarest of virtues, and the modesty of many would be severely tested, since few would doubt their right to at least one of the sorely-cumbered columns. Intelligent reporting is the only remedy, and we would fain believe that it is not an impossibility.

Reporting will not be improved, however, unless it is brought more under editorial supervision than it is at present. Great masters of English or able *précis* writers cannot be got to take reporters' places, and in most cases would be unfit to fill them, so that it will, probably, be a long time before reporters' contributions will be fit for publication, without revision, in any newspaper laying claim to be well edited. The fact is that the newspaper business in this country, like many other things, has grown up so rapidly that it is still in rather an unorganized condition. The editor is still largely engaged in doing things which other people ought to do, and he leaves undone things which nobody but he himself can do. Many of the subordinates have more scope than is good for either themselves, the English language, the press, or the public. Much of this will, no doubt, be mended in time; but there is one practice of the reporters which ought to be mended now, and that is the practice in which those of nearly every paper indulge of garbling and caricaturing and misrepresenting the speeches of political opponents under pretence of reporting them. Most reporters sent to attend a meeting of the opposite party feel called upon to make fun—and such fun!—of the whole proceeding, ridicule the speakers, put absurdities in their mouths which they never uttered, and, in fact, say everything that seems likely to bring them and their audience into contempt. The result is generally, in a literary point of view, disgusting, and, in a moral one, worse than disgusting. It is a deliberate fraud on the public, which pays its money to learn what happened, and not what reporters would like to have happened; and yet editors let it pass as if it was none of their business

ACCIDENTAL INSURANCE.

ONE of the most wonderful phenomena of this wonderful age is the progress of insurance. We may now ensure our houses against fire, our bodies against disease, and our shins against abrasion. How many human beings are, at this very moment, in receipt of an income, free of Government tax, from that most novel of modern conveniences—the "Accidental Insurance?" We recal the names of at least a dozen of our acquaintances who, as policy-holders in the new companies, are in the full enjoyment of a most remunerative convalescence. For the small sum of ——— dollars we may ensure, at our option, our lives against death by violence, or our persons against accident, at a weekly compensation of fifty dollars, for every week that through bodily injuries we may be incapacitated from performing our usual duties. To the ensured a broken finger is as good as a certified check for two hundred and fifty dollars. Taking this as a basis of calculation, what amount is represented in a broken arm, a dislocated shoulder, or a fractured thigh?

We Americans are ever quick to encourage and adopt what is practical, though with respect to the accidental insurance we have been several years behind France and England. Is it surprising, therefore, that the holders of policies in accidental companies should desert the city as a place of residence, when the profits of a commutation ticket on a dangerous and ill-managed railway are offered in competition with the stupid security of a city car? It must be allowed, however, that the exodus from the city is as yet confined to those men of small means who owe it as a duty to their families to add, in any legitimate way, to a scanty income, even if it be accomplished at the risk of a compound fracture of the *os coccygis*. Perhaps the day is near at hand when ensurers in accidental companies will look upon a railroad accident or a steamboat explosion as the El Dorado of their hopes.

When Tompkins—a holder of policy A. I. Co. No. 209,367—arrives at his home as one of the seriously injured in a terrible railroad accident, is he received by his wife with cries of lamentation and despair? Not at all. The admirable woman cautiously examines the person of the suffering Tompkins, and, satisfying herself that he is good for at least a dozen weeks of careful nursing, she hastily multiplies twelve by fifty, which gives her the amount due from the "Accidental Company." With this sum Mrs. Tompkins hopes to eclipse Mrs. Whopper, whose husband has come out of the smash-up with the unremunerative casualties of the loss of four front teeth and a slight wound on the nose.

Arthur Whackle—policy A. I. Co. No. 773,047—occupies a cottage on the line of the Borris and Fessex Railroad. The connubial veteran will readily divine that Whackle is but recently married from the fact that he still addresses his mother-in-law by the fond and endearing title of "mamma." Mrs. Whackle is an eminently just and careful woman. Mrs. Blodger is of the same persuasion as her daughter. Between the two poor Whackle is reduced to a condition which suggests precautions on the part of his persecutors. Mrs. Blodger, for the sake of Amelia, insists that the unhappy husband shall ensure himself in an "Accidental Company." The hope of peace induces the miserable being to consent, and a policy for ten thousand dollars is made out in favor of "mamma." A sleepy engineer does the rest. Whackle is returning to his home; the night is foggy, and the train pitches through an open draw-bridge into the river. Our friend is in the smoking-car, engaged with about twenty others in the ascetic occupation of coloring a meerschaum. Of course they are all drowned. Poor Whackle's remains are forwarded to their destination, with his pipe, two brass keys, seven dollars in national bills, and twenty-four small buttons—the accumulated evidence of Mrs. Whackle's neglect. On the arrival of the effects, the nasty meerschaum is tossed out of the window, and the defunct son-in-law is transferred to lot No. 37 in the village cemetery. The last offices having been performed, Mrs. Whackle and her mamma prepare to enjoy, less commissions, the fruits of policy No. 773,047.

Here is the experience of Jeremy Diddler—policy A. I. Co., No. 22. We all know the unfortunate Jeremy. We fancy we see him now, as he enters our office and whispers nervously in our ear: "I say, Tom, lend me five dollars; I'll pay you in three days." The plausible fellow secures the amount and joyously departs. Four hundred and thirty-five days elapse, but Diddler does not appear. We have given up all hopes of ever seeing him again, when we suddenly encounter him as we turn the corner. "Tom, old boy," says he, "I have just taken out a policy in an 'accidental company;' lend me ten dollars more, and I'll pay you in a few days." We advance the sum on the possibility of remunerative bodily injuries.

Poor Diddler borrows small amounts here and there until he achieves a total of seventy-five dollars. With the proceeds of his successful raids he ensures himself in the "Fearnought Accidental Insurance Company," and pays fifty dollars for the policy. With twenty-five yet at his command, he carefully studies the most noted and dangerous routes of travel. The I. O. U. RR. offers the advantages of a single track and sharp curves. The U. O. Me. RR. traverses a long, black tunnel, full of horrors and profits. Jerry is about to trust his fortune to this line, when the newspapers announce the completion of a telegraph connecting both ends of the subterranean thoroughfare. The B. & F. RR. is out of repair, the engines are unsafe, and the conductors have a habit of racing with a parallel road. Acting upon the advice of interested parties, Jerry selects this route. He buys a ticket on the night express. The train starts thirty-five minutes behind time, and the maximum speed is soon attained. Diddler, with an eye to a remunerative crush, places himself near a stout, elderly female. The train rushes on, the lights of the opposition are close in the rear—a wild crash ensues. The concussion evokes the following phenomena: Jeremy is shot out of his seat, and finally lodges on the back of a gentleman who, being asleep at the moment of collision, is unaware that instantaneous death has overtaken him. The stout, elderly female, being of greater bulk, attains an immense momentum, and, after a flight singularly full of catastrophic successes, settles upon the fragments of the red hot stove, the victim of many burns and much internal discomfort. The agents of the insurance company, who are on the train, having disentangled our friend of policy No. 22 from the spine of the person on whom he has fallen, proceed to an examination of poor Diddler, and compute his injuries as follows:

1. Broken collar-bone, four weeks, ...	$200
2. Compound fracture of the fore-arm, five weeks more, . .	250
3. One deep wound in the chest—from which is extracted, by an obliging surgeon who happens to be present, a paper collar, the carte de visite (vignette) of the deceased gentleman's wife, and a brass suspender buckle—ten weeks more, . .	400
Grand total, ...	$850

Eight hundred and fifty dollars, exclusive of physician's fees, from an outlay of fifty dollars for a policy of insurance, and three dollars and forty-five cents, the price of a ticket on a judiciously chosen railway!

Ten days since, Jeremy Diddler entered our office, his face beaming with smiles, his arm in a sling, and his body enveloped in two flannel waistcoats. From the outside pocket of an expensive coat he carefully extracts a porcelain slate. "Dear Tom," he writes thereon, "my voice is lost to me for ever, my left arm is useless, but I'm a happy man. I start to-night by the lightning express on the B. & F. RR. In view of possible contingencies, I return the amount due you." The hardened adventurer takes his departure, wheezing as he passes into the street a joyful anthem through the hole in his chest.

If we look at "Accidental Insurance" from a social point of view, we may take the cases of young Tom Mallett, policy No. 73,777, and Harry Ball, policy No. 73,778, who are over to play a game of croquet with Miss Geraldine Hooper. It must be allowed that this amiable young woman is a cause of jealousy between the young men. What is more natural, therefore, than for Harry, while raising his mallet to "croquet" Tom, to deal his adversary a tremendous blow over the eye. Young Mallett drops to earth without uttering a sound. His lips move! Does he ask for water, or is he heaping curses upon Harry? How little do we understand the nature of insurers in an "Accidental Company!" Although Tom is suffering intolerable pain, he neither calls for refreshment nor execrates his rival; but, with a financial acumen that does him credit, he is calculating, as far as his muddled intellect will allow, the amount of compensation he will be entitled to upon his policy, provided he may manage to be laid up for three weeks. As Tom lapses into unconsciousness, he whispers in Geraldine's ear the words, "One hundred and fifty." Need we add that young Mallett received a check for the amount mentioned in his confidential communication to Miss Hooper?

The wonder is not that people can ensure themselves against accidents in travelling, but that the system has not been carried further, and that we have not been provided with means of ensuring ourselves against every other risk in life, against the occurrence of every event of an unpleasant nature which it is not in our own power to prevent. The field offered to enterprise in this whole business is really immense, and yet only a very small portion of it has been explored. For instance, why cannot young ladies ensure themselves against failure to get married before a certain age? Most single women want to be married if they can find a suitable husband, and there are only very few to whom marriage is not an object in a pecuniary point of view. There is, undoubtedly, something indelicate in claiming damages for breach of promise, but what possible objection could

there be in claiming compensation of an insurance company for never having received any promise at all?

Then why should not men be able to ensure themselves against the risks of primary meetings? At present, husbands and fathers in this city are apt to stay away from them, not by any means from consideration for their own skulls, of course, but from a fear of the consequences of a "knock-down" to their business and their families. Why does not some company step in with a million of capital and enable the patriotic citizen to brave the bludgeon and the knife without flinching or anxiety? Why, too, are so many young lawyers left to pine in uncertainty as to whether they will ever get any business, or at what time they will get it, when the payment of a small annual sum might secure them consolation in the shape of policy contingent on their not being elected corporation counsels or district-attorneys before a certain age? Why cannot a man provide for the receipt of an annuity in case he is elected to Congress or the Board of Aldermen, or the Board of Charities and Correction, or in case his throat or his eyes fail him, or in case his suit is rejected by the object of his affections, or his book does not sell, or his play is damned by the audience, or his poem by the critics, or his real estate does not rise, or, in fact, anything disagreeable happens to him which he could not have foreseen or, at least, averted? Capital is now tolerably abundant, the combinations of actuaries are infinite, and so are the ills of life. We commend these suggestions to the "live men" of the insurance business.

AMERICAN CATTLE.

It is not to be inferred from the fact that our common or "native" cows are made up of a mixture of various foreign stocks that they are, necessarily, of inferior quality. So far is this from being the case, that many might be selected from among them that would do credit to any highly improved breed. Their prevailing characteristic is the extreme want of uniformity, to which allusion has been made, and this, not in form and color alone, but in milking qualities, in early maturity, and in a tendency to fatten easily.

There is a well-established principle among the breeders of stock that like produces like, and this is the basis of all systems of improvement. Among the distinct races and well-marked breeds there is little difficulty in finding animals exhibiting this uniformity, but among a stock made up of an infinite mixture, descended from such widely different sources as we have seen to be the case with ours, this cannot easily be done.

Let us see how this affects the farmer's interest. There is a "native" cow. She came, perhaps, from a drove. Nobody knows anything of her origin, but she proves to be a remarkable milker. She may surpass all the cows about her, and the owner is anxious to have another of the same sort. He raises her daughter, at great expense, to the age of three or four years, only to find her quite unlike her mother, and comparatively worthless. His money has been thrown away, or, rather, there has been an actual loss on her, because her qualities do not realize his expectations, and the animal is not worth what it has cost to raise her. This is by no means a supposed case. It is the experience of thousands whose long years of waiting and expense for the offspring of some favorite cow have ended in disappointment. In other words, there is no certainty of results.

Now, two modes naturally presented themselves to the minds of those whose attention was early called to the importance of improving the stock of the country, either of which seemed to promise satisfactory results. The first was to select from among our common cattle the most perfect animals not known to belong to any of the breeds at that time established in Great Britain, and to use them as breeders. This mode is simple enough if adopted among the uniform breeds, and, indeed, it is the only course of improvement which preserves the purity of blood; but, as has been shown, we had no distinct race, no established breed of cattle in the country. We had none among which there was any reasonable certainty of results, none which could be depended upon for producing their like in their offspring. Take the best we could find, and the defects of an ill-born ancestry would continually "crop out" and lead to endless disappointment.

Besides this, to build up a breed or family of animals upon such a foundation, in the mode already indicated, that of careful selection, requires great experience, a quick and sure eye, an accurate judgment of the true points of stock, a mind eminently unprejudiced, and a patience and perseverance perfectly untiring. It would be quite necessary to pay special attention to the progeny thus produced, to furnish them at all times with an abundant supply of nutritious food, and to regulate it according to their growth.

Few men could be found willing to undertake the task of building up a breed in that way from grade or common stock, especially when there were other well-established breeds to which they could resort. Another prominent objection also occurred, and that was, that it would require a long series of years—longer than the natural business life of man—to effect the object. No two animals, made up as our cattle were, could be found sufficiently alike to produce their kind. The peculiarities of their ancestry would be liable to come out for several generations, and thus constantly thwart well-meant efforts.

The other plan was more feasible, and that was, to select animals from races already known to exist, and to cross them with our cattle, selecting such individuals from the well-known breeds as were best calculated for the special purposes we had in view. If we wanted to produce a stock for the dairy, for instance, we should select animals belonging to a race distinguished for dairy qualities, or, if we resort to other breeds less remarkable for these qualities, we should select only such animals as have descended from remarkable milkers. We desire to be able to rely with some degree of confidence upon getting the qualities we seek.

Dairy qualities do not belong to any one breed exclusively; but as they depend especially on structure and temperament, which are hereditary to a great extent, they are themselves transmissible. In almost every pure breed we may find individual milkers which far surpass the average of cows of the same family, and many suppose good crosses may be obtained through the male offspring which descends from them, without regard to other circumstances. But these qualities are exceptional, perhaps, and it is far safer to resort to those breeds possessing what we desire to obtain in the highest degree.

Now, it was found that certain races existed in England with well-defined characteristics, while certain breeds had been built up through a course of improvements, conducted with remarkable judgment and sagacity, each possessing characteristics which they transmitted to their offspring. Among the former may be mentioned the Devons and the Herefords. Among the latter, the short-horns, the Ayrshires, and, perhaps, the Jerseys from the Channel Islands. The Devons are small in size, fine in the bone, of a beautiful red uniform color, coming pretty early to maturity, with a fine-grained and well-marbled beef—that is, beef in which the fat and lean are well mixed throughout the tissues—not remarkable for quantity of milk, and seldom bred for the dairy. Their milk is of a rich and desirable quality, however, while as working oxen they are rarely surpassed. They are so perfectly uniform in color, size, and other characteristics, such as activity and docility, that they may be matched with great ease.

The Hereford is essentially a Devon with a considerable addition to its size. It is uniformly white in the face, while most of its body is of a deep, rich red. A few incline to roan. It gives but little milk. It is rarely bred with any reference to dairy qualities, any more than the Devon. Both these races furnish the finest beef. Both have been improved to the utmost with a special view to these qualities. Prince Albert established a magnificent herd of each, the former upon the Norfolk farm, where grazed a splendid herd of a hundred head, while a magnificent herd of ninety pure-bred Herefords were kept upon an adjoining estate called the Flemish farm, two miles from Windsor Castle. Many of the nobility, also, admire and possess those superb breeds.

The short-horns trace back their origin a little less than a century. More money, more time and skill, have been devoted to the perfection of this fashionable breed than to that of any other in any part of the world. Coming first into notice along the banks of the Tees, and around the graceful slopes of the county of Durham, they have worked their way into all parts of the United Kingdom, and now stand unrivalled for beauty, for symmetry of form, and for early maturity. They stamp their peculiar characteristics on any breed or class of cows with which they are crossed, and hence there is scarcely any that they have not improved. They are of immense size, and more inclined to lay on fat, especially when not giving milk, than any other breed. They require generous feeding, of course, and are not adapted to regions of short pasture. The Devons would thrive on lands where the short-horns could never attain perfection—where, indeed, they would almost starve.

The Ayrshires are the dairy breed of Scotland. They are of small size, rather smaller than the Herefords, or even the Devons. Size is no object there, the smaller Ayrshires being preferred for the dairy. Where land is light, or if only of medium quality, the Ayrshire is the most valuable, especially in regions where dairy husbandry is pursued. If removed to other and richer soils she grows to larger size, but her milking qualities are injured by the change. The milk of the Ayrshire cow is unsurpassed for consumption in its natural form, as milk, or for the manufacture of cheese. Owing to its richness in casein, the butyraceous particles do not rise through it so readily to the surface and hence though naturally rich and of excellent

quality, it does not throw up so much rich cream in a given length of time as the milk of some other breeds.

The Jersey cow is a native of the Channel Islands, or rather of the islands of Jersey and Alderney, near the coast of France. She has long been celebrated for the richness of her milk and the delicious butter qualities it possesses. No breed surpasses the Jersey in this respect. This breed was first taken from Jersey to the island of Alderney about ninety years ago, and as it first made its appearance in England from that island, it went for many years under the name of Alderney, though the term Jersey is more appropriate. The improvements upon this breed date back only about thirty years, though its high character for the dairy was established long previous, more than a century ago. The island is only eleven miles long by about five and a half wide, and it is divided up into small holdings, but so great is the reputation of its cows that from one thousand to twenty-five hundred are annually exported at great prices. The importation of cows of any other breed is strictly prohibited.

These are the principal breeds to which American farmers have resorted; and as they have exerted a powerful and widely marked influence upon American stock, it seemed proper to allude to them at the outset. Let us take a glance at the importations which mark the progress of improvement in this branch of rural economy.

In the year 1783, three gentlemen of Baltimore, Md., Messrs. Goff, Ringold, and Patton, sent to England for some of the best cattle that could be found. It is not probable that their minds were fixed upon any distinct breeds; for at that time none of them can be said to have risen into general notoriety, unless it may be the long-horns of Bakewell. The reputation of the short-horns was then scarcely founded. "Hubback," the celebrated male to which the pedigrees of that family are usually traced, was then but six years old. The fame of the Devons and Herefords was chiefly confined to their respective counties. A few animals were received in response to this order; and two years later, in 1785, a male from this importation was taken to Kentucky, followed not long after by another lot of the same stock. It was then known as the "Patton Stock." From that time the improvement of the stock of that State dates; for it became so celebrated that, for many years after, to be said to come from the Patton stock was a sufficient certificate of goodness and character. A part of this importation was called the "milk breed," and another part the "beef breed." The former were probably short-horns, which at that time furnished the milky mothers of the herd; and the latter long-horns, large, coarse, and rough, but slow in maturing. This stock gained a wide reputation, which lasted down to the present day, or certainly to within the memory of men still living.

Colonel Sanders, of Kentucky, sent out for twelve of the finest animals in England in 1817. Six of them were short-horns. The climate and soil of that great State are so admirably adapted to bringing these splendid cattle to perfection, that they were not long in exciting a spirited emulation among the enterprising farmers of Kentucky, which had a most salutary effect, and the southern portions of Ohio soon caught the spirit of improvement in stock from across the river.

Henry Clay, in the same year, 1817, imported four Herefords, two males and two females, into Kentucky, at a cost of $500. This was the first of the Herefords in that part of the country. They stood their ground, an ornament to Ashland and to the State, for some years; but the popular taste finally settled upon the short-horns as the stock for that region, and they have maintained their high reputation for many years.

A few short-horns were imported into Westchester County, New York, as early as 1792 and 1796, where they were kept pure for some years, but finally became scattered, leaving, however, distinct traces in their descendants there to this day. Other importations of this grand breed were made into New York in 1816 and 1822, and in 1818 "Cœlebs," a celebrated short-horn, and "Flora," of the same family, came into Massachusetts, where they founded a class of cows known as the "Creampots," on the farm of Col. Samuel Jaques, at Somerville, near Boston. "Flora" was the mother of a large family of fourteen, between 1819 and 1833. In 1818, also, Gorham Parsons, of Brighton, imported "Fortunatus," sometimes called "Holderness," and his descendants were widely disseminated throughout New England.

The same year, also, Theodore Lyman, of Boston, imported a remarkably fine male, which soon went to Maine, where he established a wide-spread reputation, and founded a large family of stock. It was in 1818 that Stephen Williams, of Northboro', Mass., imported the famous "Young Denton," the sire of a large number of remarkable milkers. The success of these importations led to numerous others, the most celebrated of which was that of "Nelson," by W. Pierce, of Greenland, near Portsmouth, N. H., who also brought over the cow "Symmetry," the parents of the great ox "Americus," whose size became so enormous that he was exhibited about the country as the wonder of the nineteenth century, and afterwards sent to England as the product of American breeding.

In 1824 Mr. Powell, of Philadelphia, began the importation of short-horns, and bred them with success for many years. He held frequent sales, and his stock went into Kentucky, Ohio, and elsewhere. But the great impulse given to the importation of this fine breed was the formation of the Ohio Company for Importing English Cattle in 1834, when the sum of $9,200 was subscribed in $100 shares, and agents sent abroad, who brought over nineteen head selected from the most celebrated herds in England. The number was increased till 1836, when they were sold at public auction and scattered extensively over Ohio, and a dividend of $280 a share was immediately declared, amounting to $25,760. The following year the company made another extensive importation, which sold rapidly, and resulted in immense benefits to the country.

This rapid glance at some of the earlier importations of short-horns is sufficient to give an idea of the gradually increasing and extending interest and enterprise in breeding this class of cattle. Since 1840 these importations have been so numerous and so frequent that it would be out of place, in this connection, to give them in detail. It is sufficient to say that the best of the choicest and most celebrated herds in England have been brought to this country without regard to cost. A thousand guineas for a single animal has proved no obstacle in the eyes of enterprising men. Five or six thousand dollars, to which the cost of transportation is to be added, have been repeatedly paid, at public sales, in England, for animals that now grace or have graced our American herds, and so successful have these purchases proved, that, in repeated instances, nearly as large amounts have been paid by Englishmen to our own breeders for the same animals, or their progeny, to take back to their native country.

To a person not conversant with matters pertaining to this branch of progressive agriculture these prices seem fabulous, and yet, when closely examined, it will be found that, considered in the light of business transactions alone, they have proved, in many cases, to be judicious investments to the individual, while, at the same time, they have contributed largely to the honor and prosperity of American agriculture. A simple allusion to the statistics of a single State will serve to place this in a striking light.

During the ten or twelve years preceding the outbreak of the rebellion, the live stock of Ohio increased in value, according to official statistics, more than two hundred per cent., while, at the same time, no class of stock in that State increased in numbers, in the same time, so much as one hundred per cent. If it be said that so remarkable an increase must be ascribed to an increase of demand rather than quality of the stock itself, it can be clearly shown that intrinsically better animals superseded the inferior native cattle to a large extent, owing in part to the vastly increased means of communication by railway and the facilities for information consequent upon this increase.

When the great sales of the Ohio Stock Importing Company took place, in 1834, 1836, and 1837, they were hardly accessible to the great mass of cattle-breeders, even of that State, and the stock had acquired a local, rather than a general, reputation. It could hardly be otherwise at that date, so limited were the facilities for travel as compared with those of ten years later And what is true of Ohio is true of most other great cattle-breeding States of the West.

We propose to allude, in a future paper, to the progress of other breeds in other parts of the country, and to point out the different objects for which cattle are kept.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXIV.

COLUMBIA, S. C., Dec. 15, 1865.

GENERAL ELY, the chief officer of the Freedmen's Bureau in Northern South Carolina, is accustomed to make frequent short excursions into the various districts of which he has charge, for the purpose of conferring with the planters and addressing the freedmen. Last week his duties led him out to Edgefield, and I was invited to accompany him. He was also accompanied by an armed orderly, for it is his opinion, based upon personal experience, that an agent of the Bureau is not so safe in the remote and lonely roads as an ordinary traveller. Edgefield Court House is about sixty miles from Columbia, and, as there is no public conveyance, we were to travel on horseback and be absent four days. The morning of departure was close and warm, and we set out with our overcoats strapped to the saddle,

but soon after crossing the Congaree, a small rain began to drizzle down, making the road a little sloppier than before and lending the landscape an aspect still more cheerless. Not much was to be seen but trees, for the part of Lexington District through which we were riding is a desolate region, sandy and thinly settled. In the first five miles we passed several houses undestroyed and the remains of two or three that had been burnt, and then for twenty miles there was slight evidence of human habitation. Such dwellings as we saw were nearly all of the poorest kind, and more properly to be called huts than houses. At one of them we were accosted by a ragged, unwholesome-looking lad, who begged sturdily for money or bread. It was the first case of the kind that had fallen under my observation, but both of my companions spoke of having met with similar instances, the beggar being sometimes a child and sometimes an adult. We rode slowly all day through the wet weather and at evening slower still, for, just as the night set in, very dark and with heavy rain, we turned from the main thoroughfare and travelled through the woods along a less frequented road. After an hour and more a light appeared among the trees, and soon, emerging from the forest, we came into a small clearing whose sandy fields could just be distinguished by their white glimmer amid the surrounding blackness. The light we had seen shone through the open door of a log cabin, and the orderly was sent to find out if there was a stable on the premises and to claim a night's lodging. The name of the general procured us a grudging admission, for the woman's husband was away from home and her accommodations for visitors were of the scantiest sort. She came out with a light-wood torch above her head and scrutinized us: "Gentlemen," she said, "if I let ye put up, and give yer critters some corn, ye 'll pay me, won't ye? We 're poor folks, and we don't take in strangers, and my husband ar' n't yer." She was assured that our stay should make her no poorer, and, taking courage, she first lighted us out to the stable and then proceeded to prepare supper. Her house contained one room, with an immense fireplace at one end and two beds at the other. It was without a window, but the two doors stood wide open. An uneven floor of bending boards was under foot, and overhead we could see the shingles, for there was no loft. Besides the beds, the furniture consisted of a table, a clock, four chairs, and a spinning-wheel. The loom stood under a shed at the back-door.

At supper we had cakes of flour and water, fried in lard, and a panful of fresh pork, for it is now the time of "saving meat," and pork in some form is a standing dish at all tables. While we ate, the woman stood near making apologies for the poor fare. She reckoned we could n't hardly see, but a piece o' light-wood was all the candle she had; our women folks made better roll-cakes than them—they had stoves to cook with; Yankee coffee she could n't offer us, for she 'd seen none since the war; and, for a wonder, this remark was not followed by any expression of regret at the deprivation. She 'd had to drink cold water in the war, and now she thought she 'd stick to it, for she had n't had the sick headache since she left to drink coffee. After supper she talked about her circumstances.

"She did n't know how much land they had; there was forty acres cleared. It was all mighty poor, through that country, for farmin'. She did n't reckon they got three bushels of wheat to the acre, and it was worse yet for corn. Corn was scarce this year, and when they went up on to the ridge to buy, they axed two dollars a bushel and the greenback money they would n't have nohow, but wanted the silver; they said the greenback money would n't be good in no time at all; *she* thought it was good, but they thought it warn't. They did n't raise cotton, only a little patch, enough for her factory. She spun and wove all the cloth they needed." Then she went and got out three pieces of cotton goods and brought them for our inspection. "That 's some o' my factory," she said. "The black dye was got from the oak bark, and there was a bank of dirt right close that would color red and yellow; roast it and it colored a clever red, and take it right natural and it colored yellow. They had n't no great use for store goods—a little salt and tobacco sometimes was about the furdest. They lived within themselves altogether. As for the war, *she* niver knowed what they brought it on for. Her old man was out o' age for goin', but two of her boys went, and one got killed the 13th day of July was a year, at Petersburg. And what was the rich folks any better? They 'd lost all their niggers, and she was mighty glad of it. She wished them and the niggers had been at the bottom o' the sea." The general enquired how the negroes were getting along; if the planters abused them?

"They was mighty few in that settlement," she replied; "and where she lived it was n't any great of a place for news, so she did n't know much about it." She did n't know anything, then, about that preacher up in Edgefield? A negro preacher, it appears, was killed in that district some three weeks since, and the murderer still remains undiscovered. "She had been told about it only the day before," she said. "Now that man—that Wade—shot up in Newbury, she 'd heard about him sooner." This was a case of which the general had heard nothing, and he put many questions in reference to it, without, however, eliciting much information, for she had forgotten the circumstances. A report of it was probably made at the time directly to General Saxton's headquarters in Charleston, and will yet be forwarded to General Ely for his information and action.

At bed-time both beds were given up to us, while the woman and a young girl who was living with her slept on the floor before the fire. Contrary to expectation, we passed a comfortable night, and, after partaking of a breakfast like the supper, willingly paid our hospitable hostess the six dollars which she hesitatingly demanded. She was quite unlearned, and could not read the figures on the Treasury notes.

The day was cold and overcast, and we had a comfortless, muddy ride to Edgefield village. The first few miles of it lay along the Tarbucket Road as the old woman called it, and the country seemed to be worse, if possible—a thirstier sand and more deserted—than what we had seen on the previous day; but after crossing the district boundary, and getting into Edgefield, its appearance became very much better. The houses were handsome and commodious, seeming to be the residences of wealthy men, and the one before us could be seen while the one behind was yet in sight. There was very little wild land. The farm buildings and negro quarters were in good order, and sometimes very numerous. The fences were still standing, and on several plantations the hands were engaged in the winter work of repairing them; and, altogether, this portion of Edgefield appeared to be better improved and thriftier than any district of equal extent that I have yet seen. The surface is level, and the soil is a light loam, which looks well adapted to cotton. This year but little planting has been done, though I saw a few fields in cotton, and passed some houses in which ginning was going on; also a good deal of old cotton was under the screw in process of repacking. On every plantation where short-staple cotton is raised, the screw is a prominent object. Looked at from a little distance, it may be roughly described as presenting the form of a gigantic letter A. The point is at the top of the screw, and some fifteen feet from the ground. A mule is harnessed to the lower end of one of the limbs, and walks in a circle about the central post. The cotton-bag is placed on a raised platform between the limbs, and, the screw descending, a great quantity of the lint is pressed into a small compass. At one place which we passed, relays of women were substituted for the mules; one would run round once or twice, then another would take her place, and the old planter stood by to superintend.

As we rode along, the general was repeatedly stopped to answer questions: sometimes it would be a planter enquiring if he should divide the crop among the people, or if a soldier would be sent out for that purpose; but oftener it would be a negro enquiring if he was obliged to work another year on the plantation where he now lives, or was at liberty to seek work anywhere, or complaining that his master would make no new contract with him, but said that after January negroes would be willing to take lower wages, and he should hire nobody till then. Some expressed themselves satisfied with the treatment they had been receiving, but many charged their employers with having violated the contracts made last summer. Several of the men, after it seemed that all their questions had been answered, would still walk along eagerly asking more, and evidently anxious to ascertain their position and prospects. The enquiries and statements often revealed a total misconception of rights and duties, sometimes on the part of the laborer and sometimes on the part of the employer. From what he heard, the general seemed to conclude that free labor has less chance of a fair trial in Edgefield, and that the negro may look for more injustice there, than in most other parts of the State. The district is extensive and less remote from the main lines of travel. It was never occupied by the federal army, and its many large and fertile plantations, owned by men still rich, stand ready for cultivation unchanged and uninjured by the war. As it seems to the people, therefore, more easily possible to preserve the old order of things, and as the material inducements are greater, it may be reasonably suspected that the desire to do so is stronger there than elsewhere. To me, however, it seems not different from other parts of South Carolina.

We reached Edgefield village a little after dark, and were received by the captain of the garrison, who made us welcome at his quarters in the county jail. Notice had been previously given that the general would address the freedmen on the following day, and already they had begun to come in from the neighboring country. A score or two were waiting in the court-house square as we rode through it. I slept in the rambling old tavern at a corner where two roads entered the square, and, being kept awake by the curs beneath the window, who challenged each passer-by, I could hear the people still arriving, one by one, up to a late hour in the night and in crowds after three o'clock. Before eight o'clock more than a thousand

had come in, and the number increased afterwards to two thousand. Most were on foot, but some had ridden in; and several whom I asked said their masters wanted all the boys to hear what the general thought, and had loaned them the animals. All were in their best clothes, and, despite the depressing influence of the weather, the crowd was in very good spirits, filling the square with the noise of laughter and salutations, though on some faces there was an expression of expectation and some of the hand-shaking was done with solemnity. The landlord, an irascible old man, was much displeased at the sight.

"Aha!" said he. "Oh, they 've come now. Look at 'em. Now they 're to get their half o' the land and the stock."

"You do n't think they expect that?" I said.

"Do n't?" he answered. "Well, now, I 'll tell you. If the general do n't tell them cuffees they 're to have their share o' our land and hosses and everything else, you 'll see a hell of a row to-day. They 'll turn their backs on him right here in this square, and there 'll be a hell of a row, as sure 's you 're born. They do n't expect nothin' else but they 're to have a half."

Before the address was delivered, the general sat in the midst of a throng of people listening to the recital of their grievances and giving them advice. One good-looking yellow man, about thirty years old, waited some time for his turn to speak, and then told this story: He lived on a plantation ten miles from the court-house, and was a stiller by trade. The white people round about had been saying that the negroes there had guns—Government muskets, of which there are said to be many through the country. On Saturday last, J. R. and fourteen others of the home-guard, with a Yankee soldier, came down to the place and said they were searching for United States arms. He knew this federal soldier, for the man had once come to him and begged a drink of brandy, "which I gave it to the gentleman freely, and was proud to do it." This soldier told him the guard had a right to search, and were acting in obedience to orders, and then rode away and left him with them. They demanded his gun. He had none, he told them, and for some time they persisted in the demand and he in the denial. At last one said, "I 'll get it out of him," and, going away for a few minutes, returned with a chain. With this they hung him "till I lost my sense, and when I come to a good understandin', they asked me 'would I give up the gun, now?' and I told them, 'Gentlemen, I *got* no gun.'" Hung up again, and again restored to consciousness, he made the same reply as before, and was hung for the third time. Then they stripped off his clothes and gave him a severe beating, of which the marks were still to be seen upon his body, as well as those of the chain upon his throat and neck. "I told them the truth," he said, "for I had n't got any arms. These here is all the arms I has got. And yet they put me to death three times. Which, if I had ha' knowed how easy death was, I would n't ha' feared it so. And I do n't expect they 're agoin' to let me live now I made this complain to you, gineral; but they may kill me for good as soon as they chooses." Here he began to cry. "Which I has n't got anything in the world but myself, for I has n't got any family, nor any parents, nor any land, nor any money, and I know I is not to be any worse off in the grave than I is now."

Two other cases of hanging were reported, names were taken, and an investigation ordered. The home-guard, or militia, is now organized in most of the districts. It has its own officers, but is in the control of the federal commander, and can perform such duties only as are confided to it by him.

The general's speech was, of course, listened to with the utmost attention. He told them, and they heard it with expressions of satisfaction, that it was their right to establish schools for the education of their children; that they were free to meet together for religious worship; that they might seek work wherever they chose; but that a contract once made must be strictly observed. If the employer broke it, he must be sued and made to do justice; and if the laborer broke it, he must expect to be sued and to lose his wages. A negro's oath would be good as a white man's in all the courts, and in all respects he was now a free man. Honesty, industry, and chastity would give them a good name; and though they could not expect to become rich or well educated in one year nor in two, yet their condition would be all the time improving, and many of them would live to see their race happy and prosperous. The negro owned the labor, and the planter owned the land; each needed the other, and each must be just to the other. If any freedman wanted land, he must earn money enough to purchase it; the Government had none to give away. It was plainly evident that this part of the address caused disappointment. The faces of the audience showed it; but nothing was said, and they listened with the same patient attention and anxious endeavor to understand every word that they had evinced from the beginning. It was explained to them that one of the Union generals had made a promise of land to the freedmen, but that nobody knew at that time of war what the Government might see fit to do when peace came. It had since been decided that the former owners of land should retain it, and now the United States had no land to give away. Then advice was given them in reference to making contracts for next year, and they were cautioned to sign nothing that they did not understand. It would be best to make the agreement in presence of a federal officer.

The rain had been falling throughout the time of speaking, and at the conclusion of it the square was immediately emptied, for some of the people had twenty miles to travel. There was no disturbance, except that a drunken man, who cursed the Yankees at the top of his voice, and could not be kept quiet by admonitions, was lodged in jail till the meeting broke up. The weather was such as to prevent a large concourse of the planters; but a few were present, who sat in their carriages on the outskirts of the crowd.

In the afternoon, taking to our horses again, we rode back some twenty-five miles on our way to Columbia, being accompanied by the garrison commander, who was to sit on a court-martial, and at night, dripping wet, reached the house of a wealthy planter, at whose hands we received a most hospitable welcome. He was an elderly man, living alone in a great house full of bare, dismantled rooms—Liberty Hall it might have been styled from the manner of its housekeeping—and waited upon by a crowd of male and female servants. Fires were lighted at which to dry our clothes, a plentiful supper of pork and corn bread was prepared, and we were bidden to make ourselves completely at home. On going to bed a barefooted mulatto woman carried a whiskey-bottle and glasses from chamber to chamber, and in the morning it was brought to us again as soon as we had risen. "Dem boys do jest what they please," the servant said, in apologizing for the absence of light-wood, and master himself had to follow them all the time if he wanted anything. Besides our party there were four or five other chance guests in one part of the house or another. All were bountifully provided for, and I saw, not without surprise, none were allowed to pay for their lodging. I suppose the negroes on this plantation can hardly be taken as a fair sample of those living about them, for they seemed to live perfectly at ease and uncontrolled. One of them, whom his master laughingly introduced as "the old Adam, the preacher on the place," walked into the parlor after supper, and informed the general that some of the boys had been up to the village that day to hear the speaking. They were dissatisfied with it. The advice he had been giving them all along was precisely the same as what they had now heard from the general, but they could not be content. He would like to hear better what the general had to say, and then he could use his influence over his fellow-servants.

"I offer them a third of the crop," said Mr. N., "as Adam can tell you, and I believe that 's what you advise, general; but they say that won't do at all. I believe they think they own the plantation. You 're their best friend, they all know, and I 'm very glad you 've come down this way."

So, for some minutes, the general conversed with the old preacher, who seemed very sensible of the honor conferred upon him, and felt confident that now he could keep the people in good order. They were good boys, but they did n't know.

After getting into bed, I was called on by a gentleman, like myself a guest in the house, whose visits to the sideboard had been too frequent, and who now walked into my room and took a seat before the fire. "Some men," he said, "is dreadful ornery. Beats the Dutch what ornery men 'll run for the legislature. Now I 've got thirty-five workin' niggers; nor they ha'n't been corrected much, nuther; but they do jest as well to-day as they ever done. I 'll go home, and I 'll skin one o' them cusses, and he 'll say it 's all right; for, you see, he knows I 'll treat him like a man. You see I never let myself down to 'em. They a' n't in and out o' my house, and just as good as I am, and doin' what they please. The worst niggers now is two kinds o' niggers—them that was cut and lashed and knocked about befo', and them that never was under rule. Them 's the mean niggers now." I was too sleepy for conversation, and he soon left me to myself.

On the following day, an uneventful ride of thirty-five miles brought us to the banks of the Congaree, which was swollen and red from the heavy rains. The rope-ferry, however, was able to take us across, and in a few minutes we were riding among the ruins of Columbia.

Correspondence.

FARRER'S WATER-COLORS

ASHFIELD, January 1, 1866.

TO THE EDITOR OF THE NATION:

DEAR SIR: In the criticism of my drawing which appeared in your last number, there is one paragraph which I feel bound, in justice to myself, of notice.

The summing-up of the criticism is in these words: "The inevitable tendency of this sort of work is shown by the little drawing of three eggs. Each egg is rounded with great subtlety of gradation into its complete form. But, in doing this, the painter has been compelled to lower the tone of the whole, and they are not white eggs that we have. That they were meant to be, the high light seems to show."

Now, they were *not* meant for white eggs. The central one was, as it appears in the drawing, *white;* but the other two were the pale buff color always to be found in any large number of city eggs.

I would not trouble you with this were it not that, in criticisms that profess to be accurate and just, and which help to form public opinion, any misstatement is important. I am, sincerely yours,

THOMAS C. FARRER.

SHAKESPEARE AND CARLYLE.

TO THE EDITOR OF THE NATION:

Readers of the fifth volume of Carlyle's "Frederick" will observe a passage which seems to throw a curious light on a much puzzled-over line of Shakespeare, and gives support to a keen guess of R. G. White. The line is in *Diana's* speech in "All 's Well that Ends Well:"

> "I see that men make ropes (hopes?) in such a *scarre*
> That we 'll forsake ourselves."

White observes that somewhere in Dodsley's "Old Plays" the word "scarre" seems to occur in the sense of tumult or quarrel, but that the editor treats it simply as a misprint for "scare." Compare therewith the sentence, "Derangés par cette '*escarre*,'" in Montcalm's letter, where "escarre" evidently means violent and sudden attack. The letter is so very minute a prophecy as to be very possibly written after the event; but that makes it none the worse authority for the word. This reading ("escarre" for "a scarre") gives most obvious and intelligible meaning to the line, "Men hope that by sudden and violent attack like this we shall be won to surrender without cause." S. T.

Literature.

LITERARY NOTES.

A NEW work by Sir Edward Bulwer Lytton is among the latest book announcements in London, to be called "The Lost Tales of Miletus," a title that certainly savors of a bull, as, if the tales are "lost," how comes it that Sir Bulwer Lytton can publish them? The nature of the work may be predicated with some probability from the name. The Milesians had the credit, among the continental Greeks, of being the first Hellenic people who cultivated fiction, and are supposed to have derived the taste from the neighboring Asiatic nations. The "Tales of Miletus" that they invented were considered the earliest specimens of fictitious narrative. The tales thus invented, and of which the name has become so celebrated, have all perished. There is little known of them except that they were the "Facetiæ" of antiquity and not of a very moral tendency—a feature that we may be sure the literary baronet will not reproduce. Sir Edward's new publisher is Mr. John Murray, a fact rather curious, as this house has steadily kept aloof from being connected with works of fiction, and the author's relations with Messrs. Blackwood & Sons—in whose magazine most of his late works have first appeared—have hitherto been of a very intimate nature.

—Among the curiosities of the press in England arising from the instances of the indulgence of particular tastes by wealthy individuals, who publish for their own gratification without the expectation of a pecuniary return, is a huge and handsomely printed quarto on the science of aerostation, entitled "Astra Castra," or adventures in the atmosphere. It consists of a collection of everything that could be found relating to the navigation of the air, from Dædalus down to the present time. The accounts are merely put together in chronological order, from various sources, and are accompanied by two hundred fac-similes of portraits, views, hand-bills, tickets, etc., and everything odd and out-of-the-way connected with the subject that time has spared for the curious collector. Some facts of interest may be gathered from the mass. It is calculated that the number of aeronauts may be approximately taken at fifteen hundred and the ascents at about ten thousand, while the number of deaths or fatal accidents have only been fifteen, a result quite at variance with the current ideas of the danger incurred, and a very small number in comparison with those arising from marine navigation. The longest aerial voyage on record is credited to America—Mr. Wise having flown from St. Louis towards New York, a distance of 1,150 miles, in less than twenty hours.

—The "Gentleman's Magazine" commences a new stage of existence at the ripe age of one hundred and thirty-four years, by a singular move from its old quarters. It is in future to be published by Messrs. Bradbury & Evans, whose names have been widely spread as the proprietors and publishers of *Punch*. The new editor is said to be a Mr. Edward Walford, author of some genealogical compilations, etc. A larger space than formerly is to be devoted to belles-lettres and current literature of all kinds, fiction and politics alone being excluded, while due attention will be paid to the "obituary" and other distinguishing features of the journal.

—A remarkable work in the department of American history is about to see the light after a seclusion lasting for the greater part of a century. We refer to a "Loyalist History of the American Revolution," particularly in the Province of New York. It was written by Judge Thomas Jones, a member of the family of that name so famous in our juridical annals, who occupied the highest station in the Supreme Court of the Province previous to the Revolution, and who presided at the famous trial of the Trinity Church case. The manuscript fills five folio volumes, neatly written in the autograph of the author, and will probably, with the necessary editorial matter, make the same number of octavos. The MS. came by marriage into the possession of the Delancy family. So different was the feeling even in recent days from that which now prevails that it was carefully kept out of sight, and not allowed to be consulted, as being a work that would create mischief and ill-feeling, from the facts recorded by the author bearing on the reputation of many popular favorites. There is no doubt historic truth will gain—not lose—by an exhibition of the contrary side of a well-known story. Time has softened the asperities that formerly embittered the discussion of political questions. New facts will be warmly welcome, from whatever source they may come. Judge Jones's history will be edited by Mr. Henry B. Dawson, editor of the "Federalist," and author of various works on the Revolutionary history of the United States, all testifying to the appropriateness of the selection.

—The origin and early history of printing—a subject that never loses its attraction as the groundwork of literary and artistic research—receives much elucidation from an elaborate work on "The History of Block Printing, and the Early History of Engraving before Albert Dürer," just completed by Mr. T. O. Weigel, the famous old book collector and seller of Leipzic, who has for many years been engaged in amassing materials necessary for its investigation. His object has been to examine the relation of typography to the sister-arts of engraving and wood-cutting, and to show how they mutually illustrate one another's progress. He brings forward evidence to prove that the art of engraving was first practised in Germany, and thence transplanted to Italy. The same priority is claimed for Germany in all that relates to the discovery of printing over the pretensions of Holland, where no specimens have been found that date previous to 1460, and indubitable evidence is brought forward to corroborate the just pretension of John Gutenberg to be considered the inventor of printing with movable types in the city of Mentz. Mr. Weigel's work is so richly illustrated that it forms a complete history of the graphic arts, their invention and cultivation during the fifteenth century, embellished throughout by the art monuments of the Weigel collection. These are given in a series of nearly two hundred fac-similes of the most perfect execution, representing prints on woven fabrics, metal engravings, wood-cuts, playing-cards, Niellos, etc., etc. The work is comprised in two volumes folio, three hundred and twenty-five copies only being printed, a large portion of which are already subscribed for at the English price of twelve guineas each.

—From a list of the ages of living English writers, given in Gutch's "Literary and Scientific Register" for 1866, we select some respecting whom most interest is felt in this country, as—Matthew Arnold, 41; Wilkie Collins, 42; John Ruskin, 47; Rev. Charles Kingsley, 47; Captain Mayne Reid, 48; George Henry Lewes, 49; Tom Taylor, 49; William Howard Russell, 50; Anthony Trollope, 51; Charles Reade, 52; Robert Browning, 54; Charles Dickens, 54; Alfred Tennyson, 57; Sir Archibald Alison, 56; William E. Gladstone, 56; Charles Lever, 59; Rev. F. D. Maurice, 61; Sir E. Bulwer Lytton, 61; Benjamin Disraeli, 61; Barry Cornwall, 67; Samuel Lover, 68; Thomas Carlyle, 70; William Howitt, 71; Dean Milman, 75; Charles Knight, 74; John Payne Collier, 77; and the Nestor of the tribe, Lord Brougham, 86. There is no similar enumeration of the ages of literary ladies, as statistics on the subject are very difficult of attainment.

—"English Travellers and Italian Brigands: A Narrative of Capture and Captivity," is the title of a work announced by Mr. William Moens, the English gentleman—a member of the Stock Exchange—whose adventures

among the brigands, from whom his fate was long in suspense, cannot be wanting in interest of the most thrilling kind, if he is able to reproduce on paper the experience he must have endured. It will be remembered how long the negotiations for his ransom were in progress, and were conducted with almost diplomatic formality. Mr. Moens's book will be in two volumes post octavo, with illustrations. Its publishers are Messrs. Hurst & Blackett, who promise speedily the second volume of Miss Meteyard's beautifully illustrated "Life of Josiah Wedgwood;" "Religious Life on the Continent," by Mrs. Oliphant, author of the "Life of Edward Irving," etc.; "The Life and Letters" of the unfortunate Lady Arabella Stuart, including numerous original and unpublished documents, by Emily Cooper; "Social Life in Florence," by Count Charles Arrivabene; "From Cadet to Colonel: The Record of a Life of Active Service," by Major-General Sir Thomas Seaton; "Sport and Sportsmen," a book of recollections, by Charles Stretton, Esq.; "Memoirs and Correspondence of Field-Marshal Viscount Combermere" (better known during the Peninsular Campaign as the famous cavalry officer, Sir Stapleton Cotton), from his family papers, with portrait and illustrations; and a new novel, called "A Noble Life," by the late Miss Muloch.

—M. Topfer's "Voyage in Zig-Zag," a style of travelling narrative where the pencil plays a more important part than the pen, was the prototype of what seems destined to become a special class of literature. The world renowned "Foreign Tour of Brown, Jones, and Robinson" is the best known of its imitators. Another successful attempt was published last year, "How We Spent the Summer in Switzerland," and the authoress, encouraged by its reception, announces "Beaten Tracks; or, Pen and Pencil Sketches in Italy," in one volume quarto, with two hundred illustrations, describing a journey in North Italy during the last spring, and giving a history of the Dante festival and other Italian *fêtes*, modern Florence as a new capital, the social habits and manners of the people, its king, the customs of the peasantry, etc. The best specimen of this combination of the sketch-book and journal produced here is Mr. Strothers's (*Porte Crayon*) illustrated Tour in Virginia and the Southern States, which came out in "Harper's Magazine," and was collected in a volume that will grow in value with time.

—The projectors of the well-known beautiful "Golden Treasury Series" show a laudable desire to enlarge the narrow boundaries that confine most similar collections to the wearisome "standard authors," that we already possess in every variety of form or shape, by the choice of their new volume; it is "The Republic of Plato," translated into English, with analysis and notes, by J. Llewellyn Davies, M.A., and D. J. Vaughan, M.A., with vignette portraits of Plato and Socrates, engraved from an antique gem. As a concession to popular taste, we suppose, its companion volume is "The Adventures of Robinson Crusoe," edited from the original editions by J. W. Clark, Fellow of Trinity College, Cambridge, with vignette title by Millais.

—A new process of engraving, from which important results are expected on the score of fidelity to the artist's drawings, has lately been discovered and is already beginning to be used for art purposes. It is well known that when the most accomplished artist makes the most elaborate drawing on wood, he is dependent for its execution on the engraver, who often, to gratify his own notions of effect or to save trouble, does not spare the finished touches of the draughtsman, but cuts them all away in his rendering of the drawing. By the new process the subject is drawn on a prepared slab of stone, with a composition which hardens it as it is used, by some chemical combination, so as to form almost a metallic surface. When the face of the stone is lightly chiselled over, and the plain surface removed, every stroke of the drawing remains in relief, and is printed from at once without the intervention of any other medium. An embellished edition of Dr. Watts's "Hymns for Children," "illustrated by the new graphotype engraving process," is already announced by W. Holman Hunt, Carl Thomas, J. D. Watson, etc.

—Several books of interest appear in the announcements of the French publishers, including the second volume of M. Louis Blanc's "Lettres sur L'Angleterre," a translation of which was promised, but has not yet appeared; the first series of a work by M. Figuier, the well-known historian of science, "Vies des Savants Illustrés depuis l'Antiquité jusqu'an XIX Siecle, avec l'appréciation de leurs travaux," a plan that, if properly carried out, certainly "cuts out" employment for a lifetime; "Les Antonins, un Étude Historique," by the Comte de Champagny, in continuation of his "Les Césars;" and "Du Spitzberg au Sahara," by Prof. Charles Martius, sketches of a naturalist in Lapland, Scotland, Switzerland, Egypt, and Algeria.

—Professor Owen's great and long-promised work on the "Comparative Anatomy and Physiology of the Vertebrate Animals" is at last ready for publication. It will consist of three volumes, the first one to appear on December 14, the second on the 1st of March next, and the third during the spring. It will be illustrated with upwards of twelve hundred engravings on wood, which have required a long period of time for their execution. The work will be issued by Messrs. Longmans, who also announce several new books, including "Letters of Ludwig von Beethoven," edited and translated by the same authors who have lately brought out the letters of Mozart—Dr. Nohl and Lady Wallace; "Life of Isambard Kingdon Brunel," the eminent engineer, by his son; "Sketch of the Life of Pastor Fliedner, of Kaiserswerth," translated by Miss Caroline Wentworth, to whom English readers owe their acquaintance with the "Lyra Germanica" and other valuable works; Mr. Gerald Massey's "Shakespearian Sonnets never before interpreted, with Sketches of his Private Friends, and a recovered Likeness of the Man" (already mentioned in our columns); and a new work by Mr. Frederick Maretin, compiler of the "Statesman's Year Book," to which it forms a companion. It is entitled "The Commercial Year Book for 1866," and will contain copious classified tables of the imports and exports of Great Britain for the last three years down to the date of the latest returns, arranged so as to form a complete synopsis of British commerce, rendered easy of consultation by an alphabetical index, etc.

—Still another new periodical is announced for the 1st of the present month, to be published by Messrs. Jackson & Walford, under the title of "The Pulpit Analyst," a monthly magazine designed for preachers, students, and teachers, edited by Joseph Parker, D.D. It has probably been started on account of the great success of "The Homilist," a magazine covering partly the same ground, and having a large number of subscribers in the United States. It will contain discourses on divine revelation as related to human consciousness and experience, a homiletic analysis of the New Testament, an interlinear translation of the gospels and epistles, outlines of sermons, hints to youthful preachers, and other matters relating to ministerial study, service, and success.

—Many of the streets of Paris are being re-named according not to chance, as elsewhere, but to a system which seeks among the celebrated men of the country for the necessary names. Literary notabilities form an important portion of them, and the following are some who will shortly be commemorated in this manner:—Villehardouin, the chronicler of the fourth crusade, Alam Chartier, the poet of Normandy, La Fontaine, Cujacius, the celebrated jurist, etc., etc. The names are not applied at random, but are given to quarters where the celebrities were born, or which they helped to illustrate.

—Shakespeare enthusiasts are preparing to search in Spain for matters tending to illustrate the great dramatist. Subscriptions are being raised to form a fund for the purpose. It is supposed that the despatches of the Spanish envoys in London, between 1590 and 1616, may contain valuable matter illustrative of the drama and the stage, as scarcely anything either private or public escaped their notice or was passed without mention in their minutely detailed reports. Mr. Halliwell, who heartily favors the scheme, mentions the rumor of the existence of what would be an article of great curiosity, a copy of the first folio Shakespeare of 1623, formerly belonging to Count Gondemar, the famous Spanish ambassador to England in the reign of James I., filled with MS. notes and additions of the period. This, he was informed by the celebrated Spanish scholar Señor Gayangos, was lately preserved in the Casa del Sol at Valladolid.

—The most industrious and laborious bibliographer of the present age, or probably of any other, Joseph Marie Quérard, died at Paris on December 1, at the age of sixty-eight. His life was devoted to his favorite pursuit. He found it, however, anything but a lucrative one, and was indebted to the patronage of a Russian nobleman for the means of bringing out many of his works. His chief productions were "La France Littéraire," a record of French literature, chiefly during the eighteenth and nineteenth centuries, of unexampled accuracy and fulness of detail, in ten volumes octavo; and "Les Supercheries Littéraires Devoilées," in five volumes octavo, an account of the apocryphal, disguised, and fictitious names and books in French literature, and of the authors who have gained credit under false pretences. A work of this nature was certain to provoke many enemies. M. Quérard, however, was engaged in bringing out a new edition of it at the time of his death. His discretion bore no proportion to the zeal and laborious energy of his character. Several of his projects of the highest value in literary history and bibliography could never be realized from the impossibility of confining his works within due bounds. His life has been a stormy one, embittered by the want of the patronage of the Government, whose administrators failed to recognize the unquestionable merits that should have secured to M. Quérard the facilities for the prosecution of his labors that an official station

connected with some of the numerous public libraries of the capital would have given him. He was born at Rennes, in Brittany, and had devoted more than half a century to the exclusive study of French literature, respecting which a vast quantity of knowledge of the most curious kind must die with him.

—The new professor of English language and literature appointed by the council of University College, London, in the chair of Prof. Masson, vacated by his transference to Edinburgh, is Mr. Henry Morley, a well-known writer in many branches of literature. Mr. Morley has been a regular contributor to *Household Words*, *All the Year Round*, and other periodicals. One or two collections of his papers have been published separately. His biographical and critical monographs, "Palissy the Potter," "Jerome Cardan," "Cornelius Agrippa," show research and learning. The last book he has published, "English Writers before Chaucer," more immediately applies to the subject of his new professorship. It is the first of a series intended to embrace the critical history of early English literature. Though not to be compared in range of original information or power of thought with the "Early English Language and Literature" of Hon. George P. Marsh, it is a creditable performance, and will extend the knowledge of an important branch of study.

ACROSS THE CONTINENT.*

Mr. Bowles was one of the party which accompanied Mr. Schuyler Colfax in his trip across the Continent to the Pacific coast. They started from Kansas towards the end of May, made their way by stage through Colorado and along the base of the Rocky Mountains over the great mail route to Utah. Thence over the Sierra into California; from Northern California to Oregon and Vancouver's Island; thence down the coast to San Francisco, and home by the Isthmus of Panama. The excursion lasted four months. Mr. Bowles was, probably, a careful note-taker; he is certainly a careful observer, and the result of his observations is the thick octavo before us.

The first thing that strikes one on dipping into the volume is the small amount of knowledge possessed by the general public on the last of the regions which Mr. Bowles describes. We venture to say that to nine persons out of every ten into whose hands it falls it will have almost as much of the charm of novelty as Palgrave's "Arabia." What makes the novelty in this case all the more piquant is that the scene of our author's rambles was not beyond the sea or under foreign skies, but in the American Union; that he slept over night under the star-spangled banner and the protection of the common law, and might have been "brought up" under a writ of habeas corpus from the day he left Springfield until he got back, barring the time spent in the homeward trip across the Isthmus.

That so little should be known in the East about the Pacific coast, and even the middle region which lies between us and it, is at first sight, considering the crowds of emigrants who are constantly either going or returning, almost incomprehensible; but a little reflection makes it plain enough. Most of those who cross the plains are adventurers, with whom the world on this side has either dealt hardly or not so well as, in their opinion, they merited, and their whole attention from the moment they start is concentrated on the task of repairing or building up their fortunes. Nothing which does not seem likely to have some bearing on this possesses much interest for them at the outset, and there are, doubtless, very few who, after a few years' residence in the West, find many traces of a philosophic turn left in their composition. The feverish, fretful, eager life which nearly every man leads in the great mining regions is ill calculated to foster a taste for critical examinations or descriptions of the condition or prospects of the society which surrounds him. In fact, Mr. Bowles states that Mr. Colfax's party were "the first who ever travelled across the continent simply to see the country, study its resources, to learn its people and their wants." He adds, moreover, "that the idea of such a thing was strange to the people along their route." They could not understand it, and many were never entirely disabused of the belief that, in spite of their fine pretences, they were in reality what is, in mining lingo, called "bummers." It is not surprising, therefore, that, until the appearance of this of Mr. Bowles, there was not a single book which could be fairly called a description of the Pacific coast.

From it we confess we have risen, in spite of its numerous literary blemishes, with a sense of keen regret that it was not twice the size. It has many of the defects of style which might be expected in a book made up mainly of letters written literally *currente calamo* to a newspaper; and amidst all the fatigue and discomfort of a most laborious journey. Mr. Bowles has not used the pruning-hook as vigorously as we could have desired. But he is never dull and never commonplace; is very often really eloquent. His observations on the moral and material condition and prospects of the communities through which he passes are always acute, in the great majority of cases original, and often profound. His descriptions of scenery are admirable, and he has the rare gift of knowing when he has given the reader enough of them. There is no other account of the Yo Semite Valley, or of the scenery and atmospheric effects of the plains and mountains and rivers of the western coast, which can at all compare to his. His sketches of manners are excellent so far as they go, but he does not frequently indulge in them. In fact, his allusions to individuals and accounts of personal adventure form but the background of his narrative. We have no doubt he has in his memory or his note-book enough of this kind of material to furnish Dumas with materials for four quarto volumes.

The themes to which he devotes most of his space are the Pacific Railroad, the mining enterprises of the West, and the Mormons. In fact, the acquisition of materials for a sound judgment on these subjects seems to have been the main object of the journey. Everything else was apparently subsidiary, and the importance of what he says on these three great political and economical themes cannot be well overrated. His warnings and admonitions on the necessity of a rapid completion of the Pacific Railroad, with which, up to the present, only the slowest progress has been made, are very valuable. He shows that five years of steady labor would complete the whole work from end to end, and he calls on the Government to lend its hand not as a mere act of kindness to the dwellers on the Pacific coast, but as a measure of political expediency of the highest order. It has to be borne in mind that the settlement of the region west of the Rocky Mountains really began less than twenty years ago; that nearly every active native American member of the civilized communities now established there was born and bred in the East, and is bound to the older States by the ties of family and education and youthful associations; that he has drawn from the East his manners and ideas, and that the social differences between us and the transmontane population are really thus far simply modifications wrought by external circumstances. What hold we shall have upon the next generation, which, separated from us and from the whole civilized world by a vast wilderness, will know nothing of us except what it picks from the newspapers, and upon which we shall exert little influence except through merely literary channels if the railroad be not soon completed, remains to be seen, and upon this point Mr. Bowles's forebodings are evidently gloomy enough. In fact, it is difficult to over-estimate the political mischief that may result from allowing the Pacific States to remain much longer in their present position of isolation. The Union sentiment there is still strong, very strong; but the men who comprise those States now are men of Eastern birth. It may be wise not to rely too much on traditions for preserving the fidelity of their sons.

The civilizing and Christianizing influence of the road, too, would be immense. The republic has suffered already—and we say this while thoroughly appreciating the value of the share which the West has had and is having in the formation of the national character—from the extraordinarily rapid growth of new communities along our Western border, composed mainly of men removed from the social and religious restraints which exist in the older States. Their influence on our literature, oratory, and manners has not been elevating or refining, and it would have been vastly better for them and for the country had circumstances made the growth of these communities slower, and thus allowed women to take a more prominent part in building them up, and the ideas and manners of the older States to retain a stronger and larger hold on them. But no community to the east of the mountains has ever been so completely cut off from the rest of the world, or been compelled to work out its own salvation with so little aid from the culture and experience of the older States, as those now springing up on the Pacific coast. In fact, the Pacific Railroad, enormous as is the work it would do in developing the mineral and agricultural resources of the West, would do a still greater work as a civilizer, educator, and social reformer. Mr. Bowles says:

"To feel the importance of the Pacific Railroad, to measure the urgency of its early completion, to become impatient with Government and contractor at every delay in the work, you must come across the plains and the mountains to the Pacific coast. Then you will see half a continent waiting for its vivifying influences. You will witness a boundless agriculture, fickle and hesitating for lack of the regular markets this would give. You will find mineral wealth, immeasurable, locked up, wastefully worked, or gambled away, until this shall open to it abundant labor, cheap capital, wood, water, science, ready oversight, steadiness of production—everything that shall make mining a certainty and not a chance. You will find the world's commerce with India and China eagerly awaiting its opportunities.

* "Across the Continent: A Summer's Journey to the Rocky Mountains, the Mormons, and the Pacific States, with Speaker Colfax." By Samuel Bowles, Editor of the *Springfield Republican*. Springfield, Mass.: Samuel Bowles & Co. 1865.

You will see an illimitable field for manufactures unimproved for want of its stimulus and its advantages. You will feel hearts breaking, see morals struggling slowly upward against odds, know that religion languishes; feel, see, and know that all the sweetest and finest influences and elements of society and Christian civilization hunger and suffer for the lack of this quick contact with the parent and fountain of all our national life.

"It is touching to remember that between plains and Pacific, in country and on coast, on the Columbia, on the Colorado, through all our long journey, the first question asked of us by every man and woman we have met, whether rich or poor, high or humble, has been, 'When do you think the Pacific Railroad will be done?' or, 'Why don't or won't the Government, now the war is over, put the soldiers to building this road?' and their parting appeal and injunction, as well, 'Do build this Pacific Road for us as soon as possible; we wait, everything waits for that.' Tender-eyed women, hard-fisted men, pioneers or missionaries, the martyrs and the successful, all alike feel and speak this sentiment. It is the hunger, the prayer, the hope of all these people. Hunger and prayer and hope for 'Home,' and what home can bring them, in cheap and ready passage to and from, of reunion with, parent and brother and sister and friend, of sight of old valley and mountain and wood, of social influence, of æsthetic elevation, of worldly stimulus and prosperity. 'Home,' they all here call the East. It is a touching and pathetic, though almost unconscious, tribute. Such an one 'is going home next spring;' 'I hope to go home another year;' 'When I was home last;' 'I have never been home since I came out;' 'I am afraid I shall never go home again;'—these and kindred phrases are the current forms of speech. Home is not here, but there. The thought of home is ever rolled, like a sweet morsel, under the tongue of their souls.

"Here is large appeal both to the sympathy and foresight of the Eastern States. Here is present bond of union and means for perpetuating it. To build the railroad, and freshen recollection and renew association of the original emigrants, and to bind by travel and contact the children here with the homes and lives and loves of their parents there: this is the cheapest, surest, and sweetest way to preserve our nationality and continue the republic a unit from ocean to ocean. A sad and severe trial will ensue to the Union if a generation grows up here that 'knows not Joseph.' The centrifugal forces will ever be in hot action between the far-separated eastern and western sections of the nation. First among the centripetal powers is the Pacific Railroad, and every year of its delay increases tenfold its burden; every year's postponement weakens in equal degree the influences here by which it shall operate."

Of the mines Mr. Bowles says much, most of which we should like to quote, if space permitted it. The sum and substance of it is, that all mining, and particularly gold and silver mining, is very like a lottery; that people with but little money, and the loss of which would be a serious matter to them, had better keep clear of them; that by far the larger portion of the schemes brought into the Eastern market are worthless, and are got up by speculators whose sole thought is to get companies organized for the purpose of selling the shares; that capitalists who can afford to invest in Western mines should only do so after careful investigation by well-qualified men, in whose perfect honesty, as well as knowledge, penetration, and cautiousness, they have sound ground for confidence; and that they should send out one of their own number to oversee expenditures and direct the financial operations after the work begins. Mr. Bowles supports his conclusions on these points by the testimony of many of the oldest, most respected, and experienced scientific men, capitalists, and miners of California and Nevada. The Colorado mines he rates more highly than either those of California or Nevada. He says:

"Looking back over our mining experiences, and taking the average testimony of each district as equally reliable, I find myself impressed with the superior richness of the Colorado gold mines. Their ore averaged as uniformly one hundred dollars a ton as that of Nevada, either Austin or Virginia, or of California, does fifty dollars. The extraction is not as complete, because of the more intricate nature of the precious deposits; but means to overcome this, though perhaps at enlarged cost, seemed successfully initiated while we were there."

Of the Mormons Mr. Bowles has much to say; little that is new by way of description of manners, but his position with Mr. Colfax gave him unusual facilities for getting at the real feelings of the Mormon leaders towards the United States Government, and to draw from the knowledge thus acquired some unusually valuable inferences as to what the federal policy towards this singular community ought to be. He is satisfied that if the Pacific Railroad were once completed, the tide of emigration from the East would beat so heavily on the Mormon stronghold that its outworks, at least polygamy, which he considers only an outwork, would go down before it rapidly. But in the meantime he has little doubt that a firm and vigorous policy on the part of the Government would secure the immediate overthrow of this hideous abuse. He thinks neither the leaders nor people would cling to it if the United States authorities were to distinctly declare it to be a crime and prosecute and punish it as such. It is not an essential part of the Mormon practice, any more than the suttee of Hindooism; and shorn of it, Mormonism would still satisfy its votaries, and would in the es of the law take the same place as all other forms of religious faith.

We intended to have quoted Mr. Bowles's admirable analysis of social life in San Francisco, but space forbids. We cordially recommend everybody who wants a most valuable contribution to the social and political philosophy of the day, in the form of one of the most entertaining records of travel we have ever lighted upon, to buy and read his book. We have ourselves closed it with sincere regret that there was not more of it.

We have already alluded to its defects of form; we trust if it makes a second edition the author will revise it more carefully. Too many shreds of newspaper still hang about it, and it has now and then a touch of Western extravagance in the phraseology and similes which seems to indicate that Mr. Bowles, when he was out there, was not proof against the contagion in spite of his thoroughly Eastern taste and training.

KITTO'S BIBLICAL CYCLOPÆDIA.*

A COMPARISON of the first American edition of Calmet's "Dictionary of the Holy Bible" with the third edition of Kitto's "Biblical Cyclopædia," and with Smith's "Dictionary of the Bible," will indicate the progress of Biblical literature and science during a single generation. In no department of learning has progress been at once so rapid and so substantial as in this—a progress due mainly to three causes: (1.) An improved system of Hebrew philology, through the labors of Hupfeld, Ewald, Winer, Gesenius, Fürst, and others; (2.) The application of archæology and of contemporaneous history and literature, upon approved principles of criticism, to the illustration of the Bible; and (3.) The advance of Biblical geography and topography by the explorations of modern missionaries and travellers. We date from the American edition of Calmet, in 1832, under the supervision of the late Dr. Edward Robinson, because that was the starting point in English Biblical literature of the new treatment of this department which has yielded such rich and abundant fruits. As a pupil of Gesenius, Dr. Robinson brought his system to bear upon all questions of oriental philology, to the exclusion of the crude and fanciful etymological and mythological discussions of Calmet and his English editor, Mr. Charles Taylor. And, having already formed the conception of that systematic revision of Biblical geography and history to which he devoted so large a portion of his subsequent life, Dr. Robinson gave special attention to the orthography, the topography, and the historical description of places named in the Bible. Yet no one was more sensible than he how far short of his ideal of a dictionary of the Bible was his own edition of Calmet. After an interval of thirty years, no Biblical scholar would think of consulting that as an authority. How many sermons based upon Calmet's expositions have already become antiquated!

In 1845 Dr. Kitto made another great advance upon the ground so long held by Calmet, by combining scholars of different nations and of various departments of sacred learning in one co-operative work—a kind of œcumenical council of Biblical literature, to which each brought his special contributions, to be classified and harmonized in a general way by the presiding editor. The scholarship of Germany was represented by such names as Drs. Credner, Havernick, Hengstenberg, J. Jacobi, Ewald, Michelson, and Tholuck; that of Great Britain by such names as Drs. Alexander, Davidson, Eadie, Pye Smith, and others; the United States, also, had two or three representatives, and Dr. Robinson's "Biblical Researches" were acknowledged as the basis and authority of much that was embodied in the department of "Scripture geography." In his edition of Calmet, Dr. Robinson had availed himself of the results of German scholarship, and had thus introduced a new and most valuable element into that work; but he had not sought the services of German scholars as collaborators. Hence, "Calmet" was in no proper sense a representative work. But Dr. Kitto brought together in one work the special labors of many scholars upon designated subjects, allowing a reasonable latitude of discussion to contributors who were "competent by their attainments and studies to form a judgment worthy of attention on the various matters coming under their consideration." Constructed upon this sound and liberal principle, and containing so great a variety of useful material, Kitto's Cyclopædia soon took the lead among works illustrative of Biblical literature, and for fifteen years it pretty much held the market in its department, except for those who had access to kindred works in the German. But the publication, in 1860, of Dr. Smith's "Dictionary of the Bible," with its brilliant array of contributors, its extensive and solid learning, and its fresh and vigorous handling of topics capable of illustration from recent discovery and criticism, threw Kitto, in turn, into the shade, and compelled a revision and enlargement of the lately honored encyclopædia, if it would maintain a competition with

* "A Cyclopædia of Biblical Literature, originally edited by John Kitto, D.D. Third edition, greatly enlarged and improved by William Lindsay Alexander, D.D., F.S.A.S., etc." Philadelphia: J. B. Lippincott & Co.

formidable rival. For, though the two works were constructed upon plans essentially different, yet they covered so much ground in common, that a marked superiority of either, in any particular, would give it precedence over the other. Besides, the increasing familiarity of Biblical students with the German language brought such works as Winer's "Biblisches Real-Wörterbuch" and Herzog's "Real-Encyklopædie" into more general comparison with Kitto's less comprehensive volumes.

Accordingly, the Edinburgh publishers, having just completed their new edition of the "Encyclopædia Britannica," resolved to cancel entirely the stereotype plates of the "Biblical Cyclopædia," which had been only slightly modified for the second edition, and to prepare a new edition, revised and enlarged, according to the present state of Biblical knowledge. The task of editing the work was committed to Dr. W. Lindsay Alexander, and it could not have fallen into better hands. As the successor of Dr. Wardlaw in the Congregational chair of theology, Dr. Alexander has commanded high respect for his ability as a Christian teacher in the city where he has so long ranked with the ablest preachers. He is a good German scholar, the translator of Dörner's "History of the Person of Christ," the author of an important treatise on the "Connection of the Old and New Testaments," and of several valuable monographs in sacred literature; in short, he is one of the leading minds in the present literary circles of Edinburgh, a chief citizen of "no mean city." In the revision of Kitto, he has associated with himself a number of scholars who were not contributors to the original work, while he has retained all that was of any value in the labors of his predecessors. The new edition is expanded into three large octavos, of upwards of 800 pages each, closely printed in double columns. It differs in several respects from Dr. Smith's great work. That is properly a *dictionary* of the *Bible*, embracing whatever pertains to Biblical antiquities, biography, geography, and natural history, with collateral topics from classical antiquity, but eschewing questions of theology. Kitto's is an encyclopædia of Biblical *literature*, and while it is less full and minute in the treatment of mere names, it covers a wider range of subjects and admits notices of the life and works of Biblical scholars. This last feature, now introduced for the first time, will have a special interest to the young student in sacred learning. While controversial theology is excluded from its pages, Kitto's Cyclopædia conforms more strictly than does Smith's Dictionary to the system of interpretation known as "evangelical" in distinction from the rationalistic or latitudinarian schools. This at once appears in such articles as "Genesis," "Exodus," "Adam," "Inspiration," "Interpretation," "Jesus Christ." Yet there is much freedom of discussion in these pages, and Dr. Samuel Davidson is retained as a contributor, notwithstanding the outcry raised by his second volume of the tenth edition of "Horne's Introduction."

The defects of this new edition of the Cyclopædia are mainly due to the desire of the editor to retain so much of the original work as would preserve its historical identity. We think his judgment on this point has been overborne by a too nice regard for the memory of his predecessor. It was not wise, for example, to leave the question of inspiration just where it was left twenty years ago by so cautious and yet uncritical a writer as the late Dr. Leonard Woods, of Andover Seminary. Neither his definition, which is simply that of Knapp, nor his argumentation will meet the difficulties which more recent criticism has raised concerning the fact, the method, and the degree of divine inspiration in the composition of the Scriptures. We are well aware that an exhaustive treatment of the question is hardly possible in the present stage of the subject; but this was not a sufficient reason for retaining a disquisition which has become antiquated, without at least a reference to new phases of the enquiry and a compendium of the arguments upon either side.

It was an infelicity, also, to retain Dr. J. Pye Smith's article on Adam without modification, with its citation of Dr. Prichard's "Natural History of Man" as the latest authority upon the question of man's place in the creation, and with no mention of the theory of *cephalization* so ably propounded by Professor J. D. Dana, of Yale College. We might instance other articles in which defective information and even positive error have been stereotyped anew, through an excessive deference to the reputation of former contributors.

The new matter of the Cyclopædia in general is fresh and full upon the results of recent investigation in science and criticism. For instance, the articles on the Gospels, on John, and on Jesus Christ, fairly recognize the difficulties raised by Baur, Renan, Strauss, and others, and point to their solution; and the article on the Creation is not unmindful of Dr. Darwin's peculiar and unsustained hypothesis of the origin of species.

In the department of the religious and literary archæology of the Hebrews, the new edition of the Cyclopædia is substantially a new work; and points of Biblical geography and topography which were but lightly touched upon in the first edition, are here elaborated with a care and exactness worthy of their importance. The first edition contained nothing whatever upon the topography of Jerusalem; but in the new edition twelve pages are devoted to this topic, and a résumé is given of the results of all recent surveys and explorations, together with a discussion of all the controverted theories, from that of Robinson at one extreme to that of Fergusson at the other.

It is not the province of this notice to criticize in detail the contents of an encyclopædia. That must be left to the ampler pages of the quarterly reviews. But we have so far indicated the character of the new issue of Kitto, that students may feel warranted in procuring it as an addition of real value to the materials for Biblica study. Its mechanical execution is highly attractive, and its literary character will compare favorably with that of any work in the same department.

JULIA WARD HOWE.*

Of a like order with Mrs. Browning's, though of very different tone and texture, is the poetical gift of Julia Ward Howe. Her love of freedom, her faith in right, her wide and high culture, and her intellectual traits and tastes, give significance, authority, and beauty to her verse. Hence its superiority to the musical expression of sentiment, which has been the common range of her sex in verse. Hence, too, her claim to be estimated as a thinker, a pleader for the true as well as the beautiful, a singer in the ranks of the patriotic and the prophetic. A thorough education, a sojourn in Italy, knowledge and love of philosophy and art, intimacy with reformers in politics, innovators in religion, and with the best writers of Germany and France, added to the usual experience of American and domestic life, have expanded the scope of a mind naturally fine, and enriched and emphasized powers of expression already good. With this equipment and facility, however, Mrs. Howe's artistic discipline has not kept pace—that is, she has not bestowed upon the form and finish of her verse a care and refinement proportionate to its earnestness and thoughtfulness. Hence, it is only at times that her verse penetrates the multitude, and stirs the common heart. Often the idea is too abstract, the feeling too subtle, and the expression too crude for such a triumph. Yet, with all, the sterling ore remains, and repays more careful explorers.

Having noted the defect of form, we must also refer to her fault of tone and spirit. She is sometimes too personal; she occasionally sacrifices the dignity of art to the caprices of feeling; she allows, altogether, private and casual prejudices and partialities to find expression—a course more justifiable in a woman of narrower mind, but unworthy of one so comprehensive; pique is too small a motive for one who can sing so nobly. These and other minor faults might have been easily corrected by the disinterested revision—or rather suggestion—of a friendly critic. They are not vital but incidental defects. Changes of lines and words, omissions here and there—generalizing the application of an image, making impersonal an appeal—would have made her "clear in her great office." So, too, an experienced dramatic critic might have indicated the injudicious in plot and the objectionable in language in her play, retaining all its merits, and thus saved it from misapprehension, and harmonized and purified its artistic scope.

We make these seemingly ungracious comments out of respect for Mrs. Howe's real ability, from the desire to see completeness, harmony, and efficient expression where there is so much crude force and undisciplined feeling. The authoress herself will bear us out. With each successive volume she has come into a more free and faithful relation to life; the personalities that marred the first diminish in the second, and disappear in the third collection of her verses. Self is merged in "an idea dearer than self;" great interests absorb lesser; as she grapples with the problems of her time and country, her strain is more fervid and noble. "Passion Flowers" appeared in 1854; "Words for the Hour" in 1857. There are sweet and striking passages in the former, relating to Rome and its associations, some psychological and intuitive suggestions of deep interest, and many tributes to character, to freedom, justice, and truth, that mark the thoughtful and progressive lyrist; but with these are themes less noble, and throughout, in thought and sentiment, outweigh and surpass, instead of being fused with, the expression, except in occasional verses more impulsive and playful, where the sound is literally an echo to the sense. In "Words for the Hour" there breathes a profound and intelligent sympathy with the great cause of humanity, and especially with the solemn crisis then slowly approaching, to culminate in civil war and end in sacrifice and triumph.

"The Battle Hymn of the Republic" will attract to this volume the attention and sympathy of many readers who may otherwise be indifferent to,

* "Later Lyrics. By Julia Ward Howe." Boston: J. E. Tilton & Co. 1866.

or ignorant of, the author's claims to poetical genius. All who have heard that spirited yet solemn anthem sung with art and feeling, during the long, sad, and earnest four years of the war for the Union, will feel a special obligation to and interest in its author; and, therefore, be prepared to welcome her new offering to the muses with candor and cordiality. It is an advantage her pure and true patriotism has fairly earned. Nor are the other "Poems of the War," now first collected, less worthy of a noble woman's heart and a sacred cause. "Our Country," "The First Martyr," "April 19th," "Our Orders," "The Flag," and "The Harvard Student's Song" have the genuine lyric ring. When she sings of the starry banner that

——"dear are the stars it harbors
In its sunny field of blue
As the hope of a further heaven
That lights all our dim lives through;"

when she tells us that

"The hum of thrift was hushed
With sudden woe;"

or bids us

"Die to make men free,"

and chides the vanity of her sex with

"Weave no more silks, ye Lyons looms,
To deck our girls for gay delights,
The crimson flower of battle blooms
And solemn marches fill the night,"

she utters the feeling of the times, enforces its lesson, and celebrates its sacrifice with true poetic insight and beauty. But poems of a more tranquil era follow: there are "Lyrics of the Street," wherein the vicissitudes of human life are rehearsed with graphic and plaintive music; there are "Parables" that illustrate the same story with personal emphasis; and there are "Poems of Study and Experience" which indicate no ordinary mental resources and a comprehensive thought as broad and suggestive as it is often ingenious and imaginative. There is a womanly flavor about many of these verses that shows they were inspired by experience and not imitated from conventional precedents: the "Tea Party" and the "Jeweller's Shop," the "Fine Lady" and the "Charity Visitor," the lonely reveries over a crucifix, the maternal vigil, the household bereavement, the antagonism between love and duty, the triumph and the hollowness of society, the cares and the blessings of life, as known, felt, and observed by a gifted woman, are set in verse with tact and keenness. Here we have a monody and there a satire, now a paraphrase of classic story or a photograph of classic character, and now a domestic lyric, naïve, playful, or earnest. As a whole, these poems are a fine reflection of the inner life and the outward vision of a woman of faith, patriotism, and scholarship; a legitimate and womanly utterance of the discipline and the destiny which earnest minds experience here and now.

A VERY GOOD CHILDREN'S BOOK.*

Tom Hood is a son of Tom Hood. From Tom Hood, the son of Tom Hood, the world naturally expects something delightful. Not yet persuaded but that it is the inevitable and the proper thing that the son of a wise or clever father should be himself wise or clever, and finding examples enough to support that theory, the world goes on expecting great things of the children of the great. And to this Thomas, the son of Thomas, when he publishes verse, everybody looks for wit or pathos, or both, if it is a serious work; for unusually graceful and delicate play, if it is play.

But when a rash man offers to the world a new "Mother-Goose" book, what good can we expect? To write children's books is proverbially difficult. But a publisher could find a score of men and women who could write clever novelettes, or instructive tales, or "hymns in prose" or in verse for children for one who is capable of musical and comical "jingles and jokes." It has been tried many a time. We have seen a "sensible Mother Goose," in which the somewhat extravagant statements of the original work of that name are pared down to the compass of probability, as in the only quatrain that lingers in our memory:

"Hey diddle diddle, the cat and the fiddle!
The cow looked up at the moon,
The little dog barked to see the sport,
And the dish was laid by the spoon."

We will not insult our readers by quoting the original stanza, of which the above is a disgracefully bad parody. Then it was discovered that nine-tenths of "Mother Goose's" own original songs were songs of bloodshed and strife, grinding of bones to make bread, downfall of babies and cradles from tree-tops, shooting of cock-robins by bloodthirsty sparrows—death and destruction on every side. It was attempted to eliminate all this and produce an innocent work. The resulting collection was innocent of any effect, good or evil. Then came "The Book of Nonsense," appearing in England in 1860, and at once becoming popular, but not reaching us in America until about a year ago. The metre of this was in its favor, and the tang of it—the *note*, as Mathew Arnold would say; but the poems of the original "Book of Nonsense" were such rubbish—without fun or point—that the feeblest imitators have surpassed their model. Private circles have been delighted with the "thick-coming fancies" which take form in that fortunate metre; conceited people have been gracefully "taken down a peg;" "toad-eating little cities" or communities have been properly characterized and quizzed, as the "Nonsense Book" showed how. *Punch*, last winter, published a series of these verses, glorifying the "young ladies" and "old girls" of England:

"There was a young lady of Hitchin,
'Who never went down in the kitchen
Till her father said: 'Rose,
You 're a goose to suppose
Affectation 's genteel and bewitchin'.'"

"There was an old girl of Devizes,
Whose forte was in little surprises;
She let you come near,
Then cried: 'Bless us, my dear,
Your eyes are of different sizes.'"

And so on; announcing in each number that the series would "be continued until every town in the kingdom has been immortalized." But the best result of the "Nonsense Book" so far is "Rummical Rhymes with Pictures to Match, set forth in fayre prospect, alphabetically and geographically." The pictures to this—admirable caricatures of mediævalism, cleverly designed for printing in red and black—are so unusually good that worse verses would be endurable, but the verses are good too; *exempli gratia*, take the third one

"There was a young lady of Cork,
Who, declining to eat with a fork,
Her fingers would use
And the feelings abuse
Of the delicate people of Cork."

The title of the above is "Contrary to etiquette." Now that we have written the stanza, we see how much it lacks in lacking the illustration. Until to-day we have met no rhyme and picture book so good as "Rummical Rhymes."

It seems to us a pity that Mr. Hood has taken a rhyming and chiming title for his excellent little book. "Jingles and Jokes for the Little Folks" is very tiresome. If one owns the book and uses it and has to call it by its name now and then, "how he would hate that name" after a week had passed. But, after we pass the title-page, we find no more chance to find fault. The critic has the rare pleasure of heartily and unreservedly praising. There are thirty-four little poems; they vary somewhat in character from "Scotland, Ireland, and Wales," which is actual "Mother Goose," to the comparative profundity of "The Arbour" and the gravity of "The Launch of the Lily Leaf." But all are delightful. Hear the first-named:

SCOTLAND, IRELAND, AND WALES.

Paddy comes from Ireland,
And carries hods of bricks;
Sandy comes from Scotland,
Where they know some cunning tricks;
Taffy comes from Wales,
Where they 've toasted cheese for rabbits;
So now you 've heard my tales
Of those people and their habits.

That seems to us in the true "Mother Goose" swing, but as great an improvement on the original as the "Rummical Rhyme" quoted above is on the best stanza in "The Book of Nonsense." In selecting one of a slightly graver character, we can safely choose for brevity alone, and thus we choose:

PUSS IN NEW BOOTS.

Patter, clatter,
What 's the matter?
Our Tom Cat, who 's such a ratter,
Two new pair
Of shoes to wear
Has been buying at the fair.

Is n't he making a noise in the house!
Won't he frighten each rat and mouse!
'T was n't wise to choose
Such noisy shoes—
To be caught his dinner will now refuse!
To each rat and mouse his approach he tells,
For he 's popped his paws into walnut shells;
Into walnut shells—into walnut shells—
He has popped his paws into wainut shells!

We shall find little bloodshed and no hopeless and profitless destruction and ruin. One little mouse is caught by a cat, who is at once reprobated for catching the mouse in a dishonorable way—

"I do n't think her conduct was pretty—do you?"

One little boy falls out of a tree, but, although he has been naughty, the worst result of the tumble is that

"Kind little Jane
Pitied his pain,
And carried him home to mamma!"

* "Jingles and Jokes for the Little Folks. By Tom Hood. Illustrated by C. H Bennett, W. Brunton, Paul Gray, and T. Morten." London: Cassell, Petter & Galpin

Another little boy is punished in the style of the little boys in "Struwelpeter" for his dirty habits. These are all the terrible disasters we have found. But, more than this, the author has shown a rare faculty in setting forth a moral without moralizing. Most of the fables with morals youth reads *without* the morals. We do n't see how youth can do so here. Read this—the end of a poem:

FURTHER MORAL.

The folks who exclaimed—
"That surely can't be him!"
Lindley Murray 'd have whipped
If they 'd happened to see him.

For he was a very
Particular gammer,
And punished all people
Who did n't talk grammar.

And though he 'd not find
Fault with you or with me, he
Would teach them to say,
"That surely can't be he!"

And now we hope every reader will buy this book and read it. And therefore we do not care to quote any more. But many of the pictures are as good in their way as the poems. There are thirteen, all full-page woodcuts, simply drawn in black lines on white, few of them at all carefully executed in style and finish. The frontispiece is capital—the two rival lovers with (tin) swords drawn, and scabbards thrown away, and the stairs crowded with little people looking at the fight—the boys interested and quiet, the little girl delightfully frightened, and a greedy little chap on the bottom step with a plate of fruit on his lap and a bitten cake in either hand, happy in being able to munch and enjoy the battle at once. Of the others it is hard to say which is the best. That is very clever which illustrates "Puss and her Three Kittens," though the infantile mind will need much explanation before it will understand the "Pepper-pot," and "Sootikin" with a seam up her back. They are all spirited and tell the stories well, and help to make the book the good book it is. And the cover, even in these days when such clever designs come from the English binders, is noticeable, for there is a morning's meditation for a little one and lecture material for its nurse. The books come to pieces easily, though, and the pretty covers will soon be off.

DR. MARIGOLD'S PRESCRIPTIONS.*

It is supposed that most people have already taken these, and that there is no occasion to make severe analysis of their ingredients. They are compounded by Mr. Dickens from simples well known to the *materia romantica*, and sugar-coated with an invention of his own. In profane terms, the great author has written the first and last parts in this Christmas story, and numbers of very little authors have written the rest. The plan is that on which the Christmas books of Mr. Dickens have been constructed for several years past, and unites doubtful advantages to very obvious drawbacks. Indeed, partnership in literature has seldom produced results of great value. The muse is severe; she will not give her smiles to those who come a-wooing in companies, and is apt to snub even old favorites when they seek her in the society of others. It is true that in these Christmas books some of the evils of joint composition are escaped by making each chapter a separate and distinct story; but then the responsibility of uniting the stories upon some one pretext falls heavily on the contriver of the book. We all know how Boccaccio managed to bind together his merry stories in the "Decamerone;" and how Chaucer did with his "Canterbury Pilgrims," not to mention Mr. Longfellow and his "Wayside Inn." But these editors were also the authors of their tales, whereas Mr. Dickens must take the contributions of others, in which there is not even the slender coherence of a general reference to the Christmas season, and weld them into a book under a sole title. As it happens, the book is no different from any other number of *All the Year Round*, except that it is not so good, being marred by the violence with which the editor strives to distinguish it from these. Is it not a sorry device, that making-believe Cheap Jack causes these stories to be printed in a book together, in order to give a pleasure and surprise to his adoptive child by a book made exclusively for her? As if a Cheap Jack of Doctor Marigold's shrewdness and good feeling would choose such dull stories to amuse the poor deaf-mute!

But, in spite of this poverty of expedient, how delightful are those first and last parts of Dr. Marigold's Prescriptions! It must be confessed that a great deal is made of a little, and that one might come to know all the itinerant venders of bargains in England without finding one among them equal to Dr. Marigold; and, perhaps, all of them put together would not produce his like. But, nevertheless, we have something unmistakably true and real in the Cheap Jack telling the simple story of his marriage with the termagant, who cruelly beats their child, till one day it falls sick of its life of terror and suffering, and dies in its father's arms, as he stands, poor soul! making his jests and auctioning his wares, with a heavy heart, to the grinning crowd in the market-place. It is likewise genuine and pathetic how he is made to know (after the death of his wife), by the weak-minded but tender-hearted giant, Pickleson, of the deaf-mute child, whom her step-father (Pickleson's showman) misuses, and whom Dr. Marigold adopts, and teaches to read and write, and places at a school for deaf-mutes, and gives away in marriage to a deaf-mute lover, to be finally rewarded one Christmas Eve by their reappearance (out of a long absence in China), with a little daughter, who is not deaf and dumb, but salutes Dr. Marigold as "grandfather," and completes his earthly bliss. The character is one of the sort which Mr. Dickens loves to paint, and which reminds of his earlier manner, having something of Sam Weller in it, allied to something of Mr. Sleary, but at last being original as a whole. Dr. Marigold is simple and shrewd, with a racy philosophy of his own, the fruit of much sagacious observation and hard suffering, and is not the least a cynic. After going through enough to harden the feelings of most men, he has the greatness to give a laugh to a poorish joke, because (O gentle reader!) he knows from experience how flat you fall without it. Is not his modification of King Solomon's wisdom, concerning a brawling woman in a wide house, fine also?

"She was n't a bad wife, but she had a temper. If she could have parted with that one article at a sacrifice, I would n't have swopped her away in exchange for any other woman in England. Not that I ever did swop her away, for we lived together till she died, and that was thirteen year. Now, my lords and ladies and gentlefolks all, I 'll let you into a secret, though you won't believe it. Thirteen year of temper in a palace would try the worst of you, but thirteen year of temper in a cart would try the best of you. You are kept so very close to it in a cart, you see. There 's thousands of couples among you getting on like sweet ile upon a whetstone in houses five and six pairs of stairs high, that would go to the divorce court in a cart. Whether the jolting makes it worse, I do n't undertake to decide; but in a cart it does come home to you and stick to you. Wiolence in a cart is *so* wiolent, and aggrawation in a cart is *so* aggrawating.

"We might have had such a pleasant life! A roomy cart, with the large goods hung outside, and the bed slung underneath it when on the road, an iron pot and a kettle, a fireplace for the cold weather, a chimney for the smoke, a hanging shelf and a cupboard, a dog and a horse. What more do you want? You draw off upon a bit of turf in a green lane or by the roadside, you hobble your old horse and turn him grazing, you light your fire upon the ashes of the last visitors, you cook your stew, and you would n't call the Emperor of France your father. But have a temper in the cart, flinging language and the hardest goods in stock at you, and where are you then? Put a name to your feelings."

The only tolerable story in the little book, besides that of Dr. Marigold, is the story of the professional conundrum-maker and his ruin. That of Eunice Fielding, the tender Moravian maiden, would be good, if one did not know it all from the beginning. As for the ghost story, it is one of the dullest, most mechanical horrors we ever read; and the other tales amount to nothing, in goodness, badness, or indifference.

ANOTHER LOOK AT FOREIGN PICTURES IN NEW YORK.

At the gallery of the Studio Building, in Tenth Street, the French, Belgian, and English pictures are still on exhibition. Many of them have already been sold. Of those which have been sold a few are gone, having been removed by their purchasers, and room is thus provided for the exhibition of other pictures belonging to the collection which have not before found room on the walls. Those which have been taken away are generally sent over to "Goupil's" for repair to frames or for varnishing, and opportunity is given in that gallery for a second look at them. Then, several pictures

catalogued with the others of the collection, have made their first appearance in this gallery—for instance, the two large pictures by Schlesinger, "The Officer's Widow" and "The Spanish Girl," numbered 129 and 131. These, we are told, were bought by Mr. Knoedler before the exhibition opened. And so it seems that the gallery at Broadway and Ninth Street must be visited and explored if one would judge of the "Fourth Exhibition in New York of Pictures contributed by Artists of the French, English, and Belgian Schools." Then there are, on semi-public exhibition, other important pictures by European painters, which pictures do not belong to that collection. And it follows that we must treat of painters and schools as they are represented in New York to-day, and somewhat independently of their ownership or places of exhibition.

It would be well if any considerations of ownership or respect for the places of exhibition would inspire in the minds of a certain class of visitors that which the pictures themselves fail to inspire—a wholesome awe. A large portion of pictures exhibited, to say the least, are worthy of respect. In every gallery into which people walk, nonchalantly, to see pictures, there are works representing much care, skill, honest labor, learning, and thought. Most pictures are, on the face of the matter, worthy of respectful attention. A looker has no right to assume that the artist is unable to show him anything or teach him anything worth his while. A looker surely has no right to assume that the artist has had no meaning. This is true of all pictures which are exhibited. We say that a visitor should enter every gallery of pictures with a certain sense of awe.

And this is especially true when the visitor, accustomed to average American pictures, goes to see European pictures which may naturally be assumed to be above the average European merit. The pictures which are selected to be sent to this country for sale are generally of a certain order of merit; embody much skill and represent great reputations. Moreover, better in works, they have all been painted for a public vastly better instructed than ours in everything that has to do with art. They have all been painted in active rivalry with the strongest painters of the time; they have been painted in the presence of the best pictures of the past and the present. They, in a sense, bring European skill and cultivation for our enlightenment.

A picture by a celebrated artist, *couronné, décoré*, titled and honored, may be very bad in many ways, but is sure to be of some importance, and is necessarily worthy of notice. And people should not criticize pictures unfavorably until they have got beyond them, so to speak; until they know and are prepared to show what there is that is better, and why it is better, and what, in the case before them, needs improvement.

M. Louis Gallait is a painter of the highest standing, socially and by reputation. He has in the exhibition at Tenth Street three pictures, one of which is called "Jeanne la Folle," and represents that queen, well known to history, who would not allow her husband's corpse to be buried. Now we have twice seen parties pause in front of that picture, exclaim and wonder, muster sufficient knowledge of French to translate Jeanne la Folle into Crazy Jane, and then wonder why anybody should paint a horrid-looking picture and call it Crazy Jane. Why not Crazy Kate? as we heard one lady ask her party. Why, indeed? But, until one knows why, perhaps it would be well not to pass judgment upon the thought of the picture.

We have taken this No. 55 for our example the more willingly because it is not a picture requiring much profundity or long study on the part of the student to get beyond it. It is not a well-told story; almost anybody could tell it. It is not a good subject for a picture; people who have found out what the subject is may be excused if they instinctively feel and impulsively say that they do not want to look at it. It is not a beautiful picture in lines or in color. Nor is there in any one of these three pictures the evidence of true feeling, of imaginative insight, or even of an attempt to realize the scenes represented. "Columbus in Prison," No. 57, is the most nearly noble of the three, because the most probable and real, while all have a certain effectiveness, a certain stateliness which does what it can to redeem their many deficiencies. "Art and Liberty," No. 56, is less attractive, and has less of Gallait's charm than the others. Those readers who remember the picture by M. Gallait which was at Goupil's nearly a year ago, called, we think, "The Prisoner's Voice," and representing a mother and her children gathered beneath the prison wall which confines the prisoner, remember a picture which seems to us better than any of these three. But all are alike in manner and nearly alike in merit. They are conventional, unreal; if intellectual, not profoundly so, and not deep or subtle in feeling. And the merits of execution are not great enough or unusual enough to make the pictures valuable to our painters and students on that account alone.

There have been far more important pictures by Ary Scheffer in this country, and on exhibition, than No. 127, "The Three Holy Marys." His designs, too, are well known through the medium of engraving, and he is one of those painters whose works are said to "engrave well," that is, to be conceived in light and shade and without primary regard to color. The exhibition, therefore, of this small picture affords no favorable opportunity to speak at length of this distinguished artist and his work. One thing, however, must be clear to every one who considers the picture, that the artist whose work it is, is no colorist. For this is not merely pale and inadequate color, it is cold and ugly color; or rather it is not color, properly speaking, at all, but only a grey drawing tinted. One might be excused in forming the hasty conclusion that no work of the artist's could ever be valuable in color. So far as we know these works the conclusion would be just. All of his work that we have seen is actually painful to one who loves color at all. It is as if one who could write good prose would not, but would insist on writing bad verse. The absence of metre and music does not trouble us in prose; the absence of color does not trouble us in engraving; but bad verse is dreadful, and bad color is an infliction perhaps even greater.

Not bad color, perhaps, but color chilled with grey and, as it were, half extinguished, is the most common and most harmful fault of the great body of living French painters. There are, among them, individual painters whose work reveals the existence of great power of color; but the work of these men seems also to reveal an unconsciousness of the gift and an indifference to the possession of it. It is curious to mark how seldom French criticism of the present day treats of color as an essential element of a picture's worth or a painter's power. Even in the praise of their dead master, Eugène Delacroix, and in analysis of the character of his work, that one gift which he possessed beyond other Frenchmen, and perhaps beyond all other men his contemporaries, is scarcely noticed. The living painters of France can think, can partly feel, can study, can draw admirably, and lay pigments with sufficient skill, but cannot color in any complete, successful, and satisfying way.

The simple subjects, often domestic and nearly always in-door, which make up so large a proportion of the French and Belgian painting of the present day, are better adapted, perhaps, than subjects of any other kind to the chosen manner of their painters. The interior of a fashionably-furnished room, with a lady in morning dress, is a subject which can be painted with a certain measure of success in the subdued tones and cold, greyish hues of the existing school. But even then, by the adoption of this way of painting, these subjects, seldom at all noble or elevated, lose the only chance of being ennobled by their treatment. In No. 21 of THE NATION, we spoke of that picture by M. Charles Baugniet which was in the Artists' Fund Exhibition, "Improving the Eyelids." The picture catalogued as "The Attentive Chambermaid," and No. 5 of the present European collection, but now at Mr. Knoedler's gallery, and more properly to be called "The Lady's Maid" or "The Shoe," is even more remarkable for the technical skill displayed than was the former. Wonderfully delicate and imitative is the painting of the lace and silk, and not less truthfully drawn and rounded than simpler things is the lady's left arm, relieved against the dress which she is settling into its folds. How good such careful transcript would be if the things represented were better worth representing! How delightful would be even an inadequate painting of interiors and costume if these were more beautiful! If only Baugniet and Fichel and De Jonghe had mediæval interiors to paint! But as they are, nothing but real affluence of color will make good pictures of these subjects.

De Jonghe is bold and consistent in his disregard of color; chooses and arranges his subjects with a certain originality for one so strictly devoted to a single class of subjects, and shows a natural, if not very elevated, sentiment. He has a small picture in the Studio Building Gallery; but much larger and more important pictures are at Mr. Knoedler's—for instance, "The Twins," exhibited in Paris in 1863, and "La Causerie Intimè" of the salon of 1865.

M. Eugène Fichel seems to us a much more able painter than De Jonghe. But his skill is shown only in small pictures, of but little actual interest—No. 26, "Napoleon Bonaparte Studying," and two at Goupil's. There is not enough work of his before us to justify criticism.

M. Florent Willems is well known to New Yorkers by means of the highly finished and exquisite little pictures which from time to time, during the last four years, have been for sale, and sold, in this city. Two pictures by him are in the Tenth Street Gallery, No. 169, "The Convalescent," and No. 170, "The Lecture," or, more properly, "The Reading." This latter seemed to us the best Willems that we had yet seen. But since our first look at the two young ladies who read and listen, there has come another picture by the same artist vastly superior in every respect. "Au Roi!" is an admirable picture. It is small; although containing seven figures it is not larger than pictures by the same master of one figure or two; it is painted on panel,

like so many of the more minute and delicate French paintings. The interior of a very stately room is shown; a round table is set toward one of its corners; there are five guests, who are attended by two young pages. The toast is, "To the King!" and all have risen to honor it; one young man, belated, his glass not yet refilled, eagerly bids the others wait for him. The dignified gentleman in the foreground, in boots, while the rest are in rich in-door dress, is said to be, and may be, the king himself, who is entertaining his friends in a sort of understood incognito. The subject seems to be of small importance, though naturally and spiritedly treated. But when mere technical skill reaches such excellence as here, and is used to set forth a scene not inharmonious in line and hue, it is in itself of positive value. The interior of the room alone, richly and effectively decorated in the style of Francis I., the floor of colored marble, exquisite in color and simple in design, the furniture of the same period of art, solid and strongly made and richly adorned, with no air of modern upholstery about it; the splendid wine-cooler of gilded metal, catching and reflecting the diffused light of the interior; this alone (for it is one) would be a picture to enjoy, even without the figures. The skill shown in the painting of these details is marvellous; the floor especially is as fine as one can imagine such a thing to be. Then come the figures. The costume (time, the former half of the sixteenth century) is well chosen; some enormities of fashion which appeared later were not then in vogue. The colors are well harmonized and very delicately graded. The whole central group of the picture comes very near being a noble piece of coloring; and the men themselves are very good types and very human in look and action. There is a vivacity about the picture which is very charming and very unusual, seeming almost to tell of long acquaintance with courts and courtiers and all worldly splendors on the part of the artist.

A generally diffused pure daylight invests the whole scene, such as enters a large room through large windows. The sharp contrasts of light and shadow are not for us this time; the academician criticism of Paris has already objected to the absence of a central light or an extreme dark; we are rejoicing over their absence, believing that this very manner has helped the painter to better color than he ever got before, while not injuring the picture in any essential respect.

MUSIC.

THE PAREPA FAREWELL CONCERTS.

It is usually rather disagreeable to attend the concerts of any ordinary star single—if we may apply in the concert-room an epithet borrowed from the theatre—they are so obviously got up to show off one person, and the rest of the programme is put in merely to fill up time and detain the audience long enough for them to think they have had their money's worth. But the concerts under the management of Mr. Bateman have been of a very different character. The performers were all first-rate artists. A remarkable and brilliant singer, the best pianist in America, a violinist who is nearer a genius than any we have had here for some years, a virtuoso on the cornet capable of drawing out any amount of popular applause, and a good and well-trained orchestra, form a combination such as is very seldom heard by our concert-goers. The music performed was well selected from various schools, and was the best of each kind. The programmes had something really artistic about their arrangement. There was necessarily a certain amount of show and sensation performance, but there was enough each night of really good music to enable the most fastidious music-lover to listen with enjoyment. The orchestra played at least two good overtures and one or two pieces beside; Miss Parepa sang excellently in three or four styles, supported by an orchestral accompaniment, not merely by a piano; the solo players performed selections from the classics of their instruments, so that the general effect was very harmonious and good. We regret that these are farewell concerts, for we fear it will be long before New York will hear so much that is excellent again.

The first concert on Saturday evening opened with Nicolai's overture, "Merry Wives of Windsor," always bright and cheering, and well played by the thoroughly disciplined orchestra. Mr. Mills followed this by a "Berceuse" and a waltz of Chopin, which he rendered with the delicacy and taste which is now habitual to him, whom we think the most artistic pianoforte player in New York, so great has his improvement been recently. Miss Parepa, though seemingly a little tired, sang "Casta Diva" with great precision and excellence, but did not touch the heart so much as she pleased the ear. She may have needed the excitement of the opera to give the additional passion, but certainly she sang it not so well as we have heard Lagrange sing it. It is very difficult to compare the present voice of one singer with the recollection of another, but we surely have felt more thrilled and moved by the same music than we did when Parepa gave it the other night. Faultless as Parepa is in execution, and great intelligence as she shows in all her renderings, she lacks sympathy, and fails to touch the inmost soul, which is the especial gift of the most perfect interpreters of great music. Her voice has uncommon reach and power, the tones being round, sonorous, and musical in the upper register up to E flat, as well as in the soprano region. Its volume is great, and it filled the Academy with ease, being perfectly clear and distinct in every part. Her style of singing is noble and almost perfect, with a just appreciation of the meaning of the words and the sentiment of the music. Her voice was very sustaining both in swelling and modulating single tones and through all the variations and changes of the intricate passages. Her execution was almost perfect, an occasional difficulty in breathing, and a disagreeable throat-sound in her trill that should warn her not to use it so frequently, being the only blemishes, though we occasionally thought that she slid her voice a little badly from one register to another.

After the scherzo from Mendelssohn's music to the "Midsummer-Night's Dream" by the orchestra, Mr. Rosa played the "Fantasia Caprice" of Vieuxtemps, not, we should think, a piece that he thoroughly liked, but one that showed his power over his instrument. Rosa is young, with a fresh and ingenuous countenance, apparently wrapt up in his music. He is lately from the Leipzic Conservatoire, where he was under the instruction of David, and enjoyed intercourse with Joachim, who, we are told, has predicted a fine future for him. He plays cleanly and neatly, with a beautiful clear tone and excellent execution, and in every respect better than Prume, who played at the last Philharmonic concert. He is an artist, and is always expressive. His least notes move deeply. "The Nightingale's Trill," by Gauz, is a show-piece of slight merit, but considerable difficulty of execution. The runs and leaps, though a trifle to what La Bastardella used to sing, were clear and liquid. The echoes were excellently sung, but the trills were a disfigurement. Mr. Levy closed the first part with Hartmann's "Alexis" on the cornet. He made a *furore*, and received an encore. His playing is very wonderful; and in all the intricacies of runs and difficult passages, he shows his powers of tonguing and his manipulation of the instrument in a most noteworthy manner. He brought tones and expression out of the cornet that one could hardly suppose it capable of producing, and his *cantabile* passages were very beautiful. Some perverse purists object to the *cornet-à-piston* entirely, because it is no longer a horn pure and simple, but has, by stops and valves, enlarged its scale and its expressive power But they, perhaps, might like to turn the pianoforte into a spinet, and prohibit all instrumental music save the original reed-pipe. The cornet is, indeed, not a noble instrument, and its proper place is in an orchestra, where it has a part, and an important one too. Solos on the cornet, however beautiful, are like those on the bassoon or oboe, mere exhibitions of skill, and so not thoroughly artistic, in the best sense of the word.

The second part commenced with the overture to Coriolanus, in our view one of the poorest of Beethoven's minor works. Miss Parepa and Mr. Levy followed with Proch's "Alpenhorn," arranged as a duet for voice and cornet. Here was an occasion where the cornet was used to advantage, and where also great excellence in playing it was manifest in the soft tones of the echo, so closely resembling in quality the human voice. It was excellently given. Mr. Mills dashed off with great *bravura* Liszt's splendid arrangement of the celebrated "Rakoczy March," and gained himself an enthusiastic encore. Rosa played Ernst's "Elégie" in a most beautiful and sustained manner, with more artistic feeling and perception than we have ever heard it given. Miss Parepa sang "Comin' thro' the Rye" with spirit and archness, and for an encore gave Claribel's "At five o'clock in the morning," a nonsensical ballad which belongs to what a writer in the London *Orchestra* calls the "Horological School." Mr. Levy introduced a disturbing element into the concert in the shape of the "Excelsior Polka," by which we were at once transported to the circus, and hardly needed to shut our eyes to see in imagination a monkey-ridden horse galloping around the ring. It is a pity for the sake of a little applause to break in on the pleasant state of feeling produced by so much good music by such paltry clap-trap as this. The orchestra played the brilliant overture to "Zampa," and the Academy, which had been thoroughly full, quickly emptied the pleased hearers to their various homes.

The programme for Monday evening was better, as far as the vocal pieces were concerned. Miss Parepa sang "O luce di quest' anima" from "Linda;" the beautiful "Let the bright seraphim" from "Samson," which made us the more deeply regret that we could not hear her in oratorio here; and the prayer from Wallace's "Lurline." Rosa played the andante and finale of Mendelssohn's "Concerto" and a fantasia on "Trovatore." Mills gave Liszt's transcription from "Sonnambula" and his own "Second Tarantelle;" and the orchestra performed the overtures to "Oberon" and "Fra Diavolo," the andante from one of Schneider's symphonies, and the "Coronation March," a fitting epilogue to such a concert.

LEYPOLDT & HOLT,

646 BROADWAY.

The subscribers have associated themselves in the publishing and importing business. In conformity with the previous course of Mr. Leypoldt, they will devote themselves to the dissemination of what is best in literature, and to that alone.

FREDERICK LEYPOLDT,
HENRY HOLT.

They have in preparation, among other works:

I.

A COMPLETE VERBAL AND GLOSSARIAL INDEX TO

CHAUCER'S CANTERBURY TALES.

BY PROF. HIRAM CORSON.

This work will be based on the Harleian MS. No. 7,834, as edited by Thomas Wright for the Percy Society. There will be added to it special verbal and glossarial indexes, with the passages in which the words occur, to "The Vision and Creed of Piers Ploughman" and "La Morte d'Arthure," Wright's editions; "Gower's Confessio Amantis," Pauli's edition; "Wycliffe's Bible," Forshall & Madden's edition; "Spenser's Poetical Works," and "Chapman's Homer's Iliad and Odyssey," Hooper's edition. With an appendix containing obsolete words and words with obsolete meanings, from

DOUGLAS'S SCOTCH TRANSLATION OF VIRGIL'S ÆNEID, SHAKESPEARE, MILTON, FULLER, TAYLOR, HOLLAND, GOLDING,

and various other sources, with the passages in which they occur. To the whole are prefixed

A GRAMMAR OF THE ENGLISH LANGUAGE OF THE XIVTH CENTURY, AND AN ESSAY ON THE VERSIFICATION OF CHAUCER.

The subscription edition will be issued on LARGE PAPER, *with a list of subscribers' names*, and will be furnished to *subscribers only*. A full Prospectus, with subscription sheet, sent on application.

II.

An authorized translation, edited by an eminent American scholar, of

THE HISTORY OF THE UNITED STATES OF AMERICA.

BY DR. CARL FRIEDRICH NEUMANN.

In 3 vols. octavo.

The reviews of this history, which have attracted the attention of intelligent readers throughout the world, render praise superfluous.
Particulars in future advertisements.

III.

MOZART'S LETTERS.

(Published in conjunction with Messrs. Hurd & Houghton.)
2 vols. 16mo, $3 50.

IV.

The Life and Public Services

OF

SAMUEL ADAMS.

By WILLIAM V. WELLS.

Being a Narrative of his Acts and Opinions, and of his Agency in producing and forwarding the American Revolution; with Extracts from his Correspondence, State Papers, and Political Essays.

Three Vols. 8vo. $12.

JUST PUBLISHED BY

LITTLE, BROWN & CO.

"Without the character of Samuel Adams, the true history of the American Revolution can never be written. For fifty years his pen, his tongue, his activity, were constantly exerted for his country, without fee or reward."—*John Adams in* 1817.

"The controlling genius of the storm."—*Austin's "Gerry,"* i. 7.

"I can say he was truly a great man; wise in counsel, fertile in resources, immovable in his purposes, and had, I think, a greater share than any other member in advising and directing our measures in the Northern war."—*Jefferson in* 1819.

"I cannot sufficiently respect his integrity and abilities. All good Americans should erect a statue to him in their hearts."—*George Clymer in* 1773.

"The Father of America."—*Stephen Sayre, London*, 1771.

"If there was *any* Palinurus to the Revolution, Samuel Adams was the man."—*Jefferson in* 1825.

"The man who hungered and thirsted after independence."—*Daniel Webster.*

"Such is the obstinacy and inflexible disposition of the man, that he can never be conciliated by any office or gift whatever."—*Governor Hutchinson's Secret Letters to the British Ministry.*

"It was this man, who, by his superior application, managed at once the factions in Congress at Philadelphia, and the factions in New England."—*Galloway's testimony against Samuel Adams before Parliament*, 1778.

"One of Plutarch's men."—*Theodore Parker.*

"Samuel Adams was the last of the Puritans....More than most of his associates he understood the efficacy of personal intercourse with the people. It was Samuel Adams, more than any other individual, who brought the question home to their bosoms and firesides....The throne of his ascendency was in Faneuil Hall. As each new measure of arbitrary power was announced from across the Atlantic, or each new act of menace and violence on the part of the officers of the Government and of the army occurred in Boston, its citizens, oftentimes in astonishment and perplexity, rallied to the sound of his voice in Faneuil Hall. There, as from the crowded gallery or moderator's chair he animated, enlightened, fortified, and roused the admiring throng, he seemed to gather them together beneath the ægis of his indomitable spirit, as a hen gathereth her chickens under her wings."—*Edward Everett's Lexington Oration*, 1835.

"He was the first man who asserted the independency of the colonies upon the supreme authority of the kingdom."—*Gov. Hutchinson's reply to the questions of George III. concerning Samuel Adams.*

THE BOOK OF THE SEASON.

"ACROSS THE CONTINENT."

A SUMMER'S JOURNEY TO THE ROCKY MOUNTAINS, THE MORMONS, AND THE PACIFIC STATES, WITH SPEAKER COLFAX.

A BOOK OF 500 PAGES, WITH A FULL MAP OF ALL THE WESTERN TERRITORIES AND THE ROUTES OF TRAVEL. PRICE $2.

BY SAMUEL BOWLES,

Editor of the Springfield (Mass.) *Republican.*

All the experiences and novelties of the Overland Journey are fully described; the Mines are explored, and their mysteries explained; the Mormons are depicted as they are seen at home: the grand scenery of the Mountains, of the Plains, of the Rivers, is painted in its true relations; and the people, manners, and society of all this western half of our own continent, their achievements and their promise, are sketched with a fulness and a truth never before attained.

The New York *Times* says: "It is the ablest and most valuable report ever made of the characteristics of the Western and Pacific portions of our Union." The Boston *Transcript* says: "It is one of the most popular books of American travel that have appeared for years, both on account of the interest and novelty of its facts, and the freshness, vigor, and accuracy of the style of statement." The Chicago *Tribune* says: "The agricultural and mineral resources of the country, the sublime scenery, the Mormons, the developments of the Pacific Coast, are all described by a master's hand." The Hartford *Press* says: "Mr. Bowles has, eminently, newspaper sagacity, the sixth sense—that is, an instinct of what will interest readers; and this faculty makes these letters readable, every word."

THE BOOK WILL BE SENT BY MAIL, POSTAGE PAID, ON RECEIPT OF THE PRICE—$2.

SAMUEL BOWLES & CO., PUBLISHERS,

Springfield, Mass.

Orders from the trade may also be addressed to HURD & HOUGHTON, Publishers, New York.

WILL BE PUBLISHED ON SATURDAY, JAN. 13, 1866,

BY

WIDDLETON, Publisher,

17 Mercer Street, N. Y.,

POEMS RELATING TO THE AMERICAN REVOLUTION.

By PHILIP FRENEAU.

With Notes and an Introductory Memoir by Evert A. Duyckinck, author of "Cyclopædia of American Literature," "Portrait Gallery of Eminent Americans," etc., etc. A handsome crown 8vo volume, with Steel Portrait, price $2 50.

This collection embraces all of Freneau's Poems relating to the American Revolution. No collection of this kind has appeared in America since the edition, now exceedingly rare, published in Philadelphia in 1809. The Poems of the Revolution, by which the author's reputation was established, are now brought together in one volume for the first time.

One hundred copies on large paper, royal 8vo, uniform with Dr. Francis's "Old New York." Portrait (in India proof) engraved by Halpin expressly for the work; facsimile manuscript poem; and a portrait on India paper of John Paul Jones, from a miniature in the possession of the Naval Lyceum, Brooklyn, L. I. Price to subscribers, $12.

ALSO, READY AT THE SAME TIME,

DR. FRANCIS'S OLD NEW YORK; OR, REMINISCENCES OF THE PAST SIXTY YEARS.

By the late JOHN W. FRANCIS, M.D., LL.D. With a Memoir of the Author by Henry T. Tuckerman, and a new engraved portrait, by Burt, of Dr. Francis, from an original pastel drawing by Julius Gollmann. Handsome crown 8vo, price $2 50.

The book is replete with anecdote and biographical information respecting the past celebrities of New York from the days of the Revolution, including Statesmen, Politicians, Editors, Actors, Physicians, Lawyers, Divines, and others.

Some idea may be formed of its interest as a memorial of the past from the Index, which numbers over five hundred personal references.

COFFIN'S NAVIGATION AND NAUTICAL ASTRONOMY,

Prepared for the Use of the U. S. Naval Academy.

BY J. H. C. COFFIN.

Second Edition, Enlarged.

One Vol. 12mo, cloth. $3 50.

This Day Published by

D. VAN NOSTRAND,

192 BROADWAY.

*** Copies sent free by mail on receipt of price.

THE BEST HOLIDAY GIFT

FOR

BOYS AND GIRLS

Is a Year's Subscription to

THE LITTLE CORPORAL.

Acknowledged by the leading papers to be the

Best Children's Paper in America!

Published Monthly by

ALFRED L. SEWELL,

Chicago, Illinois.

PRICE ONE DOLLAR A YEAR, IN ADVANCE,
Including a
BEAUTIFUL STEEL ENGRAVING AS A PREMIUM TO EVERY SUBSCRIBER.

SAMPLE COPY, TEN CENTS.
CIRCULARS SENT FREE.

Every person who shall send six subscribers, and six dollars, will receive as a premium one extra copy for one year, and also a copy of the Engraving.

Other inducements for *larger clubs*.

All pages are electrotyped, and back numbers can always be furnished.

READ WHAT THE PAPERS SAY:

"*It already excels every children's paper that we know of in this country.*"—*Chicago Evening Journal.*

THE LITTLE CORPORAL.—The *Pittsburg Christian Advocate* says: "The best paper for children published in this great country of ours, is *The Little Corporal*. It is a gem in the catalogue of monthlies."

Forney's Philadelphia *Daily Press* says of it: "*The Little Corporal is destined to become the great children's paper of America.*"

"*We cannot say too much in favor* of this beautiful paper."—*Bryan* [O.] *Press.*

"*The Little Corporal* sparkles all over with vivacity and entertainment. It is, without doubt, the best and cheapest children's gazette published anywhere."—*Marshall* [Mich.] *Statesman.*

"THE LITTLE CORPORAL.—Though modestly calling itself by a subordinate title, it is really a very major-general among the children's magazines."—*Chenango Telegraph* [Norwich, N. Y.]

"*The Little Corporal* is the most interesting and instructive monthly in the Union."—*Louisville Democrat.*

"*The Little Corporal* is universally admitted to be the best juvenile paper now in existence."—*Dubuque Daily Times.*

"We like it better than ever."—*N. W. C. Advocate.*

"It strikes the right key, and is admirable—neither heavy nor silly, but simple, fresh, buoyant, and earnest."—*Adams* [N. Y.] *Visitor.*

"Its influence for good can never be estimated."—*Grand Haven News.*

"Indeed, there is no paper of the kind published that approaches it as a juvenile journal."—*Poughkeepsie Daily Press.*

"Of all the children's papers which are competitors for the patronage of the public, we know of no one which so nearly approximates to our standard of what such a paper should be. The terms are most liberal."—*Batavia* [N. Y.] *Republican Advocate.*

"The children will be better and happier from reading it."—*Henry* [Ill.] *Courier.*

"*The Little Corporal* really excels any child's paper we have seen. The premium picture is of itself worth a year's subscription."—*Sandusky* [O.] *Reg.*

"We consider it the best, decidedly the best, journal of the kind for children that we ever saw."—*Star of the Valley* [Newville, Pa.]

"We have the first two numbers of *The Little Corporal*, which are edited with unusual ability. They sparkle with originality, and are attractive on every page."—*Worcester* [Mass.] *Palladium.*

"*The Little Corporal* is the most readable and interesting and instructive paper for children we have ever perused."—*Farmington* [Maine] *Chronicle.*

"It is the cleverest thing of its kind yet realized in America."—*Roxbury* [Mass.] *Journal.*

"THE LITTLE CORPORAL.—Certainly, we have seen nothing in the shape of a child's paper which could compare with this, which comes to us from over the prairies."—*Portland* [Maine] *Daily Press.*

The above are only a tithe of the many beautiful notices our young soldier has received.

Address ALFRED L. SEWELL,

COTTON STEALING.

A NOVEL.

A very lively story of Southern life, both before and during the war, divulging secrets the cotton speculators must wince to see in print.—*Chicago Journal.*

487 PAGES. $2.

FINANCIAL REVIEW.

NATION OFFICE, Monday Morning,
January 8, 1866.

THE receipts of cotton at the ports up to 31st ult. aggregate 1,300,000 bales, thus falsifying the estimates of the Secretary of the Treasury and the most experienced merchants in the trade. It is now said that the crop of 1865 will, with the accumulations of previous years, amount to not less than 2,100,000 bales, worth, at a moderate estimate, $150 per bale in gold. The South will thus have a sum of $315,000,000 to begin the world again upon. The ex-rebels and their friends North and in Europe continue to assure us that there will be no cotton worth mentioning raised in 1866. But as these are the same persons who would not allow that the crop of 1865 with previous accumulations could exceed a million bales, their present opinions must be received with caution. It is evident, in fact, from the efforts which are being made in every cotton State to compel the freedmen to hire for the year, that the planters are going at least to try to raise a full crop.

The statement of the public debt which was made up at the close of the calendar year 1865, shows that, on Dec. 31, the net debt (after deducting cash in hand from the gross amount of securities afloat) was $2,716,581,536, or $1,948,222 more than it was on 30th November last. The internal revenue for the six months ending on 31st ult. was over $175,000,000, and the customs revenue for the same period not less than $83,000,000 (in gold)—together, $258,000,000, or, allowing for premium on surplus gold sold, not less than $275,000,000. Should the remaining six months of the year produce as much, the annual revenue would amount to $550,000,000, which would not only enable the Department to dispense with new loans, but would place the Secretary in a position to reduce the principal of the debt by over $100,000,000. As may be inferred from the small increase of debt during the month of December, the changes in the securities by which it is represented have been trivial. The old 5 per cent. coupon legal tenders have been reduced to about $8,500,000 in all, and replaced by compound legal tenders; the debt certificates have been increased, and the old legal tenders slightly diminished. A reduction is reported in the temporary deposits. Sound policy would dictate the funding of these deposits as soon as convenient. So long as the Government is liable to be called upon to pay, at 10 days' notice, $75,000,000 or $100,000,000 in legal tender notes, the Secretary of the Treasury will be in the power of the moneyed institutions of the country, and will not be free to pursue a policy which they disapprove. No contraction or any other measure tending to embarrass the banking interest is feasible so long as the banks hold a call upon Government for an amount of currency greater than the whole balance in the Treasury.

Money continues to accumulate in our banks, and the standard rate for call loans on approved securities is now reduced to 6 per cent. On Governments loans are made as low as 5 per cent. In consequence of the

reduced shipments of grain from the West and the large purchases of goods by Western merchants, that section is not drawing as much money as usual from the seaboard; and, unless a funding loan should be placed on the market, the rate of interest bids fair to fall at least as low as 5 per cent. It can hardly be expected, however, that Mr. McCulloch will allow the present opportunity to escape without funding at least fifty millions of the compound notes and temporary deposits. Five-twenty bonds are nearly 105 for the old issues, and the European consumption is so active that an export of fully a million a week may fairly be expected for some time to come. Money is very easy. These appear to be the conditions to which the Secretary made reference in his report, when he spoke of funding the currency from time to time whenever circumstances were auspicious for the negotiation of loans. Hence it has been commonly reported in the Street for some days past that a loan would be announced this week. At the Sub-Treasury the public are assured that the Department has no present intention of offering new bonds. But, on the other hand, it is asserted, on fair authority, that an understanding has been arrived at by the Secretary of the Treasury, Mr. Fessenden, of the Senate, and Mr. Hooper, of the House of Representatives, in pursuance of which a bill will shortly be put through Congress, empowering the Secretary of the Treasury to fund currency whenever he may deem it advisable; and, in the event of the passage of such a bill, there would seem to be no good reason for waiting for a more favorable opportunity than the present one to inaugurate the policy of contraction. If the Government cannot contract now, when money is a drug, when the national banks are issuing $3,000,000 of paper per week, and 5-20 bonds at 5 per cent. premium are in active demand for export, it can hardly be able to do so hereafter. By counting the Clearing House certificates as legal tender, which they are in fact, the New York City banks now show a reserve of legal-tender paper equal to $75,000,000—say 42 per cent. of their liabilities.

Gold fell last week, under the dread of coming contraction, to 141½; closing at about 141⅞. This is the heaviest fall we have had to chronicle for several weeks. It was in part due to the failure of a heavy bull operator in gold, who has figured extensively in the Gold Room during the past two years. Exchange was weaker last week, in consequence of the bills drawn against five-twenties and liberal cotton shipments. At the close of the Saturday mail, bankers' bills were sold at 109, and fair commercial bills at 108. Importers still cling to the theory that gold is going to fall heavily, and remit as little as they can.

The following table will show the course of prices during the week in the stock, exchange, gold, and money markets:

	Dec. 30.	Jan. 6.	Advance.	Decline.
United States Sixes of 1881	108¼	104⅜ ex c.	....	⅞
5-20 Bonds, old	105	104⅞	....	⅛
5-20 Bonds of 1865	102	102	....	....
10-40 Bonds	93⅝	98⅜	....	¼
7.30 Notes, second series	97⅝	98⅜	⅜	....
New York Central	96¾	96	....	¾
Erie Railway	97¼	95¾	....	⅛
Hudson River	109	108	....	1
Reading Railroad	106⅛	105¼	....	1¼
Michigan Southern	74⅝	72⅛	....	2½
Cleveland and Pittsburg	84⅛	82¾	....	1⅜
Chicago and North-Western	35¾	35⅛	....	⅝
" " " " Preferred	61⅞	60¼	....	1⅝
Chicago and Rock Island	108⅜	107¼	....	1¼
P., Fort Wayne, and Chicago	106	100½	....	5½
Canton	45¾	45	....	¾
Cumberland	45	44¼	....	¾
Mariposa	14¾	14¼	....	½
American Gold	144¾	141⅞	....	2⅞
Bankers' Bills on London	109¼	109	....	¼
Call Loans	6	6	....	....

The course of prices has been uniformly downward. This has been due in part to the decline in gold, with which stocks always sympathize more or less; in part to the natural reaction from an active speculation for the rise engineered by weak operators; in part to the dread of a tight money market to ensue from a new funding loan; and in part to the declining traffic on the railways. Of these various causes, the most potent has been the second. Allusion was made in recent articles in this journal to the "cornering" movements in Erie and Pittsburg, by means of which the price of both stocks had been forced far above the real value of the property, and the bears forced to submit to severe punishment. Of Erie nearly all the floating shares were bought up by one house, which was understood to be in close relations with the leading director of the road; by refusing to lend stock, and so compelling the bears to buy for delivery, this house forced up the price to 97, and held it between 95 and 97 for many days together. It is clear, however, that the stock of the Erie Railway, whose expenses absorb 80 per cent. of its gross earnings—according to the official report to the Legislature—is not worth 95, or 90, or any such figure. So of the Cleveland and Pittsburg. By buying up all the stock a clique managed to force up the price to 97, dividend on, or 93, dividend off. It needs no demonstration to show that a railway stock which only pays 4 per cent. dividend in a year is not worth so much. It is mainly to the natural recoil from the advance produced by these factitious influences that the decline of the past two weeks is due. In both instances the cliques discover that, at the high prices to which they have succeeded in forcing the stocks, the public are sellers, not buyers. In both, the bears, after enduring some punishment, relinquish the contest, leaving their antagonists masters of the field and *owners of the stock*. In both, after some delay, the bulls conclude to sell, and the consequence is a heavy and sudden decline. That decline has commenced in Pittsburg, which has fallen from 97 to 81½—15½ per cent.—in about a fortnight; it is yet to come in Erie. Among the other shares the heaviest decline is in Fort Wayne, which is quoted 5½ per cent. lower than it was a week ago. No specific cause is ascribed for this sudden falling off, though it is surmised that the change of direction in the Cleveland and Pittsburg may lead to a disturbance of the peaceable relations existing between the two lines. Michigan Southern is heavy, and has been pressed for sale at a decline of over 2 per cent. during the week. The directors met on Wednesday and determined to declare no January dividend. It is now a year since a dividend was paid on this stock, and as the earnings show a heavy falling off from last year, the prospect of anything being divided among the shareholders at midsummer is slim. Rock Island and Hudson are firm, being manipulated by cliques. New York Central has also been the subject of some manipulation; the price rose at one time last week to 98, and certain manœuvres on Saturday rather indicate a renewal of the forcing process next week. Intrinsically, the stock is above its value. According to the official reports, it is earning about 5 per cent. So long as Government securities, paying 6 per cent. in gold or 7.30 in currency, can be bought at or near par, it cannot be expected that 4 or 6 per cent. railway stocks can be maintained at anything like the same figure.

GREAT NATIONAL SAVINGS BANK.

THE UNION MUTUAL LIFE INSURANCE COMPANY

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom, and disinterested philanthropy. It offers superior advantages to the life-ensuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies by receiving a note for one-half when the premium amounts to over $30.

THIS COMPANY offers PECULIAR ADVANTAGES to persons intending to ensure their lives.

Since its organization it has paid (chiefly to Widows and Orphans) for losses by death, $912,342, and $412,748 in Dividends—a total of over

One and a Quarter Million

of Dollars, and now has, in its Capital and Accumulations, securely invested for the Payment of Losses and Dividends, a fund of $1,400,777 16.

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the policy holders.

COLLEGE HILL MILITARY SCHOOL,
POUGHKEEPSIE, N. Y.

OTIS BISBEE, A.M., PRINCIPAL.

"The Poughkeepsie College Military School paid a visit to this city yesterday (April 3). The pupils were uniformed in blue military style, and numbered between fifty and sixty in line. It was a beautiful affair, witnessed by thousands, many of whom are of the opinion that the cadets are under better discipline, and, in the military exercise, far superior to the celebrated Chicago Zouaves who visited our city some years ago."—*Albany Express.*

"Yesterday afternoon (April 3) the College Hill Cadets, of Poughkeepsie, visited our city on a pleasure excursion, and for the purpose of paying their respects to the Governor. After the review the Governor briefly addressed them. He said he was glad of the opportunity to welcome the company to the Capital of the State, and thank them for their visit. He was glad of this evidence of the success of the teachers, and the proficiency of the taught."—*Albany Evening Journal.*

WILLIAM KNABE & CO.'S

Celebrated Gold Medal

GRAND, SQUARE, AND UPRIGHT

PIANOS.

These instruments have been for thirty years before the public, in competition with other instruments of first class makers. They have, throughout that long period, maintained their reputation among the profession and the public as being unsurpassed in every quality found in a first-class Piano.

SCHOOL FURNITURE!

Lecture-Room and Sabbath-School Settees

IN EVERY STYLE,

MANUFACTURED BY

ROBERT PATON,

24 GROVE STREET, NEW YORK.

GROVER & BAKER'S

SEWING MACHINES

WERE AWARDED THE HIGHEST PREMIUMS

At the State Fairs of

New York,	Illinois,	Virginia,
New Jersey,	Michigan,	N. Carolina,
Vermont,	Wisconsin,	Tennessee,
Pennsylvania,	Iowa,	Alabama,
Ohio,	Kentucky,	Oregon,
Indiana,	Missouri,	California,

And at numerous Institute and County Fairs, including all the Fairs at which they were exhibited the past three years.

The GROVER & BAKER ELASTIC-STITCH SEWING MACHINE is superior to all others, for the following reasons:

1. The seam is stronger and more elastic than any other.
2. It is more easily managed, and is capable of doing a greater variety and range of work than any other.
3. It is capable of doing all the varieties of sewing done by other machines, and, in addition, executes beautiful embroidery and ornamental work.

GROVER & BAKER S. M. CO.,
495 Broadway, New York.

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

SHAFTING, with Ball and Socket Bearings and Double Cone Vice-Couplings, admitting of the easiest possible adjustment.

A complete assortment of PULLEY and WHEEL PATTERNS, from which Castings or finished work will be furnished.

RAILWAY EQUIPMENTS, TURNING and TRANSFER TABLES, and PIVOT BRIDGES.

Sole Manufacturers and Licensees of GIFFARD'S INJECTOR, For Feeding Boilers.

WILLIAM SELLERS. JOHN SELLERS, JR.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars

They are more fire-proof.

They are more burglar-proof.

They are perfectly dry.

They do not lose their fire-proof qualities by age.

Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

NEW YORK

LIFE INSURANCE COMPANY,

112 AND 114 BROADWAY.

This is one of the oldest institutions of the kind in America, having been chartered in 1841, and commenced business in May, 1845.

EVERY ONE SHOULD ENSURE.

While we live we may protect those dependent upon us; but when death severs the tie of all others most dear, it is a consolation to know that our prudence and foresight have made provision for the wants to which we can no longer minister; and the man who has the power, and neglects the opportunity, of providing in this way for the comfort and independence of his family, fails in the duty which he owes to them and himself. Therefore let every one who has not obtained a policy of Insurance upon his life no longer neglect this imperative duty. GREAT CARE SHOULD BE MANIFESTED IN THE SELECTION OF A COMPANY. The

NEW YORK LIFE INSURANCE CO.

Offers the following highly important essentials:

It is a strictly Mutual Company;

It has had Twenty Years' Business Experience;

It has large Accumulated Assets;

It gives Liberal Assistance in the payment of Premiums;

Its Dividends are declared Annually;

It is prompt in the Payment of all Losses.

IN FACT,

Special care in the selection of its risks, strict economy, and a safe and judicious investment of its funds, emphatically characterize the management of this Company.

Assets over

$4,500,000.

Annual Dividend, January 1, 1865,

50 PER CENT.

Amount Returned Premiums (Dividends) paid,

$1,700,000.

Amount Claims by Death paid,

$3,500,000.

During its existence it has issued

Over 36,000 Policies.

TEN-YEARS NON-FORFEITING POLICIES.

The *New York Life Insurance Company* originated, and was the first to bring before the public, the *Ten-Year Non-forfeiting Plan*, which has so fully commended itself to the judgment of thinking men that it has become the most popular mode of assurance, and is rapidly superseding the old method of life-long payment. It has received *THE UNQUALIFIED APPROVAL OF THE BEST BUSINESS MEN OF THE LAND*, large numbers of whom have taken out Policies under it as an investment.

TEN-YEARS NON-FORFEITING PLAN.

A Party ensuring by this table, after the second year, cannot forfeit any part of what has been paid in, and his policy becomes a source of income to him while living.

ANOTHER NEW FEATURE.

TEN-YEARS NON-FORFEITURE ENDOWMENT POLICIES.

A party ensuring by this table the amount is received by the assured himself, upon his attaining a specified age, while full provision is made for death occurring prior thereto. As a sure and profitable investment for one's declining years, they deserve the attention of all. These policies are coming into general request. *The New York Life Insurance Company* have recently prepared *A NEW TABLE BY WHICH THE PREMIUMS CAN ALL BE PAID IN TEN YEARS AND THE NON-FORFEITURE BENEFIT ALSO SECURED.*

POLICIES ISSUED IN ALL THE USUAL FORMS.

MORRIS FRANKLIN, President.

ISAAC C. KENDALL, Vice-Pres't.

WILLIAM H. BEERS, Actuary.

☞ Parties desirous of acting as Agents will please apply personally or by letter.

UNIVERSAL CLOTHES WRINGER,

WITH COG-WHEELS.

The World's Fair in London, the Mechanics' Institute, and Eleven State Fairs have decided that the U. C. W. IS THE BEST.

We also WARRANT IT THE BEST and most durable Wringer made. Over 200,000 have been sold, and each family can testify to its superior merits.

"It saves its cost in clothing every year."—ORANGE JUDD.

"One of the most useful articles in my house."—MRS. HENRY WARD BEECHER.

"I heartily commend it."—REV. DR. BELLOWS.

Call or send for illustrated circular, with testimonials, retail prices, and terms to salesmen.

Money can be made rapidly selling them in every town.

R. C. BROWNING, GENERAL AGENT,

347 Broadway, New York.

DECKER & CO.,

MANUFACTURERS OF PIANO-FORTES,

419 BROOME STREET,

One Block East of Broadway, N. Y.

These Pianos stand unrivalled in regard to their singing quality; volume and purity of tone; sympathetic-elastic, and even touch; and durability of construction, which enables them to remain in tune much longer than ordinary Pianos.

JESSUP & MOORE,

27 NORTH SIXTH STREET, PHILADELPHIA,

128 WILLIAM STREET, NEW YORK,

PAPER MANUFACTURERS,

Have on hand, or make to order at short notice, all qualities of Book and News Printing Papers at current market prices.

WHEELER & WILSON'S SEWING MACHINES,

625 BROADWAY, N. Y.,

MAKE THE

LOCK-STITCH,

and rank highest on account of the elasticity, permanence, beauty, and general desirableness of the stitching, when done, and the wide range of its application.—*Report of American Institute.*

UNITED STATES STEEL PEN WORKS,

FACTORY, CAMDEN, N. J.

R. ESTERBROOK & CO.,

STEEL PEN MANUFACTURERS,

WAREHOUSES, { 403 ARCH STREET, Philadelphia. / 42 JOHN STREET, New York.

Samples and prices on application. Lots made to order of any pattern or stamp required.

CAUTION.

These Pens are of genuine American manufacture, and equal in finish, elasticity, and fineness of point to the best imported. They are, therefore, sure to gain the confidence of the American public. The fac-simile of our signature is sufficient security against foreign imitation.

R. ESTERBROOK & CO.

JOSEPH GILLOTT'S STEEL PENS.

OF THE OLD STANDARD QUALITY.

TRADE MARK: Joseph Gillott, Warranted.

or Descriptive Name, and Designating Number. *New Series, Good and Cheap, from No. 700 to No. 761.*

TRADE MARK: Joseph Gillott, Birmingham. With Designating Numbers.

For sale by

JOSEPH GILLOTT & SONS,

91 John Street, New York.

HENRY OWEN, Sole Agent.

FRANCIS & LOUTREL,

45 MAIDEN LANE, NEW YORK,

STATIONERS, STEAM PRINTERS AND BLANK-BOOK MANUFACTURERS,

Supply everything in their line at lowest prices. Every kind of Writing Paper, Account Books, Fancy and Staple Stationery, Diaries for 1866, Expense Books, etc. Orders solicited.

The Nation.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

A PORTION of a letter has been published written by General Grant in reply to an application from Governor Parsons, of Alabama, for the withdrawal of the federal troops and the arming of the local militia, in which the general declines to recommend any such measure until "there is full security for equitably maintaining the rights and safety of all classes of citizens in the States lately in rebellion." This accords with the view we have ventured to take in another column of the necessity of ample protection for persons and property as the basis of all plans of reconstruction. But it must not be forgotten that the insecurity which now prevails at the South is not merely one of the sequelæ of the war, as some persons represent it. It is a chronic disease of Southern society, and must be eradicated by interposing the strong arm, if not of law, at least of justice, between every man's head and the bludgeon or pistol of the mob. A good test question to put to every State applying for readmission would be, Can Wendell Phillips deliver one of his most violent and desponding lectures on any part of your soil without other risk than that of being hissed?

A GREAT deal of painful uncertainty weighs upon the public mind concerning the late attempt to assassinate Senator Wade, of Ohio, if it *was* an attempt to assassinate. As an assassination, the thing was a failure; as a means of publicity, it was a prodigious success. Every variety of transaction has now been telegraphed from Washington as descriptive of the real occurrence. At one time we behold the senator assailed with a bowie-knife, as long at least as the bow which the reporters draw, and in the scornful attitude of simply kicking the blood-stained miscreant down stairs. In another *tableau* he "forces him to the door with the assistance of fire-arms," and *then* kicks him down stairs. Again, we see a foolish half-witted fellow, after making a harmless thrust at the senatorial waist-band with a penknife, led good-humoredly out, *and* kicked down stairs. The only point clearly established, therefore, is that Mr. Wade has kicked somebody down stairs; bowie-knife, fire-arms, penknife, all else is wrapped in the deepest mystery. Whether it is a dagger which we see before us, or but a dagger of the mind of the reporters, no one can decide but Mr. Wade, who should relieve popular anxiety in some way.

MR. ADAMS and Lord Clarendon have, *apropos* of the *Shenandoah*, taken up the international controversy where Earl Russell left it, and it cannot be said that they have thrown any new light on the subject. Lord Clarendon received, however, two or three very hard hits on the question, raised by himself, of American laxness during the South American war with Portugal, being, in fact, completely floored by Mr. Adams's citations, whereupon his Lordship declined further controversy in order to avoid creating "acrimonious" feeling between the two countries—a bit of precaution which strikes us as superfluous.

MR. RAYMOND, of New York, has introduced two excellent bills into the House, one to provide New York with a decent post-office, and the other to provide the United States with a decent naturalization law, under which color shall cease to be a disqualification for citizenship. If he added a clause to his post-office bill requiring in the New York postmaster ability to read and write English correctly, and insisting on his close attention to his official business and rigorous abstinence from electioneering excursions round the city, he would lay the public under still greater obligations. The New York post-office is already one of the most important institutions in the country, being the greatest postal centre; but it is managed as if it were simply a large hall for political re-unions.

A MOVEMENT was begun in this city soon after Mr. Lincoln's death for the collection of dollar subscriptions to build him a monument. Why people who wanted and could afford to give a hundred dollars were not to be allowed to do so was never clearly explained; but as nothing has now been heard of the matter for some months, we think it is the duty of the persons having the matter in charge to let the public know what progress they have made and how many dollars they have got.

GENERAL SWEENEY, who occupies some post of honor and profit amongst the Fenians, entered upon the business of organizing that body and declaring war against Great Britain while serving in the United States army, and it appears omitted the little formality of asking leave of absence from his superiors when charging himself with the business of the Brotherhood. The President has accordingly gently reminded him of the oversight by dismissing him from the service, a step which will not only give the public great satisfaction, but promote discipline in the army. One of the curses of the service hitherto has been that many officers could not rid themselves of the idea that when they received a commission they were charged with the double duty of commanding their men and of helping along what they conceived to be the true foreign policy of the nation, by making little demonstrations now and then against friendly powers. General Sweeney is probably by this time considerably astonished to find that the President intends to decide himself when Canada had better be invaded or a descent made on Ireland.

THE population of this State, according to last year's census, is 3,831,937—an increase, in the preceding decade, of 363,232. The number of legal voters is 823,426.

WE publish elsewhere the letter of a correspondent whose opportunities of becoming acquainted with the real feelings and aims of the Southern population have been unusually good, and whose capacity as an accurate observer is attested by the fact that he was selected for his mission by an association of manufacturing men desiring information for business purposes. He sums up in this letter the experience of five months of travel, and we earnestly commend his conclusions to the attention of everybody who desires a real and not merely formal reconstruction of the Union.

"A. W. K.'s" experience, coupled with that of our own correspondent, is full of warning for those who are inclined, as so many are, to reason about Southern men's conduct and motives from the same premises as about those of Northern men, overlooking, as it seems to us, the totally different training and education which the people of each section have received, and the totally different meanings which they attach to the word "interest." We may add, too, that in taking a less hopeful view of the state of the South than that of a large portion of the public, we are actuated by no party feeling whatever, and have no party purpose to serve. We care nothing for party triumphs; but we are satisfied that we must all cultivate the habit, in politics as in other things, of seeing things as they are, and not as we would like to have them, if we really mean to solve the tremendous problems now before the country.

Mrs. Dall writes us a remonstrance upon our recent expression of opinion that women ought not to have the franchise till they show that they generally desire it, and alleges that this argument would shut out negroes from the suffrage who had not sense or cultivation enough to ask for it, or want it. The political, social, mental, and moral condition of the women of the United States is so very different from that of the negroes, that we do not think any discussion of this point on our part is necessary; and whatever may be the state of feeling as regards the franchise amongst the women of Massachusetts, we shall require very much stronger evidence than has yet been submitted to the public to make us believe that one-hundredth part of the women of the United States either desire to vote, or, if allowed to vote to-morrow, would do so for any better reason than to oblige their nearest male relative. No statistics have as yet been collected on this point that are of the slightest value. Women have, no doubt, voted in Australia; but how many?

The Supreme Court of Massachusetts recently decided that, in conformity with a statute of the Legislature, towns may assess a tax to refund the moneys voluntarily advanced by individuals toward creating a bounty fund in view of an impending draft. Such persons, the court adjudged, had a moral claim for reimbursement, from the fact that their contributions were given "in aid of the performance of a public duty which devolved on the city or town, and for which it would have been competent for the Legislature, in anticipation of the exigency, to authorize money to be raised by taxation or otherwise, on the credit of a town or city. The particular town in question, however, had included in its appropriation the sum of one thousand dollars, which was designed to reimburse two persons for the cost of procuring substitutes for themselves. This the court held to be clearly unauthorized, since "it relieved one citizen from the performance of a legal duty at the public expense, and appropriated money for a private purpose which could only be raised and used for public objects." The whole appropriation was consequently vitiated, and a perpetual injunction was issued upon its collection and enforcement.

The Boston Public Library was instituted thirteen years ago in an humble way, and now possesses more than 120,000 volumes. Its circulation has expanded from 7,000 to 195,000 per annum, averaging, for the past year of 275 days, 700 per diem. The ample freedom of the reading-room and library has been abused by the unscrupulous, who have defaced, mutilated, or stolen many books and periodicals, so that legislation is needed to counteract this evil, in its nature exceedingly difficult to reach. After all, the losses which arise from this cause are trifling in comparison with the immense advantages of the institution itself, to whose existence and liberal management we attribute in fair measure the political regeneration of the city which cherishes it, since we are not aware that the native population, hitherto driven to the suburbs for homes, have begun to overcome the numerical preponderance of the foreign. The Public Library also tends powerfully to preserve the homogeneousness of Boston, to which contracted limits are in themselves favorable. New York is sadly in need of such a resort for all classes of her citizens. The Astor Library is not for the people. Its books do not circulate, and it is closed after dark. If any one of our millionaires contemplates founding a university, we entreat him to do better and give this metropolis a free library.

The case of the Smith brothers, of Boston, who were tried by a naval court-martial before which conviction was a foregone necessity, is disgraceful to the history of our Navy Department during the war. That the department was conscious of this reproach has appeared from its absolute refusal to publish President Lincoln's decision annulling the whole proceedings. This has somehow transpired, and was read on Wednesday week to the Boston Board of Trade. It is highly characteristic of its author, and is as follows:

"*Whereas*, Franklin W. Smith had transactions with the Navy Department to the amount of one million and a quarter of a million of dollars; and, *whereas*, he had the chance to steal a quarter of a million, and was only charged with stealing twenty-two hundred dollars—and the question now is about his stealing a hundred; I do n't believe he stole anything at all. Therefore the record and findings are disapproved, declared null and void, and the defendants are fully discharged."

The question of trying Davis has again come up in reply to enquiries addressed to the President by Congress, and the reasons for not trying him are furnished by Attorney-General Speed. These are, that he must be tried where his crimes were committed, and before a civil court. His crimes were committed in the South, which is still under martial law; therefore, he must remain in prison.

A batch of Mexican correspondence has been published, the sum and substance of which is that the French are willing to evacuate Mexico if the United States will recognize Maximilian. But the United States will not recognize Maximilian, and therefore the French will remain—a result with which, it is hardly necessary to say, neither Mr. Seward nor M. Drouyn de Lhuys is satisfied. The latter became unpleasantly facetious a few weeks ago by advising Mr. Bigelow to complain to Juarez, and not to him, of outrages committed on the Mexican border.

Two Richmond editors fought with pistols in the hall of the Capitol at Richmond a fortnight ago, and succeeded in shooting away the head of the cane in the hand of Washington's statue. Mr. Pollard, of the *Examiner*, the "historian of the war," as wags are in the habit of calling him, has now assaulted Mr. Brooks, the correspondent of the New York *Times*, being armed characteristically with a bowie-knife and cowhide. The affair ended simply in torn clothes. We wonder greatly, and shall not cease wondering, that Southern men, capable of reading and with some little knowledge of history and of the rest of the world, do not give up bowie-knives, cowhides, and revolvers. What can be the charm of being a raging barbarian in the broad daylight of civilization? If it proved courage to attack people in the streets with deadly weapons, there might be some excuse for it; but it does not. There are no braver men breathing than Frenchmen, but fancy a respectable Frenchman lying in wait for an enemy on the Champs Elysées with a *couteau de chasse* and a yard or two of untanned cowhide!

A meeting was recently held in London composed of about eighty persons, principally "High Church clergymen," for the purpose of conferring with Prince Orloff and two or three Russian ecclesiastics as to the best means of bringing about union, or at least intercommunion, between the Anglican and Greek churches. The English bishops present, according to Prince Orloff's account, urged immediate action, but the Russians were cautious, and declined to sanction or encourage any movement without further discussion. They said the Russian Church would need much more information, and desired that works might be published in England "with a view to prove that the Anglican Church is not a Protestant but a Catholic Church." The Broad Church party, as represented by the *Spectator*, are very indignant at what they consider the readiness of the High Church bishops to sacrifice the historic character of the English Church for the sake of securing Russian recognition of its orthodoxy.

A contract was completed last week between the Atlantic and Great Western and the Philadelphia and Reading railroad companies,

by which a line is to be laid, in the narrow gauge, upon the former road to all the chief cities of the West, and the two connected by a new line from Centre County, Pa., to Northumberland. As an immediate consequence of this enterprise, there is promised the establishment of a line of steamships between Philadelphia and England.

CONGRESS.

WASHINGTON, Jan. 13, 1866.

THE feature of the week has been the prolonged debate in the House upon the bill to enfranchise politically the colored men in the District of Columbia. This has attracted to the Capitol the largest audiences of the season, and it is plain to see, from the notable effect of the best points made by the advocates of the extended suffrage, that the sympathy of the population here is not, as has been represented, all on the other side. The original proposition, to admit all negroes of the prescribed age to the polls, has been modified by the Senate Committee, and will very probably be modified in the House, so as to limit the franchise to three classes: 1st, all who can read and write; 2d, all who have served in the army of the United States; 3d, all who pay taxes upon property. But there is much division of opinion among the friends of the measure as to those limitations. Some of the most sagacious are opposed to the exaction of a standard of intelligence, and ex-Gov. Boutwell, of Massachusetts, contrary to the provisions of the constitution of his own State, is in favor of universal suffrage. That President Johnson is friendly to the bill was announced on the floor of the House by Mr. Kelley, of Pennsylvania.

There are palpable signs of a purpose on the part of Congress to take vigorously hold of that "twin relic of barbarism," polygamy, and blot it out of existence in Utah. There is already legislation enough on the statute-book to do this, were it enforced. But the problem before our legislators is how to render any legislation effective over a recusant population, fanatically wedded to an outlawed institution. Is there anything that can purge the United States of the reproach of polygamy short of another and a final Mormon exodus?

The reply of Major-General Howard to the House resolution of enquiry respecting the restoration to late rebel owners of property legally confiscated to the United States, setting forth the orders of the President as far back as August, 1865, to restore all property to those who received his pardon, was referred to the Judiciary Committee. This was done at the instance of Thaddeus Stevens, who significantly said that he wanted to test the legality of this proceeding of the Executive. There is no question that the Confiscation Act of July 17, 1862, is virtually nullified by it, and although the same act authorizes the President to grant pardon and amnesty, "by proclamation," to persons participating in the rebellion, it does not settle the question of the restoration of their forfeited property.

Two or three very able speeches, maintaining the doctrine of "State suicide" by rebellion, have been made, that of Mr. Shellabarger, of Ohio, in the House, and of Mr. Howe, of Wisconsin, in the Senate, being especially notable. Neither of them has been answered, and the purpose of Congress to adhere to its prerogative in prescribing the time, mode, and conditions of reconstruction has been materially strengthened.

The application of the Committee on Reconstruction for power to send for persons and papers, indicates a prolonged and searching investigation at their hands. But the testimony and the proceedings of the committee are to be guarded from publicity for a time. This is a measure of very doubtful expediency, and likely to lead, as in the case of the "Peace Convention" of February, 1861, to more evil, agitation, and misrepresentation than would result from entire and voluntary publicity.

A caucus of the Union members of the House, held this week, settled the principle that important legislative measures are hereafter to be so far considered by the majority before being pushed to a vote in the House as to secure a more united action. Several instances of "hasty legislation," on the part of both House and Senate, have occurred, rendering it necessary for each body to recall from the other a bill once regularly passed. Is it not a little surprising that legislators of such age and political experience as take a leading part in the business of Congress should not be able to avoid such crudities and ambiguities as have so often crept into our national legislation and deformed the statute-book?

DIARY.

Monday, January 8, 1866.—In the Senate, Mr. Morgan presented a petition of the New York Chamber of Commerce for a law to exempt Northern creditors from the Southern State statutes of limitation for a certain period. Referred. Mr. Johnson presented credentials of Randall Hunt as a Senator from Louisiana. Laid on the table.

In the House, bills were offered to prevent certain persons guilty of rebellion from holding office under the federal Government; to educate the militia of the United States; to amend the naturalization laws; to enlarge the powers of the Freedmen's Bureau; to amend the tariff laws; to supply deficiencies in the appropriations for the current year; to sell the public lands in Alabama and four other Southern States under the Homestead Act; to erect a post-office in New York City; to authorize a railroad from Washington to New York; to secure the writ of habeas corpus to persons held in slavery contrary to the Constitution; to amend the Constitution as to basis of representation; and to authorize the issue of bonds for funding the obligations of the United States; all of which were referred. A resolution declaring that the military forces should not be withdrawn from the seceding States until Congress declares their presence no longer necessary was passed—ayes, 94; nays, 37. A letter was received from the Freedmen's Bureau stating that, by order of the President, lands confiscated to the United States had been restored to parties pardoned by the President. Referred to the Committee on the Judiciary to enquire into the legality of the act. A resolution looking to further legislation to suppress polygamy was passed. Mr. Blaine offered a constitutional amendment, basing representation in Congress upon the actual number of persons in each State not deprived of political rights on account of race or color. Referred. Mr. Shellabarger spoke at length on reconstruction, arguing that the rebellious States ceased to be States by secession, and should be treated as dependencies until equal rights to all are secured beyond contingency by amendment of the Constitution.

January 9.—In the Senate, Mr. Sumner offered a resolution looking to the prevention of kidnapping and the revival of the slave-trade on our Southern coast. Referred.

In the House, Mr. Broomall offered resolutions declaring the South a conquered territory, and its future political condition to be fixed by the supreme power of the conqueror; that the effect of amnesties and pardons is to relieve individuals from punishment for crime, not to confer upon them political rights; and that Congress should speedily organize State governments composed of loyal citizens alone, excluding from political power all participants in the late rebellion. Referred. Mr. Voorhees brought up his resolutions pledging Congress to uphold the President in his policy of restoring civil government to the Southern States. Mr. Bingham moved an amendment, "that this House has an abiding confidence in the President that he will co-operate with Congress in restoring to equal position and rights in the Union all the States lately in insurrection." Both sets of resolutions were sent to the Reconstruction Committee—yeas, 107; nays, 32.

Jan. 10.—In the Senate, a bill was introduced and laid over, giving to the Secretary of the Treasury the appointment of assistant assessors of internal revenue. Mr. Wilson introduced a bill to increase and fix the military establishment of the United States. Referred. Mr. Morrill's bill to regulate the elective franchise in the District was taken up, amended, and recommitted. An amendment prescribing a reading and writing qualification was objected to by Mr. Pomeroy, and laid over. Mr. Howe offered a joint resolution declaring the necessity of provisional governments for the South, and spoke at length in its favor. The Senate went into executive session.

In the House, a resolution was offered defining the proper use of the "previous question" as a means of reasonable debate. Referred to the Committee on Rules. The Committee on Freedmen's Affairs was instructed by resolution to enquire into the truth of certain allegations against South Carolina planters of injustice towards freedmen in their employ. A resolution (by Mr. Davis, of New York) of confidence on the part of the House in the President, and support of the general policy inaugurated by him was laid over on debate. The President was requested to furnish information concerning the causes of the confinement of the leading rebels, and the reasons why Jefferson Davis has not been tried for treason. A resolution declaring that the House would not exclude Southern delegates because colored votes were not allowed at their election was referred to the Committee on Reconstruction. The bill for the right of suffrage in the District was taken up and debated with great liveliness, and closed by a powerful speech from Judge Kelley, of Pennsylvania.

Jan. 11.—In the Senate, the bill for the appointment of assistant assessors was passed, after some debate about the character of Southern appointees. Mr. Trumbull reported the bill to enlarge the powers of the Freedmen's Bureau, and that to protect the inhabitants of the United States in their civil rights. Mr. Howe's resolution was opposed in discussion by Mr. Johnson, of Maryland.

The House instructed the Committee on Territories to enquire into the expediency of dividing Utah and annexing the several portions to contiguous territories. The district suffrage bill was debated still further, Mr. Rogers, of New Jersey, being prominent in opposition, and Messrs. Kelley and Farnsworth in its support.

Jan. 12.—In the Senate, Mr. Trumbull presented the petition of the American Free Trade League, that no duties be hereafter laid for purposes of protection. The Joint Committee on Reconstruction, through its chairman, Hon. W. P. Fessenden, moved for authority to send for persons and papers. Agreed to. A resolution looking to the appointment of a select committee to enquire into the cotton transactions of special agents of the Treasury was referred. Mr. Trumbull's bill to enlarge the powers of the Freedmen's Bureau was taken up, and several amendments to it adopted, when it was postponed to Monday, January 15. A message from the President was received, stating that he had declined to proclaim the admission of the Territory of Colorado as a State, because of informality in the adoption of its constitution, and referring the matter to Congress for its action. Referred. A bill was introduced for the admission of Colorado as a State. Referred. Mr. Trumbull called up his bill to protect all persons in the United States in their civil rights, and sundry verbal amendments were adopted, and the bill postponed. Adjourned to Monday, January 15.

In the House, the bill of the Ways and Means Committee to extend the time for withdrawal of goods in bond was passed. A resolution reaffirming the Monroe Doctrine was referred. Mr. Raymond's resolution calling on the President for information relative to the condition of the late rebel States was passed. A resolution for increasing the compensation of members of Congress and Government employees was laid on the table by a vote of 147 to 5. The bill extending suffrage in the District was again discussed by Mr. Davis, of New York, in the affirmative, and Mr. Chanler, of New York, in the negative. Adjourned to Monday, January 15.

THE FREEDMEN.

Col. Whittlesey's "Summary Report of North Carolina" compares with Col. Brown's in respect to the difficulties encountered of obtaining assistants from the army, and of keeping them when detailed. "More than one half of the State is still without an officer or representative of the Bureau." Naturally a large part of the duties of the agents has consisted in affording protection to the freedman in his person and in his rights. The cases of this sort have defied any attempt to record them, and are reckoned at several thousand. "One officer reported that he had heard and disposed of as many as 180 complaints in a single day." The Commissioner presents a few specimens of the wrongs redressed or averted, and, remarking that a hundred pages might be filled with similar accounts, adds: "So far from being true that 'there is no county in which a freedman can be imposed upon' [speech of Judge Reed in Constitutional Convention], there is no county in which he is not oftener wronged; and these wrongs increase just in proportion to their distance from United States authorities." Still, great improvement is noted in this regard. As for the freedmen themselves, they have gradually settled down steadily to work. Out of 350,000, only about 5,000 are now receiving Government support. There is a great variety of contracts between them and their employers, and much vagueness in terms. "In the great majority of cases the land-owners seem disposed to do justly, and even generously." Hiring by the job or by the month has been successful, and is much more attractive than prospective shares in the crops. In Lenoir County, a joint-stock company has been formed among the freedmen for the purchase of homesteads and other purposes. The members will number 250, and the capital amount to $10,000, to be raised by Jan. 1, 1868. The Trent River Settlement, an outlying suburb of Newbern, which was laid out by Capt. James, has now a population of nearly 3,000, nine-tenths self-supporting. It is confessed by all "to be well-ordered, quiet, healthy, and better regulated than the city proper." There are in the State 63 schools, 85 teachers, and 5,624 pupils. There have been 512 marriages recorded.

In response to an enquiry of the House of Representatives, General Howard, on the 8th, submitted a statement of the disposition of the real estate which had in various ways fallen under the control of the Freedmen's Bureau. A number of pieces of property were seized and condemned under the act of July 17, 1864, and occupied by freedmen though not allotted to them. None of these have been restored to their former owners. A large number of abandoned plantations have been occupied by freedmen, and a few actually allotted to them under Gen. Sherman's order. No plantation thus allotted has been restored to any claimant, but some of those merely occupied have been, care having been always taken to prevent suffering from such action. No property vested in the United States by confiscation has been bestowed on conquered enemies. But property of this sort, as well as that allotted to freedmen, is a very insignificant proportion of the entire amount in the hands of the Bureau, which was turned over to it chiefly as abandoned, and not as libelled. Gen. Howard remarks:

"It was intended not only to allot this to freedmen, but also to use it as a means of revenue; for the latter purpose it had already become exceedingly useful and valuable to the Bureau, and measures had been initiated to use portions for the former purpose when, on the 16th of August, instructions were received to the effect that abandoned property should be restored to former owners when pardoned. Under those instructions the Bureau has parted with the greater part of this property. Its tenure upon it has been rendered so uncertain that the steps taken to allot it to freedmen have been countermanded in most instances, and its revenue has been so curtailed that it is not a self-supporting institution."

The census of the colored people in Washington is not quite finished. The following is the cens usof Alexandria County: Total number, 7,763, of which only 370 are outside of the city of Alexandria. Of these, 3,766 are males, and 3,997 are females. Under 14 years, 2,732; between 14 and 20 years, 1,180; between 20 and 30 years, 3,123; between 50 and 70 years, 603; over 70 years, 125. 1,734 of the whole number can read, and 641 are unable to support themselves. These people own property to the amount of $99,804 00. The above statistics are exclusive of what is known as "Freedman's Village" on Arlington Heights. Washington has been divided into districts, and each one of these has a visiting agent, who goes about amongst the poor and distributes supplies by his or her own hand. The Quartermaster's Department has kindly loaned wagons during the present cold weather, which are engaged in distributing wood about the city. The total number treated medically in Washington, Georgetown, Alexandria, and vicinity is 1,879, of which number 45 have died, and 1,166 have been discharged, leaving 668 under treatment.

A case of a colored man being still held as a slave in Montgomery County, Md., having been brought to the knowledge of the Bureau, immediate action was taken, and the papers referred to the U. S. District Attorney for Maryland, with an endorsement, of which the following is a part:

Washington, Jan. 10, 1866.

Respectfully referred to Hon. W. J. Jones, U. S. District Attorney for Maryland, with the request that he will, if possible, secure proper action in this case. The gentlemen in Montgomery County evidently stand in need of enlightenment. A copy of the official announcement of the ratification of the Constitutional Amendment is enclosed herewith for their information.

Gen. Saxton is ordered to report, as soon as he is mustered out of his volunteer rank, to Gen. Howard for inspection duty. His rank in the regular army is captain and brevet colonel. Brig.-Gen. R. K. Scott is assigned to duty as Assistant Commissioner for South Carolina.

There are 19 colored schools in operation in Arkansas, with 23 teachers and 1,349 scholars.

The state of things in Texas is such that medical officers cannot be found who will go there.

—Papers were presented on the 10th to the Senate from the Bureau of Military Justice in relation to recent trials in the South by military commission. In one instance Judge Holt received a petition bearing the names of 200 citizens of South Carolina and the governor's endorsement, and asking for the pardon of E. W. Andrews, of Orangeburg, who was undergoing sentence of imprisonment for two years for killing a negro charged with horse-stealing. The Judge-Advocate General replied that the very number of the petitioners was an additional reason for enforcing the sentence, since it betrayed the extent of the deadly hatred against the black race now entertained at the South. Other similar appeals for clemency were equally rebuked and disregarded by Mr. Holt.

—The Fisk Freedman's School was dedicated at Nashville on the 9th with speeches from Gen. Fisk and Gov. Brownlow. It is intended for a free high school, accommodating from 1,000 to 1,500 children. The governor warned the teachers that if Gen. Thomas and his troops should vacate the city, the school would not be tolerated by the predominant party a week, and the Legislature itself would be broken up by a mob in forty-eight hours.

—A proposition has been forwarded through the Bureau to the Secretary of War from a firm in Little Rock, Ark., to employ the colored troops in that department in completing the railroad from that city to the Mississippi. The pay to be in land on the line of the road, at fifty cents a day. Gens. Reynolds and Sherman are said to have endorsed this request.

—In Albemarle County, Va., negro men have been hiring for from eight to nine dollars a month, and women for from four to five dollars. Extra men in Charlottesville, says the local paper, get ten and twelve dollars.

Minor Topics.

When we cannot have things pleasant, it is human nature to want them abominably unpleasant; and we suspect that if people should analyze their feelings in regard to the cold of the 7th and 8th of January, they would find it one of pride in having known weather so cruelly

severe. It is a personal triumph with one to have survived it, and everybody's sufferings differed so much from the sufferings of everybody else, that they form a topic of the most varied interest, upon which people of the slenderest conversational means may make entertaining discourse. How one thought he should freeze Sunday night, and piled on a dozen blankets, and his overcoat on top, sir, is balanced by the experience of another who was afraid, by Jove, to go to bed at all that night. It is a fact, which Mr. Silent relates, with great vivacity, to the young ladies upon whom he is calling, that he had not put his head out of doors, Monday, till his beard and moustache froze tight together; and it is another fact with which the young ladies hasten to match Mr. Silent's, that *they* had fires in all the grates as well as the furnace, and had to put their shawls and furs on, and *then* they could not keep warm. Another recounts how he thought his ears were frost-bitten, without fear of the silly jest that the frost must have taken a large bite; while yet another rehearses his oft-told tale of being so cold that he had no feeling in him for hours. One who walks down town every day, hot or cold, wet or dry, and, marching along in a rain-storm without an umbrella, pities those poor devils mewed up in the street cars—even *he* has his sufferings to describe, and narrates that his right foot (very particular to have you know it was the right one) became insensible—like a clod of ice—and that he went into a saloon to warm it, and found no fire there, and called for a toby of ale (ale *does* warm you, he says, though most people think it a cooling drink), and took off his boot, and sat down on his foot till he thawed it; while his friend, who never went out doors all day, tells how he suffered in his mind on seeing a stage-driver lifted from his perch as stiff as your hat. Now, also, ladies, whose lady friends call upon them, rehearse their domestic woes, arising from the inclemency of the weather, which, heavenly muses, sing! Or need the muses sing? We know how the pipes burst, and the water ran down to the parlor ceiling, and the ceiling fell down on the piano; and how the housewives whom this disaster has befallen are only too glad, sweet souls! that it is no worse. As if it could have been! The lady friends, who are confidentially led to inspect the scene of desolation, are sure that *they* could not imagine anything worse.

And yet we think they might, if they gave rein to their fancy in the right direction. The reporters tell us in the daily press of the poor woman who took care of one blind, and rose up from her bed that bitter Sunday night, lest, with nothing to keep her from the cold, she should freeze there, and was found frozen to death in the morning upon her threshold. Of our million must not many have sat by fireless hearths all that cruel Monday long? Little children huddled moaning together, and sick and infirm persons cowering over empty grates—some things are worse than the bursting of water-pipes; and if you come to add hunger to the cold of the poor, it is almost enough to make one ashamed of one's most heroic experiences of the late weather.

We have an idea that if our friends, the habitually hungry and cold, met on Wednesday, and gossipped together, as we have figured our other friends, the habitually warm and full, to have done, they must have had things quite as interesting to say about the cold weather. Of course, the poor woman who was frozen to death Sunday night must be mute in this company; but the blind woman of whom she was taking care might describe the tragedy, as she heard it, quite pathetically and entertainingly: her companion's rising up from the comfortless couch and walking the miserable room; the cries and half-articulate prayers for pity, the cessation of the steps, the sound of some one lying heavily down, the sobs and moans drowning slowly in the blessed drowse of death. Oh never to be a-hungered, never to be a-cold, never to be poor any more! Why, this took place about the time that one of our habitually warm and full friends piled on a dozen blankets, and his overcoat on top, sir; and another, by Jove, was afraid to go to bed at all! And at the time that terrible accident happened to Mr. Silent's beard and moustache some discharged soldier, who had inherited a blue overcoat from a grateful republic, was hobbling on his crutches out of the station-house, where he had passed the night, and wondering where, in God's name, he should get his breakfast or pass the pleasant day. Drunk? Very likely. It was not the least part of the hard fate of those who fought to keep us a home and country that some of them learnt ugly vices from the dull life of camps, the desperate life of battles. But if we were pitied only for our wholly unmerited calamities, friends, how little compassion we should get on with! Shall we not be moved for the misery of certain poor human creatures, because (while Mr. Silent's young lady friends sat suffering, with all their furs on, in a house heated with grates and furnace) they herded together like swine, in a ten-cent lodging-house, and kept themselves alive with hard drinking and hard swearing and perhaps hard fighting?

Nay, we say, let us pity them; for pity is one of the cheapest of the Christian virtues—need not unbutton a pocket, nor affect a balance at the banker's. It is to be hoped, for those who have empty coal cellars and vacant larders, that Providence will not send such terrible weather again this winter, if, indeed, it *was* so cold after all, last week; for, animated by the charitable spirit which we have no doubt roused in our readers, there will be enough of them to deny that Monday, the 8th, was more than wholesomely fresh and invigorating.

A JOURNAL which commonly inculcates the virtues of truth and decent speech by presenting an awful example of what a newspaper is without them, gave, the other morning, a severe and well-merited reproof to a contemporary. In the latter, some poor creature, mixed of equal parts of ghoul and Paul Pry, had sought to win the applause of whatever is ghoul and Paul Pry in public sentiment by going over Mr. Lincoln's household accounts, and showing how the nation had been plundered by the domestic extravagance of the late President's family. The wretched office was performed in such fashion as ought to have shocked every one who read the article; and when it was suggested by the morning journal alluded to that the article was inspired by the spirit of Wilkes Booth, we felt the weight of a debt of gratitude for the suggestion which we here hasten to discharge.

To be sure, it was the pot calling the kettle blackamoor, but in this world the pots and kettles are so numerous that calling of names must be well-nigh given up altogether if they cannot indulge in it. Besides, it is well to know that the kettles *are* black, even though we have to learn it from the pots. In this case, the reproving pot is so well known to be covered with grime that nobody assumed a virtue for it because the kettle had it not.

We know in what terms the public habitually speaks of that paper and of the other journals which flourish on personalities, or "the precious riches of private reputation," as Mr. B. Doran Killian calls them; but we rather suspect the public, after all, likes rascal journalism. It offers editorial weakness immense bribes to be scurrilous and scandalous, by giving such papers as yield to its debased appetites a most generous and cordial support.

It is, indeed, a sad public, and utterly unconscious of its viciousness. It has a vague notion that it is sternly virtuous, and that it frowns down disreputable newspapers, whereas it is perfectly evident that it fosters them. They are published for their owners' profit and for the gratification of the very large class of people that buys them, and not in spite of it, as the public imagines.

We have often seen the public cautioned against such publications; but we earnestly warn the whole brotherhood of journalism against the wicked public. We know that there is a great temptation, seeing that people like to have affairs pried into which should be sacred from public comment, to seize the chance of success by slaughtering somebody's reputation; but we plead for the forbearance of the scribbling fraternity. The return to barbarism is easy for human nature. The man of a race which has toiled up to civilization through ages of culture, runs wild and degenerates into a savage in a single generation. The restraints of decency which journalism has imposed upon itself, and which a corrupt public desires it to throw off, may be lightly cast aside, and we may have the manners of Grub Street again as soon as we like; but we hope this may not come about. It may be that if newspapers generally persevere in a courteous, dignified, and honest conduct, the public, becoming ashamed of its low and truculent tastes, may be educated up to the better newspaper standard.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of The Nation *should be addressed to the Editor.*

WHAT THE SOUTH NEEDS FIRST.

It is now eight months since the South laid down its arms and the North entered on the work of reconstruction. During the interval which preceded the meeting of Congress, the whole country devoted itself, without stint, to the discussion of the "reconstruction problem." The newspapers have, ever since Lee surrendered, teemed with it; little else has been heard from the platform; the pulpit even has sought to shed what light it could upon it, and it has formed the prevailing topic of conversation in every social circle. And yet it may be safely said that, down to the present moment, no plan of reconstruction yet propounded has found favor with a majority, or anything like a majority, of either Congress or the people. Mr. Johnson was at the outset supposed to have a plan, and it seemed for awhile as if he had; but he soon found reason to modify it to such a degree that there is now little left of it, and that little appears to meet with but a very small measure of approval from the country. There is hardly a senator or member of Congress now who does not think that he has hit upon a sovereign remedy for the great Southern ill, if he can only secure its adoption; but there is no general agreement upon anything. The Republican party, while concurring very fully as to the objects in view, is divided into a dozen sections as to the means of effecting those objects; and in the meantime, as long as it remains undecided, the grand Democratic plan of doing nothing whatever gains more or less strength from the mere lapse of time, the subsidence of popular excitement, and the distraction of the public mind.

There have been nearly a dozen ways suggested since last May of pacifying and regenerating the South. First of all, there was the plan of giving the suffrage to the blacks by a general order of the President. But he refused to issue any such order, and the Connecticut and Wisconsin votes justified, or at least seemed to justify, him in his refusal. Then there was the plan of holding military possession of the South, and governing it by martial law, until it gave signs of being clothed and in its right mind; but this never met with much popular favor, and is still surrounded with difficulties. Then came the plan of giving the negroes the suffrage by procuring a decision of the Supreme Court in a case raised under the "republican form of government" clause in the Constitution; but this was dropped almost as soon as propounded, and its advocates now never allude to it. Then came Mr. Stevens's plan of confiscating the whole soil of the South, or nearly the whole, and dividing it amongst the blacks; but, so far as we know, Mr. Stevens himself is the only supporter of this scheme. Mr. Sumner's proposed amendment to the Constitution, basing representation on the number of legal voters, and not as now on population, so as either to diminish the number of Southern representatives or force the whites into admitting the blacks to political equality, is that which perhaps now finds most favor, and on which the attention of the North shows most tendency to concentrate itself.

There are, in our opinion, several objections to this expedient arising out of its possible effects upon the Northern, as well as on the Southern, States which we will not here stop to discuss. But there is still another and a stronger one, which must be met now *in limine*, and that is, that, though brought forward as a radical remedy, it is anything but radical; it draws all its value from the assumption that a state of things exists which does not exist. It is, in short, much the same sort of boon to the South that the present of a carriage would be to a man unable to leave his bed, or bonbons to a man who found great difficulty in securing a daily allowance of common domestic bread. At present, there is no quarter of the South, outside the reach of Northern garrisons, in which there is any safety for either the life or property of a man who presumes to think or speak differently from his neighbors on any of the great questions by which the South is agitated. No Northern man dare go there and hold and utter the sentiments on political and social topics which the majority of us hold and utter here. We profess to place great reliance on the influence of Northern emigration in reorganizing Southern society and modifying Southern opinions. But, at present, no emigrants can show their faces there with safety, or go to their beds with the certainty of rising in the morning, unless they take special pains either not to exercise any influence whatever, or consent, both by speech and example, to strengthen Southern prejudices. Emigration that will be of any use to us politically is, under these circumstances, not to be thought of.

Moreover, we look for a great change in Southern feeling and habits through the spread of education, and the diffusion of books and periodicals amongst the poorer and more ignorant classes. We look for the elevation of the negroes through the opening and maintenance of schools for them, and the growth amongst them, as the result of Northern teaching, of self-respect and of mutual respect. But the fact—the hard, stern, repulsive fact—is that, according to the testimony of all those who have recently visited the South, there is no probability that any Northern man will be allowed either to teach, write, speak, or print in any part of the South doctrines conflicting with those commonly held in Southern society on social or political topics. Where is the district, we should like to know, in which a Northern man or woman will be able to open and conduct a school, or print a newspaper, or make a speech, with freedom and security, one month after the federal troops are withdrawn? What probability is there, in short, that any of the influences which we most value and which we consider most conducive to progress and civilization can be brought anywhere into play at the South under the protection of State laws?

Now the very basis of civil society is security for life and property. Freedom of speech and of locomotion, of trade, of following all lawful callings, from selling needles to making stump speeches, without let or hindrance, is at the very foundation of free society, and, above all, of American society. Without these things there is no freedom, and there can be no progress in civilization, and to talk of the authority of the United States Government being really restored over any State or territory or district in which it cannot guarantee these things to all classes of the population, is an abuse of language. All reconstruction, though it gave every black at the South two votes, which did not secure these things to both white men and blacks, would be a delusion and a snare; and all arrangements for bestowing the suffrage on the negro, or for coercing his late masters into giving it him, which do not provide also for protecting him in the exercise of it, and in preparing his mind for the right exercise of it, will prove futile. The South will never be really in this Union until Henry Ward Beecher can read an article from the New York *Tribune* on the steps of the principal hotel in Jackson, Mississippi, and can "peddle" the paper afterwards, should he feel so disposed, through the town, without fear of other harm than what may come from a "scathing editorial" in the local *World* or *Daily News*, whatever their names may be. That is no part of the American Union in truth and in deed, no matter who votes in it, or how many members it may send to Congress, in which any man may not speak the thing he wills, or in which he has to fear a power behind the law which the law cannot control.

For many years before the war the South was in the Union only in name. Its connection with the North was hardly recognized by local legislation or local opinion. The dominion of law, as we understand it, and as every civilized country must understand it if it means to retain its civilization, was unknown to the mass of the Southern people. The necessities of their social system made respect for legal forms, or processes, or individual rights, impossible. The quick, sharp, peremptory mandate of a mob of citizens collected from the neighboring plantations is at this moment the highest sanction known to most Southern men, something far higher than acts of the legislature or decrees of courts. The idea of deliberate resistance to a local vigilance committee is what never enters into the head of a Southern boy.

If we want peace at the South, and permanent peace, we must in some way or other first of all familiarize the mass of the people with the idea of law as an irresistible power to which all must bow, and which throws just the same amount of protection over the meanest as well as the proudest black or white. If this can only be done by force,

force we must have to do it, and, until this is done, the first step has still to be made in the re-organization of Southern society. Whatever military force may be necessary to afford to every freeman, of whatever color, the protection which the Constitution guarantees him, in person and property, we must maintain, and in doing so we shall be carrying out the true democratic theory of government. The absolute dominion of a few men over any spot of our soil is the vilest kind of oligarchy—no very great improvement on feudalism.

Even if Mr. Sumner's amendment were passed, and legal voters made the basis of representation, the negro who found himself robbed or flogged for being "sassy," or the white man who found himself tarred and feathered or driven from his house for publishing or circulating a disagreeable newspaper, or for opposition to local opinion on any subject, and, on seeking redress, found the courts closed to him and governors and sheriffs deaf and blind, would, on carrying the story of his woes to Washington, receive the consolatory assurance that he might return to his home in peace; that the Southern delegation in Congress was greatly reduced; and that the South could look for no increase of it until she bestowed the franchise on the black man.

BAYONETS AND SCHOOL-HOUSES.

Senator Wilson's bill for the peace establishment of the United States army increases the present number of troops in the regular service from twenty to upwards of seventy thousand men. This much exceeds the estimate of the Secretary of War at the opening of Congress; and if it is fair to ask the reason why, it is also fair to respond that a month has elapsed since the Secretary's report, and that in these times the lessons of a month may be as important as those of an ordinary year or period of years. There are, incontestably, very grave objections to the proposed increase, but so there are to Mr. Stanton's; and if it were merely a matter of taste, we might and probably should content ourselves with the moderate standing army of yore. No sober-minded citizen, however, differ as he may from Senator and Secretary, will conclude that this would meet the requirements of the country in its present emergency. Our foreign and domestic complications, to take the best view of them, dissuade us from a hasty disarming. And it is evident that in the next contest, whether within the Union or across her borders, our reliance must be on those whose business it is to fight, and not to any considerable extent upon volunteers.

While not engaging to defend Mr. Wilson's proposition as the least that could be made in the face of our national contingencies, we are not troubled by the thought of the money it will cost to carry it out, and the dangers and corruption inseparable from the establishment at which it aims. The expense is a part of the grand burthen imposed upon us by the rebellion, to crush which it was considered good economy to spend three thousand millions; and if seventy thousand soldiers will secure protection to black and white at the South, and by their moral prestige restore the fortunes of Juarez and the autonomy of Mexico, and do this sooner and more effectually than fifty thousand, then they are cheaper than fifty thousand. The peril which this same host will offer to our liberties and our morals is not, of course, contemptible, but it is not so formidable as the anti-republican and anti-American spirit which threatens us on the other hand. We have reason to fear not so much that we shall suffer in pocket and in personal franchise because of the army, as that we shall depend upon it too much for results which can as well and even better be attained by other instrumentalities.

One of these was brought to the attention of the House of Representatives last month, and was referred to the Joint Committee on Reconstruction. It was a national bureau of education, whose function should be "to enforce education without regard to race or color upon the population of all such States as shall fall below a certain standard, to be established by Congress." Many will object to such compulsion as an infringement of private right and individual freedom; but the practice of several States is already conformed to this principle, and the feeling in favor of intelligent suffrage, which is rapidly strengthening, is justified only by the opportunities for education which it presupposes to be available to every citizen. Where this happens to be the case, it is still desirable that the State should, in laying disabilities on ignorance, demonstrate that it is punishing wilful neglect and not misfortune. This it cannot do unless, besides opening wide the door of its school-house, it resolutely compels the attendance of those who are kept away by unwholesome restraint.

We are far from saying that the proposed bureau deserves to be erected. Its value for the originally free States may be doubted. With them emulation may promise more for the thorough enlightenment of their citizens than dependence upon the yard-stick of a branch of the national Government. In the long run we may trust that Connecticut will discover that her school fund, derived from the Western Reserve, is not so elastic in meeting the requirements of her growing population as the general tax by which Massachusetts has kept abreast with the learning of the age. At the South, where, if we do not mistake, no Constitutional Convention has provided any system of free instruction for the people, the bureau would have a value proportionate to its efficiency. Yet even here interference would be beset with difficulties, not least of which would be the acquiescence of the States themselves.

Indeed, the policy which has thus far prevailed in our dealings with the reconstructed communities has been remarkable for exacting precisely those conditions which they could not possibly have avoided, and for omitting those which would have been the test and seal of their social metamorphosis. The "accomplished facts" of the Government might have passed without recognition: of what concern was it whether the South confessed the rising and setting of the sun? It was indispensable that she should point to facts accomplished not over her, and beyond her control, but by her, in evidence of a genuine devotion to democracy and the Union. Hence we hold that the foundation of a common-school system should have been among the prerequisites of reconciliation and forgiveness. True, this might have involved the enforcement of the confiscation act, in order so to distribute population as to bring the school-districts within practicable limits. But if so, was it not best that this act should be enforced?

It is our hope that Congress, remembering what part of the stability of our national edifice is due to public intelligence, and the innate hostility of the South to the light of letters, will repair the omission of the President in this regard, and refuse to believe that loyal men are safe, or the professions of the South to be trusted, so long as the minds of the people are controlled and their ears filled by the late champions of secession and treason. We should be well pleased if, among the numerous amendments offered, out of which might almost be made a bran-new Constitution, one should appear supplementary to the clause concerning the admission of fresh States into the Union, and requiring, besides numbers and the usual organization, a plan of education akin to those of the States already admitted. Nay, if we are to have inserted a definition of what is meant by "a republican form of government," we have no objections to seeing it include free schools. And if, in guaranteeing this form to the lately oligarchical States, there arise on Southern soil in time seventy thousand school-houses, we shall repose much greater confidence in them than in the seventy thousand bayonets of Mr. Wilson. Finally, we are prepared to assert that, concerning this whole subject, there is greater unanimity among the people of the North than can be predicated of any other single phase of the problem of reconstruction; that there is a very general solicitude for comprehensive and decided action on the part of Congress, and corresponding chagrin at the indifference or short-sightedness of that body. We would not condemn the pains which they have taken to put the leaders of the South in limbo; but we submit that some thought should be bestowed on the millions who are led. These will continue to be led, and be led astray, however long the Capitol may be closed on Southern delegations, unless they are rescued from their blind and servile following by a sight of the nobler destiny within their grasp. The bills for the continuance and enlargement of the Freedmen's Bureau, introduced into the Senate by Mr. Trumbull and the House by Mr. Eliot, which empower the Commissioner, under the direction of the President, to purchase sites and buildings for schools, do not go to the root of the difficulty. The need is to reach and educate not only dependent refugees and freedmen, but the entire population of the South; and no scheme that shall be adequate to this need, can be contained in an incidental clause or section of a bill, or be left to any man's discretion or "direction."

WHAT RABBI JEHOSHA SAID.

RABBI JEHOSHA used to say
That God made angels every day,
Perfect as Michael and the rest
First brooded in creation's nest,
Whose only office was to cry
"Hosanna!" once, and then to die—
If with life's sources to be blent
Be not return from banishment.

Rabbi Jehosha had the skill
To know that Heaven is in God's will,
And doing that, though for a space
One heartbeat long, may win a grace
As full of grandeur and of glow
As Princes of the Chariot know.

'T were glorious, no doubt, to be
One of the winged hierarchy,
To burn with Seraphs or to shine
With Cherubs, deathlessly divine;
Yet I, perhaps, poor earthly clod,
Could I forget myself in God,
Could I but find my nature's clew
Simply as birds and blossoms do,
And but for one rapt moment know
'T is Heaven that comes, not we that go,
Should win my place as near the Throne
As the pearl angel of its zone,
And God would listen, 'mid the throng,
For my one breath of perfect song.

J. R. L.

SOME DOUBTS ON THE POPULAR SUPPOSED DISTINCTION BETWEEN WIT AND HUMOR.

MUCH subtle refinement of criticism has been expended on the commonly alleged antagonism between wit and humor, without arriving at any definite or satisfactory conclusion. Has it ever occurred to any one that the difficulty might be owing to the imaginary nature of the separation? Has it ever been suggested before that wit and humor were but different phases and manifestations of the same faculty? Without committing ourselves absolutely to the naked assertion that they are one and the same thing, we shall adduce some reasons for supposing that the popular conception of their opposition is much exaggerated.

We may begin the discussion of our subject in two ways, though both have the same object, namely, to put before us clearly the things which we have to compare.

This we may do in two ways: first, directly and abstractly, by defining our terms, *wit* and *humor*.

Secondly, indirectly and concretely, by naming sundry prominent wits and humorists, and observing the peculiarities of their writings.

Although the former seems the more regular method, the latter is preferable, because, if we make a fanciful or theoretical definition, the whole affair may end in a skiomachy; while, if we adopt a practical one, our examples and illustrations must be drawn from various authors, wits and humorists respectively, so that we virtually come to the latter plan, only by a more roundabout way. Even then we find it difficult to get rid of some confusion arising from the looseness of popular phraseology. All comic or non-serious writing is frequently called *humorous*, and only the best of it *witty*, so that in ordinary parlance wit would appear to be something not distinct from humor, but only from inferior or, as it is usually designated, *low* humor. The French *esprit*, so often and so imperperfectly translated by our wit, means, at least in its modern usage, little more than *cleverness*. This signification is particularly striking in the adjective. *Un homme spirituel* is almost the equivalent of the English *clever man*. We say *almost*, because a certain notion of readiness and promptness is involved in the word *esprit*, which is not connoted by the word *cleverness*. In older English *wit* had a meaning nearer to that of the French *esprit*. A wit was a man who said and wrote clever or sharp things, or what most Americans would call *smart* things. And humor originally meant eccentricity of some sort, such as "those islanders," to use the French designation of them, were always famous for.

However all this may be, we find certain writers generally recognized as humorists, *e. g.*, Aristophanes, Rabelais, Swift, Southey, Dickens, Thackeray; and others as generally reputed wits, for example, Pope, Addison, Voltaire, Sheridan, Sydney Smith, About.

Bearing these and other well-known names in mind, let us try the current definitions and distinctions by the respective models.

A distinction not unfrequently drawn is that wit consists chiefly in the *words*, and humor in the *matter*. In support of this might be adduced the current phrase *verbal wit*. We never hear of *verbal humor*.

Now, if this were true, we might surely conclude that punning, which depends on words and words alone, would be a special development of wit. According to the old Joe, it is the lowest sort of wit, and therefore the foundation of wit. But how are the facts? Take the two humorists at the opposite ends of the series (or very nearly so) in point of time, Aristophanes and Hood. The former is a frequent, the latter a perpetual, punster. Swift emitted puns by the yard. Rabelais punned; so did Southey. Charles Lamb was another punning humorist. His answer to the lady who asked him if he would venture on an orange, "Madam, I fear I should fall off if I did," inaugurated a particular species of pun which has been run to death in our own day by Byron the burlesquer and the smaller scribblers in *Punch*. If any man could be emphatically called a humorist, it was Theodore Hook. His humor did not confine itself to words, but developed itself in actions, often of a very questionable nature, and recalling the French proverb, "Practical jokes, vulgar folks" (*jeu de main, jeu de vilain*). Every definition, laudatory or the reverse, of humor must include his performances, and he was an inveterate punster, not confining himself by any means to his own language, but constantly making incursions into the French tongue, which he pronounced as well as most Englishmen do. Thus when an amateur pointed out a certain picture as a *chef-d'œuvre* of Correggio, "You mean it 's a *shade over* his other works," said Hook. Thackeray happily imitated this where Wagg, in "Pendennis" (meant for Hook), says to the bookseller's wife who is boasting of her French cook, "Does your cook say he 's a Frenchman? Because, if he does, he 's a *quizzin yer* (*cuisinier*)." On the other hand, the greatest wits disdain punning, and some of them have expressly condemned it. Our first impulse would almost be to reverse the rule; but then again there are great humorists, Dickens, for instance, who never pun.

Again, let us look at verbal catches, where the joke consists not in the words themselves, but in their collocation. The most striking of these is that technically called parhyponœa, for which we have no nearer English word than surprise. In order to appreciate it the reader must always be prepared to expect something perfectly unexpected. Now, the first and greatest parhyponœist is Aristophanes; while the people who do the *chronique*, that is, the theatrical and scandalous gossip, in the French Sunday papers, are nearly all adepts in the practice. So that here we have a verbal jocosity common to the greatest of humorists and the smallest of wits.

Polysyllabic and divided rhymes, which are almost peculiar to the English language, seem to be the common property of both classes. They characterize Samuel Butler, whom most critics would designate a wit; Ingoldsby Barham, whom they would all allow to be a humorist; and Moore, about whom there might be some hesitation; the majority would probably call him a wit, though he certainly verges upon very broad humor at times, according to the usual tests of humor.

If wit be more in the words and humor in the matter, the former ought to be difficult or impossible, and the latter comparatively easy, to translate. Is this the case? It is a hard question to answer satisfactorily. French wit is certainly hard to render into *adequate* English; but so, for that matter, is all good French writing, in spite of a sad popular delusion to the contrary. Much English humor looks very queer in a French dress (as odd as *Bottom* in his "translation"), and of course such an element as double rhyme is untranslatable. On the other hand, much Spanish humor runs into English very readily, and a whole school of modern English humorous poetry (the "Don Juanic") is founded directly on older Italian models.

The mention of translation brings up another distinction which has been sometimes proposed. It is said that wit is more superficial, and humor more under the surface. The one may to some extent be learned, as Plato thought virtue might be; the other depends on a settled constitution of mind. By this rule, also, humor would be the national, wit the cosmopolitan, quality; and, therefore, the former must be more difficult to translate. German humor is not only untranslatable, but to a great extent unintelligible to foreigners. German wit is supposed to exist only in Heine, who ought, somehow, to have been a Frenchman.

The names of Voltaire and Sydney Smith alone are enough to stagger this theory. No doubt, a habit of jesting at everything may be acquired by dint of constant association with the frivolous, but we may be sure no *genuine* wit was ever manufactured by such a process. Indeed, we can

afford to dismiss this theory briefly, as it has never had followers enough to be fairly called a popular one.

Cognate to it, however, is a proposition. Humor is said to be the quality of weightier, more serious, and, in so far, greater minds than wit, the proof being that it is frequently combined with deep pathos. Sometimes we even find the tragic and poetic element quite eclipsing the humorous. Such is Victor Hugo's case, who would be a great humorist were he not a great poet. But here again our examples fail to carry out the theory fully. If there is any such rule, it must be subject to many and great exceptions. Is there no touching sentiment in Pope, no good, honest, stirring indignation in Sydney Smith? Cannot the arch-mocker, Voltaire, be eloquent and thrilling when it serves his turn? And how many second and third-rate humorists there are (Paul de Kock and "Soapy Sponge" Surtees will serve as two instances) who seem incapable of saying anything serious, much less anything pathetic!

Thus far we have dwelt on explanations which rather give the preference to humor. But there is another very prevalent one, alluded to at the beginning of our investigation, which makes wit much the higher quality of the two. It is said that humor deals only with matters calculated to raise a laugh—eccentricities, exaggerations, hyperboles, surprises, above all, blunders (thus, the Irish "bull" is said to be the opposite of wit, and, *therefore*, highly humorous), while wit is like Lord Chesterfield's fine gentleman, who will never do more than smile himself or make his readers do more. It is supposed to discover the most recondite relations between words, such as would never occur to the ordinary observer. In short, according to this theory, wit is felt and understood by the best educated classes only, while humor appeals to the capacity of all classes. The first criticism which suggests itself on this theory is, that it does injustice to humor by assuming the very lowest varieties of it as its fair representatives. If the indelicate allusion, the practical joke, the provincial accent, the clownish blunder, all, in short, that we comprise under the term *farcical*—all that is calculated to please the baser sort, and raise

"The loud laugh that speaks the vacant mind"

among the uneducated or unthinking—if these are to pass for humor, we might as well accept for our models of wit the word-tortures of the English witlings already mentioned, or the silly transpositions of initial letters that were so popular some years ago. They were the revival of an old green-room style of joke, which in its day was sometimes very good, as when the actor, going to a horticultural exhibition on a wet day, said "he had been to see the *shower flow*."

Is refinement (in the sense of the opposite of coarseness) a necessary mark of wit, and its absence a characteristic of humor? Is Irving coarse? Is Thackeray indecent? Were the great wits of Queen Anne's time remarkable for their delicacy, or have French wits been at any time distinguished in that way?

But a greater error of the theory under discussion is that it confounds the *humorous* with the *ludicrous*. An old woman or a gaily-dressed swell falling into the gutter may cause a laugh, but there is no humor (unless it be ill-humor) in the operation, either to the sufferer or the bystanders. The accident may indeed be *related* in a humorous way, or an entirely imaginary fall may be humorously described, but that is a different matter. An Irish "bull" is eminently of the things which are ludicrous, not humorous. There have been and are Irishmen, "fellows of infinite jest, of most excellent fancy;" but they are not the Irishmen who make "bulls," unless they do so on purpose, to put them into the mouths of others.

There are plenty of bull-makers besides the Hibernians. A lady, a full-blooded American, once said to us, bewailing the loss of her cherries, "The gardener declares the birds take them, but between you and me, I think they are *two-legged birds*." None of this lady's friends ever called her a humorist? The very same blunder was made long ago by a Cambridge Don, and now occupies a place in the Joe Miller of Cantab tradition.

A standard essayist on the subject has incidentally touched on this distinction, though his main object was to discriminate between the *witty* and the ludicrous. As an instance of wit he gives the sign of an ale-house keeper named Littlejohn, who placed over his door a figure of Robin Hood, with this inscription:

"All ye who know when ale is good,
Stop in and drink with Robin Hood.
If Robin Hood is not at home,
Stop in and drink with Littlejohn."

When the innkeeper was gathered to his fathers, his successor, one Samuel Johnston, substituted his own name on the sign, making the last line of the quatrain read

"Stop in and drink with Samuel Johnston,"

and spoiling rhyme and reason together. This, says the essayist, is ludicrous but not witty. He rightly calls it *ludicrous*, not *humorous*.

Blunders of this kind often occur, not from stupidity, but merely from inadvertence. Such was the following, which happened in the case of Lowell's "Fable for Critics." It is an old trick to write rhyme without division into lines or initial capitals. Lowell improved on this by constructing his title-page on the same plan, so that at the end, "October the 21st day" rhymed with the publisher's address, "E. P. Putnam, Broadway." But the eminent bibliopole moved to Park Place between two editions, and of course the address was changed (mechanically, we might say) on all his title-pages, and among the rest on Lowell's, destroying the final rhyme. Such errors have the smallest possible connection with humor.

When we think of Aristophanes, Rabelais, and Swift, hyperbole and exaggeration seem properly enough set down as characteristics of humor. But what shall we say to some of Voltaire's fancies, "Micromégas," for instance? It may, indeed, be argued that here he was out of his line, and wrote in direct imitation of "Gulliver." Let us, then, take the first of modern French wits, About. Let us turn to his most famous work, the "Roman Question," and to that striking passage of it where he recounts what the young Englishman, American, Frenchman, and German have respectively done, while the young Roman noble has been doing nothing. What is this but the wantonness of exaggeration? No one Englishman or American or Frenchman ever did a tithe of what every one of them is represented to have done. The whole wit of the passage lies in the very grossness of its hyperbole.

And now let us look at the question from the other side. Is the subtlety of the relations discovered a mark of wit as opposed to humor? Let us take a standard instance of wit, and see if it cannot be matched or overmatched from the writings of an acknowledged humorist. Lord Erskine, when told that a ship's crew in the Northern Ocean had been driven, by want of other provisions, to live on the seals they caught, said, "And very good living they make, if you can keep them long enough," referring to Lord Eldon, who had made a fabulous sum by many years' tenure of the great seal, which Erskine himself had only kept nine months and made nothing by. This is usually allowed to be wit of a high order (it was cited to us as such by Fitz-Greene Halleck, who ought to know). Very well, we will cap it from Tom Hood.

In the catalogue of sham books which Hood made for the door of a nobleman's library, this title occurs: "The Life of Zimmermann. By Himself." Here the jest is so recondite that probably nineteen out of twenty readers would fail to perceive it at the first glance, but all must admit its excellence when apprehended.

We take another example, less striking but sufficiently remarkable, from our own humorist, Irving:

"It was advanced by some of the ancient sages that the earth was an extended plain supported by vast pillars, and by others that it rested on the head of a snake or the back of a huge tortoise; but, as they did not provide a resting-place for either the pillars or the tortoise, the whole theory fell to the ground for want of proper foundation."

A stronger instance than either occurs in the "Acharnians" of Aristophanes, vv. 75–9, where the irony is so fine as to have escaped most of the commentators and translators.

If any curious reader wishes to try the experiment for himself on a larger scale, let him take the three opening paragraphs of About's "Roman Question." Let him note carefully all the points and figures in them, the irony, the insinuations, the surprises, the magnificent example of *tapeinosis* in the third paragraph (where the head of the Roman Church is arraigned under his aliases like a petty criminal), and then see how many of them he can parallel from celebrated humorists.

And now what is our conclusion? That wit and humor are absolutely interchangeable expressions? We have already intimated our hesitation to go that length. But we do maintain that their boundaries often encroach on each other, that many important elements, irony, for instance, are common to both, and that many of the world's first jesters have been both witty and humorous. Shakespeare—we have kept the greatest name for the last—was a wit *and* a humorist. He created *Falstaff* and *Dogberry* as well as the word-splitters and conceit-hunters in the King of Navarre's park.

AMERICAN REPUTATIONS IN ENGLAND.

Charles Lamb once wrote to his friend Manning, who was travelling abroad: "It appears to me as if I should die with joy at the first landing in a foreign country. It is the nearest pleasure which a grown man can substitute for that unknown one, which he can never know, the pleasure of the first entrance into life from the womb." Without stopping to discuss this fantastic, Charles-Lamb-like reference to a pleasure which we "can never

know" for the very good reason that it never existed, there is a certain analogy between the facts of being born into the world and of being born into a foreign country. In either case, the man plants his foot on the strange shore to find nearly every appeal to his five senses wondrously novel, startling, amusing; and the newly arrived traveller, like the newly arrived child, stares and listens, and puts out his hands at the most insignificant objects. But more impressive to the new comer than merely external innovations is this realm of new ideas, new maxims, new whims, new prejudices, new reputations, into which he is introduced, with the inevitable obliteration of so many of those which he has just emigrated from. To an American coming to England, perhaps nothing gives a greater spiritual jar, nothing more startles him into realizing that he is actually abroad, than the discovery, constantly breaking upon him during the first weeks of his residence here, that, when he sailed away from America, he did indeed sail away from a whole hemisphere of personal authorities and reputations—from the principalities and powers of the literary, political, religious, and social world before which he had loyally bowed from his youth up. I think that, to any man, it would give at least a momentary shock to find, for the first time in his life, his references to illustrious names not understood, to august authorities not regarded, the titular dignitaries of his native chess-board not responded to with deference or even with recognition.

As a matter of testimony upon this subject, perhaps I may be allowed to refer to some of my own experiences during a residence in England now extending over nearly three years. I well remember the first decided shock of this kind which I received. It was my second Sunday in England, and I was spending a part of the day at the house of a literary man whose name (if I should mention it, which I shall not) would be recognized as a household word wherever the English language is spoken. I was showing to him and to a little circle of his friends my photograph album of American celebrities; and when we came to a certain face, they said, "Who is that?" I replied, "Oliver Wendell Holmes." "Who is he?" "Why, Dr. Holmes—did you never hear of him?" "Never!" I confess that then, for the first time, I felt a little homesick. That word gave me, indeed, a sense of being "*abroad*." Before me, then, yawned the dreary distance from that dear spot which "there is no place like" with a vividness more painful than I had derived from all the three thousand farewells of the Atlantic, with all the taunts and jeers flung at us by "the countless laughter of its salt sea waves." Since then that particular reputation has grown very rapidly in England; and, of course, even then there were here multitudes of the readers and admirers of the autocratic-poet; but it was simply staggering to find men and women, eminent in English literature, too, who did not remember to have heard the name of Oliver Wendell Homes!

M. D. Conway told me that he talked with a poor man in Venice who, he ascertained, had no knowledge of Daniel Webster, but was acquainted with the name and deeds of old John Brown. So I have found in England that, among the mass of the people—among those, for example, who make up a lecturer's audience at the literary and mechanics' institutes of the country—any reference to our great statesmen, jurists, and scholars of the time just gone, to Andrew Jackson, Webster, Clay, Story, Choate, Felton, requires explanation, while the mention of the names of philanthropists and reformers, especially of Garrison and Phillips, is generally caught up with instant appreciation and responded to with enthusiasm.

I appeal to any American who has grown up under the omnipresence and majesty of Daniel Webster's renown, if he would not have been punctured by a new sensation had he gone through the following bit of experience. Just before Christmas, a year ago, I arrived, at the close of the day, in that noble old town on the south coast of England where our Pilgrim Fathers bade their last adieus to the cruel yet still beloved mother who cast them forth. I went to a quiet inn, was ushered into the coffee-room, and, while waiting for dinner, in the twilight, I thought I saw hanging upon the opposite wall a portrait, of life-size and done in oil, of Daniel Webster. It gave me a strange feeling full of pleasure, like hearing some familiar air of home, like seeing some well-known living face. I thought I must be mistaken, but, on rushing across the room, I found it was, indeed, a fine portrait of the great Daniel himself. Wondering how such a thing could have found its way into this quiet nook in one corner of England, when the waiter came in—a portly gentleman, dignified as a chief-justice or one of the apostolic fathers—I asked him of whom that was the portrait. After some hesitation he said, "Ah, sir, I think I have heard master say it was some American gentleman or other. I will ask master, sir, if you wish." When he next entered he said: "I have asked master, sir; he does n't exactly remember the gentleman's name; he bought the picture at a sale; he thinks it is some American gentleman or other." And that is Fame—an old lady who shudders at the Atlantic voyage. In the young Plymouth what an august personage would have been evoked before every eye by that portrait! Just across the water, at the old Plymouth, it is merely the head of "some American gentleman or other."

We all find here a perpetual source of amusement in the very mixed apprehensions people have of the two most celebrated members of the Beecher family. Everybody knows Mrs. Stowe, and calls her Mrs. Beecher-Stowe. Everybody knows Henry Ward Beecher, and nearly everybody calls him *Mr.* Beecher-Stowe. There is a confused idea of some very near relationship between these individuals. It is generally stated that she is his wife, sometimes his daughter, occasionally his mother, seldom—what she is. I do not exaggerate in saying that, in nine cases out of ten, Henry Ward Beecher's name is by Englishmen enriched with the pleasing suffix of Stowe. Yet, a few weeks ago the *Times*, in whose eyes he is of course a peculiarly endeared person, took quite the opposite tack and got the cart completely before the horse by speaking of him as Mr. Beecher Ward!

Excluding, in these remarks, the small minority of English people who are really acquainted with our history and literature, in travelling up and down England I seldom meet with any one who has heard of George W. Curtis, Dr. Holland, John G. Saxe, Col. Higginson, Gail Hamilton, Bayard Taylor, Tuckerman, and Thomas B. Aldrich, whom we know so well, but whose names pronounced before a general English audience would be no more recognized than the names of so many under-secretaries of the Tycoon. It is true that the books of some of them have had a considerable sale in England; but, in the first place, there is a large population of resident Americans here, who try to keep up an acquaintance with their country's authors; and, in the next place, there are a certain few English men and women who get and study all our best books as they appear. Upon the vast bulk of the population such names as these have yet made no impression. Here and there their books are to be found; but such casual and sporadic circulation does not make fame or even reputation. The supreme American literary reputation in England is that of Longfellow. His renown has diffused itself into every household; his poems are in every drawing-room; he has more readers than any living English poet. His is the one only American literary name that may be mentioned in all companies with as much certainty of recognition as the name of Shakespeare, though even with Shakespeare's name it would not be safe to go below a certain tide-mark of society. During the Shakespearian festivals, last year, a London omnibus-driver, by whose side I was sitting, whose daily journeys took him under the very walls of Apsley House and Buckingham Palace, gravely asked me, "Who is this fellow Shakespeare they 're making such a damned row about?" My impression is, that next to Longfellow in fame on British soil is Washington Irving, although an English lady of wealth and literary proclivities once enquired of me whether that was "the Irving who attracted so much notice as an eccentric preacher in London thirty years ago!" Next in renown to Longfellow and Irving, and in about the order given, are the names of Hawthorne, Emerson, Prescott, Lowell, Dr. Channing, Bryant, and Theodore Parker. I am surprised to find how many there are who do not know Whittier. It would be wrong to omit Elihu Burritt, who is everywhere known in England, and for whom there is an affectionate regard among multitudes of the purest and best. He has passed many years here; he has lectured in nearly every town and village; he has gone on foot through the whole length of the island; and by the simplicity, beauty and amiability of his nature, by his learning, by his calm thinking, by his modest yet glowing speech, has not only made fame for himself, but has done much to change English estimates of the American character.

It is very probable that Americans who have made the tour of England may not be able altogether to verify my statements by their own experience, and especially may think that I have underrated the English reputation of some whom I have referred to. This is but natural. Mere tourists bring letters to the very people who are most interested in America, who know most about America, and in whose conversation these names are most familiarly used. It would be a mistake to infer that the English people in general have such an acquaintance with our literary names. But having travelled up and down England as a lecturer; having had the opportunity of experimenting with all sorts of audiences in all sorts of places, by purposely throwing in allusions to noted Americans and watching the effect; and having had in these journeys some glimpse of the interior of English life as well as some chance of free conversation with vast numbers of the middle-class English people, it is likely that my impressions are not what they would be were I seeing England as a tourist only. My duty in this paper, however, has been not to account for the impressions of others, but truthfully to relate my own.

It is with a melancholy interest that I look back over the growth of

the English fame of Abraham Lincoln. During the first two years of my life here he was "the buffoon President," "the vulgar tyrant," "the brutal despot revelling in the woes of a race." As his name came naturally into some of my lectures, I watched curiously the changes in the demonstrations which it excited. Except in very polite audiences it was always hissed. Even as late as the day on which we received the news of Mr. Lincoln's re-election, the mention of his name in a large audience convened in the very heart of London created a stormy susurration of hisses; and when the hisses provoked a retort of cheers, they rallied in ten-fold intensity and won the night. His death has now changed all. During the past autumn, laying the hand on the popular pulse in the same way, from Cornwall to Yorkshire, I find his name and praises welcomed with hearty tributes of applause.

In the "Scarlet Letter" occurs this just remark, that "it contributes greatly towards a man's moral and intellectual health to be brought into habits of companionship with individuals unlike himself, who care little for his pursuits, and whose sphere and abilities he must go out of himself to appreciate." May not a similar remark be made as to the advantages of companionship with those who care little for the personal reputations which have always awed us, for the august authorities with which we have been wont to fortify our speech, for the enthroned ones in literature with whose images we had filled the pantheon of our youthful homage? Yet it would be a rapture to get home again among the old names, and to take on once more the pleasant yoke of the old reputations.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXV.

AUGUSTA, Ga., December 23, 1865.

THE first stage of the journey from Columbia towards Augusta is seven miles long, occupies three hours and more, and is made in the dark. We were called from bed at three o'clock in the morning, several coaches were filled up with sleepy, shivering travellers, and then till after six o'clock the time was consumed in slowly moving through the wind and rain to Hampton's Turn Out. As we passed the College campus the chapel windows were still lighted, for it was the last day of the legislative session, and that body was sitting late. Some of the members already on their way home were in our coach, and spoke together about the character of the two houses, and the work that had been accomplished. The critics seemed dissatisfied upon the whole, though many of their remarks were not quite intelligible. The best part of the Negro Code had been cut out, they said, before its final passage. It was a very good thing, however, that so many copies of it had been printed, for every white man would need one, and probably no law ever enacted in the State had been so generally and thoroughly studied as that would be. The session had been very busy, but more work would have been done if the senate had been less factious and impracticable. Strange to say, that branch of the legislature had been far more radical than the house. It had proved false to all its traditions. The course of "that fellow T——" was then severely reprehended.

"Oh, he had a great deal to say about the poor, patriotic soldiers, you know, and their widows and orphans. They say that in the conference committee in reference to the usual appropriations, he said before he would consent to pay the judges their undrawn salaries in good money he would cut off his right hand. He just as much as said that they left their pay in the treasury because of the depreciation of our money. Yes, he was exceedingly enthusiastic. And he is so vociferous! A perfect demagogue, sir. In point of fact, those gentlemen probably had no use for their money, and allowed it to remain with the State for the good of the cause. I am sure a great many of our people down to the very last retained a great deal of confidence in our currency, and no man of honor, nobody but some such a fellow as T——, would have charged them with such motives."

"No. What a curse it is to a country when these low, demagogical fellows of no character are able to rise to the surface! Several of the up-country members, gentlemen who were very strong in the convention for remodelling representation, are said to be quite willing now to undo their work. One of them—you would know him were I to give you his name—told me himself, that after this winter's experience of the new system, the people in his section would be very willing to return to the old. In three years, he thought, we would be back again."

"Ah," said another gentleman, "it was very ungenerous in them to force that measure upon the low country at that particular time. They knew that we had lost everything by the war, and, at least, they should have given us time. For I think, sir, that the rice country is ruined. Cotton-planting may possibly become profitable again, but no one, so far as my information extends, entertains any hopes of the rice culture. The negroes never liked it, you know. It is very hard work, and it is unhealthy necessarily. I do n't know what we 'll do. I am not going to attempt it. This year's experience in Georgetown District has satisfied us that nothing can be done. Take one example out of many. Mr. A——, you know A——, has worked four hundred of the freedmen this year—his own negroes—with the understanding that they should return to him all the seed-rice, and that the surplus should be divided between themselves and him. The other day the division took place, and how many bushels do you think there were to be given to four hundred negroes? Just nine and a half. There were nineteen bushels over and above the seed. That is one case out of a hundred that I might give you. I am convinced that we shall never be able to do anything till we get white labor. Oh, I have made up my mind fully to do nothing at all with my places this year. Mine came to me, and asked me if I would think hard of it if they tried to find employment off the places. I was very glad to tell them 'No; that they might go as soon as they pleased, and they could n't go too soon.' I never could stand their impudence, I 'm sure."

"Let me see; you have the black troops down there? Though Orr told me they were to be relieved at once. I suppose they demoralize the freedmen?"

"Oh, yes! yes, sir; their officers have no control over them. I wish you could have seen what I saw the other day in Georgetown. In the middle of the street there was a crowd. I should think there might have been a hundred of these black soldiers surrounding about half a dozen of the white Yankees and quarrelling with them, calling them the vilest names—'D——n their white-livered souls, they could whip any white man ever walked,' etc. Their faces looked absolutely fiendish. They really appeared like demons. The whole street was full of them, and the citizens were in a fright. They would just as soon elbow one of our first citizens as not. And all this was within a few rods of the nigger colonel's quarters. At last one of the Yankees picked up a little courage and offered to fight any one negro in the crowd. A big fellow jumped out at once and said he was his man; so the two stripped off their coats——"

"Going to fight this nigger?"

"Yes, sir, he was going to do it; but just then the colonel, who must have heard it all—the whole town was in an uproar—walked out of his quarters and spoke a few words to them, and stopped it. Never made any arrests or anything of that kind; seemed to be afraid of them; just walked between them once or twice, and went away."

"One of the captains in Barnwell told me candidly that, in the event of an insurrection, the officers would not be able to restrain the black troops, and they would certainly side with the negroes."

"Yet some people say they prefer them to white soldiers. A friend of mine told me that in the summer he had some difficulty with his people, and sent up to the Yankees for an officer to come down and talk to them. Well, they had the impudence to send down a black sergeant. My friend thought, however, that he 'd let him try what he could do. He was a pompous fellow, he said, and very proud of his stripes; but it was really marvellous to see the influence he had with the people. They obeyed him implicitly. He considered it a proof that the freedmen were disposed to be a law-abiding people. I told him I considered it a proof that the black soldiers have entire control of the whole colored population, and it should be a warning to us to have them removed as soon as possible."

"Well, does n't it seem as if the United States Government was desirous of bringing on a collision between the races? Its policy can hardly be accounted for on any other supposition; yet that is almost too barbarous."

"We do n't know whether anything is too barbarous. However, I believe they will soon be removed."

The conversation, carried on in the dark, was accompanied by snoring from two travellers asleep, and the thread of it was often broken by a jolt, or by the cries of the coachmen giving each other instructions and encouraging the teams to extraordinary exertions. In this, as in other companies of South Carolinians, I noticed that almost always when any man's name is mentioned, some one enquires whom he married. Then the lady's name is given, and it is told whether she was of good family or not, how wealthy she was, and how many children she has brought him. Young men and old seem to take an equal interest in this sort of information, and to possess a great deal of it.

At Hampton's we found the train, and, as usual, quite an assemblage of negroes clustering around some wood fires and waiting for a passage to the low country. Travelling slowly all the forenoon, we reached Branchville without accident, and there, from twelve o'clock till eight in the evening

were detained while the engine was repairing. The little village at the junction, with its half-dozen gaily painted railroad buildings, contained nothing to interest a stranger, and our passengers, after they had wandered for awhile about the platform and read the notices of sales by auction posted there and the order prohibiting the sale of intoxicating liquors to negroes during the holidays, sat and lay on the pine straw in the sunniest spots, impatiently expecting our departure. Some of them derived amusement from the spectacle of a man suffering from an attack of *delirium tremens*. He went from one person to another, falling on his knees and begging for his life. If the gentlemen wished to kill him, of course that was their privilege, and he supposed he deserved it, for it must be acknowledged that he had been in the Yankee army, though he was a Southern man by birth. But he had a wife and two little children. He did n't want to oversize the pile, but he would give fifty dollars, at least, to any gentleman who would save him. If he could have a fair trial, he would be able to show that he had fired on the Massachusetts regiment that came through Baltimore in April, and had made one of them sick, anyhow, and he did n't know but more. Besides, he was an ignorant man, unable to read and write, and never would have gone into the army if he could have got employment. They drafted him after he had travelled about for seven months from place to place to avoid being taken, and he had never shot anywhere but in the air. These, he thought, were mitigating circumstances. He was condemned to death, however, and took the position of the soldier in order to die with dignity. He was repeatedly tried and sentenced and reprieved, and dosed heavily with whiskey and morphine, but nothing could remove from his mind the impression that his fellow-travellers, being Southerners, sought his life, and he continued to weep and supplicate until we arrived at our journey's end.

At Bamberg, thirteen miles from Branchville, there is a break in the S. C. Railroad, and travellers must take a coach for forty-two miles to Johnson's Turn Out, whence they go by rail to Augusta. It was not possible to get a bed in Bamberg, which was filled to overflowing, but our driver lived upon the road five miles from the village, and to his house accordingly we were carried. His fare consisted of myself, a young lady from Georgia returning from boarding-school, and her brother, who escorted her. The driver was loud in praise of his horses and of a "through cut" which he had made through the woods, and which saved all the danger and mud of the big road. We were mighty lucky to get him, he allowed, if he did say it himself. But we met other drivers in his through cut, each of his horses was thrown down once, the carriage was nearly capsized over a bank, and at last he was effectually silenced by a tall stump which broke one of the single-trees and delayed us fifteen minutes. A little before midnight we reached the log-house he had spoken of, and were very glad of a roaring light-wood fire and beds upon the floor. In the morning the farmer, a paralytic old man, came into our room and talked while breakfast was getting ready.

Sherman had been through that country and made him a poor man. He never was wealthy, but now he had n't anything. The soldiers came into his lot one morning early, and they just overrun everything. They did n't burn any of the buildings but the cotton-house. It had a matter of thirty bales in it, though. He would have run it out into the woods, and dropped it about, but it was all in the seed. All the poultry went, and all the bacon except some jowl pieces. When he begged for some of the good meat, they turned round and asked him if he had n't three sons in the rebel army and two sons-in-law, and called him a d—d old rebel. He told them he was n't much of a rebel at the jump, but when the war got a-going it sort o' inspired him. They seemed to know as much about his business as he did. They got all his honey, too, and his knife. He saw a parcel of the Yankees round a bench in the yard, and some mighty fine pieces of the comb there, so he said to them, "Gentlemen, I reckon I can have a piece of the comb." "All right, old fellow," says one, a little Irishman or Scotchman or German he was: "Dad, lend me your knife and I 'll cut it for you." So he handed him the knife, and sure enough he did cut off a big piece, but he put the knife into his pocket, and that was the last of it. "He had more use for it than I had," he said. Then they took away every horse he had and every saddle. He was not abused himself or any of his family, though he did n't stand back for them, either. They made a fire in the yard, one parcel of them, and began to dance round it, but he went out and told them he could bear to see his property burnt and stolen, but to make him look on and see them dancing over it was a little too much and he would n't bear it; so they stopped it. One thing the war had taught him anyhow. He would never try to hoard up money again. What he could make he intended to eat and put on his back. He had n't eaten cheese for four years, and hardly any meat, but for the future he should live well.

Breakfast, when it was served, hardly kept the implied promise thus made us, but it is seldom in these Southern farm-houses that one finds food at once good in itself and well prepared. The old man surveyed the rye coffee and hominy and corn bread and sausages with audible satisfaction. I asked about the freedmen on the farm. At one time he said he had owned thirty-four. The able-bodied young men, seven or eight in number, had been carried off by the Yankees, but the rest remained and had been at work this year, doing tolerably well. At the division of the crop they claimed a third part, and he wanted to give them only a sixth. Nothing was said about terms at the beginning. Finally he had to get a Yankee from the court-house, and he told him he was poor and pretended to be very obstinate about the one-sixth; so the Yankee gave the negroes a right hard talk, and made them take one-fifth, and call themselves lucky to get that. Next year he was going to have an understanding. His negroes said they would work for one-third; he had four white men hired to run the ploughs, at twelve dollars a month and board and washing, and he intended to plant pretty much all his land in cotton. He thought more cotton would be planted in Barnwell in 1866 than in any previous year. Now, if the negroes would only work, he did n't know but it might be a good thing that they were free, and he asked the Georgian and myself what we thought about it; we were city raised, were n't we? and knew more about things than he did. He also enquired of the Georgian if old Joe Brown was not the governor of that State, and if it was true that England had declared war against the United States.

As we were leaving, I asked what we should pay him for our entertainment. "Nothing," he said, "he never took a dollar from a man for lodging in all his life." In a minute he added, "You must talk to the old woman about that." She entered just then, so we asked her the same question, and paid a dollar and a half apiece. On the way the driver, of course, talked about Sherman's army, pointing out this house as the place where so many hundred bushels of corn were destroyed, that as the place where two splendid pianos were smashed to pieces with axes, that other as having been occupied by Sherman as his headquarters for two or three days. "It would n't do for him to travel through this country now. Too many of the boys would want him." As in other parts of the State the devastation was not nearly so great as my preconceived notions of it. But few of the houses near the road had been destroyed, and near the road, I was told, the destruction had been more complete than elsewhere.

"They burnt my house smack clean, sir," said the driver, "and every bit of furniture that I had except some that the niggers saved for me. I was worth fifteen thousand dollars the day the war broke out, and the day it ended I just had my horse that I rode home on. But I 'm a young fellow. My father lost everything, too, and he 's an old man. They put fire to the corners of the house, and then two of 'em held him and made him look at it burning. The women folks would try to save some of the things out of the fire, and when they came running out with books or anything the Yankees would snatch 'em and throw 'em back on to the fire. The old man had to go down to my sister's—she 's married and lives near where you stayed at last night—and she gave him a bed, or he 'd had to sleep out in the open air; and when he went down the next morning to look round, sir, one of the niggers told him he might leave; Sherman gave her the place, she said. Called him a grand old rascal and all sorts of names."

"What did he do with her?" the Georgian asked.

"Why, he could n't do anything. He 's an old man, seventy-two years old, and she was a big strapping nigger; could ha' killed him with one hand."

"Does he keep her there now?"

"No, by G—, he do n't. You may bet she did n't stay there long after I came home. They told me the story."

"And she 's left the plantation?"

"Yes; and when she comes back she 'll come back in the spirit. Nobody is exactly certain where she is, you know. Some think she 's gone to Charleston or somewhere on the coast, and some think she 's got lost in the big swamp."

"A heap of 'em out in my country get into the swamps and get lost. I do n't know as it 's true, but I 've heard that there 's men out there that have n't got anything else to do, and if you mention any nigger to 'em, and give 'em twelve dollars, the nigger 's sure to be lost in a very few days."

"I know four right here in Barnwell that have been drowned some way within the last two months. Niggers never were so careless before. They go into the swamps and nobody can find out anything about 'em till by-and by they 're seen floating down the river. Going to the coast, I reckon; that 's where they 're fond of going."

"Well, now," said the Georgian," it 's queer that the niggers that were the best before the war, the ones that we trusted the most, and thought the

most of, and gave every privilege, are the same ones that turn out the meanest."

The driver admitted that this was the fact, and the Georgian continued:

"And the niggers that we thought were the grandest rascals, stealing and lying and everything else, are the ones that do the best now. A nigger has got to know you 're his master, and then when he understands that he 's content. There was one of our niggers, I 'll bet my father has given him more than two thousand lashes since I can remember; he just lived in the woods in old times, but he 's the best nigger we 've got now. When we hired the hands this year, he was hired with the rest. I was at home myself, and after they 'd been working a day or two days, I went out into the field, and they were n't doing anything hardly. So I went up to the house and told my father that the negroes were not doing anything, and this particular nigger I told him I thought was doing all he could to prevent the rest from working; and I 'm going to discharge him, says I. Very well, my father told me. He gave me full power to discharge any of them I wished; but, says he, let 's give them a talk first. I was away that evening, but father called them up and told them that I was dissatisfied with the way they worked, and he mentioned this nigger in particular. Well, he stepped out right at once and said, says he: 'Whoever would say that I prevented the rest from working or did n't work well myself, is capable of telling anything.' As much as to call me a liar, you see. Well, the old gentleman told 'em all at home to say nothing to me about it when I came back. He knew there would be a row sure if I heard it, and they all meant to keep it secret from me. But at the supper-table I heard my little brother telling my mother the circumstances, and very soon I got it all out of him. I got up from the table right away and took my walking-cane and a big navy pistol that I 've got, and I walked right out of the house. In the yard I met my brother-in-law, and he saw by my looks there was some trouble, and asked me what it was. 'I 'd got a nigger to frail,' I told him, 'that had been calling me a liar.' 'All right,' he said, 'he 'd go out with me.' So we went on down to the quarters together, he and I. When we got to this nigger's house I called for him and out he came. As soon as I saw him, I jumped for him, and I laid the cane unto him—it was a kind of a riding-cane—just as hard as I could lay it, over the head or anywhere. He did n't like it much, and blamed if he did n't run in on me and get hold of the whip. Then I took the pistol and I did n't stop to cock it, but I hit him two or three times with it as quick as ever I could strike. The pistol went off and the nigger thought I 'd killed him. 'Oh! Master Henry,' he says, 'I never thought you 'd do one of your own niggers so that you raised yourself.' 'I 'll learn you,' says I, 'to call me a liar;' and we took him and tied him up and I gave him one of the best frailings he ever got in his life. My father came out, though, and took him down. He can hardly hobble about, but he was so afraid I 'd kill the nigger that he walked away out to the quarters and took him into the house, and washed his head himself and bandaged it up for him. But he 's been the very best hand we 've had since that time. Frail a nigger and he knows you."

There was much talk of a similar character between the two young men, and they had an inexhaustible topic of conversation in their varied adventures as soldiers and scouts and spies during the late war. All day we were riding steadily at a very good rate of speed, and early in the evening, without accident, we arrived at the Turn Out, where we were provided with beds, or, rather, with certain fractional parts of beds, and with breakfast on the following morning. In that desolate little hamlet I saw nothing and heard nothing which would merit reporting, and the railway ride across the Savannah River into the State of Georgia was equally destitute of incident.

THE LONDON TIMES IN TROUBLE.

LONDON, December 30.

NOT having been in China, I cannot say whether the love of stereotyped routine may not be stronger in the Celestial Empire than it is with us. But of all the countries that I am acquainted with, I can assert confidently that England excels all others in a rigid adherence to custom simply as custom. It is an unwritten law of English daily journalism that every editorial should occupy not less than one nor more than one column and a half, and should consist of three paragraphs, and three paragraphs only. From time to time a newspaper makes a bold effort to break through the tradition, but somehow or other the innovators get astounded at their own audacity and relapse into the old prescribed form. So in the same way to-day, as on the last day of every year since time immemorial, the interests of the reading public are deliberately sacrificed to a journalistic tradition. It is the fashion on such days to have no leading articles, and to supply their place by one long dreary summary of the year. Nothing can well be duller than these annual retrospects. Too long for anybody to read, too cursory to be used for reference, they serve no purpose except to wear out the patience of the public for whom they are supposed to be written. Newspaper editors are sharp enough as a class, and know all this as well as anybody. But it is the custom to have such summaries, and in England an old established custom is not a thing to be disregarded with impunity.

To an American reader the one feature of any interest in these reviews would be, I fancy, the allusions contained in them to the termination of the civil war. It is curious to anybody who remembers how, on the last day of 1864, our newspapers took occasion to discourse on the text that another year had passed without bringing the North any nearer to its insane purpose of restoring the Union, to note the language now held about America by the leading pro-Southern newspapers. The *Times* at last has made the gratifying discovery that, "though the numbers of the Northern army were out of all proportion to its exploits, the troops which were, from time to time, actually engaged displayed creditable discipline and remarkable valor." The same paper, which was never weary, twelve months ago, of ridiculing everybody who suggested the possibility of the Union being restored, now informs its readers that "there is every reason to hope that the United States will deal successfully with the problem of internal reconstruction, and that the people will re-enter on a career of material improvement and expansion." The *Daily Telegraph* delivers an eulogy on the unparalleled splendor of a whole nation's clemency; and the *Saturday Review* performs the process of devouring its own words with a gusto which is creditable to its powers of digestion. When I read, as I do in its annual retrospect, that "to those Englishmen, and they are the vast majority, who have the heart and the sense to take pride and pleasure in the well-doing of a free and kindred race," and so on and so on, I feel a sort of mental confusion as to how it is that I could have been for so long one of a vast majority, together with the writers of the *Saturday Review*, without ever discovering the fact. If, mindful of the Scriptural exhortation concerning the danger of all men speaking well of you, you grow alarmed at this concurrent chorus of praise, you may, perhaps, be consoled by learning that the *Standard* still cherishes its old antagonism to the North, and gravely warns its readers that the time will come when the world will reject "the non-establishment of a well-ordered balance of power in Northern America by an intervention that would have saved the American people three years of desolating warfare."

Apropos of newspapers, the club world for the last few days has been occupied with stories of dissensions between the managers of the *Times* newspaper. In all such matters it is very difficult to arrive at the exact truth. Shrewd men of the world, like the conductors of the leading English journal, are not likely to let the world into the secret of their disputes until such time as their connection is finally severed. On this account, I am not disposed to place implicit reliance on the stories circulated in society as to the details of the rumored crisis in Printing House Square. I can only give them to you for what they are worth as the *on dits* of men about town. It is said, then, that for the last week or two the barometer at the *Times* office has stood at "stormy." You may, possibly, be acquainted with the fact that the chief ostensible proprietor of the *Times* is Mr. John Walter, late M.P. for the county of Berkshire. A great and not very intelligible mystery has always been maintained as to the exact proprietorship of the journal in question. On one occasion, when some remark was made on the subject in the House of Commons, Mr. Walter declared that he was by no means as influential in the paper as he was supposed to be. Whether this gentleman is the virtual holder of shares entered in the names of sleeping partners, or whether his profits as printer of the paper—a post secured to him by the terms of the partnership deed—exceed his profits as part proprietor, are points about which opinions differ. As a matter of fact, there is no doubt that he reaps the lion's share of the income derived from the *Times*, and that he is the ultimate authority in all matters relating to the paper. In other words, there is no person employed in its management whom Mr. Walter could not dismiss if he were so minded. His father and grandfather took a very active part in the management of the paper; and it is on record that in one instance, at the outset of the Puseyite movement, when some one of the young Oxford writers of the day wrote an article expressing sympathy with Dr. Newman's views, old Walter posted up to London the very moment he caught sight of the article, to stop what he considered rightly a most fatal error. The present inheritor of the Walter interest has of late years kept himself studiously aloof from any active interference in the conduct of the *Times*. A man of large property, a county member, and a local magnate in Berkshire, he has hitherto, according to an expressive, though vulgar expression, done his utmost "to drop the shop." In his place in Parliament he was a steadfast supporter of the Palmerston Administration, and markedly expressed views on more than one occasion

not in accordance with those advocated in the journal of which he was the reputed owner. In his private capacity he was much more desirous of being known as a large landed proprietor than as Walter of the *Times*. Thus, for many years the practical management of the paper has been delegated entirely to Mr. Delane and other members of the *Times* staff, who formed a sort of happy family party, united in more than one instance by ties of marriage.

At last, so report says, this mutually satisfactory arrangement has been disturbed. Mr. Walter, according to the current story, recently informed Mr. Delane that he was not satisfied with the manner in which the paper had been conducted of late. Upon this, according to the same gossip, Mr. Delane tendered his resignation, and several of the staff expressed their resolution to leave if his resignation was accepted. In fact, for a time, it was thought there was likely to be a complete break-up in Printing House Square. Now, however, it is rumored that the quarrel has been made up; and that no important change will be made in the management. As I said before, I do not vouch for the accuracy of these statements. I simply mention them as current in quarters likely to be well informed on the subject. I almost disbelieve in their truth, if I may say so, from their intrinsic probability. It is so natural the proprietors of the *Times* should be dissatisfied with the position of the paper, that people are apt to assume the fact of their so being. I have very little doubt that the assertion commonly made by the persons connected with the paper is true, and that the actual net profit of the paper is larger now than it ever was before. I am told, too, on good authority that the circulation increases steadily. This fact, however, I feel sceptical about. Any man who is in the habit of travelling about England must, I think, share my scepticism. The *Times* has lost its "chance" custom. In the railroads and omnibuses you hardly see anybody reading the *Times* now; the news-boys find it does not pay to sell it on the streets; the suburban news-venders never keep it on stock; they supply a very large number on order, but they no longer take in copies not ordered beforehand. The truth is, the penny papers have supplanted it as popular organs of opinion. It is still *the* newspaper of the governing classes, but it is no longer the chief English journal. For this fact the gentlemen who have managed the paper are very little to blame. When once it became clear that a penny newspaper could be made to pay, it became clear also that sooner or later the *Times* must either lower its price to a penny or be content to see other competitors surpass it in circulation and in the influence attaching to a vast constituency of readers. The only valid cause of complaint against the management is not that the *Times* cannot compete in popularity with a paper like the *Daily Telegraph*, but that it has forfeited its reputation for political sagacity. The utter failure of all its predictions with reference to the American war is beginning to tell against it. Then its reckless advocacy of Governor Eyre has proved to be a mistake in policy as well as in principle; and its bitter animosity towards the idea of reform is, to say the least, a hazardous experiment. Moreover, in a merely intellectual point of view, it has not of late exhibited its former supremacy of talent. Constantly other newspapers are beforehand with it in news. Leaders and reports in other papers get more talked about than those in the leading journal.

The Crimean year was the apogee of the *Times's* greatness and grandeur Its one formidable rival, the *Morning Chronicle*, had been finally vanquished in the contest, and both proprietors and managers fancied that they had established their power on an immovable basis. With security there came carelessness, and the result has been the gradual decline of its influence. On the whole, I think this is a circumstance for which the public has cause to be grateful. Personally I have a great respect for the talent and good sense with which for many years the *Times* was conducted; and, with all its faults, I own it had also signal virtues. The heyday of its greatness will, I think, always remain one of the most brilliant periods of English journalism; and if the despotism of the *Times* were simply to be replaced by that of some younger and more energetic rival, I should see little ground for satisfaction. Happily, this is not likely to be the case. It is most improbable that the combination of circumstances which conferred on the *Times* its temporary dictatorship should ever occur again. We shall have, I hope, a number of influential and successful papers in coming years, but I trust we shall never have one again able to speak, as the *Times* at one time could do, in the name of England. A monopoly of power is dangerous for any rulers, but above all for an anonymous and irresponsible body such as in the day of the Crimea held sway in Printing House Square.

With the exception of these reports concerning the *Times*, there has been a complete dearth of any public news. During these Christmas holidays all politics are forgotten, and till Parliament meets, in February, we are not likely to hear much of political discussion. There has been some talk of late of Mr. Bright's accepting a seat in the Russell-Gladstone cabinet, but I believe the rumor to be utterly unfounded. If Earl Russell is defeated, as I expect, on the reform question, he will possibly form a complete coalition with the advanced liberals, but not till he has tried his fortune alone; he will certainly not ally himself with the member for Birmingham. I have some reason to believe that Mr. Bright has lately devoted himself more sedulously to commercial matters—a fact that is utterly irreconcilable with any idea of taking office.

The death of Sir Charles Eastlake has left vacant the presidency of the Royal Academy. The question of his successor excites much interest in the artist world; but I suppose there is little doubt the office will be offered to Sir Edwin Landseer.

PARIS GOSSIP.

PARIS, December 29, 1865.

THE Christmas music in all the more fashionable centres of ecclesiastical attraction has been this year uncommonly fine. Many rising composers had written masses expressly for the occasion; and these, interpreted by the leading artists of the day, seem to have been eminently successful. That performed at the Church of the Madelaine, by Camille de St. Saëns, so well-known for his admirable transcriptions of Bach, has added a very green leaf to the chaplet already so worthily won by him.

A beautiful mass was performed at the Chapel of the Tuileries on Christmas, in presence of the court, the King and Queen of Portugal, their sister and brother-in-law, Princess Hohenzollern and her husband, and a numerous gathering of distinguished guests specially invited. In the evening a "family dinner," of a very magnificent description, took place at the palace, and happily cemented the reconciliation which has just been brought about between the Emperor and his too outspoken cousin. Here, where every little detail of court life is scrutinized with interest, as "straws" showing "which way the wind blows," it was remarked with satisfaction that the occupants of the Palais Royal went on foot to the Tuileries, thus freeing their visit of every appearance of etiquette, and giving to it the air of a merely private family affair. The Imperial hosts are said to have responded to this token of returning kindliness and good-will by giving a most affectionate reception to the Prince and Princess. All the numerous members of the Imperial family were present at this gathering, with the exception of Princess Anna Murat, now Duchesse de Mouchy, who, after the splendors of her marriage at the Tuileries, and her reception by the people of over thirty villages in the neighborhood of Mouchy-le-Castel—with no end of triumphal arches, bouquets, addresses from *maires* in official costume, and charity-children in book-muslin, torchlight processions, and grand displays of rockets and Bengal fires—is spending her honeymoon with her youthful bridegroom in the old dwelling of his historic ancestry, in the midst of a population whose affectionate veneration for the Mouchy family offers a curious contrast to the indifference of the Paris of to-day for the great names of the past. The Prince Imperial, who, being in his ninth year, is becoming quite a man in his own eyes, was allowed for the first time to eat his Christmas dinner with his "august" relatives.

The traditional roast-beef and plum-pudding which, since England was England, have constituted the orthodox Christmas dinner on the other side of the Channel, are only seen here on the tables of the English residents. The American colony substitutes turkeys for roast-beef, but largely patronizes the traditional pudding, and is by no means oblivious of mince-pie, though this latter is seldom prepared exactly according to the standard of its English original. But no lover of Christmas and Christmas cheer, in England or out of it, has ever been able to imitate the famous "plum-broth" which, served up in a massive, antique silver tureen of Brobdignagian proportions, has formed for ages the distinguishing feature of the Christmas dinner of the kings and queens of England. This "broth" is, in fact, a liquid edition of the orthodox pudding, with the same deep hue of old mahogany, verging on blackness, the same delectable and enticing odor, the same peculiar mellow richness of flavor, luscious yet chastened, and laying, alas! the same heavy tax on the powers of the digestive organs. But easy as would seem, to ordinary mortals, the task of diluting the "solid pudding" to the consistence of water, no one has ever succeeded in imitating the "plum-broth," of which the secret, strictly guarded, is handed down from generation to generation by each successive "head cook" at Windsor Castle to his immediate successor.

The young King and Queen of Portugal (who had so much difficulty in getting a leave of absence from the Portuguese Chambers, and whose "outing" was delayed for some weeks after permission had been given to their Majesties to leave the kingdom, because the Chambers obstinately

refused to let the precious two-year-old baby, the heir to the crown, accompany his royal parents, who were equally determined not to go without him), have been making the most of their brief liberty. They enjoyed themselves immensely in Italy, dispensing with state and etiquette, seeing all the Queen's old friends, and visiting everything of interest within reach. During their stay here they have been just as busy, and have had their time pretty well occupied in sight-seeing. They wound up their explorations on Saturday by going to the magnificent new Théâtre du Chatelet, and, getting back from there about twelve, lost no time in putting on masks and dominoes and going to the opera-ball, which takes place every Saturday night at this season, beginning exactly at midnight. The frantic, glittering, many-colored whirl of sights and sounds so attractive to the pleasure-loving people of Paris, was witnessed by their youthful Majesties, of course, from the decorous precincts of a stage-box.

Queen Maria Pia, not yet eighteen, and the mother of a couple of boys, shares largely the want of personal beauty which is the appanage of her House. Prince Humbert, though not handsome, has a refined and very intelligent face, the plainness of whose features is redeemed by a magnificent forehead. Princess Clotilde, far from pretty, looks so good, so kind, and so honest, that her face is pleasing, despite its plainness. But the young Queen of Portugal, though said to be very amiable, and adored by her husband and all about her, is plain almost to ugliness. Her complexion is as white as wax, her hair is violently "carrotty," and her features are as inharmonious as possible. The redeeming point in her personal appearance is her figure, which is splendid; tall, shapely, and well-devel oped. She dresses admirably, and her manners are at once dignified and pleasing. The young King is a fine-looking fellow, not handsome, but with an open, intelligent face, a most winning smile, and charming manners. He is highly educated, well-read, an accomplished musician, and a universal favorite.

The great attraction of the hour is the pair of great dolls, dressed in the styles of the First and Second Empire, now exhibiting in the tempting windows of Siraudin, the well-known ex-member of the Legislative Assembly, poet, playwright, philosopher, now the first maker of artistic sugar-plums in Paris. The dolls are about four feet high, of wax, and wonderfully got up. The "First Empire" wears an immensely long train of crimson velvet embroidered with silver wheat, over a petticoat of white satin entirely covered with the same magnificent embroidery, an apology for a *corsage*, coming scarcely lower than the arm-pits, and edged with a standing ruffle of lace, a turban of the same crimson velvet, with jewels in the band, long white kid gloves fastened above the elbow with a cameo bracelet. Every line about the figure (which holds a little fan in its right hand, and with its left is plucking behind at its long train, as though fearing an entanglement in walking) indicates an attempt to produce the effect of length without thickness, the tightly-gored petticoat being of the most attenuated narrowness. The "Empire" of to-day sports a gorgeous robe of very rich *moire* of a pale gray shade, with cupids so cunningly wrought in the same as to give the effect of Gobelins tapestry; the skirt, excessively long behind and displayed over a crinoline of most fashionable proportions, is bordered with a deep trimming of dark green velvet, almost covered with gold ornaments, according to the *furore* of the day; the *corsage* and sleeves are trimmed and ornamented to match; the head is covered with a mass of short puffy curls *à la Newfoundland*, ornamented with bands of gold and surmounted with one of the microscopic bonnets now in vogue; a lace shawl and white gloves complete the toilette, and the little lady holds a rose in her hand. All Paris is flocking to the Rue de la Paix to admire and laugh at the pair of little figures, so well illustrating the two extremes of fashionable folly they so faithfully represent.

The double line of ugly wooden booths, looking like magnified packing-cases, which a paternal municipality allows the petty manufacturers of the capital to set up for a fortnight at this season along the Boulevards, have just made their appearance, and are rivalling, on a lower scale, the more costly attractions of the shops. The week before New Year's Day is always a very carnival of buying and selling, the amount of money thus "turned over" during the last few days of each expiring year being something fabulous.

All the theatres are bringing out new pieces in honor of the season. Mademoiselle Brohan, the popular actress at the Théâtre Français, has just drawn a prize of 50,000 fr. in a lottery, and a sister-artist, Mademoiselle Ehlers, has added another to the long list of victims to Moloch and crinoline, having been burned to death on the stage of the opera at St. Petersburg. The various courses of lectures lately introduced among the amusements of Paris are being "improved" by the co-operation of pairs of speakers, who take opposite sides in the discussion of the topic of the evening; and returning grandees are opening their salons for the coming winter. But the topic which will be uppermost in the general mind of this region for a week to come is faithfully reflected in the letter just found in the post-office, addressed to "The Infant Jesus. In Heaven. To be given to St. Peter," and containing an urgent entreaty, from the child-writer, for "plenty of New Year's presents." STELLA.

Correspondence.

THE FUTURE RELATIONS OF NORTH AND SOUTH.

TO THE EDITOR OF THE NATION:

Having, since the termination of the war, occupied nearly five months—from July until the latter part of December, 1865—in making an extended tour through the Southern States, passing over portions of South Carolina, Georgia, Florida, Alabama, Tennessee, Mississippi, Louisiana, and Texas, it has been suggested to the writer that the general result of his observation and experience in the South, more especially as regards the present disposition of the people and the feeling they entertain toward Northern men, might possess sufficient interest for the public to justify him in offering a brief summary of his conclusions upon those questions which at the present time justly occupy so considerable a degree of public interest.

A detailed and carefully elaborated report is not, of course, to be expected from one whose business at the South was of a purely commercial character, which of necessity prevented him from giving the subjects herein briefly alluded to that attention and careful study they require; and even if the writer were competent to the task, the nature of the data from which he has drawn his inferences and conclusions precludes the possibility of any such undertaking. The following views are therefore submitted, without apology for their crudeness, the writer merely premising that his statements have no greater merit than their sincerity, and that all relations of facts and actual occurrences may be relied upon as literally true and capable of abundant substantiation.

It will scarcely, I think, be denied, by any disinterested and unprejudiced observer of the popular feeling as it exists in the Southern States to-day, that so general and all-pervading is the hatred and distrust at present existing among Southerners of all classes against men of the North, particularly against all persons born or educated in the New England States, that although, aside from this fact and the general insecurity of life and property at the South, the inducement to invest capital is very great, yet, under the circumstances, no Northern man would be justified in giving up a permanent and profitable business at the North in the hope of securing a larger return for his money by investing it at the South. Whenever the inhabitants of the Southern States shall have realized sufficiently the great change that has taken place in the nature of their institutions and the character of their labor, and consent to receive emigrants from the North with courtesy and good-will, instead of suspicion and dislike; whenever they shall be willing to lay aside their foolish and unworthy jealousy and give the "Yankee" fair play, and extend to him the right hand of fellowship, *then*, and not till then, will Northern men and Northern capital be justified in seeking a field for industry and investment at the South. At the present moment, so far is this from being the case, that in the interior of the cotton States a man had better hail from the state prison than from Yankeeland. Threats are freely uttered as to what methods will be resorted to to rid them of all "abolitionists" when the military shall have been withdrawn; and I state a fact that any Northern gentleman of "radical" sentiments who has ventured among the Southern people since the conclusion of the war will confirm, when I say that it is hardly more safe to differ in opinion from the prevailing Southern idea of the incapacity of the negro to-day than before the war. Any man who expects to go South and be able to express his opinion in favor of negro suffrage, and the right of the black to political equality with the whites, will be disappointed. The presence of the United States troops *may* protect him in the large towns and cities, but his life will be in constant danger wherever his sentiments are known and the protection of the soldiers is withdrawn.

This feeling of hatred toward Northern men professing "abolition" sentiments is not confined to any particular class. It appears to be as common among their best educated and more prominent citizens as among the less influential and most ignorant. As a general rule the women of the South exceed the men in the bitterness of their vituperation; and, singular to say, the clergymen of the different denominations vie with one another in the expression of the most bigoted, uncharitable, and unchristian denunciations of Northern character and motives; inculcating rather a spirit of revenge than the virtues of moderation and forgiveness. The young men

and women are almost unanimous in their animosity against the North; and the educators of the public youth, the professors in the different colleges and seminaries, manifest anything but a true spirit of loyalty and hearty acquiescence in the course of events.

The great and radical difficulty in the way of a perfect reconciliation between the people of the North and South appears to be the fact that, however much the Southerners may regret and deplore their folly in going to war, yet nearly all still believe sincerely that the *right* was on their side. In the language of one of their journals, "the *right* of secession, as a question, stands as it stood before the war; and the only thing in reference to it that is settled is the inability of the South to carry it into effect." Instead of recognizing their present sad condition as a just and well-merited punishment, brought on by their own rashness and presumption, the inhabitants of the Southern States are now wasting their time in useless regrets as to what is done and cannot be undone, or in worse than useless plans for effecting their purpose in some other manner.

It may as well be understood by the Northern people first as last that a genuine, loyal, Union sentiment, as it is felt and recognized at the North, is almost entirely unknown at the South. *Individuals* there are, without doubt, who sincerely acknowledge the benefits resulting from the union of these States; but the great body of the Southern people at the present time regard the national authority as an usurping military tyranny.

Far from being convinced that the close of the war was the death-struggle of State-rights, they look forward to a period when the United States shall have become involved either in a foreign war or in financial confusion to again assert and maintain their independence.

At the present time there is not the slightest reason to suspect the existence of any immediate design of again taking up arms against the national authority, yet it is plainly to be observed that no feeling is more earnest and deep-seated among the great majority of the Southern people than their desire to live apart from the North; and I have no doubt that the inhabitants of the Southern States to-day, if permitted to do as they please, would vote themselves out of the Union with even greater unanimity than in 1860. The stand-point from which they now regard the position of affairs differs decidedly from that occupied by the Northern people. Everywhere I found among their best educated and most cultivated citizens a firm belief that "the end was not yet." I have frequently been told with great emphasis that this nation could not hold together for five years under any circumstances. Their belief in the righteousness of their cause, and its expediency from a political point of view, appears to have been shaken very little by the surrender of their armies. There were many of the shrewder class of politicians at the South who opposed secession in its inception and progress not so much from opposition to the policy itself, as in view of the war and consequent disaster it would bring upon them. These men hoped by constantly agitating the subject to bring about their end without war; they believed they could in time convince the voters of the Western States that their interests lay rather with the South than the East, and this once accomplished they did not doubt that separation would follow peacefully. Now, by the process of events and the policy adopted at Washington, these men, from their original opposition to the *war*, not to *secession*, have become the advisers and guides of the Southern people.

This being the case, it is easily to be understood that the inhabitants of the South to-day are only prevented from manifesting their inclinations by the pressure of the national authority, exerted as it is by and through our military forces; and as soon as the soldiers are withdrawn, and the Southerners are permitted to speak and act as they please, it must be *expected* that the old spirit will again be exhibited. If they are impatient and restless now, what is to be hoped for when all restraint shall have been withdrawn? I repeat that I saw no reason, while in the South, to apprehend a second attempt at a *forcible* disruption of the Union, but I believe that we of the North must expect, and be prepared for, a steady, united, and persistent effort on the part of the Southern people to accomplish the dissolution of the present form of government, and the erection of a Southern confederacy, by and through other agencies than the bayonet. To what end is it to be supposed their organizations tend? So long as the will remains, and their minds and hearts are unchanged, so long will there be danger, constant danger, of an effort to attack the integrity and unity of this Government.

It would really appear as if it were impossible that opinions *could* differ as to the means to be employed to bring the South into a proper frame of mind. I believe that there would be but one sentiment at the North in regard to the subject, if all understood exactly what is the attitude of the Southern people to-day. What would be thought of the wisdom of an individual who, having been attacked by an assassin, had conquered him after a desperate struggle, and then not only assisted him to rise, but handed him back the weapon just aimed at his own life?

I have spoken of a class of Southerners who were in favor of secession if it could be brought about peaceably, but who opposed the *war* from the knowledge that it would tend, even if successful, to lower the value of their slave property, etc. These men to-day urge that had their ideas been adopted, separation would have been accomplished; and they allege that the mistake the Southern people committed lay *not* in the end they sought to attain, but in the *means* through which they sought to effect that end. Many among them feel assured that if, instead of secession, they had "fought for their rights" under the old flag, they would have secured the co-operation of many at the North, and, by revolutionizing the national Government, would have reconstructed it to suit themselves, leaving out New England and the more radical States of the North-west. These men have a more pernicious effect upon the minds of the Southern people than the leaders of the secession movement, many of whom are convinced that they are whipped for all time, and who bitterly hate all the advocates of peaceable secession, because they think that had they come forward at the critical moment and given their assistance, instead of hanging back and stigmatizing the movement as premature, the South would have been victorious in the struggle. For this reason and for others, I cannot but regard the policy of the Administration in refusing the late leaders of the Southern people any participation in reconstruction as unwise and impolitic. I am thoroughly of the opinion that such men as the Confederate Vice-President, Stephens, of Georgia, are prevented by the existing policy from doing much good which they feel inclined to do; while the men in power at the South, possessing infinitely less influence with the masses of the Southern people, are doing their utmost to *retard* the Union movement instead of accelerating it. If the present policy be persisted in, it will not be difficult to indicate a programme of operations which will be commenced so soon as the Southern representatives can regain their seats in Congress. From what I heard and saw in all parts of the South, it is safe to assume that one of the first steps to be taken will be a claim for compensation for every slave that has been freed, every rail that has been burned, and every peck of corn taken by Northern armies at the South. The national debt will be attacked either in front and without disguise, under the plea that, since the North has obliged the South to repudiate the Confederate debt, it is unfair to ask them to assume any part of that contracted to overwhelm them; or else a flank movement will be made in favor of a reduction of taxes and a low tariff. In one word, every effort of political intrigue will be exhausted to swamp our national credit, in the hope that in the confusion sure to ensue in case of their success, the Southerners may find an opportunity to effect their purpose.

Under these circumstances it would appear as though no other means *could* be adopted for the immediate future than the retention of a strong military force at the South and the diffusion of information among the masses of the Southern whites, in order that they may be *educated* into a belief that their true interests and future welfare require that they should remain *in* the Union and *of* it. The origin of the late war may be traced to the ignorance prevailing among the Southern whites in regard to the intentions of the North. That ignorance still remains in full force.

The educational influences which are now being exerted on the minds of the rising generation at the South, whether at home in the family, at school, or in society, are such as, unless they can speedily be done away with, or counteracted in some manner, must certainly render the future political leaders at the South as inimical to the federal Union as their predecessors.

No more certain method, in my opinion, can be adopted to render disaffection toward the national Government permanent, and keep awake the spirit of hostility toward the North, at present so painfully manifest in all parts of the Southern States, than the system of education as at present administered at the South. It is a matter of boast among the people that they hate the Yankees, and their children hate them worse still. I believe that a deliberate attempt is now being made to bring up the youth of the South to adopt as their first duty to one day reassert the heresy of State sovereignty. Ask almost any Southern boy under ten years of age what he intends to do when grown up, and he replies, "Fight the Yankees"—a remark sure to be applauded as an evidence of spirit.

Northern people may disregard this fact, and argue that time will soften the asperities and diminish the unkindness of the Southerners, but it was precisely this teaching and this feeling that made the late war possible, and so long as the people of the Southern States persist in inculcating the idea that the position of the South to-day is similar to that of Poland or Hungary, so long will an element of disaffection exist which may do much harm at some future time.

With regard to the future condition of the freedmen at the South, if left entirely to the mercy of the Southerners, it is not difficult to forecast their fate. They will be obliged, in one way or another, to work for a scanty pittance, punished mercilessly for the slightest infringement of whatever arbitrary and unjust laws may be imposed upon them, and if they attempt to better their condition, or resist the impositions practised upon them, they will be shot down like dogs. In many parts of the Southern country the position of the late slave is far worse than when held as a chattel, since then it was his master's *interest* to look after his health and physical well-being, while now the interest of his employer ceases at the moment he becomes unable from sickness or accident to render service in return for what he receives. It is the universal impression among Southerners that the negro is destined to extermination, and the desire to see the last of him is freely expressed. But while he yet remains among them they wish to obtain the full benefit of his service, and, as they have no idea of free labor, any attempt they make to oblige the black to work is, to a greater or less extent, based upon the old system of slavery. No stronger argument can be adduced in favor of maintaining a military force at the South, than the necessity of affording protection and assuring justice to the freedmen. The danger of insurrection among them, of which so much is heard at the present time, will be rendered less, so that the Southern people can hardly object on that score. But the fact is, that all fears of an extended, organized, and systematic uprising on the part of the blacks are merely the offspring of the excited imaginations of the Southern people, rendered more vivid by their knowledge of the wrongs the blacks endured.

As the attention of the American public at the present moment is in no small degree directed toward the question of the probable future supply of cotton, and the amount on hand in the Southern States at the conclusion of the war, I append the result of my investigations upon these subjects during the five months I passed in the cotton States.

I estimate the amount of old cotton in good condition at the termination of hostilities in the South as approximating eleven hundred thousand bales. To this must be added the crop of the present season, which I judge to be nearly a half-million bales, making the entire amount of cotton, old and new, in the country, available before the crop of 1866, to be about sixteen hundred thousand bales (1,600,000). Allowing that a very much larger amount has been concealed than was generally supposed, and, after making the most liberal additions for all possibilities, the amount of merchantable cotton in the Southern country from the 1st of May, 1865, up to the 1st of September, 1866, will still be less than two millions of bales.

As regards the future of cotton, so much depends upon what measures are adopted to regulate labor and restore order and tranquillity at the South, that it is unsafe to hazard an opinion with any degree of assurance. Up to a very recent period, I felt quite certain that the quantity of cotton to be expected next season would not exceed, if, indeed, it amounted to, one million bales; but in view of the great exertions which are being made by Northern capitalists, and the unexpected energy developed by many of the poorer class of Southern whites in prosecuting the cultivation of the staple, two millions of bales are within the limits of possibility. A. W. K.

Literature.

LITERARY NOTES.

In the present rage for collecting everything that relates to the history of America—Revolutionary, rebellious, local, general, and particular—when any scrap of engraving, printing, or coin that is connected with our great historical names and events calls forth the competition of apparently limitless purses, it is remarkable that one branch of national progress has been entirely neglected. We mean the illustration of American intellect, as exhibited in the printed literature of the country. No one has yet turned his attention to making a collection of books written by Americans. How scarce they become in a few years, and how difficult of access, may be seen by any one who takes a book like Duyckinck's "Cyclopedia of American Literature," and tries to consult the writings of almost any one of the minor authors there commemorated. He will soon find that neither public libraries nor book stores will afford much help, and for all practical purposes a large portion of what has been is almost as inaccessible as if it never existed. As an instance at hand, we notice in Dr. Gardiner Spring's lately published autobiography a list is given of his writings, amounting in number to about sixty distinct publications, including twenty-two octavo volumes. Probably no library in New York possesses a quarter of them. Of course, with books issued in provincial towns and country districts, the chance of their preservation is proportionably lessened. Perhaps there is something in the nomadic habits of our people unfavorable to the preservation of relics of this kind, for it is a curious fact that most of the rare American early printed books that grace the shelves of our collectors are procured from London, and, even after all the drafts made on that great reservoir, more curious things of this sort can be "picked up" in England than can be found here. What we would urge the collection of is not, however, books that lay claim to be rarities, but simply the original works that point out the prevailing currents of thought, and are identified with the intellectual movements of the country. That much of value exists unrecognized is certain. The history of no science can be written satisfactorily without a knowledge of the progressive steps of its advancement. John Stuart Mill says of a work on political economy, by John Rae, published in Boston in 1834, and never heard of by the present generation: "In no other book known to me is so much light thrown, both from principles and history, on the causes which determine the application of capital;" and other instances might be given. A complete collection of American educational works would be of great value and curiosity. In fact, in every pursuit that has engaged attention among us a perfect series of books is desirable. It is one of the latest discoveries of bibliography that there is no such thing as absolute rubbish—nothing, in fact, but what may have a value for some classes of enquirers, and consequently should not be allowed to perish.

—A new work by Henry Fawcett, professor of political economy at the University of Cambridge, and M.P. for Brighton in the new Parliament, has just been published by Messrs. Macmillan & Co.—"The Economic Position of the British Laborer." His "Manual of Political Economy" has lately reached a second edition. The pursuance of studies under so great an affliction as a complete loss of sight is of rare occurrence, and still more the appearance of any one so circumstanced in public life. Professor Fawcett was born in 1833, the son of a Wiltshire gentleman. He was educated at King's College, London, thence passing to Cambridge, where he obtained very high mathematical honors and graduated as seventh wrangler in 1856. He adopted the law as his profession, but ten years later his legal studies were interrupted by the peculiarly distressing accident whose consequences influenced his future life. In the autumn of 1858, Mr. Fawcett was spending the vacation at home, and, while engaged in partridge-shooting with other members of his family, he received two stray shots from his father's gun, each shot piercing the centre of either eye-ball and rendering him hopelessly blind. This lamentable occurrence made a change of pursuit necessary, and he consequently devoted himself to political economy. His election to the professorship of that science at Cambridge followed in 1863. It has been filled with singular honor to himself and with undoubted benefit to the university. As a public speaker, Mr. Fawcett has made a most favorable impression at several late meetings of the British Association. He contested the representation of Southwark and the borough of Cambridge previously to his triumphant return by the Liberal party at Brighton, whence he enters the new Parliament under the most favorable auspices, and will, undoubtedly, be heard of among the partisans of legislative progress.

—A reprint has just been issued by Messrs. Willis & Sotheran, of London, of a rare little tract, to which their attention was no doubt drawn by the similar undertaking of the late Mr. George Livermore, of Boston. It has often been said that the soldiers in Cromwell's army were each supplied with a pocket Bible, though no evidence existed to show what edition it could be. A short time since the tract in question was discovered, and is no doubt what every Commonwealth soldier was furnished with by the Government, though only two copies are now known to be in existence: one among the "King's Pamphlets" in the British Museum, and the other in Mr. Livermore's collection. It is entitled "Souldier's Pocket Bible, containing the most (if not all) those places contained in Holy Scripture which doe shew the qualifications of his inner man—that is, a fit Souldier to fight the Lord's Battels, both before the fight, in the fight, and after the fight;" London, 1643. Mr. Livermore printed privately a few copies for distribution among his friends of this curious relic of the Cromwellian era, including two copies on vellum, which were among the first specimens of typography on that material executed in this country. The London reprint is also a fac-simile, with an introduction by Francis Fry, the Biblical collector, and editor of the beautifully executed fac-simile edition of Tyndale's New Testament.

—"The Pictorial History of the Civil War in the United States," by Mr. Lossing, the author and artist, after long and careful preparation, is now passing through the press. The first volume will probably be issued in February. The great popularity and wide circulation of Mr. Lossing's "Field Book of the Revolution" suffice to show that the public appreciate

the unique combination of the pen and the pencil for which his works are remarkable. Volume I. of the "Pictorial History" will contain the early civil and military history of the conflict from the opening of the first scene in the Democratic Convention at Charleston, in the spring of 1860, to the close of the battle of Bull Run, in July, 1861. Its six hundred pages include more than four hundred illustrative engravings. About one hundred and fifty of these are portraits of prominent men on both sides—governors, generals, statesmen, etc. The remainder comprise views and maps of battle-grounds, forts, arsenals, ships of war, weapons, medals of honor, military costumes, and a great variety of other subjects, all helping the "education of the eye" in a knowledge of the material forces of the great conflict. The succeeding volumes will be issued with as little delay as possible consistent with their careful execution. The last will contain biographical sketches in dictionary arrangement of all the prominent actors in the war, loyal or disloyal, male or female, with fac-simile of the signature of each, an elaborate analytical index to the whole work, etc. The enterprise of the publisher, Mr. George W. Childs, of Philadelphia, has ably seconded the efforts of the author and artist. The "Pictorial History" will contain, when complete, two thousand illustrations, and will rank among the handsomest books ever produced in this country. The popularity of the subject, and the demand for books relating to it, continue unabated. For a "Naval and Military History of the Rebellion," issued by Messrs. D. Appleton & Co., mainly condensed from their "Annual Cyclopædia" for each year of the war, the publishers are said to have received, in a short space of time, orders for eighty thousand copies.

—The third volume of Prof. Rawlinson's historical work, "Five Great Monarchies of the Eastern World," is just published by Mr. Murray. One more volume will complete the work, and thus place within the reach of general readers the best résumé yet made of the results of archæological study in the East. The work shows how far the materials amassed by the labors of Sir Henry Rawlinson, Botta, Oppert, Dr. Martin Haug, Burnouf, Max Müller, Layard, and other scholars, both English and Continental, are available for the reconstruction of the historic past, and the reproduction of whole chapters in the world's record that had died out of human memory. The earliest Chaldean empire (an entirely new discovery, unknown to the ancients) and the monarchy of Assyria occupy the first and second volume of Prof. Rawlinson's work. They are derived almost entirely from monuments, inscriptions, ancient remains, etc. In the new volume, relating to the third and fourth empires, Media and Babylonia, firmer ground is reached, the narratives of the Greek historians by turns reflecting light on, and receiving elucidation from, the crumbling material fragments of vanished civilization that reward the diligence of the explorer. Among the interesting topics fully discussed are the religion of Zoroaster and its sacred book, the "Zendavesta," in its connection with the earliest phase of Aryan religious belief, as preserved in the Sanscrit Vedas, the extent and remains of ancient Babylon, the progress in astronomical science of its inhabitants, for which they were celebrated by all the nations of antiquity, etc. Not the least valuable portion of Prof. Rawlinson's book is its richness in illustration, the three volumes containing nearly six hundred drawings of Assyrian, Chaldean, and Babylonian antiquities. The fourth and concluding volume will comprise the ancient empire of Persia, and complete the survey of Eastern dominion ere the sceptre passed to European hands.

—In the absence of stirring literary news at home, the French papers abound in gossip respecting the illustrious exile, Victor Hugo, who is now made the theme of more *canards* than any writer since Lord Byron. He is said to have received from his Brussels publishers a sum equal to 150,000 francs for the forthcoming book, "Les Travailleurs de la Mer;" and for a series of volumes of poems, "Les Chansons des Rues et des Bois," the first of which was lately published, 40,000 francs per volume for twelve years' right of publication. The Brussels edition of this first volume consisted of three thousand copies, and that printed under the same copyright for the Paris market of ten thousand. As his gains by "Les Misérables" are said to amount to nearly half a million of francs, the sum total of his receipts reaches a very respectable "figure." His literary activity keeps pace with the public eagerness, and a new book by Victor Hugo, the incidents of which are laid in England, to appear simultaneously in French and English editions, has already been secured by an eminent London publishing firm. "Les Travailleurs de la Mer" will be issued in an American translation by Mr. Carleton, the publisher of "Les Misérables."

—The relics of pre-historic races so abundantly found in Central France, and famous for the information they afford respecting a fauna and a human population formerly existing in that region under conditions that mark a very early stage in man's history on the earth, are about to receive due illustration in a work devoted to the subject. It is entitled "Reliquiæ Aquitanicæ, being Contributions to the Archæology and Palæontology of Perigord and the adjoining Provinces of Central France, by Edward Lartet and Henry Christy." It will contain numerous well-executed plates of the weapons, tools, and ornamental work in stone, bone, and horn of the prehistoric cave-dwellers of Perigord, also of the osseous remains of contemporaneous animals. The work will form about twenty parts in quarto, each containing six plates and letter-press. Another important ethnological work may be mentioned as relating to a different branch of the same class of enquiries, "The Oriental Races and Tribes Resident and Visitors of Bombay," a series of photographs with letter-press descriptions by William Johnson, of the Bombay Civil Service. It is magnificently issued in folio, at five guineas per volume.

—Though scarcely a purely literary topic, yet, as connected with books and interesting to a large class, a brief mention may appropriately be made here of the new system of reporting the legal decisions of the English courts, adopted with the sanction of a council of the most distinguished members of the profession, headed by the Attorney-General, Sir Roundell Palmer. The evil attempted to be remedied is one of long continuance and growing inconvenience. The number, expense, unofficial character, and imperfections of the rapidly increasing series of legal reports which every lawyer must keep up with, has been an acknowledged grievance for more than a hundred years past, and the principle of unchecked competition rather increased the mischief. At the present time there are fourteen distinct sets of reports in progress of the various courts, costing about £30 per annum, and produced without any uniformity of principle. The gentlemen connected with eleven of these series have accepted appointments under the council, who undertake to issue a complete and carefully prepared set of reports by the most able and experienced reporters, under independent professional control, published with expedition, regularity, and uniformity, at the moderate price of five guineas per annum. The details of the plan are given in the announcement of the council, and appear to be well considered and adapted to the wants of the legal profession. The reports will be issued in three divisions: I., the Appellate; II., the Common Law; and III., the Equity series, either of which may be separately subscribed for. They will be issued in monthly parts, and will include copies of the statutes of each session relating to the law that are important to practitioners. A weekly publication, called *The Weekly Notes*, will be continued during the sitting of the courts. They will consist of short notes of the decisions in the several courts in each week, and will include points of practice. They are intended for information to the profession as to the current decisions, and not for citation as authority.

—To all persons of confirmed literary taste catalogues of books are pleasant reading, both from the facts that they convey and the associations suggested by the articles which they contain. Turning over some of the late lists of the London old-book sellers, it is amusing to note the curious articles on sale, and the money value of each, determined, of course, by the practical rule of supply and demand, and often with results seemingly incongruous if judged by any more refined standard. Thus, a relic that would be worthy of a place in the most select library—an edition of the Greek poet, Lycophron (Geneva, 1601), "rendered famous by having been once the property of the immortal Milton, who has inscribed on the fly-leaf, Sum ex Libris, Jo Miltoni, 1634, and has also added a considerable number of notes on the margin," is valued at the not immoderate sum of £52 10s. by its possessor, Mr. Ellis, of King Street, Covent Garden. The same enterprising dealer has a copy of the much-coveted "First Folio Shakespeare" (1623), apparently above all price, as none is mentioned. It is described as "one of the finest copies extant, not excepting that of Miss Burdett Coutts, which cost her £787, and in one respect the most desirable copy known, being the only one existing in old morocco binding of the commencement of the last century. It is preserved in a case made from the wood of Herne's oak, in Windsor Park, carved with the poet's arms and monogram." Another dealer offers a volume, "Gesneris Mithridates" (1555), "with two lines autograph and signature on the title, su. Ben Jonson, and remarkable passages underlined by the dramatist," for £3 13s. 6d., and a presentation copy of Burke's "Reflections on the Revolution in France" (1790), with the autograph inscription, "From the author, with great respect, to Miss Goring, E.B.," for £1 6s. Coming down to later times, we see in another catalogue a volume of original manuscripts of the late Thomas Hood, "a most interesting collection, entirely in the handwriting of the eminent poet and humorist, containing a variety of his published and unpublished writings, all in the finest preservation, mounted and inscribed with great care and nicety in a royal folio volume," valued at £26 5s., and a French work, "Costumes Françaises—Civils, Militaires, et Religieux," "formerly in the possession of

W. M. Thackeray, and containing original designs by him, presenting all the vivid life and character so peculiar to his pencil," estimated at £12 12s. These specimens are enough to prove that if relics of saints are at a discount, the current prices of relics of literature show no symptoms of a falling market.

—Mr. Frank Buckland, the worthy son of an eminent father, Dean Buckland, the great geologist, has in press a third series of his "Curiosities of Natural History," in two volumes post octavo, with illustrations, to be published by Mr. Bentley. Mr. Buckland's exertions for the promotion of pisciculture and the increased production of fish have won him the friendship of all lovers of the angle. It may interest many of them to know that he will shortly appear as editor of a new magazine to be called "Land and Water," dealing with the various sports of field and foam. With this magazine will be incorporated "The Fisherman," a monthly periodical conducted by Mr. Cholmondeley Pennel, so as to make it the organ of all devotees of the gentle sport.

CHASTELARD.*

"CHASTELARD" is not destined, in our judgment, to add to the reputation of the author of "Atalanta in Calydon." It has been said—we know not on what authority—that it is an early production, which the author was encouraged to publish by the success of the latter work. On perusal, this rumor becomes easily credible. "Chastelard" bears many signs of immaturity. The subject, indeed, is one which a man might select at any age; but the treatment of it, as it seems to us, is that of a man still young. The subject is one of the numerous flirtations of Queen Mary of Scotland, which makes, like so many of the rest, a very good theme for a tragedy. A drama involving this remarkable woman has, by the fact of her presence alone, a strong chance of success. The play or the novel is half made by the simple use of her name. Her figure has been repeatedly used, and it is likely it will continue to be used for a long time to come; for it adapts itself to the most diverse modes of treatment. In poetry, after all, the great point is that the objects of our interest should be romantic, and from every possible point of view Queen Mary answers this requisite, whether we accept her as a very conscientious or as a very profligate woman; as a martyr or simply as a criminal. For the fact remains that she was supremely unhappy; and when to this fact we add the consideration that she was in person supremely lovely, that she embodied, if not all the virtues, at least all the charms, of her sex, we shall not be at loss to understand the ready application of her history to purposes of sentiment. And yet, whoever takes her in hand is held to a certain deliberate view of her character—the poet quite as much as the historian. Upon the historian, indeed, a certain conception is imposed by his strict responsibility to facts; but the poet, to whom a great license is usually allowed in the way of modifying facts, is free to take pretty much the view that pleases him best. We repeat, however, that upon some one conception he is bound to take his stand, and to occupy it to the last. Now, the immaturity of Mr. Swinburne's work lies, if we are not mistaken, in his failure to make very clear to himself what he thought about his heroine. That he had thought a great deal about her, we assuredly do not doubt; but he had failed to think to the purpose. He had apparently given up all his imagination to his subject; and, in so doing, had done well; but it seems to us that in this process his subject had the best of the bargain; it gave him very little in return.

Mr. Swinburne has printed at the beginning of his play a short passage from that credulous old voyager, Sir John Mandeville, wherein he speaks of a certain isle toward the north, peopled by beautiful and evil women with eyes of precious stones, which, when they behold any man, forthwith slay him with the beholding. The author's intention, then, has been to indicate a certain poetic analogy between these fatal syrens and his heroine. The idea is pretty; the reader makes the *rapprochement* and proceeds; but when, as he advances in his reading, it dawns upon him that it is upon this idea, as much as upon any other appreciable one, that the tragedy rests, he experiences a feeling of disappointment which, we are bound to say, accompanies him to the end. He recurs to the title-page and finds another epigraph, from Ronsard, which the author has very prettily translated in the body of the play;

> "With coming lilies in late April came
> Her body, fashioned whiter for their shame;
> And roses, touched with blood since Adam bled,
> From her fair color filled their lips with red."

The reader's growing disappointment comes from his growing sense of the incompetency of any idea corresponding at all exclusively with these poetic fancies to serve as the leading idea of the work. Out of this disappointment, indeed, there comes a certain quiet satisfaction; the satisfaction, namely, of witnessing the downfall of a structure reared on an unsound basis. Mr. Swinburne, following the fashion of the day, has endeavored throughout his work to substitute color for design. His failure is, to the reader's mind, an homage to truth. Let us assuredly not proscribe color; but let us first prepare something to receive it. A dramatic work without design is a monstrosity. We may rudely convey our impression of the radical weakness of "Chastelard" by saying that it has no backbone. The prose of the poetry just referred to—that salutary prose which, if we mistake not, intervenes between poetic thought and poetic expression—is that Mary was superlatively fascinating to the sense and superlatively heartless. To say, in poetry, that a woman slays a man with her jewelled eyes, is to mean in prose that she causes every man to love her passionately, and that she deceives every man who does love her. As a woman of this quality, if we fully disengage his idea, Mr. Swinburne accepts Queen Mary—in other words, as a coquette on the heroic scale. But we repeat that this idea, as he handles it, will not carry his play. His understanding of Mary's *moyens* begins and ends with his very lively appreciation of the graces of her body. It is very easy to believe that these were infinite; it was, indeed, in Mr. Swinburne's power to make us know absolutely that they were. It were an impertinence to remind him how Shakespeare makes us know such things. Shakespeare's word carries weight; he speaks with authority. The plot of Mr. Swinburne's play, if plot it may be called, is the history of the brief passion aroused by Mary in the breast of the French adventurer who gives his name to the work. He has followed her to Scotland and keeps himself under her eye; she encourages his devotion, but, meanwhile, marries Darnley. On the night of her marriage he makes his way into her presence, and she makes him half welcome. Thus discovered, however, in the *penetralia* of the palace, he is arrested and cast into prison. Death is the inevitable result of his presumption. Mary, however, by a bold exercise of her prerogative, pardons him and sends him an order of release, which, instead of using, he destroys. Mary then visits him just before his execution, and, in a scene which appears to us an equal compound of radical feebleness and superficial cleverness, finds him resolved to die. The reader assists at his death through the time-honored expedient of a spectator at a window describing the scene without to a faint-hearted companion within. The play ends with these pregnant lines:

> "Make way there for the lord of Bothwell; room—
> Place for my lord of Bothwell next the Queen."

There is, moreover, a slight under-plot, resting upon the unrequited passion of Mary Beaton, the queen's woman, for Chastelard, and upon her suppressed jealousy of her mistress. There is assuredly in all this the stuff of a truly dramatic work; but as the case stands, it appears to us that the dramatic element is flagrantly missed. We can hardly doubt, indeed, that there was an intention in the faint and indefinite lines in which all the figures but that of the Queen are drawn. There is every reason to suppose that Mr. Swinburne had advisedly restricted himself to the complete and consistent exhibition of her character alone. Darnley, Murray, and the four Marys are merely the respective signs of a certain number of convenient speeches. Chastelard, too, is practically a forfeit, or, rather, he and Mary are but one. The only way, in our judgment, to force home upon the reader the requisite sense of Mary's magical personal influence was to initiate him thoroughly into its effects upon Chastelard's feelings. This, we repeat, Mr. Swinburne has not even attempted to do. Chastelard descants in twenty different passages of very florid and eloquent verse upon the intoxicating beauties of his mistress; but meanwhile the play stands still. Chastelard is ready to damn himself for Mary's love, and this fact, dramatically so great, makes shift to reflect itself in a dozen of those desperately descriptive speeches in which the poetry of the day delights. Chastelard is in love, the author may argue, and a lover is at best a highly imaginative rhapsodist. Nay, a lover is at the worst a man, and a man of many feelings. We should be very sorry to be understood as wishing to suppress such talk as Chastelard's. On the contrary, we should say—let him talk as much as he pleases, and let him deal out poetry by the handful, the more the better. But meanwhile let not the play languish, let not the story halt. As for Mary, towards whom the reader is to conceive Mr. Swinburne as having assumed serious responsibilities, we may safely say that he has left her untouched. He has consigned her neither to life nor to death. The light of her great name illumines his page, and here and there the imagination of the cultivated reader throbs responsive to an awakened echo of his own previous reading. If Mr. Swinburne has failed to vivify his persons, however, if he has failed to express his subject, he has at least done what the unsuccessful artist so often turns out to have done: he has in a very lively man-

* "Chastelard. A Tragedy. By Algernon Charles Swinburne." New York: Hurd & Houghton. 1866.

ner expressed *himself*. "Atalanta in Calydon" proved that he was a poet; his present work indicates that his poetic temperament is of a very vigorous order. It indicates, moreover, that it is comparatively easy to write energetic poetry, but that it is very difficult to write a good play.

THE FATHER OF THE AMERICAN REVOLUTION.*

In furnishing these three fair and admirably wrought volumes as a biography of his kinsman, Mr. Wells has rendered a high service to truth, and has established claims too well-grounded ever to be questioned, in behalf of a man of the loftiest make and of the amplest usefulness to stand henceforward first on the roll of honor as the father of the American Revolution. We have not a single abatement on the score of criticism by which to reduce our gratitude to Mr. Wells for a grateful and needed public service. There can be no question that until Mr. Bancroft, even in his enthusiastic representation of the character and work of Samuel Adams keeping within the limits of sober truth, had informed readers of this generation what a conspicuous part he had so nobly performed, that wise patriot and high-souled man had failed of his just meed of fame. The felicity of Mr. Wells's opportunity, and equally so of the mode in which he has improved it, lies in this fact, that the means existed for securing late justice to Samuel Adams, without any ingenuity of special pleading, any contesting by argument or detraction of the claims and services of other men. There certainly is in the tone and reasoning of the biographer a spirit of assertion and vindication, but it is a most honest and manly spirit of standing for the truth of history. And his arguments are facts. They are presented with calm dignity and with a beautiful candor. He need fear no contestant. With the manifold and cumulative evidence left in the wreck of a once immense amount of original documents, he had in his hands, or was able to gather from a wide distribution among autograph collectors, the means for the most successful accomplishment of the task he had undertaken.

We confess, ourselves, that with such information as we had drawn from our common historical and biographical literature, we had not only failed to appreciate the character and services of Samuel Adams, but had almost taken up the shadow of a prejudice against him. True, one may quote from his contemporaries, as Mr. Wells has done, generous encomiums and specific tributes of homage and gratitude bestowed by them upon him. But some of these are qualified and balanced by drawbacks. His own kinsman, John Adams, has written in his diary and letters sentences of noble eulogy about him, and might even be regarded, on the strength of these utterances, if they stood alone, as asserting for the elder patriot the full preeminence which he will henceforward enjoy. But he, too, is sometimes unappreciative if not niggardly in his praise, and, from some unexplained cause of alienation, failed to sustain his wise and fostering friend when he was the victim of a temporary and not deserved unpopularity. As a general statement, it must now be affirmed that up to the publication of these volumes that elder patriot did not stand on the record, nor in the hearts of his living countrymen, as the chief representative and most able and devoted pioneer and agent of the cause of American independence. To that lofty honor he is entitled.

It suited the ends of the abettors and minions of arbitrary power in the interest of the British ministry, and, we are sorry to have to add, it favored the calculating and timid policy of some of Adams's colleagues in the first two Continental Congresses, to represent him as a scheming and self-seeking demagogue. His poverty, it was said, secured him from the risk of any personal sacrifice, and his rigid Puritanism was but the mask of an unscrupulous and hard hypocrisy.

The circumstances of the times, and the method by which Samuel Adams prepared and trained the minds of the people, particularly through caucuses, town-meetings, speeches, and a skilful use of his pen in newspapers, for slowly maturing results which he foresaw and they did not, made it very easy to affix upon him the character of a demagogue as his repute among strangers, especially for the ministerial party in England. And the character of a real demagogue is as odious to us now, in this republic, as it was then to the king and ministry. It has taken exactly a complete century to draw out the full difference for our apprehension between what Samuel Adams really was and what his enemies represented him as being. What New Englander of mature years but can call up before him the image of a village politician, a party manager, a lobby waiter, or a Congressional log-roller filling out the fullest reality of the demagogue? To men in authority, especially with lucre, conceit, and patronage as its concomitants, Adams seemed to exhibit some of the phenomena of that hateful character, and their prejudices or fears supplied the rest. They knew of him as neglecting all thrifty business; as poor and, indeed, insolvent; as seeming even to neglect his family; and as always on hand as manager and adviser in mischievous machinations; as hanging round ship-yards, and loitering with mechanics, and forming clubs, and distributing inflammatory documents; and then appearing in a sham humility and unobtrusiveness on public occasions, as if to engage in an unprejudiced discussion of matters, a decision on which he had cunningly anticipated by a sly indoctrination of his tools and fellow-demagogues. So Adams seemed to Hutchinson—perhaps even to men better than Hutchinson, and certainly so to some who were much worse than he. Indeed, the wisest and shrewdest contemporary of the noble patriot would hardly have risked a wager upon the likelihood of his coming at last to a halter or to a bronze statue. It is not strange, when all the facts of the case are considered, that the shadow of the obloquy and the hate which the enemies of Adams so sneeringly vented against him during the ten years preceding the Declaration of Independence, should have, in a measure, clung to him ever since. He was always poor. He did neglect worldly thrift. He was sagacious and cautious and temporizing in a way to suggest the possibility of slyness. He could keep the secrets of two sets of enemies from each other, and so, on occasion, to those who did not know the rigor of his virtue, he was an object of their common distrust.

We can but briefly and imperfectly sketch the real man, and we attempt it for the same reason for which we have written the preceding paragraphs, viz., to make our readers, especially young men, sharers in the tribute of gratitude which we owe to Mr. Wells for his laborious and almost faultless work, and, through the means afforded in its pages, sharers in the venerating regard due to its great subject.

Samuel Adams passed through his eminent and useful career with unsullied integrity, with unselfish devotion to others, incorruptible by bribes and flatteries, by which he might easily have won a fortune and a noble title. He was a Christian man of the highest type; devout, God-fearing, scrupulous, consistent; and softening down the Puritan style of his piety only to reduce the old rigidness and obtrusiveness and intolerance once associated with it, without abating from its penetrating thoroughness of sincerity in heart and life. He was simple in manners and mien, and frugal, as both necessity and principle induced him to be, in household economy. He was a most faithful and endeared father, husband, and friend. He was richly furnished with inward resources of conviction, patience, forbearance, self-mastery, and skill in reading and dealing with humanity. Often had he to draw on these resources for his own guidance and comfort alike amid friends and foes.

His lineage, like that of Franklin, was drawn through a parentage of the good old Massachusetts and Boston stock of thrifty but frugal households, of humble and self-supporting men and women. He was born in Boston September 16 (O. S.), 1722, and graduated at Harvard in 1740. On taking his master's degree, three years afterwards, he maintained the right of popular resistance to arbitrary rule, a thesis the practical demonstration of which was to be the endeavor and the full accomplishment of his life. Turning away from the study of law which he had begun, he entered his father's counting-room as his assistant. That father's business was brewing. Embarrassments of various kinds prevented that parent's success in trade, but he sustained an honored position in the community, and was one of the representatives of Boston in the General Court. The son was active in forming a political club and in the establishment of a newspaper for political discussion. The year of the Stamp Act, 1765, just a century ago, marks the commencement of his real work, for which all before had been wise and effective preparation. He was just at the right age at the crisis when a mind and character like his were needed to lay wisely and to conduct vigorously measures which looked far on into years for their full fruitage, and required the most cautious and temperate dealing, lest the grand result to be aimed for should be perilled.

With a most practical insight into the tendency and the irresistible consummation of the measures instituted by the British ministry, through the counsels of Bernard and Hutchinson, to bring the Colonies under a thraldom to Parliament which would be undistinguishable from absolute servitude, he followed the progressive encroachments step by step, and educated his townsmen first, then the people of his own province, and, finally, the people of the twelve other provinces, to prepare for resistance. It was an irritating truth, which he expressed in homely terseness of phrase, that from the first date of their recognition as being in existence, "England had rather milked than suckled her American colonies." In none of our histori-

* "The Life and Public Services of Samuel Adams. Being a Narrative of his Acts and Opinions, and of his Agency in producing and forwarding the American Revolution. With Extracts from his Correspondence, State Papers, and Political Essays. By William V. Wells." Boston: Little, Brown & Co. 1865. 3 vols.

cal volumes so graphically as in these before us does the fatuity of the course pursued by the mother country present itself to the reader, and this effect is wrought by the progressive development of the controversy as pursued stage by stage in the admirably written papers of exposure, protest, and remonstrance by Samuel Adams. He appears to have been a diligent reader and an intelligent digester of the works on constitutional law which were then accessible. He rarely adorned his pieces with rhetorical art, but he always crowded them with sagacious and practical matter level to the comprehension of the common people.

The quality of the man is most strikingly displayed when we consider the sort of service to be done in his generation, the sort of influence to be exerted and extended over an ever-widening space of population and territory, and his marvellous adaptation to the emergency of time and work. Each of the most effective measures and plans, beginning ten years back from their culmination in the Declaration of Independence at Philadelphia, was initiated by him. He was the inventor and deviser of them all, without a single exception. The evidence of this exalted claim, as rightfully maintained for him, is spread over these volumes and presented with generous zeal and a cogent force by Mr. Wells. Looking back along the line through which the historical development advanced, we discern one by one the links of the chain of events; we see how patiently they were wrought, how thoroughly they were welded, how firmly they were united. With a calm and resolute self-possession and an absolute "mastery of the situation," did this noble and far-sighted patriot keep his gaze upon the future and do heroically and wisely the exacting duty of each passing hour. He deliberated cautiously over each step and effort. His moderation was never surprised into haste, or even into ardor, through impatience or heated zeal. In no single instance through the weary and intricate controversy can we find a token of rashness, or judge that he went too fast or too far. His shrewd maxim was, always to keep his opponents in the wrong. And from time to time, at intervals just long enough to apply the test of trial, he compelled them to confess that they had been wrong, either by their own retraction or by facing the mischievous results of their obstinacy. He educated his own fellow-citizens, and even many leading men over the whole country, to contemplate the inevitable necessity of war if they would avert subjugation. And he wrought this critical process without hurrying them or frightening them by his over-activity or by any passionate recklessness. He sought out young, earnest, enthusiastic, and yet trustworthy associates; he won their confidence, he engaged their co-operation, and he inspired and guided them. He guarded carefully against internal treachery, leaky confidants, and plausible compromisers. Modest and unobtrusive, indifferent to public honors, hating display, he always yielded the precedence to others whose aims were the same as his, and he allowed tributes and honors which were most fairly his own to be attached, without protest or challenge by himself, to less scrupulous claimants. He was indubitably the first man in America to foresee, and the first in the privacy of his own conviction to believe, that the issue would come to open war; and that if the people were faithful to themselves the opportunity would be offered to them of constituting themselves the most privileged and prospered nationality on this earth. But he kept this vision to himself till others reached his own point of view. The grand and exacting aim which tried his sagacity and in which his consummate genius fully triumphed, was to feel after till he found, and then with delicate care to strengthen, a bond of sympathetic union between the people of all the colonies, which, when they themselves recognized it, would bring them into co-operation, would combine them in resistance and harmonize their measures and plans. This delicate task was to be done among people previously divided by alienation and feuds, on which the British ministry largely relied to prevent the great accomplishment on which Samuel Adams had resolved. His large correspondence at home and abroad, of which we have but fragments, and his newspaper articles and the public documents from his brain and pen, are proud memorials of his unrivalled and single devotedness and of his successful championship of a triumphant cause.

We commend the volumes before us to our young men, and to their parents. They will pledge their readers to patriotism and virtue.

WHEELER'S DICTIONARY OF THE NOTED NAMES OF FICTION.*

The shadowy "beings of the mind" are by no means, indeed, the most unreal of things. In truth, in several respects they are the most real of all. They are certainly apt to be *realized* to the mental apprehension with a no less vividness, intensity, and distinctness than belong to things in the world of fact. What does it matter to the inmates of the nursery whether or not Jack the Giant Killer ever had actual existence? And just so is it in after years with our Robinson Crusoe, our Hamlet and Macbeth, our Jeanie Deans and Captain Dalgetty. Then, as forces in the intellectual, moral, and social world, their potency and sway are not inferior. As regards durability and permanence, the products of the imagination have greatly the advantage. How often in these days are we called upon to abandon and wholly reverse our most firmly established and previously unquestioned ideas of historical personages and events? Our fondly cherished idols are rudely broken down or transformed to vileness, or some hideous monster in our previous estimation is presented for our reverent worship or loving embrace, unless, perchance, conflicting theories, equally well-supported, leave us nothing whatever to which we can hold.

The character and story of Henry VIII. may undergo the most surprising metamorphoses—changes so striking that we shall with difficulty know the new personage under the old name—but the Blue Beard of the nursery tale is quite beyond the reach of disturbing critics. Much more is it true that, in the realm of fiction, so-called, a thing of beauty is, literally, a joy *for ever*. Then, as giving the real truth of things in actual life, the characters in fiction which genius brings forth as types of distinctly marked classes, and as the presentment in strong relief of peculiar traits and phases of humanity, have a special value which does not always attach to historical personages, and especially to the imperfect and erroneous record of them which is all we can ever hope to have.

Now, we have long had what the Germans call *real*-encyclopædias, with dictionaries of biography, cyclopædias of agriculture, and what not; but Mr. Wheeler's is the very first attempt at a dictionary of fiction. The idea was a happy one, and what now strikes everybody with wonder is that it was never conceived and carried out before; but the wonder ceases in a good measure when we consider the difficulty of the task. It was a fortunate thing for the undertaking that it should fall into so good hands. Dictionary-making has been Mr. Wheeler's occupation for some years in connection with the works of Worcester and Webster; and his habits of diligence and thoroughness, with his good taste and scholarly culture and acquirements, have exceedingly well fitted him for this work of his own origination. But he has not labored in the execution of it without assistance. He has industriously sought and largely received contributions from literary friends, and from some whose pursuits eminently qualified them to render such assistance.

The vocabulary, of the same general description, included in the appendix to the late edition of "Webster's Dictionary," is the basis of this volume. This contains, however, nearly seventeen hundred new articles, and more than a thousand new and apt citations, besides the addition of certain peculiar features which materially enhance its value. The work is limited to proper names, but includes within its scope not merely the heroes of classical poetry and prose romance, but those which figure in the old legends and ballads as well as in the popular mythologies and superstitions. To hunt up these, as the author has done, and to give us what is to be ascertained of their origin, must have been no light labor. The book will be found, we think, on full trial to be more nearly complete in its comprehensiveness, and far nearer to perfect accuracy in detail, than could have been anticipated in regard to a first work of the kind.

Literature is full of allusions such as this book aims to explain, and of which the larger part are but half understood by ordinary readers, while the best-read and best-informed will often have occasion to welcome the assistance here offered. In fact, now it is furnished, the volume must be reckoned an indispensable hand-book for all who read at all. How often, indeed, do writers and speakers themselves employ a stereotyped allusion, as, for instance, to the purse of Fortunatus, without actually knowing what it means! And who can afford to stumble on year after year, hearing or reading such things with but a faint comprehension of their meaning and force, now that the means of accurate information are made ready to his hand? What was the "Minerva Press;" who "the veritable Jenkins;" who was "Old King Cole;" who were the "two Kings of Brentford;" who the "Cambuscan bold;" who and what the "Vicar of Bray?" What do we mean when we speak of ranting "in King Cambyses' vein;" of "outdoing Termagant," "out-heroding Herod," "dining with Duke Humphrey," and the like? Such allusions had once all the freshness and life of such as are now made to things rife and passing; but, as handed down, they inevitably get worn, faded, and comparatively empty, and sometimes are a *vox et præterea nihil*. If we keep them in use, we want the means of reviving as well as we can their freshness; at any rate, we want to understand those who used them in their original newness.

* "An Explanatory and Pronouncing Dictionary of the Noted Names of Fiction; including also familiar Pseudonyms, Surnames bestowed on Eminent Men, and analogous Popular Appellations often referred to in Literature and Conversation. By William A. Wheeler." Boston: Ticknor & Fields. 1865. 12mo, pp. xxxii., 410.

A very valuable feature of the work is that which concerns the orthoëpy of the names. The author has been at great pains to determine the proper pronunciation, and employs a scheme of notation well fitted for his purpose; he has also a few pages of explanations on some of the nicer points of English pronunciation, but more especially on peculiarities of languages foreign to the English; indeed, we know not where else is to be found so complete and succinct a view of the phonological peculiarities of the leading languages of Europe. Perfect agreement upon nice points in phonetics is a hopeless thing; but we think the manner in which this part of the work is done will give general satisfaction to intelligent phonetists; and it will not be deemed a superfluity by any who value accuracy in pronunciation. Even those who will not care to employ the Spanish pronunciation of Don Quixote or Don Juan will like to be informed what it is; and for those foreign words which no well-bred person would ever think of uttering in any other than their proper national fashions, the author's guidance may be safely followed. His long familiarity with this subject, and his habit of doing nothing by halves, have made him very thorough in this matter.

We must not pass without mention the supplementary index of real names with pseudonyms attached, nor omit the word of especial commendation which the book deserves as a rare specimen of accurate typography.

POEMS BY DAVID GRAY.*

Since Lord Houghton published the "Life and Letters of John Keats," and revealed the ardent growth of that young poet's genius in all its pathos and sorrow, a peculiar tenderness has been felt toward all young aspirants for literary fame, and the result is that many men have printed verses who had only poetic feeling, which they mistook for poetic power. They were ambitious young men who struggled up from narrow circumstances with the brave purpose of making the world listen to them. Such was Ebenezer Elliott, the corn-law rhymer; such are Alexander Smith, Philip James Bailey, and Sydney Dobell; and such was David Gray. The essential characteristic of these men is always a strongly subjective and undisciplined power. But though feeling is a prime condition in a poet, and the highest poetry will reveal clearly the poet's soul (as Wordsworth's, for example), there is far more than this necessary to the making of a Tennyson or a Browning. It requires much discipline in the merely mechanical work of verse-making, a wide range of general knowledge, accurate observation of nature, something of Shakespeare's insight into men, and, finally, the conscious reticence of power, to make a great poet; and when judged by any such standard, all these poets fall miserably below it.

In David Gray's case it may be cruel to apply the scalpel, but, after reading this volume through carefully, we can assign it almost no place in poetical literature. His poetry has all the faults of what has been aptly called the spasmodic school. "The Luggie," his longest poem, celebrates the beauties of the little stream by which he lived and died, but it had no adequate revision, and many of its lines halt in measure or are disfigured by words which convey more sound than sense and are not poetical. Such are "*dilucid* air," "being *undeflowered*," "the *saponaceous* loam," "fair *delapsion*," and "the *sarcenent* mists." Then, further, there is nothing completed. We have looked through "The Luggie" in vain for a single picture, such as you often find in Keats and Shelley, which we could quote. There are none. He labors and strains for language, as Keats sometimes does, and this makes the poetry harsh and unmusical. This poem is in the vein of Thomson's "Seasons," and what Gray wrote, "When I read Thomson I despair," is precisely our feeling on comparing the two poets. We despair of Gray. His "Luggie" is not nearly so good poetry as the "New England Seasons," which Percival wrote at sixteen and which his friends have thought not worth publishing.

The other poems in the volume are a series of sonnets, "In the Shadows," which are chiefly personal, written when disease lay heavy upon him, "Poems Named and Without Names," and "Miscellaneous Sonnets;" but their only value is their promise. He writes most naturally about the simple pleasures and associations of his childhood, as in "The Luggie," though the sonnets show greater accuracy in versification and more poetic power.

But the story of his life as the record of manly endeavor has far more value than his poetry. He was born on the 29th of January, 1838, on the banks of the Luggie, about eight miles distant from the city of Glasgow, the son of a Scotch hand-loom weaver. He was a self-educated lad, and was intended for the ministry in the Free Church of Scotland. Early in life he found delight in poetry, and "devoured the poets, from Chaucer to Tennyson." These awakened in him a poetical ambition, which first shone out in the Glasgow *Citizen*, a paper which was the first to herald that late Scotch luminary, Alexander Smith. Then he took fresh courage and ventured a literary life in London, where he met with kind favor at the hands of Lord Houghton, but was soon stricken down by incipient consumption, and died a year later, December 3, 1861, at his home in Merkland, the day following his sight of a specimen-sheet of his Luggie. He passed away tranquilly, almost his last words being, "God has love and I have faith." It is the story of his struggle to be heard—from his quiet cottage home up through London mendicancy to the recognition by literary men—pathetic and tragic, that imparts interest and value to the book. Few young men ever had kinder words spoken of them after death than David Gray. First, there is a carefully written introductory notice by Lord Houghton; next, a memoir by James Hedderwick, himself one of the minor Scottish poets; and, lastly, final memorials, charmingly written by Robert Buchanan, whose "Poet Andrew," in the "Idyls and Legends of Inverburn," is the poetical rendering of young Gray's life. These two were sworn friends, but Buchanan has the brighter genius and promises much for Scotch poetry. In closing this notice we think instinctively of the late George Arnold, a poet of much higher rank than Gray, but who was stricken down, like him, in all his young promise. Aside from the poetical value of this book, which is so slight, it would be well if the legion of young literary aspirants about us would read both the memoirs and the poems. They would learn that there are higher things in life than the writing of poetry or posthumous fame; and the sad story of Gray's life would cure many of scribbling verses.

* "Poems by David Gray. With Memoirs of his Life." 16mo, pp. 239. Boston: Roberts Brothers. 1865.

TWO BOOKS TOO MANY.*

Mr. Calvert won a little note, some years ago, by his essay on "The Gentleman," which is now reprinted in a third edition, and the fact that he did win this note by so slight an effort is an encouraging proof that it is exceedingly easy to achieve renown in this country. We seem to have, as a generation, a great kindness for the essayists, and we do singular reverence to the bent brows of meditation. If the reader will recall the names of those writers on whom we have bestowed a few months' immortality during the last five or six years, he will be surprised to find how great a number of them are the authors of essays, or reflections, or kindred productions, blending moral instruction with milky criticism and watery speculation. Whether modern conditions are not favorable to creative efforts in literature, or whether we really like speculation best, we do not know, but it is certain that we are all given frightfully to comment.

Mr. Calvert's book is no worse than many others of its kind, except that it is very turgid and boyish, at times, in style. One comes upon such words as *teemful*, and *upstretching*, and *pre-resolved*, in English ambitious, certainly, but not otherwise very bad. The great fault of the book is, however, the generic fault of the class of literature to which it belongs. In some hundred and fifty pages of disquisition one learns nothing original or new concerning gentlemen. Does it surprise us to be told that gentlemanliness, in the good sense, is, with rare exceptions, a Christian virtue? We know very well that gentlemen are not rapacious, nor ostentatious, nor ungenerous, nor sensual, nor cruel, nor, in fine, vulgar; and we know that Lord Chesterfield's theories of politeness are not those of a gentleman. We know that Don Quixote, and Sir Philip Sidney, and Socrates were gentlemen, and that Bayard was as much a gentleman as a Frenchman of his time could be. Mr. Calvert has very little else to tell us, though he says these things in a vastly greater number of words. His scenes are old, his instances not modern, and there is such labor visible in the application of his anecdotes and axioms as discourages the reader from ever thinking on the subject himself. One of the concluding passages of the book is the following, from which much of the manner and material of the book may be known:

> "Every gentleman will not always be above selfishness, and, from their aggregate qualifications, men may bear unchallenged the choice appellation, who will at times use their opportunities for their own advantage. But a gentleman will be negatively rather than positively selfish. He may dine oftener than one with disinterested digestion would on capon and Burgundy; but he will not rob a hen-roost."

"The Gentleman," for the reasons given, seems to us a superfluous book; but as for Mr. Calvert's volume of poems, it is worse than useless, for bad verse is one of the worst things in the world. We may forgive a man for an idle essay, but human nature resents a poetic failure as an aggression. We shall not, however, have any criticisms to make on Mr. Calvert's book of poems, but shall suffer it to pronounce its own condemnation. It contains, first, a number of lyrics in celebration of a child called "Anyta," then brief poems

* "Anyta and Other Poems. By George H. Calvert." Boston: E. P. Dutton & Co.; New York: Hurd & Houghton. 1866.
"The Gentleman. By George H. Calvert." Boston: E. P. Dutton & Co.; New York: Hurd & Houghton. 1866.

on miscellaneous subjects, and then a series of sonnets addressed to the great men of all ages. "Anyta" is metaphysical and rhapsodical, and each thought or feeling is supposed to complete itself in a single impulse of song, as in "In Memoriam."

"Mysterious child!
In thee uppiled
Are treasuries of love and beauty,"

cries the poet to the being of his song. She is "lusty Freedom's brave child," and her "dear motions all swing to a rhythm such as angel-ears quaff." She is "a myth entrapped in flesh from its antique cloudy land, delighting in the sudden mesh spun by beauty's lightsome hand." On summer days her face has "a pensive opal blaze," and she is told:

"The Sun his children doth embrace,
In flame his arm they feel:
Through love it is he rolls through space
Each ordered orbit's wheel.

"From several suns the fervor warms
Thy new coruscant path,
And burns with love the hydra-harms
That multiply with wrath.

"But not a beam from us outstarts
To beck thee on thy way,
But it returns upon our hearts
To bless us with its day,—

"A day elate with love's own light,
Illumination pure—
A spark seraphic, kindled white
By inward sufflature."

The miscellaneous poems are as strange in their way as "Anyta." If any one but Mr. Calvert had written the following, would he not have been supposed to be joking?

"From sleepless nature, myriad-faced,
Upglimmers such a sea of eyes,
My brain, with sibyl-lights belaced,
Illumined wills it will be wise.

"And thought is chafed by orphic hints,
The common glistens weird and strange,
And melt the firmest forms and tints
In mystic sequences of change.

"And all about are sights and sounds
That suckle rapture, since began
Creation's radiant rhythmic rounds
Through rose and beetle up to man."

About all this we have nothing to say, except that we have not chosen the worst nor the best things out of Mr. Calvert's poems.

The North American Review. January, 1866. (Boston: Ticknor & Fields.)—Those who note the absence of a leading literary article from this number of "The North American," cannot fail at the same time to be struck by the variety of other topics discussed. The first paper is on "The Conditions of Art in America," and the reviewer argues that we have not yet great art because feeling has been wanting in the people, knowledge in the critics, and study in the painters. Alluding to the many-sided character of genius, he thinks it probable that many an American who could have been a painter or sculptor, like Da Vinci or Buonarotti, has become an inventor, because there has been more demand for machinery than for art. He demands that critics should educate themselves to know good from bad in art, after which it will scarcely be possible for them to mislead the public; that artists themselves should be their own severest critics. He pronounces Church's "Niagara" and Ward's "Freedman" good art, as compared with "The Heart of the Andes," "The Rocky Mountains," "The Greek Slave," and "The Indian Girl," which are only clever. The writer on "Secession and Reconstruction" advocates as means of perfect reunion permission for the South to protect its manufactures until it shall be able to compete with the North, together with the extension of suffrage to the negroes. "Alone neither can be sufficient; together, the successful result is by no means certain, but it may be hoped for." Another writer, on the "Courts of Conciliation" which exist in France and Denmark, advocates the introduction of some such means of arbitration (in which equity is the principle consulted, and from which lawyers and their agents are absolutely banished) for the decision of disputes to which the Southern freedmen are parties. A third article (that on the President's message), dealing with kindred matters, does justice to the President's liberal views and good intentions, but advises a very cautious and gradual return to civil authority in the late rebellious States, where the writer sees no cordial disposition to return to the support of the Government or to deal fairly with the freedmen. At the same time, the writer does not fail to lament that the vote of Connecticut and Wisconsin in regard to negro suffrage should have been such as to weaken the President's confidence in the Northern sense of justice, and to confirm him in his reluctance to give the men lately slaves all the rights of freemen. "Our Financial Future" is a paper of very great value, written in so light and easy a spirit as to make the rather dry topic very attractive. The reviewer advocates direct taxation as the best and speediest means of paying off the national debt. We presume the article on "Henry Clay" is by Mr. Parton, whose contributions to the "Review" do equal credit to that periodical and their author. We do not remember to have read anything from Mr. Parton's pen so good as this article, in which much that is worth knowing about Henry Clay is rescued from panegyric, and made criticism and history. Mr. Parton, always vigorous and earnest, seems at last to have survived the faults that blemished his earlier books, and we do not well know how the present paper could be written in better English or better spirit. Mr. Sanborn's comprehensive and lucid paper on "The Present State of the Prison Discipline System" favors the adoption of the Irish system, with the workings of which the writer has made himself thoroughly acquainted. There is a very lively little paper on "Children's Books of the Year," another on "Hours of Labor," and an article by Mr. Howells on "Ducal Mantua." The last is a pleasant historical sketch of Mantua nominally since the downfall of the Roman Empire, but is mainly devoted to Mantua under the Gonzagas. One is not often led as pleasantly through a long succession of rulers, of whom it might fairly be said that each one was worse than the other. Their vices and crimes, however, have all those charms of picturesqueness in which Italian vice and crime are never wanting. Mr. Howells has made out of their chronicles a very entertaining chapter in Italian history—all the more so for opening up a field with which but few readers are familiar. Public attention has for so many generations been concentrated on the story of the Popes and the republics that little is known of the petty princedoms, and yet the history of Mantua is but the history in miniature of any European kingdom during and after the Middle Ages. One rises from the perusal of Mr. Howells's narrative with the question on one's lips—which he does not answer—how, out of so small a population, the dukes got the money to pay the expenses of such jolly lives. The critical notices, though full and varied enough, do not equal those of former numbers in vivacity.

Cotton-Stealing. A Novel. (Chicago: Walsh & Co.)—The effects in this fiction are of vastly greater number than the causes; and, indeed, seem rarely to flow from such causes as are developed. When you have read the book through, you are aware of a great deal of action to a purpose which seems indifferently served by it. Federal army gentlemen do much in the prohibited cotton traffic during the war, and seem to accomplish nothing—not even their own disgrace; while a secession hero and heroine form a hideous compact to sell the enemy of the South all the cotton they can, and the heroine further pledges herself even to marry a Yankee, as a final blow at the North. She keeps this pledge, with no particular result that the author makes known. All the time, however, this Leetle Ledonc is in love, to madness, with Kendal La Scheme, the villain-hero of the book, who turns her love and the love of other unhappy females to the account of the South, and marries nobody, though there is no reason suggested why he should not have married them all, as far as the South is concerned. Plot there is none, properly speaking, though there is intriguing without end; and there is little giving in marriage, though there is much love-making. The tender scenes between La Scheme and Leetle are, of course, sadly mixed up with bloodshed and politics. "'Leetle!' said he. Her reply was a child's action. In love to him, her woman's heart was as a child's heart and nestled in its faith in him. He rested his cheek on hers, and asked, 'Darling! what is the matter?' 'They told me Generals Van Dorn and Price were to attack Rosecrans at Corinth to-day. I believed we would wipe them out; but my heart does not feel victory, and you were not here.'" Naturally, this gentle being signs the compact of cotton, matrimony, and vengeance to the North in her own blood; and she is quite as willing to shed the blood of others for the Confederacy. She has a horse which she loves above anything on earth, except La Scheme; but she kills this horse at Memphis, in order to stuff the cavity, left by disembowelling it, with bottles of quinine and percussion caps, and then have the carcase conveyed out of the federal lines for burial (so reads the order which Leetle wheedles out of the commanding officer), where the Confederates easily find it. In fine, she is a far deadlier female than any other fire-eater of her sex concerning whom we remember to have read.

It is a pity that an author who is not without literary power, and who has evidently made some observation of character and manners in the South-west, should have wasted himself and his material in such a book as this. If he is a young man, he may outlive it, for few people will read it; and he may yet write something better. If he is of mature age, we have no hope for him, and can only offer him the assurance of a profound compassion.

The Late English Poets. Edited by Richard Henry Stoddard. (New York: Bunce and Huntington. 1865.)—Though a book requiring far less research than the "Melodies and Madrigals" of Mr. Stoddard, which THE NATION had occasion to praise so cordially some weeks ago, the present compilation is marked by the same good taste and judgment in selection and proportion. The editor's object was to offer us acquaintance with the best poems of the more recent English poets, devoting his space rather to those whose reputation does not yet equal their merit, and taking it for granted that no intelligent reader would care to have poems of Tennyson or the Brownings repeated in his volume. Except in the case of Mr. Swinburne, he has given entire poems, and we have no fault to find with his choice of poems from any writer. There are twenty-eight poets represented, whose works, in many cases, have not been reprinted in this country, or whose fame in other cases has not passed the critical circles. Many appreciative readers of poetry will here learn to know, for the first time, the excellence of the two Arnolds, Matthew and Edwin, of Charles Turner, and Frederick Tennyson, while they will be glad to be made more familiar with others whom one or two poems have already endeared to the popular mind. Mr. Stoddard's selections are made with the instinct of a poet, and we are glad that he does not hesitate to quote a very long poem (like Kingsley's "Andromeda") where it happens to be the poet's best.

Poems of Religious Sorrow, Comfort, Counsel, and Aspiration. Selected by F. J. Child. (New York: Hurd & Houghton. 1866.)—We confess that we like the quaint elaboration of this title, and we have to express no sense of disappointment in looking through the volume, for we find there not only piety but poetry. Positively, there is nothing from Dr. Watts in the book,

while there is in it whatever is best in the religious feeling of the poets, who are far better comforters and counsellors than the hymn-makers. It is a book for thoughtful people of devotional sentiment, who care rather to be consoled and elevated than instructed in theology, and therefore it gives much from Milton, from Wordsworth, from Tennyson, from the Brownings, from Whittier, from Longfellow. Neither are minor poets, who have once given expression to a thoughtful sense of devotion, neglected; while the awe and the sweetness of the spirit of early Christianity find utterance in the noblest of the old Latin hymns. There are three German poems, from Luther, Klopstock, and Von Canitz—and, of course, Petrarch's "I'vo piangendo i miei passati tempi" finds a place. The rest of the poems are English, and, in very great number, modern. Indeed, the sincere spirit of modern literary art is eminently favorable to the expression of religious feeling, and many of the loftiest and loveliest psalms are by poets of our own day. The nature of the collection may surprise some persons who

——"judge the Lord with feeble sense,"

doubting if He loves good poetry well enough to inspire it; but whoever takes up the book with an enlightened idea of the prophetic office of poetry, will find the best sentiments of religion interpreted to him in words of excellent beauty.

Every Saturday: A Journal of Choice Reading, Selected from Foreign Current Literature. (Boston: Ticknor & Fields.)—The title of this periodical leaves little for criticism to say concerning it, for it is scarcely desirable to speak critically of matter which is taken out of English magazines and newspapers and appears here at second-hand. The sole original virtue which publications of this class can have is one of judicious selection, and *Every Saturday* will increase in this virtue, we hope, as it grows older. We observe a wish to give variety in the topics chosen, and a due acknowledgment is prominently made to the sources from which they are drawn. But as for the articles themselves, we do not find them first-rate, and, indeed, they are of the flavor of too much literature printed for the first time in our magazines—a kind of literature which is produced apparently for the perusal only of the class which writes it, which is to say, the young ladies. *Every Saturday* is of the size and general presence of *Once a Week*. The design of the title-page is rather cheap and poor.

The Pilgrim's Progress. By John Bunyan. (Sever & Francis, Cambridge.)—The merits of this edition, which first appeared in 1864, are its convenient form, clear typography, and richness of paper and binding. Its only defect consists in retaining two or three very inferior wood-cuts, which not even the University Press can make respectable or in place. They occupy separate leaves, and might easily be omitted.

Picciola. By X. B. Saintine. (Hurd & Houghton, New York; E. P. Dutton & Co., Boston.)—One of the series of the "Riverside Classics," and in all respects commendable. The illustrations are by Leopold Flameng, and have many good features.

Science.

SCIENTIFIC NOTES.

The grant of public lands made by Congress to the several States for the purpose of promoting instruction in agriculture and the mechanic arts, is beginning to bear fruit in the establishment of agricultural colleges and schools. In seeking the wisest methods of spending the money thus appropriated by Congress, the trustees or governors of such institutions would do well to observe the progress of German opinion in this matter of agricultural education. The schools first established in Germany, like that of Hohenheim, near Stuttgart, and that of Tharandt, near Dresden, were isolated institutions, placed at a distance from any university or polytechnic school, and supposed to be in themselves complete, well equipped, and well balanced. As they proposed to teach not only the general principles of the sciences which underlie the practice of agriculture, but also the practical details of the farmer's or forester's business, the schools owned large farms and forests, which were managed by the directors or by professors of the schools, and were intended to keep before the students a practical example of the judicious management of a great estate. The experience of the last fifty years has developed three strong objections to the schools thus constituted: First, their collections, laboratories, cabinets of apparatus, libraries, and other means and appliances of instruction have been necessarily inferior to those of the richer universities and polytechnic schools; secondly, they can, as a rule, command the services only of second-rate teachers, partly because the salaries are necessarily low, and partly because the isolated position of these schools is distasteful to most scientific men; thirdly, it has generally been impossible to find the very different qualities of a practical teacher and a practical farmer united in the same person. And yet, unless the director at Hohenheim possesses both these different capacities, either the teaching or the farm must suffer. We need not believe the whole of Liebig's accusation when he bitterly says that the teaching at Hohenheim has been false and the conduct of the estate ruinous, and that, in general, it would have been better if there had been no teaching of agriculture at all in Germany for the last fifty years; but it will be wise to be warned in time against these two serious mistakes from which the German schools have so much suffered—first, isolation; second, the owning of a great farm. While the isolated schools are languishing in Germany, other and better institutions are rising to replace them. In 1863 the University of Halle established an agricultural department, under the charge of Dr. Kühn, bearing to the university exactly the same relation as the department of medicine or of pharmacy. In 1864 this new department had as many students as the old and famous school at Hohenheim. In the year just closed, the University of Leipzig has established a chair of agriculture, to be filled by Prof. Knop, long in charge of the old agricultural station at Möckern, and the admirable polytechnic school at Carlsruhe has added a department of agriculture to its mathematical, engineering, chemical, and commercial departments. These new establishments possess only a few small fields for purposes of experiment, and it is distinctly understood that their students are to obtain their instruction in practical farming on private estates, and, if possible, before they come to the schools. The reasons for this change of policy are sufficiently clear. The general principles of physics, chemistry, and natural history are the same, whether they are to be applied to agriculture, pharmacy, or manufactures, only the special subsequent application will vary. When a strong university or technical school adds to its ordinary corps of instructors two or three special professors of agricultural subjects, and places at the disposal of the student of agriculture all its other resources and appliances, it is altogether probable that better special instruction will be thus offered to the student, with a much more liberal general culture, than can possibly be obtained at an isolated and comparatively feeble special school. Hence the sudden success of the new class of agricultural schools in Germany. A just economy of the resources placed by Congress within the control of the several States will suggest a seasonable consideration of German experience in the organization of agricultural instruction.

—A cheap mode of preparing carbonic acid is of importance, because of the many useful applications now made of this gas. A manufacturer of soda-water at Paris, M. Orouf, has recently perfected a method of preparing carbonic acid, which seems very simple and economical, and at the same time presents points of scientific interest. The gaseous products resulting from the complete combustion of coke, after having first been forced through water in order to cleanse and cool them, are made to pass through a solution of carbonate of soda. This solution retains the carbonic acid, and bicarbonate of soda is formed, while the nitrogen of the gaseous mixture escapes into the air. After all the carbonate of soda has been converted into bicarbonate, the flow of gas from the fire is stopped, and the liquor is heated by a current of free steam. At the temperature of boiling water bicarbonate of soda is decomposed. Hence, all the carbonic acid which had previously been absorbed is now evolved as gas, and there is left behind nothing but the original solution of monocarbonate of soda, which may immediately be used over again in the same round. The carbonic acid thus obtained is said to be chemically pure, though charged with vapor of water, which can be readily separated by condensation. The single portion of carbonate of soda with which the operation was started may be used over and over again indefinitely, since none of it is consumed or in any way altered.

—At a recent meeting of the Royal Society of Edinburgh, Sir David Brewster exhibited a piece of amber from the kingdom of Ava weighing about two pounds and a half. The specimen is remarkable in that it is intersected in various directions by thin veins of a crystallized mineral sub

stance. These veins are in some parts of the mass as thin as a sheet of paper, and in other parts about the twentieth of an inch thick. An examination of a portion of the thickest vein has proved the mineral to be carbonate of lime. Pieces of amber of two or three pounds weight are rare. A specimen weighing one pound is valued in Prussia at fifty dollars. The largest piece yet found is in the Royal Museum at Berlin; it weighs eighteen pounds, and is said to be worth upwards of seven thousand dollars.

—A fatal accident lately reported in Massachusetts, under circumstances which at first admitted of a doubt whether death had been caused by the breathing of coal-gas from a stove without draught, or by other poison intentionally taken, brings to mind the recent researches of Hoppe-Seyler on poisoning by carbonic oxide. By an ingenious application of spectral analysis he detects the presence of carbonic acid in the blood. Blood which has dissolved this exceedingly poisonous gas gives the same lines in the spectrum as normal arterial blood. If sulphide of ammonium be added to normal blood, the mixture gives an altered spectrum, with only a single line placed between the common lines named D and E, whereas the like addition of sulphide of ammonium to blood poisoned by carbonic oxide produces no change at all in the lines of the spectrum. Before being submitted to analysis, the blood must in all cases be largely diluted with water. The poisoned blood can retain the oxide of carbon for several days, but the examination should, nevertheless, be undertaken without unnecessary delay.

—Statistics of the quantity and quality of soldiers' food have a scientific interest, because they present the results of a long experience in feeding adult men so as to keep them in full health and strength. In England fixed rations of three-quarters of a pound of meat and one pound of bread are issued to the soldiers, and the rest of their food is procured from their own pay. According to Dr. Lyon Playfair, the average diet of soldiers in peace and war may be stated as follows, in ounces and tenths of an ounce:

	In Peace.	In War.
Flesh-formers,	4.2	5.4
Heat-givers { Fat,	1.8	2.4
Heat-givers { Starch, etc.,	18.7	17.9
Starch, equivalent of heat-givers,	22.1	23.5
Total amount of carbon	12.0	12.7

The peace diet above given was obtained by examining the statistics of food issued to the English, French, Prussian, and Austrian armies, while the war diet included, in addition to these, the Russian, Dutch, United States, and so-called Confederate States armies. Great Britain is the only country which does not possess a special war diet, and the want of it was one of the causes of the frightful mortality of the Crimea. During the latter part of the Russian war, the rations of the English soldiers were increased; but the diet of the English army when engaged in the arduous work of war is, according to Dr. Playfair, unworthy of the country—twenty years behind the actual state of science and a hundred years behind the practice of other nations. To ascertain what well-paid soldiers, engaged in occupations which would represent moderate war work, found it necessary to eat, Dr. Playfair obtained returns from the garrison of sappers and miners at Chatham. This garrison is composed of men versed in trades at which they work when not employed on fortifications or in the field. The exact food consumed by four hundred and ninety-five men during twelve consecutive days was carefully weighed, and the results were expressed as follows in ounces and tenths of an ounce:

Flesh-formers,	5.1
Heat-givers, { Fat,	2.9
Heat-givers, { Starch, etc.,	22.2
Starch, equivalent of heat-givers,	29.4
Total amount of carbon,	14.8

It will be seen that this dietary resembles much the war dietary, except that the starch and, consequently, the carbon is increased, because of the large use of potatoes in garrison. Dr. Playfair concludes that a war diet should supply at least five and a half ounces of flesh-formers in the food. He estimates that this quantity is necessary to enable men to march fourteen miles daily, carrying sixty pounds weight, without being obliged to consume their own tissues in obtaining the necessary force.

—In a series of experiments which were published some months since, the French chemist Pelouze had shown that the yellow color which can be brought out in glass by the addition of carbon, phosphorus, boron, silicon, hydrogen, or aluminum is due to the action of these bodies on a compound of sulphur which is always to be found in the glass of commerce. He found that glass made of materials entirely free from sulphur remained perfectly colorless on being subjected to the influence of the several substances above enumerated. That sulphur really produces such a yellow coloration may be shown directly by coloring glass, either pure or impure, with sulphur or a sulphide. There now remained a curious point to be decided, viz., whether selenium, which is so closely analogous to sulphur, would also color glass. It is upon this point that M. Pelouze has recently contributed a note to the French Academy. By adding selenium to ordinary window-glass he obtained a perfectly transparent product of a fine reddish-orange color which recalled the color of certain varieties of topaz. Though the proportions of selenium were varied between one and three per cent., the color obtained was always of the same shade and degree of intensity.

—In the collection of Japanese objects at the Dublin Exhibition were some very curious illustrated treatises on physics, zoology, botany, and anatomy. The letter-press of these was not particularly intelligible to European visitors, but the illustrations are spoken of as excellent, and indicative of advanced knowledge in the several subjects to which they relate. The cuts representing bandaging, amputation, the use of the lancet, and so forth, are said to have been almost precisely similar to those which would be found in a European work on surgery, and many of the plates on osteology and natural history were equally good.

—Dr. Druitt, of London, calls attention to the use of hot water as a remedy for profuse perspiration. If a part of the body which is perspiring be bathed with water as hot as can be borne without pain till it becomes decidedly hot and red, the skin will become dry and will continue so for some time. The water may be used by sponging or by immersion. This use of very hot water is recommended to persons who perspire to a distressing degree in hot weather, or who are annoyed by a disagreeable perspiration of some particular part, as the arm-pits, hands, or feet. Even the night-sweat, which is so distressing a symptom in certain diseases or enfeebled conditions, may often be checked or lessened by the judicious use of this simple remedy. The method is suggested not, of course, as a cure for disease, but as an easy mode of relieving unpleasant symptoms.

Fine Arts.

MUSIC.

MUSIC OF THE WEEK.

Concerts have been plentiful the past week. Miss Parepa finished her series of three, and gave an extra one on Thursday. Both programme and performance on Tuesday were very fine. The orchestra played the overture to "Melusine" and one of the "Fidelio" overtures, besides a very singular but not beautiful piece by A. von Kontsky, called "The Awakening of the Lion." It was remarkable chiefly for the drum part. Mr. Mills played his "Fantasia from Faust," and Liszt's "Rhapsodie Hongroise." The gem of the evening, however, was Mr. Rosa's rendering of Schumann's "Abendlied" and of two little pieces by F. David. His tones were clear and full of soul, and his execution beautiful. He is the artist of the company. Miss Parepa was not so fatigued, and was therefore in better voice than at the previous concerts. She sang "En vain j'espère, Robert," with almost dramatic fervor, and "Voi che sapete," from "Le Nozze di Figaro," magnificently. In Ganz's *bravura* piece, "Sing, Birdie, sing," she displayed again her remarkable management of her voice, but she made no more impression on the feelings than she did before. If music is a language that is spoken by one heart to another, Miss Parepa is not eloquent. We feel like applying to her what an eminent father of the church said about the dialectics of the sophists: "She plays about the heart—*circum præcordia ludit*—without ever penetrating it."

On Wednesday evening the company of Messrs. Juignet and Drivet gave one representation of the *opéra-comique*. This was a mere tentative effort, and as such was very unhappy, and to be regretted. We have no doubt that when the new theatre on Fourteenth Street is completed, if a well-selected company is brought here, the *opéra-comique* will flourish. It will not interfere with the Italian opera, but there is a large class of people who will enjoy it more; and if the operas are mounted with the care that French directors and French taste require, there will be a great benefit to the public taste. But the other night the house was much too large for the voices; the singers, with one exception, were very poor; and no pains were taken in the arrangement of the stage. The pieces chosen for the performance were two of the best of the modern French comic opera—"L'Eclair," by Halévy, and "Les Noces de Jeannette," by Victor Massé. "L'Eclair" was produced in 1835, about six months after the performance of "La Juive." It was received with enthusiasm, and gained for its author the cross of the Legion of Honor. It is a little singular that the two works of that year are better than any of those that preceded or followed.

It would have been better if something else, some one-act opera, had been substituted in the place of "L'Eclair" by the directors, for the three acts were shortened to two in a very unsatisfactory manner, and Madame de Lussan replaced Mlle. Ayosto at the last moment. It is but fair to say that she did well, considering the limited time she had to prepare herself for her part. M. Genty, who took the part of *George*, made a very bad impression, but he also was improvised, and does not pretend to be a singer. From M. Armand we hoped much more. He is awkward, and sings in a hurry, as though he were reciting and were anxious to get through his lesson. His accent is provincial, and his gestures very ungraceful. His voice was apparently good, and some notes were very sweet. We hope that he has some parts in which he will do better than in *Lionel*. He evidently has capacities, and with careful study and attention to his manner and acting, he may be listened to with pleasure when he appears here next winter.

The only good singer of the evening was Mlle. Naddie. But even she could not save "L'Eclair" from falling dead on a cold house. She ought to be judged of only in "Les Noces de Jeannette," which was the redeeming feature of the evening. Victor Massé is one of the most agreeable of the writers for the comic opera. He had a brilliant success when in the *Conservatoire*, and was a pupil of Zimmermann and Halévy. He was sent to Rome by the French Academy, and studied in Italy two years, after which he travelled in Germany. In 1852 he brought out his first opera, "La Chanteuse Voilée," and in 1853 "Les Noces de Jeannette," since which time his pen has been prolific. He writes too fast, and without sufficient revision to secure excellence to his works; but they are full of bright and sparkling airs, and of lively dialogue, of which this opera is a very good example. It has been played here several times before, with Miss Hinkley, Miss Kellogg, and Mlle. Cordier as *Jeannette*, but we think that the part has never been so perfectly sustained, or the music so well and carefully rendered, as it was by Mlle. Naddie. Without being pretty she is graceful; she knows exactly the extent of her part, and neither overacts nor underacts; she is not mannered, but free and natural. Her voice is clear and fluent, and she sang with precision and without effort the difficult "Air de Rossignol," hardly letting the audience know that it demanded skill, so easy was she. She fully appreciated the music, and gave it the full expression. "Parmi tant d'Amoureux" she rendered beautifully, with suppressed tears in her voice. M. Harndorff has hardly a good enough voice either in quantity or quality for the stage, as he is himself aware; but he is a good actor, lively and quick, and displayed much art in the way in which he avoided and smoothed over the difficulties of his part, and gave Mlle. Naddie efficient support.

If Messrs. Juignet and Drivet will not injure themselves by any more unequal representations, but will get three or four more singers as excellent and efficient as Mlle. Naddie, we shall have a delightful season next winter, when we shall hope to hear not only "Les Noces de Jeannette" again, but "Marie," "Zampa," "Les Diamans de la Couronne," and many other operas that we have so long desired in vain.

On Wednesday evening, Messrs. Mason and Thomas gave the first of their soirées of chamber music to a small but appreciative audience, at Dodworth's Hall, which was dark and cheerless, the gas-pipes being frozen by the extreme cold weather. Three pieces were performed, the first being the quartet in G, No. 1, by Mozart, which caused all to feel happy and cheerful, and fully made up for the dim light. The trio in D, op. 70, No. 1, by Beethoven, came next, with its beautiful dramatic slow movement, expressive of the passion which the composer entertained for the Countess Marie d'Erdoedy, to whom he dedicated it. The remaining piece was the sextet of Brahms, in B flat, op. 18. Johann Brahms was once called by Schumann the Mozart of the nineteenth century, such remarkable musical power did he exhibit in his early years. This sextet, with its beautiful and passionate passages of melody, is a witness of the precocity of his musical intelligence and of the rare development of his fancy; but the praise of Schumann was too enthusiastic, and the later career of Brahms has not fulfilled these auguries of his greatness. May the weather be more propitious and the audience larger at the next soirée on January 24! The artists who give them are actuated solely by a desire to promote musical culture, and always consider themselves fortunate if they come out with whole purses at the end of the season. In the same spirit they give one or two concerts every summer at Farmington, Conn., and occasionally at other places.

The third of Mr. Theodore Thomas's symphony soirées took place on Saturday evening, with a good programme and able performers. It was, as a whole, the finest concert of the kind that we have heard in New York for some years. The opening symphony was the one in C, op. 30, of Bargiel, and is a striking work. The *allegro* is noticeable for a strongly marked rhythm, and, though worked up from a very simple phrase, rises sometimes to passages of considerable power. The *andante* contains a beautiful melody, though the orchestration is not equal throughout, and in parts weak. The *minuet* is sparkling and fresh, with good points made by the little trills and shivers of the flutes. The *finale* is in the same spirit as the first movement. The symphony will bear frequent repetition, for it is by no means exhausted at a single hearing, and will be a welcome addition to the orchestral *repertoire*. Miss Parepa sang the scena and aria, "Ah! perfido," Beethoven, op. 48, with more power and feeling than anything we heard at her own concerts. The same can be said of the aria from Handel's "Susannah." Her rendering of the passage, "Thy will be done," was exquisite. Mr. Carl Wolfsohn, of Philadelphia, played Chopin's fantasia in F minor, op. 49, coldly. His style is hardly suited for a large concert-room, and he did not seem to enter thoroughly into what he was playing. He did not re-create the piece. He seemed to drag a little in the time at the beginning, and his rendering of the *lento* passage was not pleasing. The Liederkranz Society sang splendidly a beautiful "Volkslied" for male voices, and, being loudly applauded, gave another chorus almost as fine. Mendelssohn's overture, "Zum Mährchen von der schönen Melusine," was the next orchestral piece. Mendelssohn, in one of his letters to his sister, says that it was suggested to him by an opera of Conradin Kreuzer's which he disliked, but which contained one scene of a mermaid combing her hair that struck his fancy. The beautiful Melusine, as every one knows or ought to know, was one of the most celebrated of the French fairies, who, as a punishment for some action, was changed every Saturday into a serpent from her waist downward. She married a count of Poitiers, but, being seen by him in one of her transformations, was imprisoned for life in a dungeon of Lusignan. That is the theme of the beautiful overture, sweet, like most of Mendelssohn's music—too sweet, perhaps. The only remaining piece was Beethoven's fantasia in C minor, op. 80, for piano, chorus, and orchestra, which was carefully performed. The orchestra admirably seconded Mr. Thomas in his endeavors to give good music, by playing throughout with a right spirit and with precision. The careful drilling and good leadership of the conductor was manifest.

The Life and Public Services

OF

SAMUEL ADAMS.

By WILLIAM V. WELLS.

Being a Narrative of his Acts and Opinions, and of his Agency in producing and forwarding the American Revolution; with Extracts from his Correspondence, State Papers, and Political Essays.

Three Vols. 8vo. $12.

JUST PUBLISHED BY

LITTLE, BROWN & CO.

"Without the character of Samuel Adams, the true history of the American Revolution can never be written. For fifty years his pen, his tongue, his activity, were constantly exerted for his country, without fee or reward."—*John Adams in* 1817.

"The controlling genius of the storm."—*Austin's "Gerry,"* i. 7.

"I can say he was truly a great man; wise in counsel, fertile in resources, immovable in his purposes, and had, I think, a greater share than any other member in advising and directing our measures in the Northern war."—*Jefferson in* 1819.

"I cannot sufficiently respect his integrity and abilities. All good Americans should erect a statue to him in their hearts."—*George Clymer in* 1773.

"The Father of America."—*Stephen Sayre, London*, 1771.

"If there was *any* Palinurus to the Revolution, Samuel Adams was the man."—*Jefferson in* 1825.

"The man who hungered and thirsted after independence."—*Daniel Webster.*

"Such is the obstinacy and inflexible disposition of the man, that he can never be conciliated by any office or gift whatever."—*Governor Hutchinson's Secret Letters to the British Ministry.*

"It was this man, who, by his superior application, managed at once the factions in Congress at Philadelphia, and the factions in New England."—*Galloway's testimony against Samuel Adams before Parliament*, 1778.

"One of Plutarch's men."—*Theodore Parker.*

"Samuel Adams was the last of the Puritans.... More than most of his associates he understood the efficacy of personal intercourse with the people. It was Samuel Adams, more than any other individual, who brought the question home to their bosoms and firesides.... The throne of his ascendency was in Faneuil Hall. As each new measure of arbitrary power was announced from across the Atlantic, or each new act of menace and violence on the part of the officers of the Government and of the army occurred in Boston, its citizens, oftentimes in astonishment and perplexity, rallied to the sound of his voice in Faneuil Hall. There, as from the crowded gallery or moderator's chair he animated, enlightened, fortified, and roused the admiring throng, he seemed to gather them together beneath the ægis of his indomitable spirit, as a hen gathereth her chickens under her wings."—*Edward Everett's Lexington Oration*, 1835.

"He was the first man who asserted the independency of the colonies upon the supreme authority of the kingdom."—*Gov. Hutchinson's reply to the questions of George III. concerning Samuel Adams.*

JUST READY,

And published by C. SCRIBNER & CO., No. 124 Grand Street, New York,

A new and Revised Edition, with a Supplement, of the

CYCLOPÆDIA OF AMERICAN LITERATURE.

By E. A. and G. L. DUYCKINCK. Embracing Personal and Critical Notices of authors, and selections from their writings, from the earliest period to the present day, with 225 portraits, 425 autographs, and 75 views of colleges, libraries, and residences of authors, and elegant steel engravings of J. Fenimore Cooper and Benjamin Franklin. 2 vols. royal 8vo. Cloth, $10; half calf, $11. (*The Supplement sold separately.* 1 vol., $2 50.)

"The new interest awakened in all that relates to our country and the value of authentic data on the subject, coupled with the fact that this work has long been out of print, explains the demand for it. In truth, no other work contains so large an amount of curious information as regards the intellectual development of the United States.

"Those who are familiar with this work can easily appreciate its popularity. In the first place, it gives a full account of the Colonial writers; secondly, the American colleges are described historically and at length; thirdly, biographies of all the native authors carefully prepared; fourthly, a critical history of native literature incidentally appears; and lastly, specimens are collected of most characteristic American writings from the time when George Sandys translated 'Ovid' on the banks of the James River, in the days of Queen Elizabeth, to the last funny poem of Dr. Holmes in the 'Atlantic Monthly.'"—*Boston Evening Transcript.*

CHICAGO, ILL.

WILL BE PUBLISHED ON SATURDAY, JAN. 20, 1866,

BY

WIDDLETON, Publisher,

17 Mercer Street, N. Y.,

POEMS RELATING TO THE AMERICAN REVOLUTION.

By PHILIP FRENEAU.

With Notes and an Introductory Memoir by Evert A. Duyckinck, author of "Cyclopædia of American Literature," "Portrait Gallery of Eminent Americans," etc., etc.
A handsome crown 8vo volume, with Steel Portrait, price $2 50.

This collection embraces all of Freneau's Poems relating to the American Revolution. No collection of this kind has appeared in America since the edition, now exceedingly rare, published in Philadelphia in 1809. The Poems of the Revolution, by which the author's reputation was established, are now brought together in one volume for the first time.

One hundred copies on large paper, royal 8vo, uniform with Dr. Francis's "Old New York." Portrait (in India proof) engraved by Halpin expressly for the work; facsimile manuscript poem; and a portrait on India paper of John Paul Jones, from a miniature in the possession of the Naval Lyceum, Brooklyn, L. I. Price to subscribers, $12.

ALSO, READY AT THE SAME TIME,

DR. FRANCIS'S OLD NEW YORK; OR, REMINISCENCES OF THE PAST SIXTY YEARS.

By the late JOHN W. FRANCIS, M.D., LL.D. With a Memoir of the Author by Henry T. Tuckerman, and a new engraved portrait, by Burt, of Dr. Francis, from an original pastel drawing by Julius Gollmann. Handsome crown 8vo, price $2 50.

The book is replete with anecdote and biographical information respecting the past celebrities of New York from the days of the Revolution, including Statesmen, Politicians, Editors, Actors, Physicians, Lawyers, Divines, and others.

Some idea may be formed of its interest as a memorial of the past from the Index, which numbers over five hundred personal references.

COTTON STEALING.

A NOVEL.

A very lively story of Southern life, both before and during the war, divulging secrets the cotton speculators must wince to see in print.—*Chicago Journal.*

487 PAGES. $2.

The above are additions to DITSON & CO.'S EDITION OF STANDARD OPERAS, the most popular, complete, and satisfactory copies published.

Each contains the original text with an English translation, together with the Music of the Principal Airs. Price, 30 cts. a piece.

OLIVER DITSON & CO., BOSTON.

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening, January 13, 1866.

THE feature of the week has been a heavy decline in gold, stocks, and produce. Gold, which had been steady for several months between 144 and 148, suddenly lurched downward early in the week, and on Wednesday touched 136½, closing to-day at 139¾. Produce of all kinds naturally sympathized, and heavy losses are reported in wheat, flour, pork, etc. In produce there has been a partial rally within the past day or two, and, as stocks at the seaboard are light, prices may possibly be sustained for the present at or near present quotations. For many months foreign merchandise has been, with few exceptions, bought and sold for gold, so that it has not felt the effect of the tumble in the gold room; indeed, in the coffee and sugar markets a somewhat improved enquiry is noted. But the fall in gold and stocks has naturally tended to impair confidence, and there is an unwillingness to sell on credit. The West is well stocked with goods, and several descriptions of dry goods are cheaper there than here. The South, however, continues to consume quantities of dry goods and general merchandise and to pay for them in cash or cotton. No specific cause has been assigned for the sudden fall in gold. The increased demand abroad for our securities; the prospect of conservative legislation in Congress; the failure of some speculators for the rise, and the abandonment of the game, in despair, by others; each of these causes had its influence in producing the result. That gold had been too high, in view of the policy of Government, the receipts from taxes, and the general prosperity of the country, can hardly be questioned. A premium of 25 per cent. would, in the opinion of many, suffice to express the redundancy of the paper currency. When Gen. Lee surrendered, and peace became imminent in April, 1865, gold fell to 127, and sound men believed it would never again pass 130. It is difficult to gauge in figures so delicate and impalpable an essence as public confidence; but if we are really going to reduce our paper currency by $200,000,000 in two years, and if our bonds are going hereafter, as heretofore, to be the favorite investment of small capitalists in Central Europe, a premium of 30 per cent. will soon seem as extravagant as a premium of 100 seemed twelve months ago to those who knew the real situation of affairs and the real prospects of the rebellion. One curious feature of the recent decline in gold may be noted. It was entirely unexpected. For two months it has been impossible to find speculators willing to sell gold on long options at any material concession from the cash price. There was not a man in Wall Street, it seemed, who expected that gold would fall below 140. As soon as it began to fall, everybody rushed in to sell, and as much as ¼ and ⅜ of one per cent. was paid this week for the use of gold for one day. But before the fall no one dreamed of selling short.

The following table will show the course of prices during the week in the stock, exchange, gold, and money markets:

	Jan. 6.	Jan. 13.	Advance.	Decline.
United States Sixes of 1881	104¾ex c.	104	....	¾
5-20 Bonds, old	104⅞	103⅞	....	1
5-20 Bonds of 1865	102	101¾	....	¼
10-40 Bonds	93¾	93⅝	⅛	....
7.30 Notes, second series	98⅜	98	....	⅜
New York Central	96	93¾	....	2¼
Erie Railway	95¾	91	....	4¾
Hudson River	108	106	....	2
Reading Railroad	105¼	102¼	....	3
Michigan Southern	72½	69	....	3½
Cleveland and Pittsburg	82¾	77½	....	5¼
Chicago and North-western	35½	32	....	3½
" " " Preferred	60¼	58¾	....	1½
Chicago and Rock Island	107¼	103⅞	....	3⅜
P., Fort Wayne, and Chicago	100⅝	95	....	5⅝
Canton	45	43	....	2
Cumberland	44¼	42½	....	1¾
Mariposa	14¼	12¾	....	1½
American Gold	141⅞	139¾	....	1⅞
Bankers' Bills on London	109	108¾	....	⅛
Call Loans	6	7	1	....

Again we have to report an almost uniform decline in prices. On several occasions during the week the decline took the shape of a panic, and everyone rushed to sell stocks at any price. These fits were generally succeeded by sharp reactions, in which the parties who had just sold rushed in to buy, every one fearing to be the last in the race. But, in fact, there is no appearance as yet of anything like a substantial rally from the decline. The oldest and most popular of the commission houses report no consumptive demand for stocks. Capitalists are all holding off, in expectation of the promised contraction of the currency. Railway men, seeing the steady decline in earnings, are selling their stocks and not replacing them. Erie, which has been for some time the leading speculative stock, and which had been held at an extravagant price by the clique connected with the direction, "broke" on Friday, and sold down to 88, against 97 on Wednesday. To-day it sold as high as 92, and as low as 89, closing at 91. Nothing has yet transpired about the February dividend, but the report to the Legislature, previously mentioned in this column, and the reports of other roads, show clearly that if it is paid, the money will have to be borrowed, as heretofore. New York Central, which is not earning five per cent. in paper, has been firmly held at 93 and upward—higher than 10.40 bonds, which pay 5 per cent. in gold. Old Southern, which pays nothing, is being bought up by a clique, and may possibly be cornered. Such an operation may retard, but can hardly alter, the issue. For a time the operations of this or that speculator or clique of speculators may impel prices in an unnatural direction, but in the end intrinsic values must govern. Pittsburg, a 4 per cent. stock, fell on Friday to 74½. A few months ago it sold at 45, and a few weeks ago at 97. Rock Island is in the hands of a clique, and is still maintained above par; the earnings show a steady falling off. The North-western stocks have declined, but hardly as much as might have been expected in view of the heavy debt of the company and the enormous mileage run. If, as seems probable, we are going to have a period of slack traffic on the railways, low fares, and heavy expenses, the North-western property may yet fall into the hands of the bondholders. Fort Wayne, notwithstanding quarterly dividends of 2½ per cent., fell to 93, but closed yesterday at 95. This is probably one of the best railway concerns in the country, but it yields to the general tendency. A peculiar feature of the market, to-day, was a general failure of deliveries. This indicates an extensive closing of short contracts, and shows that the previous speculation had been on a scale totally disproportioned to the volume of floating stock in the Street. It is not unlikely that this condition of affairs may lead to fresh attempts to corner some of the more active stocks. It is in the power of any one of several heavy speculators to force up the price of Pittsburg or Old Southern or any such stock to prices considerably above those now ruling, by simply buying a line of stock and refusing to lend it. The finale of such operation is not likely to be profitable to the cornering party, as the public are seldom willing to purchase a stock that has been cornered. But such operations, though they may yield no profit to their contrivers, nevertheless inflict severe loss on the Street.

The Committee of Ways and Means have reported a measure to Congress in exact conformity with Secretary McCulloch's recommendations. Without disrespect to the committee, it may be mentioned that nothing less was expected. For four years it has been the sole function of the Ways and Means Committee to record and embody in bills the behests of the finance minister. The committee was never known to have an opinion of its own. It has faithfully done as it has been bidden. Whether the members have best discharged their public duty by delegating to the Secretary of the Treasury the office of doing their thinking for them, is a question which time will enable their constituents to discuss. Grave objections may be urged against the abandonment of the Sinking Fund, which was a solemn guarantee given to bondholders when they subscribed for our securities, and the repeal of which involves an indirect form of repudiation. And while the country may, perhaps, contemplate without uneasiness the passage of an act which empowers Secretary McCulloch to sell U. S. bonds bearing almost any rate of interest, running for almost any length of time, at any price, for almost any kind of securities or money, it cannot be concealed that the grant of such enormous power would be viewed with alarm if it were made to any one in whom the public had less confidence. Criticism of the bill is, however, quite superfluous. It will pass in the shape which the department likes best; and, in the main, if its provisions can be carried out, it may do good. A conviction gains ground daily that there can be no safety or comfort in business of any kind until we can get back to some stable standard of values, and the mercantile community are prepared to endure a great deal in order to secure this desideratum.

Considerable scandal has been created in Wall Street by two prominent accidents during the past week. Mr. Carr, of the well-known firm of Carr, Taylor & Co., departed suddenly on this day week for Europe under very peculiar circumstances, and on Friday another active firm in Broad Street was reported to have failed, leaving some large checks uncovered. It resumed again next day, under circumstances of some mystery. In the open Board there have been several failures. These accidents, which can have surprised no one who has been a careful observer of the wild speculations of the past two or three years, are calculated to unsettle confidence and check the loose habits of the Street. It is generally feared that other Jenkins and Ketchum cases may come to light should the present decline in values continue, and the sifting process now in progress be carried on for a few weeks more.

THE UNION MUTUAL LIFE INSURANCE COMPANY

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom, and disinterested philanthropy. It offers superior advantages to the life-ensuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies by receiving a note for one-half when the premium amounts to over $30.

THIS COMPANY offers PECULIAR ADVANTAGES to persons intending to ensure their lives.

Since its organization it has paid (chiefly to Widows and Orphans) for losses by death,

$912,342 00,

and

$412,748 00

in Dividends—a total of over

ONE AND A QUARTER MILLION

of Dollars, and now has, in its Capital and Accumulations, securely invested for the Payment of Losses and Dividends, a fund of

$1,400,777 16.

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the policy holders.

COMPETENT AGENTS WANTED.

FIRST CLASS FIRE INSURANCE

ON THE PARTICIPATION PLAN.

MARKET FIRE INSURANCE COMPANY,

37 WALL STREET, CORNER OF JAUNCEY COURT.

CONDITION OF THE COMPANY.

ABSTRACT OF THE ANNUAL REPORT OF DEC. 31, 1864.

TOTAL ASSETS		$414,729 18
Viz.—Bonds and Mortgages	$134,672 00	
Temporary Loans	92,630 00	
Real Estate	10,000 00	
100 Shares Mer. Ex. Bank	5,000 00	
Government Sec., value	144,514 00	
Cash on hand	18,042 34	
Interest due	3,085 58	
Premiums due	6,785 26	
PRESENT LIABILITIES		$15,995 92
NET SURPLUS		198,733 26

This Company will continue, as heretofore, to insure respectable parties against DISASTER BY FIRE

At fair and remunerating rates; extending, according to the terms on its Policies, the advantage of the

PARTICIPATION PLAN OF THE COMPANY,

pursued by it for several years past, with such great success and popularity, and profit to its customers; whereby

(75) SEVENTY-FIVE PER CENT. (75)

of the Profits, instead of being withdrawn from the Company in Dividends to Stockholders, is invested as a "SCRIP FUND," and held for greater protection of its Policyholders; and Scrip, bearing interest, is issued to Customers therefor: thus, IN THIS COMPANY, those who furnish the business, AND PAY THE PREMIUMS, derive the largest share of advantages; and when the accumulations of the SCRIP FUND shall exceed

FIVE HUNDRED THOUSAND DOLLARS,

the excess will be applied to PAY OFF the Scrip IN CASH in the order of its issue.

☞ The liberal and prompt adjustment of Claims for Loss, WHEN FAIR AND SQUARE, is a specialty with this Company.

NOTE.—This Company does not insure on the hazards of RIVER, LAKE, or INLAND NAVIGATION; confining itself strictly to a legitimate FIRE INSURANCE BUSINESS.

Cash Dividends paid in fourteen years, 248 per cent.

P. NOTMAN, Secretary. JONATHAN D. STEELE, President.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, or body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features: and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

SPECIAL GOLD MEDAL.

(From Watson's Weekly Art Journal.)

AWARDS TO MUSICAL INSTRUMENTS.—A Gold Medal was awarded, at the late Fair of the American Institute, to CARHART, NEEDHAM & CO., for the best Reed Instrument on exhibition—a most just testimonial.

"They are an exceedingly good substitute for an Organ, and I can speak of them in the highest terms."
GEO. W. MORGAN.

"I have found them to be the *finest Instruments of the class I ever saw.*" GEO. F. BRISTOW.

"They are entitled to be ranked as the *first* and *best* among instruments of their class." WM. A. KING.

"*The tone is incomparable*, and they are *far in advance* of any other instrument of a similar kind."
CHARLES FRADEL.

THE PARLOR ORGAN,

with the recent improvements of Mr. J Carhart, is, without exception, *far superior* in QUALITY, POWER, SWEETNESS, VARIETY and EXPRESSION OF TONE. DURABILITY OF CONSTRUCTION, ELEGANCE OF CASE—POSSESSING IMPROVEMENTS APPLIED BY US ONLY.

A Descriptive Catalogue and Price List sent by mail.

CARHART, NEEDHAM & CO.,

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars
They are more fire-proof.
They are more burglar-proof.
They are perfectly dry.
They do not lose their fire-proof qualities by age.
Manufactured only by

MARVIN & CO., 265 Broadway.
721 Chestnut Street, Philadelphia.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

CONGRESS, to the surprise of most people, has admitted the negro to vote in the District of Columbia, and without any qualification. We wish, for our part, it had insisted, when doing away with the color qualification, upon every man's knowing how to read before exercising the franchise. The opportunity was a good one for setting an example that the States might have followed, and the great principle of equality before the law would have been as firmly established by a measure of this kind as by the one which has been passed. Pictures are now being drawn in some quarters of the dreadful effect which this vote will have in "irritating" the whites of the District; but it is really time that we had heard the last of this argument. If justice can only be done, and the Government can only keep faith with the blacks, by irritating a portion of the whites, the latter must get used to being irritated, and the Government to irritating them. Four years ago this precious sophism was put in the foreground of the battle against emancipation, and events have revealed its value. The only way in which the blacks could completely avoid giving offence to any of their fellow-citizens would be to betake themselves out of the world; but, from so benighted and degraded a race, devotion of this kind to the public comfort is hardly to be expected.

THERE is a scheme on foot to equalize the bounty of all volunteers who served during the war. It appears there has been already paid in bounties upwards of three hundred millions of dollars, or nearly one-tenth of the national debt. If each man who served were paid, as is proposed, as much as would bring his bounty up to four hundred dollars, three hundred millions more would be necessary, making in all nearly one-fifth of the national debt. This calculation does not include State bounties, which were probably as much more, and it must be remembered that every cent of this money was borrowed and is still due. If, therefore, the payment of the recruiting expenses of all the States were to be assumed by the general Government, as has been proposed, the total amount would probably reach nearly two thousand millions—all paid for bribing men to do their duty. The whole bounty system was one of the most frightful sources of corruption ever opened on an afflicted people. An attempt to equalize the bounties would open another almost as bad, and would call from their lairs once more a whole swarm of unclean animals in the shape of claim agents, whose frauds and rascality would throw the bounty-brokers of the war, bad as these were, completely into the shade. What Congress ought to be doing, instead of considering such preposterous schemes as this, is framing a good militia law, which would give us a trained army of the bone and sinew of the country whenever we wanted it, on short notice.

WE believe the accounts received by prominent commercial houses in this city from their agents at the South represent a great change as having come over both planters and negroes since Christmas, and the relations of the two parties as being now very much more cordial and encouraging than they were two or three months ago. The negroes have got over their dream of having the land divided amongst them on the opening of the new year, and the planters have got over their absurd fear of a general insurrection on Christmas Day, with the usual accompaniment of arson and murder. Contracts are therefore now being freely made, and with a good prospect of their being fairly kept on both sides. There is nobody, we are satisfied, in the whole Union, who will not feel devoutly thankful if the labor problem of the South can only be settled in this way.

IN the effervescence of Mexican affairs, an atom of trouble for us has been thrown to the top. The Liberals have taken Bagdad, and, it is said, taken it with the help of American soldiers. Bagdad, like most other places on this continent which have inherited the names of famous towns, is probably of no great importance, and the gravity of the case is merely in the assistance we are supposed to have given. General Sheridan declares from his post at New Orleans that he does not believe any of our soldiers were concerned in the capture. *Apropos* of Mexican affairs, General Weitzel, having protested against the execution of seventeen Republicans captured by the Imperialists as a "horrible barbarity," has received a direct snub from General Mejia, who declares the prisoners in question to be bandits, and informs General Weitzel that he will hereafter return, unanswered, all letters couched in the language of his protest.

MR. EMERSON ETHERIDGE, who does not approve of the President personally, does approve of the presidential policy of reconstruction. He says in a recent letter, that the Union's and the President's best friends will be found among those who have been their worst enemies; while the people at the South who will be found most unfriendly to the restoration of good government, are those dark spirits who wish to have the presence of the troops continued there for the protection of the rights of life and property; or, as Mr. Etheridge expresses it, for the purpose of increasing the calamities of our Southern brethren, and augmenting their humiliation. There is no doubt that, on this principle, Mr. Etheridge is the friend of the President *par excellence*.

THE re-election of Mr. Sherman to the Senate from Ohio, by a vote of 94 to 41, is to be regarded as no very decided expression of conservative feeling, although General Schenck, who is defeated, is of more radical politics than Mr. Sherman. There was, no doubt, a feeling among many who would otherwise have preferred General Schenck that the course of Mr. Sherman during his past term ought to be approved by re-election, especially as there was no very wide disparity of opinions between the two candidates after all.

MR. JOHN BELL, of Tennesse has written a letter favoring negro suffrage, with a property qualification of $250; and declaring for th admission of negro testimony in the courts, especially in all cases

which black men are concerned. He believes that their testimony will generally be found as truthful and candid as that of white men of the same degree of education. He forebodes, however, the early extinction of the African race in a state of freedom.

SECRETARY MCCULLOCH has brought out in his communication to the House on the subject of the decrease of our commercial marine some facts worth knowing. The loss to us in tonnage during the war is not, as commonly supposed, four or five million tons, but only, in round numbers, nine hundred thousand. Of these, eight hundred thousand were really transferred to foreign owners, and only one hundred thousand were destroyed by pirates—a very much smaller amount than has been usually imagined. But Mr. McCulloch advises against any modification of the act of 1797 that would permit those American owners who have transferred ships to foreign flags during the war to restore them now to American registry, apparently because he believes them to have been guilty of an offence deserving at least such punishment as is involved in a refusal to grant them any indulgence. While all honor is due to those who made heavy sacrifices of their property rather than resort to this expedient to save it, it is, perhaps, but right to consider that many merchants would doubtless have been unable to meet the just claims of creditors if they had refrained from doing so, and that their duty to refuse to adopt it under these circumstances may fairly be doubted in consideration of the fact that the Government afforded them absolutely no protection. During four years they were liable to be plundered with impunity anywhere outside our own harbors, and many had their whole fortunes in their ships. Under these circumstances, it is hard to say that they were not entitled to resort to any means of security that offered itself. And, as to their want of patriotism, it is not quite clear that ship-owners should have been called on to make sacrifices from which the rest of the community were entirely exempt.

THE execution of Mrs. Grinder at Pittsburg has furnished the reporters with a splendid opportunity for the display of their very remarkable powers of composition, as the scenes which occurred at the gallows were very revolting, and Mrs. Grinder's conduct full of striking "effects." We shall probably now have a series of homilies upon the question of inflicting capital punishment upon women; but there is only one thing which needs to be said about it, and on this the strongest advocates of capital punishment will agree. No matter how illogical it may be to make distinctions between the sexes in punishments, when there is none in the crimes for which the punishments are inflicted, if the hanging of women excites more sympathy for the offender than horror of her crime, it were better not to hang her, for the great object of hanging is not to put the murderer out of existence, but to deter others from imitating him. We shall, however, never find a substitute for hanging, either in the case of male or female criminals, that will satisfy the public, till the discretionary power of pardon in cases of capital punishment is taken away from governors, and everybody else, and a sentence of imprisonment for life is made really irrevocable.

THE Government, in the pursuit of its oblique policy of punishing the treason of rebels under the name of some minor offence, has caused the arrest of the guerilla Mosby. He is charged with having hanged two Union soldiers during the war in retaliation for the alleged murder of some of his men.

OUR special correspondent at the South in a recent letter alluded to certain reports which implicated the commanding officer at Beach Branch, S. C., in certain acts of injustice and cruelty on the part of the planters towards the freedmen. Lieut. Wood, 104th U. S. C. T., assures us that our correspondent was misinformed. He says:

"I was in command at Beach Branch up to Nov. 12, 1865, and nothing of the kind occurred. There is no foundation for the story whatever. My course while in command at Beach Branch was such as to meet the approval of my superior officers. I had but one object in view, and that was to render impartial justice to both black and white."

THERE has been more countermarching in Mexico. The French approached Chihuahua in great force, and President Juarez and his Cabinet retired in great haste. The latter, when last heard from, were at El Paso, while the national forces remained fifty miles from Chihuahua, "annoying the French."

THE young King of the Belgians was received by the people with the liveliest enthusiasm when entering Brussels. Arriving in the market-place Marché-aux-Herbes, such an avalanche of bouquets saluted him that he was obliged to rein in his horses, or leap over the flowers. The populace took advantage of the pause to press close to the King, crying out, "Sire, to-day, as yesterday and always, we are for you and liberty." The young King, who was very pale, clasped the hands extended towards him, and replied, "I know, to-day as always." His brother, the Count of Flanders, was melted to tears, and, letting his bridle-reins fall, bowed to the throng and reiterated his thanks.

GREAT cordiality seems to exist between the Emperor of Austria and the Hungarians. Francis Joseph has received deputations from the Diet, as well as other visits without number, at his Imperial residence of Buda. The correspondent of the *Indépendance Belge* relates that his majesty was so overcome by the multitude of these visits that on one occasion he confused the speeches intended for two deputations, and delivered each to the wrong body. But as they both came to nearly the same effect, the deputations, except in respect to some trifling details, were perfectly satisfied.

IN her speech at the opening of the Cortes, the Queen of Spain took occasion to declare herself true to the purpose heretofore expressed of respecting the independence of the American states once colonies of Spain. This declaration was made *apropos* of the recognition of San Salvador. The Chilian difficulty is attributed to refusal, on the part of Chili, to make reparation for insults offered to Spain during her difficulties with Peru.

IT is announced that Francis II., ex-King of Naples, has no idea of leaving Rome, as long as the Pope remains there, though this may not be long. The Pope, whose cheerfulness has been a matter of surprise, does not disguise his sadness now, nor conceal his fear that the fulfilment of the treaty of September, 1864, will probably be the signal for his withdrawal from Rome.

THE special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

CONGRESS.

WASHINGTON, Jan. 20, 1866.

THE week closes with one great act of legislative justice accomplished, so far as the passage through the House of Representatives of the negro suffrage bill for this District may be so considered. The debate upon the measure, though too long protracted, developed points of much interest. Its advocates were able to show that the colored people of Washington are the owners of a million and a quarter of property, on which they pay taxes; that they take and read over 5,000 daily newspapers; that they own twenty-one churches and about as many schools, built and maintained almost wholly by their own money; that they furnished a much larger quota of volunteers for the war, in proportion to population, than the white men of the District; that they are as intelligent and moral as any class of people in similar social station; and, finally, that the suffrage to be conferred upon them relates wholly to the municipal affairs of this District, in which their interests are as directly involved as those of the whites. This, it must be admitted, was a strong showing; and no small share of the final success of the measure is due to the fact that its opponents were able to allege nothing against it save the trite and threadbare arguments of negro

inferiority and degradation, which failed to hit the mark of this individual case. Indeed, many of those who voted for this bill are warm opponents of universal negro suffrage.

It is important to explain that the rejection of the amendment requiring the ability to read as a qualification for voting, by the large majority of 64, was owing to the fact that the Democratic members threw their vote solid against it, with the avowed object of making the bill as odious as possible to its more moderate friends. Yet it is significant that not a single vote was lost to the bill because of this defect which would have been thrown for it when providing for qualified suffrage only. This indicates the extraordinary cohesion of the great Union party in the House, which carried this bill through by more than two-thirds majority, although two days before unable to agree in caucus whether or not to go for the naked principle of negro suffrage, without prescribing qualifications therefor. It is proper to state that quite a number of Republicans representing districts in Southern Ohio, Illinois, etc., whose constituencies consist largely of negro-haters, were very qualmish upon making this record. But they made it. The only votes thrown against the bill, besides the 39 Democrats present, were those of nine border slave State Unionists, and six recusant Republicans from the West, three of whom represent Indiana districts. The issue was not "dodged" by any one—twelve members only failing to vote, and those were necessarily absent.

Now that the bill is passed, and it is settled that it will also pass the Senate by nearly as heavy a majority, it is confidently predicted that it will encounter a Presidential veto. If the President is more disposed to conciliate the South than to co-operate with the present Congress in what it deems wise legislation, he will undoubtedly veto not only this measure but many others likely to be enacted. But all outgivings of his purpose are wholly without knowledge on the part of those who make them, the President himself being very reticent regarding his relations to the Congressional majority.

Mr. Stevens's proposition to restore the Southern lawyers to practice in the United States courts without requiring of them an oath which not one in a hundred of them can honestly take, met with unexpected opposition in the House. Although passed by the narrow majority of five, a motion to reconsider was entered, and it is doubtful whether any report in favor of its principle will be made.

That Congress is not wholly bent upon the consolidation of power in the hands of the federal Government, as some persons have feared, was evinced by the very strong vote by which it rejected the bill to charter a great corporation for the purchase and settlement of lands in the late rebel States. It evidently means to leave to the States all that class of subjects relating to partnerships and corporations, so far as they do not affect inter-State commerce or run counter to great national interests.

DIARY.

Monday, January 15, 1866.—In the Senate, Mr. Sumner presented petitions from ministers of the African Methodist Church in Missouri and Illinois, praying for the right of suffrage for the negro in the late rebel States. Referred. A number of petitions were presented praying for further protection to American industry. Referred. Mr. Sherman offered a resolution prohibiting any appointment to the United States Military or Naval Academy of parties who have taken part in the rebellion, and removing a person named in the resolution who had been placed in the Naval Academy on the recommendation of a Kentucky Congressman. The bill securing to all railroads equal rights and privileges was defended at length by Mr. Foot.

In the House, credentials of three representatives elect from Arkansas were referred to the Committee on Reconstruction. Mr. Conkling offered a constitutional amendment basing representation in Congress upon population, excluding all persons to whom the right of suffrage is denied by State laws on account of color. Referred. Mr. Darling moved to instruct the Judiciary Committee to report on the expediency of amending the naturalization laws so as to require ability to read the Constitution as a condition of citizenship. Adopted. Mr. Broomall moved that a vote of the black men of the District of Columbia be taken to decide whether the white men should be allowed the elective franchise. Laid on the table, 138 to 12. Mr. Stevens offered a resolution that the Judiciary Committee report upon the expediency of so modifying the test oath of July 2, 1862; as to allow attorneys to practise their profession without taking said oath. Adopted, 82 to 77. The bill extending suffrage to colored men in the District was debated by Messrs. Kasson and Price.

January 16.—In the Senate, Mr. Chandler offered a resolution declaring non-intercourse with Great Britain, on account of her refusal to make reparation for damages to American commerce by her subjects during the rebellion. Laid on the table—ayes, 25; nays, 12. Mr. Davis spoke three hours against the bill for negro suffrage in the District.

In the House, the joint resolution from the Senate authorizing the Reconstruction Committee to send for persons and papers was adopted—yeas, 126; nays, 35. The discussion of the District negro suffrage bill was continued by Mr. Julian in its favor, and Messrs. Sitgreaves, Randall, and J. L. Thomas against it.

January 17.—In the Senate, the credentials of W. A. Graham, Senator elect from North Carolina, were received and laid on the table. Mr. Wilson reported a new bill for the organization of the army on the peace establishment. It provides that there shall be hereafter five regiments of artillery, twelve of cavalry, and fifty-five of infantry—ten regiments of the latter to be colored troops. It also provides for one lieutenant-general, five major-generals, and ten brigadier-generals. The bill was postponed. Mr. Doolittle spoke at length against the resolution for provisional governments over the lately rebellious States.

In the House, a bill to incorporate the U. S. Mutual Protection Homestead Company, with a capital of $3,000,000, and extensive powers to purchase, lease, settle, and convey lands and loan money, with a view to the colonization of the Southern States, was debated. It was opposed as conferring exclusive and almost unlimited privileges on a private corporation, as of doubtful constitutionality, as a dangerous precedent, and as a stride towards consolidation. The bill was laid on the table—ayes, 120; nays, 32. The discussion of the District negro suffrage bill was continued by Messrs. Conkling, Hale, and Van Horn, of New York, and by Mr. Thayer, of Pennsylvania.

January 18.—In the Senate, the bill for the admission of Colorado as a State was reported but not acted upon. A joint resolution for the distribution of 500 copies of the "Writings of James Madison," sending copies to 100 public libraries, to each State and Territory, and to each member of Congress, was passed. Mr. Nesmith, of Oregon, spoke at length in favor of the President's policy, against the doctrine of State suicide, and against negro suffrage. Mr. Wade, of Ohio, made a strong speech in favor of the rights of the four million freedmen and against hasty reconstruction. The Senate passed a bill granting the franking privilege to Mrs. Mary Lincoln.

In the House, the Committee on Claims made an important report against any and all claims presented or to be presented for damages to their property by our army from any citizens of States lately in rebellion. Mr. Jenckes reported the bankrupt bill of last session, with amendments. Made a special order for January 30. The discussion on the District of Columbia negro suffrage bill was concluded, Messrs. Clarke, of Kansas, and Boutwell, of Mass., in its favor, and Mr. Johnson, of Penn., against it. The House then came to a vote on a motion to postpone the bill till March. Lost—ayes, 34; nays, 145. Mr. Hale, of N. Y. (Rep.), moved to recommit the bill, with instructions to amend by restricting the right of suffrage in the District to all persons of whatever color coming within three classes following:

1st. Those who can read the Constitution of the United States.

2d. Those who pay taxes on property.

3d. Those who have served the United States in the war.

Mr. Schenck moved to strike out the property qualification. Carried. The House then refused to recommit the bill for amendment—ayes, 53; nays, 117. The bill was passed—ayes, 116; nays, 54—in its original form, which strikes out the word "white from all laws and ordinances relating to citizenship in the District of Columbia.

January 19.—In the Senate, the credentials of William Marvin, senator elect from Florida, were presented. Mr. Sumner read letters written from that State, stating that four-fifths of the Legislature elect were rebel officers and that the people of Florida were more hostile to the Government of the United States than ever. Laid on the table. The bill to enlarge the powers of the Freedmen's Bureau was taken up. Mr. Hendricks opposed it as expensive and unconstitutional. He said the section confirming for three years the possessory titles to lands granted by General Sherman's field orders was a wholesale confiscation, and beyond the power of Congress. Mr. Trumbull replied at length in defence of the bill, maintaining that the war power of the Government had not ceased, and that the President and Gen. Grant still regarded the South as in insurrection. An amendment was adopted confirming the titles to lands for three years instead of permanently.

In the House, the Naval Appropriation Bill was considered, amended, and laid over. Mr. Deming, of Connecticut, spoke upon reconstruction, opposing premature action, and declaring the general disloyalty of the South. Mr. Smith, of Kentucky, spoke on the other side. Adjourned to January 22.

January 20.—The House was not in session. The Senate passed the bill authorizing the President to appoint pension agents and to define the boundaries of their districts. The bill to extend the powers of the Freedmen's Bureau was taken up. Mr. Cowan moved an amendment restricting its operation to rebel States. Mr. Trumbull objected that this would exclude Kentucky, Maryland, etc., where the late slaves need protection. Mr. Guthrie spoke against it, saying that it was not in the bond of union that Congress should send officers of the Freedmen's Bureau to Kentucky to regulate its domestic relations. Mr. Pomeroy defended the bill. Adjourned to January 22.

THE FREEDMEN.

THE principal facts embodied in Col. Eaton's "Summary Report of the District of Columbia" have been already published by us. An interesting account is given of the Government farms in St. Mary's County, Md., which have produced, "with great economy of labor, the best crops in that section of the State." Thirteen hundred acres, in addition to the gardens of the freedmen, have been under cultivation. "Besides the work on the crops, barns, fences, etc., have been built, and other permanent improvements made." The number of persons on the farms has averaged 500, about half of whom are laborers and receive regular wages. Elsewhere in Maryland the colored people are subjected to many hardships and outrages, including personal assaults, which go unpunished if the assailant is white. The law excludes the negro from bearing testimony in his own behalf, and he is unable to compel the good faith of his employer. The apprenticeship law still causes much

wrong by the unjust separation of families. Col. Eaton says he has aimed "to act not so much by direct authority as to secure the best possible administration of bad laws, and exercise an influence in favor of their speedy amendment." The intelligence offices opened in Washington and Alexandria have proved of the greatest usefulness. From July 21 to November 1, 773 persons obtained work under contract and were registered; and as many more probably were helped to situations. "Several calls for labor have been received from railroad and mining companies at the North, by which the introduction of a large element of colored labor is desired. For various reasons these calls have not yet been answered."

Some trouble has been caused among the freedmen in Mississippi by injudicious addresses and improper interference on the part of officers in no wise connected with the Bureau. Such harangues and intermeddling have been expressly prohibited.

The Alabama planters conspired, on the 1st of January, to reduce the wages of their employees on the expiration of their contracts. The freedmen not only refused to submit to this reduction, but demanded an increase, and it had to be granted before they would renew the contracts. Present wages, including medical attendance, food, and quarters, amount to $10 for men, and $8 for women, monthly. The demand for laborers exceeds the supply, especially for field-hands. It is said that over five thousand Northern men are industriously at work in the State.

Great improvement has taken place in Georgia in the relations between the freedmen and their former masters. "Jayhawkers" (*i. e.*, the evil-disposed whites) have been compelled to give over persecuting the freedmen and trying to secure their services at insufficient rates of compensation. The negroes, on their side, are more tractable, respectful, and law-abiding, and disposed to enter into reasonable contracts.

—The farmers of Somerset County, Md., recently held a county meeting to fix the prices of labor. These were, omitting details of specific kinds of work, $10 a month, or $120 a year, with board, for men, and $36 for women. They recommend declining "to hire day labor in any department of their business when hands can be more advantageously hired by the month or year."

—The James River farmers met at Turkey Island, on the 5th of January, and adopted certain regulations for the purpose of an "Organization of Labor," as follows:

"2d. A first-class field-hand shall be paid by the year $130—a first-class field-hand shall be paid by the month $10; a second-class field-hand shall be paid by the year $105—a second-class field-hand shall be paid by the month $8; a third-class field-hand shall be paid by the year $70—a third-class field-hand shall be paid by the month $5; a first-class woman (field-hand) per month, $5; a second-class woman (field-hand) per month, $3.

"4th. Each hand hired by the year shall have deducted a 'per diem' (*pro rata*) for sickness, holidays, or absence by leave of the employer.

"5th. Each hand hired by the month shall be subject to the same deductions as those hired by the year, and, in addition, shall be charged one dollar a month for their fuel during the months of December, January, February, and March.

"6th. For disobedience of orders or insubordination, each hand will be charged one dollar.

"7th. For leaving the farm without permission, one dollar will be charged each hand in addition to the loss of time.

"8th. Each hand will be responsible for injury or loss to the stock and farming utensils, if occasioned by negligence, and the amount deducted from his wages.

"13th. No hand will be employed who has been discharged for misconduct or violation of contract.

"16th. The rations shall be as follows: For men, three pounds of meat per week; for women and boys, two pounds of meat per week, or its equivalent. For men, fifteen pounds of meal per week; for women and boys, twelve pounds of meal per week."

These wages are professed by those offering them, among whom are some of the wealthiest and most prominent citizens of Virginia, to be "fair and liberal." It is hard to guess what they mean, or on what grounds they have the effrontery to face the world with such a claim. Taking the several qualifications into consideration, we believe that no farmer would expect to obtain laborers at much less than twice these rates in those parts of the Union which have not been ravaged by war, where the laborer's government exists by consent, and measurably under the control of the laborer; where, in case of dispute with his employer, he can expect to have justice administered by courts of law before which both parties will appear on equal terms; where the laborer's children are provided with education with little or no expense to himself, and where his ambition to improve their condition and his own is respected and encouraged.

—A correspondent of the New York *Times*, dating at Richmond, January 18, states that

"Throughout the whole State county meetings have been held for the purpose of fixing prices of labor, and in many instances they have been liberal and generous, while in others they have agreed on rates which will be ruinous to the working-classes and productive of trouble in the future. The reports of these meetings," adds the same observer, "conclusively prove the fact that equal and fair-handed justice will not be rendered in every instance unless forced by the Freedmen's Bureau or some similar organization. Property-holders are naturally prone to get as much labor as possible for a small outlay of money, and, with this desire, the reluctance to give up supreme control of the negro combines in producing concerted movements to grind and oppress the emancipated blacks."

With regard to the social condition of the late capital of the rebellion the correspondent of the *Times* says:

"Garroting and other similar means of attack, for the purpose of robbery, are nightly occurrences, and the columns of the local newspapers teem with accounts of such assaults upon every class of people here, high and low, white and black. . . . It seems as if a moral ulcer had fastened itself upon this section, and, eating its way to the vitals, threatens to permeate the entire body politic. The characteristic recklessness of the Southern people fosters the growth of this deplorable tendency, and it is also strengthened by the poverty and despondency entailed on this people by the result of the war. The intelligent classes are more or less affected, which statement is proven in the fact that they are partially indifferent to the startling and daily increasing amount of wickedness with which they are surrounded."

—The New York National Freedmen's Relief Association has published its Fourth Annual Report. Its income in 1865 was $291,624, of which $139,926 were contributed in cash and $135,978 in goods. England (chiefly), and France, Switzerland, and Holland, have contributed of money $40,690, and of goods $37,853. Its disbursements have been mainly for supplies for the relief of the physical needs of the freedmen; $181,030 have been expended or are in process of distribution for this purpose; $60,590 were paid for salaries of teachers, disbursing agents, superintendents, and officers. The Association has 206 teachers in the South. They have about 10,000 pupils under their charge, exclusive of the adults in the night-schools. It supports two colored Orphan Homes—one in Florida and one in South Carolina. After the present winter the Association will, practically, re-organize as an Educational Commission, although it may still retain its present name. Of course it needs, and will continue to need, the support of the liberal. The president is Francis George Shaw, and the treasurer, Joseph B. Collins, 40 Wall Street.

Minor Topics.

THE electric telegraph is usually so prompt in imparting to the press throughout the country a knowledge of public events at Washington that we are rather surprised to have found no reference in the despatches of the daily papers to the visit which Master Richard Coker has paid to the President. For information touching the occurrence we have been obliged to wait the slow processes of the post, which has at last brought us the facts in the Washington *Republican*.

Had there been among the conductors of our daily press a tithe of the enterprise which should animate them, we should have had at least three dispatches from Washington concerning the visit of Master Coker to the President. The *Post* would have announced:

WASHINGTON, Jan. 5, 12 M.

"Master Coker has given the President an interview at the White House."

And the *Tribune* of the following day would have declared:

"The *Herald* report that Master Coker had called upon the President is understood to be a newspaper hoax."

To which a later edition of the *Times* would have added:

"Master Coker has called upon Mr. Johnson. There is no truth in the report that he tried to assassinate the President."

But no effort was made by the daily press of New York thus to rescue this event from oblivion, and, except for us, the metropolis might have gone for ever empty of information so valuable. Our task

is all the more difficult from the fact that we must ground the unblushing public in the knowledge that Master Richard Coker is a distinguished juvenile vocalist; whereas, if the affair had been telegraphed from Washington, every one would have been ashamed to confess that he knew nothing of Master Coker, who "is thirteen years of age, and possesses a wonderful soprano voice." These gifts qualified him to go and pay his respects to the President, which he did, receiving Mr. Johnson's felicitations upon his great success in what the *Republican*, with a very pretty stroke of rhetoric, calls "the vocal world," if, indeed, the President did not himself use the elegant periphrasis. In return for this politeness, Master Coker, "who possesses good conversational powers" (newspaperee for talks well), no less than a wonderful soprano voice, took the President to task for living in such poor style. Master Coker said, in his fine conversational way, that if he were President he would have richer and more beautiful things about him. This must have taken Mr. Johnson somewhat aback, but he was evidently not to be put down by good conversational powers, for he rallied, and, placing his hand on Master Coker's head, replied:

"You must remember that in this country we judge of men by their intellectual greatness and moral worth, and not by their wealth or position."

He might have added that this was a nation which rather begrudges its chief-magistrate a well-furnished house; that it had been possible for the press to accuse the widow of a President of carrying away the very rubbish in the White House which awakened Master Coker's disdain; and that he ought to have some respect for it because the Republic prized it so highly. These reasons for living shabbily would have come home to a youth of Master Coker's conversational powers, we think; but perhaps he also appreciated the reasons the President did give, which, if not quite a candid response to Master Coker's remark, had at least the charm of novelty. The *Republican* trusts that the President's lesson "will not be lost upon him in his future visit to the glittering and princely courts of Europe," and we hope that the advertisement of his visit will be no loss to the distinguished juvenile vocalist's friends, who probably intend to take him to the glittering and princely courts in question, after first making our own public acquainted with so famous a singer. We think Master Coker could make the crowned heads a suggestion or two which would improve them; and we confess that we greatly enjoy the whole affair of his visit to the President. It betrays a quickness of expedient in his friends which augurs well for the vocalist's future, and shows how a frightfully overworked public servant can be turned to practical account even in moments of relaxation.

The trial of the suit brought by Mr. Swanborough, of the Birmingham Theatre, against the comedian, Mr. Sothern, for a breach of engagement, has developed some very odious traits of human nature. The engagement was made last autumn, just before Mr. Sothern's malady of the throat obliged him to submit to an operation, and it was in consequence of the severity of the disorder that he broke the contract, and refused to appear more than five of the seventeen nights agreed upon with Mr. Swanborough. But, the first night of all, Mr. Sothern had disappointed the audience by failure to play, and the manager had to return the people their money, as well as some four or five pounds claimed by dead-heads, who had paid nothing to come in. After this the Birmingham play-goers became very cold and critical, and Mr. Swanborough lost a good deal of money by his engagement with Mr. Sothern, although the comedian appeared in that character of *Lord Dundreary* which elsewhere had never failed to draw vast houses. The manager had recourse to the expedient of *papering* in order to fill his theatre, but the audiences thus admitted on free passes, though encouraging in numbers, were but lukewarm and niggardly in applause; and Mr. Sothern, speaking from a shrewd observation of human nature over the foot-lights, said that "*a paper audience was not like a pay audience—there was a coldness about it—paper was never lively.*"

It must be confessed that there is a disagreeable analogy between the characteristics displayed by the Birmingham dead-heads and those which mankind generally exhibits toward benefactors; and it need not take us long to get over the shock of surprise and indignation with which we learn that people who go into theatres for nothing are so ungenerous as to withhold applause habitually. It is known to most Christian moralists how exceedingly slow men who enjoy the bounty of Providence are to acknowledge the goodness which gives them health, riches, and station; whereas, persons who have neither are very grateful for them. Indeed, we fear that, in proportion as we are papered in this world, we are pitiless and proud. The favor seems a tribute to our merit, and it behooves benefactors to look well to the quality of their benefits if they wish to win our approval. When we pay our money for a thing, we are ourselves concerned in finding it good; but if we borrow or beg it, we judge it with unqualified severity.

This principle accounts not only for the liveliness of pay as contrasted with paper in theatres, but for a great deal of ill-nature in life. Does any one suppose, for example, that the critics would be so savage if they had to buy the books they cut up? But having the volumes given to them by the large-hearted publishers and generous authors, how mercilessly they tear them to pieces! How the cruel rogues gloat over the destruction they occasion, and swell with scorn, and talk of "the volume of ridiculous trash before us," and "the absurd twaddler who has printed the present collection of rhyme," and so on! Of course, the people who buy the books are never guilty of this ingratitude. They put them into their libraries, and lay them on their parlor tables, and say nothing about them, and a purchased volume seldom meets with criticism except from somebody who borrows it. One of the most terrible censors of the public press of whom we ever heard was a person who took no papers but those he found in his neighbor's area. It is the same with the art critics, as they call themselves. Has any one ever heard of an art critic buying a picture or a statue? They abuse because they do not buy the artists' works, and come away from the exhibitions, where they have seen the pictures for nothing, and write terrible disquisitions on the creation of the world, and knock the poor painters about with the hard words of abstract æsthetics. The fat, good-natured purchaser of Mahlstick's "View of the Fulton Ferry-boat by Starlight" never has anything to say about Fra Angelico or Bellini, but has a habit of taking his friends up to the picture, after dinner, and pointing out the merit of the smoke-stack and getting orders for Mahlstick. He has paid his money and he applauds, and even if he fancies the picture bad he says nothing, on the same principle that boys who give their money to see a calf with six legs never expose the imposture on coming out of the show, and it is left to some rogue who has stolen in under the curtain to issue forth and denounce the monster as in nowise agreeing with his portrait on the posters.

The principle is of universal application. If we buy a bottle of wine to grace the dinner we give a friend, we do not cry out that it is beastly stuff, though our friend has no reserve in giving this opinion behind our backs, and making a wry face before us. Who is it creates the clamor about accidents on the best-managed railroads in the world? We fear it is the gentlemen of the press, who travel on free passes; and it is certain that if any church-goer finds a sermon dull, it is some casual hearer, invited into the pew of a member who has paid a thousand dollars for the pew, and thinks the sermon refreshing. It is universally granted that mothers love best those sickly and peevish children who cost them most pains and care, to the neglect of wholesome and amiable little ones, who never tax their patience; and it is notorious that the good humor of ill-natured people is the only good humor which has any positive value. Nay, would the fair partners of domestic joy appear such prizes as they all do if people were not at great trouble to win them? And would there not be many more divorce cases than there are now if people could be *papered* into matrimony?

We have had a great deal of absurd talk (from the poets chiefly) to the effect that life is hard; but it must be admitted that we should scarcely be willing to accept it, without grumbling, on better terms than the present. There are numbers of persons (the idle poets among them) who are dead-headed through life, and we see how captious and discontented they are with our poor little world. Alas! life is too easy, as any reader may learn by asking somebody who is puzzled where to sleep to-night, or some bed-ridden invalid, or say one of those Sybarites who take to the imposture of street-beggary out of mere luxurious wantonness.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of The Nation *should be addressed to the Editor.*

COLONIZATION AT THE SOUTH.

Not only, as it appears, has the German immigration at this port more than doubled within the past two years, but in the year just elapsed it exceeded the Irish by nearly twenty-eight thousand. It is not difficult to discover the causes of this gratifying increase and preponderance. The most palpable is the systematic effort of various associations, among our native-born and adopted citizens, to stimulate emigration from the Continent. A more subtle, but perhaps not less effective, if indeed it be not the fundamental cause, is the political and social change which the war clearly promised and has since wrought in this country—a change which could not fail to exert a far wider influence in Germany than in Ireland on the minds of those desirous of coming to America. Both these forces, as well as the natural attraction of those who remain at home towards their kinsmen here, are certain to grow in intensity and to reinforce our population still more strongly from the Teutonic stock.

The many qualities which render this stock superior to the Celtic, not indeed for testing (which has its value) but for strengthening our republican institutions, are too familiar to require enumerating. Whatever made its advent welcome heretofore ensures for it a heartier welcome now. Already it had resisted in the States along the Ohio the encroachments of slavery across the river, and, in peaceful times, had redeemed the Missouri of border-ruffianism for a bulwark of loyalty in the second revolt against the ballot-box. The invaluable services which it thus performed at the West it may now repeat in the heart of the South; and it is in this direction that we hope to see the stream of German immigrants persistently directed by those who have it in their power to shape its course.

It may seem strange that this class of foreigners, whom we can charge so confidently with the support of democratic ideas, is well received and even invited by the South itself. Nobody can point to a German settlement there which has succumbed to the baser habits, practices, and principles of the community about it, or which has been anything else than a protest and an argument against them. The Germans of Texas disproved the favorite assertion of the slaveholders that white men could not labor in semi-tropical cotton-fields, and demonstrated the false economy of slave labor by a larger and finer production of its principal staple. They abided as steadfastly by the Union as by freedom, and endured unyieldingly the murderous persecution of their neighbors. Nevertheless, there is a genuine demand from the South for more of these people in quarters where a "Yankee" would be refused admission, or, if allowed to reside, would be precluded from carrying on his business. Diversity of language will account sufficiently for this apparent paradox, and explains why the *Pionier* and *Neue Zeit* might circulate without hindrance where The Nation would be tabooed and its subscribers jeopardized. The fact is, the instinct of the South, being trained to recognize "fanaticism" only when dressed in English, is put at fault by this red-herring of an unknown tongue.

It is this consideration, coupled with the evident gains for industry which the South now affords, that induces us to urge very strenuously upon the Germans the largest possible emigration thither. We are aware that objection has been made to the still fierce and suspicious nature of the people of the late slave States, but we have shown that Germans least of all will suffer because of it. They need not, as Northern men must, surrender their own liberal notions, and denounce them in others, for the sake of pursuing undisturbed their calling. One might almost say they would be just as useful without liberal notions, since the grand object is to establish amid the barbarism of the South a society retaining the ways and usages of civilization. We anticipate the objection that this equalizing process has far greater perils for the newcomer than promise of elevation for the native inhabitant. The spectacle of those Northern men whom the South engulphed and completely assimilated to itself, has been but too frequent and painful. We admit the danger, and therefore counsel earnestly against all isolated attempts to erect free labor and introduce civilized manners where only colonies can succeed. This is the true and pressing want of the hour. From any considerable body of German immigrants can generally be selected such a variety of trades and talents as will render a colony independent wherever it may be located. Finding thus within itself all the resources necessary for its comfort and prosperity, it cannot be tempted to forsake thrift for shiftlessness, decency for profligacy, humanity for cruelty, light for darkness. It will continue to expand from within, to found itself permanently in its chosen pursuit, and will gradually lift its surroundings to something like its own plane of life and conduct. On the other hand, the individual German who trusts himself alone in the social wilderness of the South will be pretty sure to be absorbed into the population around him—to learn to think their thoughts, use their language, and adopt their habits. A little organization, a little concentration of means and of purposes, will avoid all this waste, and accomplish infinite good for the whole country.

We may as well confess that, while we duly consider the welfare of the German immigrants, we perceive that their colonization is to bring the desired opportunity for the men of the North, who have at present no refuge in all the Southern country except the military posts. The continuance of these is as precarious as the will of the Commander-in-chief, and their protection has not at the best a wide or constant range. But if everywhere there should spring up honest German settlements, vigorous and self-sustaining, giving no offence and incurring no hatred, they would form a *point d'appui* for Northern immigration, and would extend to the single-handed adventurer a moral support which might cover him from harm. We could regret, except that regret seems almost useless, that the land we have laid open by our arms is closed against our peaceful entrance, and that we are forced to summon pioneers from across the water. Such, however, is the unpleasant state of the case, and interest and patriotism unite in spurring our German population to a well-considered, comprehensive plan of occupying the South, in which a host of their countrymen as yet untransplanted shall take an honorable and a profitable part.

OUR INDIAN POLICY.

Standing by itself, the war waged during the rebellion with the Indians would have seemed of huge and striking proportions. Not less than twenty-five thousand men have been and are now operating against the aborigines. From three to four thousand in New Mexico, under command of Gen. Carleton, have been fighting the Apaches and Navajos; and fifteen thousand of the latter have been removed as prisoners of war from their mountain homes to the Bosque Redondo, a valley in the eastern portion of the Territory. Gen. Conner, in Utah, and latterly on the plains and along the central lines of travel, has never had less than two thousand men, and during the past year has commanded more than treble that number. A full brigade of cavalry have been actively engaged in the Humboldt Valley and upon the Pacific coast, and another in Arizona. In the North-west, along the frontiers of Minnesota, Dakota, the northern part of Iowa, and the eastern slopes of Montana, as many as six thousand troops have been employed during the past three years—large bodies of them, under Generals Sully and Sibley, in campaigns extending over several months. At this writing, the military division of the Missouri (second in importance only to that of Sheridan, and including Kansas, Nebraska, Colorado, Utah, New Mexico, Montana, and Dakota) contains a force of from twenty to twenty-five thousand men, exclusively occupied against the Indians and in protecting our continental thoroughfares from their unremitting hostilities.

The advance of civilization here, as elsewhere, is literally "upon a powder-cart," for this large army holds open the great overland and Santa Fé mail routes, two thousand miles in length, with their daily and weekly service, which costs the country annually upwards of a million of dollars. It protects two thousand miles of navigable waters above Omaha, by which the adventurous pioneer may reach the El Dorado of that region. It guards the overland telegraph from the Mis

souri to Carson Valley. Under its ægis a hundred thousand emigrants go thronging annually toward the Pacific, while our scattered settlements that jut from east and west out into our vast pastoral plains, once familiar to us only as the "Great American Desert," and the growing overland commerce whose profits are reckoned by scores of millions, owe their prosperity and stability to the same military police.

How great are the interests thus fostered, and how important it is that they should remain for ever undisturbed, is evident to all. It is also pretty generally understood that our past policy toward the Indians and our present conflicts with them have effected little for the desired security. The cost of this warfare is appalling, and its disgrace deep when it blossoms into such atrocious crimes as the Sand Creek massacre. "It is estimated," says the report of Secretary Harlan, "that the maintenance of each regiment of troops engaged against the Indians of the plains costs the Government two million dollars per annum. All the military operations of last summer have not occasioned the immediate destruction of more than a few hundred Indian warriors." Indeed, it is an axiom in the Department that it is much cheaper to feed than to fight Indians. But it has only recently begun to be asked whether it is necessary to do either; whether savage warfare will not largely cease when treaty stipulations are strictly fulfilled, when honest trading shall be the rule, when agents forbear to grow rich on moderate salaries, and when justice shall be visited promptly and impartially on the lawless white man who boasts of shooting an Indian whenever seen, as on the latter when he madly runs a muck.

The Indian race within the American Union is variously estimated at from four to five hundred thousand persons. Those who are in treaty relations with it number about three hundred and fifty thousand, and the rest do not exceed from fifty to seventy-five thousand. The latter are mainly the Comanches of Texas, the Apaches, Yumas, Mohaves, Yampais, Hualopais, and Chemihuevis, in New Mexico and Arizona. The Comanches and Apaches are the greatest obstacles to the rapid development of the south-western mining regions. East of the Rocky Mountains may be reckoned about one hundred and fifty thousand Indians, of whom two-thirds will be tribes more or less civilized. Many are quite well educated, possess considerable means, and have most of the habits of an intelligent yeomanry. The mountain tribes number one hundred and fifteen thousand, of whom some ten thousand are Pueblo or Village Indians, for the most part living in New Mexico. These are quite as intelligent, industrious, and in every way useful a population as the Mexicans. Some of the Arizona tribes exhibit the remains of the ancient Aztec civilization. Small tribes are located on reservations in Utah and Nevada; but at least ninety-five thousand are entirely savage, and have generally no other dealings with the Government than the reception of occasional gifts or hostilities with the troops. The Indians on the Pacific coast form naturally a separate division. About one-half of them are more or less permanently settled upon reservations.

Now, our policy towards this people has been (and it is in theory more scrupulous and honorable than that of any other European stock which has invaded them) to acknowledge by treaty their primitive title to the soil, and then purchase it by paying them in annuities of money and goods, reserving suitable tracts on which to place the various tribes, and there instruct them in agricultural and other civilized pursuits. The system has not worked well in any one of its three aspects. The treaties have given the Indians an exaggerated idea of their own importance. The aboriginal tribes never had any national elements: they were and are simply clans. But the new American idea is the unity of man, in spite of differences of race or color, and the sooner the Indian is embraced under it, the better will it be for him and for us. There is the same objection of separation and isolation to the payment of annuities, which is even more disastrous in its effects, inasmuch as it has served to make paupers of the tribes. The manner of distribution has resembled a timid mother's alternate petting and scolding of the unruly boy whom she cannot manage. Its consequences have been the same, besides affording rare opportunities for plunder to traders and officials. To the rascality of the latter in debasing or withholding the promised supplies, money, or presents, are attributable many of the worst Indian outbreaks. Finally, the reservation plan is almost an entire failure. Had it been adopted with the view of uniting the Indians into one Territory or State, as was contemplated in the case of the Southern nations, it might have succeeded. One of the best proofs of the advantages derived from concentration is the progress made in the territory south of Kansas. Another is the fact, which is confirmed by the reports of the Indian Bureau, that the smaller the reservation, the speedier the Indians become extinct; and *vice versa*.

Up to the present administration of Secretary Harlan and Commissioner Cooley little effort had been made, in appointing Indian agents, to procure suitable men. The agents were, for the most part, decayed politicians, or "smart" and ambitious men ready to take their chance of promotion in a new country. Add to this, that the salaries have been miserably inadequate. To tempt any really capable person to leave home and civilized resorts for a life among savages, something more was required than a salary less than is paid to a first-class clerk in a dry goods store. Corrupt practices and habitual swindling were inevitable when low wages were joined to characters destitute of principle. The money thus worse than wasted has, of course, contributed to the destruction rather than the civilization of the Indians. Comprehensively speaking, it may be said that hitherto the Indian Bureau has *bribed* them into temporary peace, while the War Department has desired to *frighten* them into permanent quiet; and between the two they have been nearly exterminated. In 1836, the Miamis numbered eleven hundred; now, but five hundred. The Winnebagos, forty-five hundred; now, but two thousand. The Sacs and Foxes, then living in Iowa, now in Kansas, were six or seven thousand strong; now, not more than one thousand. The Pottawatomies have lost seven thousand in thirty years, numbering now but two thousand. In 1850, at Fort Laramie, Nebraska, twenty thousand "Indians of the Plains" were represented in council. In 1853, other hunter Indians, also living on the plains, and representing fifteen thousand, met in council. These thirty-five thousand, all told, have decreased ten per cent. since then. The Pawnees, once a warlike people, have decreased three thousand since 1848, when their number was seven thousand.

In another article we shall consider the steps which the Government is taking to apply substantial corrections to the abuses of the past, and redeem the national honor, so far as it is now possible, by a humane and just regard for the rights of the red men.

MORAL APATHY AND IMMORAL ANTIPATHY.

The vote of the House of Representatives on suffrage in the District of Columbia—whatever may be thought of the process by which it was carried, or of the propriety of refusing to impose an educational test in the very place in which of all others it is perhaps most needed—was an unmistakable indication of the resolute temper of Congress, and is a signal rebuke to those adroit manufacturers of opinion, those pseudo expenents of popular sentiment, who, whether from party prejudice, hardness of heart, or honest conviction, have always been tacitly, as they are now actively, zealous to leave the work of the Republic half done. From those who avow such principles the cause of justice has little to fear. The nation will not, with its eyes open, and with full knowledge of what it is doing, consent to an act of constructive perfidy; but then there is reason to dread, in spite of the vote of Thursday last, that the public mind may be confused by means whose employment and ulterior objects are not always apparent.

The means referred to are employed both at home and abroad, in the street and in society, in leading articles and in correspondence, in direct charge and in covert implication; the objects are, primarily, to cover the black race with half-pitying, half-contemptuous odium; to stimulate aversion for it; to prove its unfitness to be trusted; to demonstrate the universal "antipathy" with which the whites throughout the country regard it; to prove the impossibility of the two races living together in amity unless one is constrained by special legislation to live, if not in slavery, at least in a condition of slavish subserviency to the other; to persuade the world not only that this incompatibility exists, but that it is a very proper, rational, and Christian-like thing that it should exist, and so on. The ultimate aim is, of course, the degradation of the negro and his permanent exclusion from political rights. We repeat that there is little risk of the black race being deprived of aught to which it may be justly entitled

by its open foes; the danger, unhappily, comes from the direction of its pretended friends.

The argument that a righteous measure is *inexpedient* is, of course, far more likely to carry weight with mankind than the consideration that to disallow it will favor selfish ends. He who avers that he would gladly advocate such and such a policy, virtuous in principle as it is, but that his extensive experience and specific knowledge of the subject persuade him, reluctantly, to acknowledge that it would not work well in practice, has a better chance as a propagandist than he who bluntly declares he opposes the policy because successful opposition will get him an office. The man who, previously favorable to the colored race, has an immense concourse of friends (all likewise similarly favorable) continually bringing him bad accounts of the way the freedmen behave, and how inexplicably they, the friends, find themselves loathing all blacks after brief personal contact, and who, therefore, gradually modifies his own opinions as to their merits and capacity, will obviously be a more effective operator on public opinion than another man who bluntly owns he always hated niggers, and wishes they had never been freed at all.

It is true that the more thoughtful and enlightened may regard with suspicion the ringing of changes on such stale arguments about amalgamation, barbaric ignorance, unconquerable laziness, and unchangeable inferiority of race as were opposed of old time to emancipation, and now do service against enfranchisement; but such thinkers are not too numerous, and the ancient device of dressing up old dogmas in new dresses and getting them currency at critical moments under new names often produces more bewilderment than scorn. It is highly important, then, that all men who wish to see justice done and truth disseminated should resolutely unmask and denounce these scarecrows whenever they venture across the public path.

It is well to understand and to declare that there is scarcely any argument brought against the black man's having a vote which has not been vehemently urged against his having his freedom; and that—apart from the question whether, as the conditions of peace and war are different, a tentative policy might not be at once more practicable and more expedient in extending the suffrage than in according liberty—the uncompromising foes of one measure are, at heart, the uncompromising foes of the other. They are of opinion, admitting the possible hypothesis of amalgamation, that because Spaniards and Mexicans in the proportion of one to six make a bad cross (the cross, bad as it was, beat the pure race out of the country!), Anglo-Saxons and Africo-Americans, in the proportion of six to one, with immigration constantly widening the disparity, would make a precisely similar or equally objectionable one. They maintain that the mingling of races is more detestable when both are free than when one is free and the other bond, because *partus sequitur ventrem*, and it is better to beget a new slave than a new freeman. They contend that it is wiser and better to give he suffrage to an ignorant foreigner, if white, than to an intelligent native, if colored. They insist that we should take for demonstrated truths all manner of prejudiced speculations jumbled of physiological hypotheses and often at positive variance with known facts, not because they, professedly at least, wish harm to the numerous and powerful blacks, but because they fear harm to the sparse and feeble whites. They set up a painted devil—a hybrid bugbear—to affright our souls with the natural and human supposition that men are going to do what they dislike very much indeed to do in order to insure their own physical, moral, and intellectual ruin hereafter. They would have us pursue a course which, besides being unjust, is sure to entail obvious and absolute if not measurable disasters, and eschew another which is not just alone, but whose consequent disasters are not simply uncertain and speculative, but by many lofty and penetrating intellects are utterly discredited and scouted. They enjoin us to take as guides, and foreigners to take as witnesses, writers and travellers of a past generation whose theories and observations were instructive and valuable in their day, but are often supremely inapplicable to changed and unforeseen conditions; forgetting or ignoring that more lessons have been taught us in these last five years than in all the previous ones of our national existence.

But, however times may change or we change with them, it were a sorry thing for America, a mournful degradation from the moral pedestal she now occupies in the eyes of the world, were she to play the recreant and backslider, by moulding her practice in accordance with such precepts. The sanguine may say there is no likelihood of such a perversion; but if the preceding reflections are well founded it cannot be said there is no danger of it. There is a vast amount of irresolute, semi-bewildered public sentiment which the anomalousness of our situation and the desire for harmonious reconstruction are but too likely to bring into a condition favorable to the schemes of the class we have indicated; it becomes, then, the duty of every clear-headed and right-minded advocate of equal justice and common humanity strenuously to combat so evil a tendency; to put the people on their guard against the sophists, the metaphysicians, the physiologists, and the dialecticians who go about teaching them to do wrong that good may come; counselling them to take their hands from the plough while it is yet in the furrow; urging them to make over to their beaten enemy the crowning rewards of their victory; frightening them with

"Gorgons, and hydras, and chimeras dire,"

as the infallible penalties should they have courage to act up to the noblest impulses of humanity and resolve to do what is right.

Our position *is* anomalous. No other nation has been placed in circumstances precisely similar. Nothing is more natural than that there should be conscientious diversities of opinion. In the long run there will not be much confusion, not much doubt, as to the sincerity or duplicity of those that conflict. Meanwhile we may profitably remember that men who have been bitter foes to reform rarely become, at heart, the honest friends of its results. Consistency, to some extent, may be looked for in deeds when not in words, and it conforms with its laws that those who have combined to deprive mankind of one set of rights will not scruple to do all in their power, openly or covertly, to deprive them of another.

CONSULS.

Amongst the most important of the works which our renewed and strengthened Government must sooner or later (and the sooner the better) undertake is a thorough and radical re-organization of the consular system. Government has already ceased to regard it in its old aspect—a hospital for sick political friends—and has taken the initiative steps towards giving it a more vigorous and hopeful *ensemble* by a better selection of appointees than those who ten years ago used to drift into and out of office with the flood and ebb of parties, and by revising and enforcing in a more decided manner the consular regulations.

But the prerogatives of the State Department are too limited for effectual reform. Nothing but thorough re-organization by legislative action will render the service what it ought to be—the pioneer of our commercial enterprise and the principal channel of our political influence. At present it is neither profitable to the country nor the consuls, and a consular appointment is, to a man in earnest, neither a prize pecuniarily nor a social distinction worth making sacrifices for. Here and there an individual has been able to win himself credit, and distinction even, by fortuitous circumstances, some windfall in the way of a blunder in a local government, or a chance to operate for political influence in the days of our late perplexity. Mr. Bigelow, our late consul at Paris, may be cited as an excellent instance; but the wonder always was how Mr. Bigelow ever accepted the place of consul at Paris, so little commensurate in itself or its compensation with the status of the man at home—a fact which was recognized by the Government in one of the most graceful and creditable acts of the administration, the promotion of Mr. Bigelow to the ministership. But the services required of the rank and file of the consular corps are such as neither flatter ambition nor repay application, while the recompense offered is neither good pay nor good economy.

The service for its bettering needs much from the country and its legislators, and ought in return to bring, as it will doubtless under proper management, a greater energy and more undivided attention than have generally obtained hitherto. It needs to have its province and services better marked out, extended, and sustained, and its morale raised by something better to look forward to than a shiftless (or, in

the only alternative, hard-worked and thankless) four years' service; it needs to be governed with more rigidity and with improved *esprit de corps* and discipline, and it ought to have, and, it is to be believed, would, were the other conditions supplied, men devoted to it, watchful and quick to find any opening or circumstance which, taken advantage of, might promote the prosperity of the mother-land.

To those who regard a consular appointment as a pleasant sinecure, and its occupancy within the capacity of any man incapable of providing for himself otherwise, a résumé of the obligations of our service at present may be instructive. Firstly, and amongst the most important, is the acquiring of the language in use amongst the merchants of the place where the consul resides, without which he is entirely in the hands of the native sharpers or his own assistants, who are a necessity to him. In all European countries he should be acquainted with the French as the usual medium of official intercourse. So that, out of England and France, he ought to know at least two languages beside his own. He must be acquainted with all the treaties which have any bearing on any contingency possibly arising before him;* with all the important points and principles of international law; he must become acquainted with the values and qualities of all those products which the country he inhabits may or might contribute to the commerce or production of his own. He must be of such temper and intellectual capacity that the dignity of the nation he represents shall not suffer through him, as has too often happened in past years; of such integrity that the important trusts confided to him shall be safe, and their execution beyond reasonable doubt. It is not enough that he should be honest; he must also be vigilant. An instance has come under our notice in which a person who had obtained a false passport in the name of a well-known American citizen, through the fraud of an employee in one of our consulates, ran the gauntlet of half the consulates of Europe, committing frauds wherever he passed without being detected by the consuls who visaed his passport, while, at the same time, the passport itself was so irregular that it should have been stopped by the first consul who saw it. It is scarcely to be doubted that gross enough frauds have been committed on the revenue of the United States, through the inefficiency of consuls or the consular regulations, to have produced an amount greater than the expense of the consular corps for the rest of this century at the present rates of compensation, and more than enough to have paid first-class men to occupy all the posts in the gift of the Government. We have it from the most competent authority that the recent law for the verification of invoices by the consuls has more than doubled the revenue on some important articles of importation, has stopped smuggling in a great measure, and added many millions to the revenue. The general principles of the English laws establishing the duties of consuls are the same with our own, and the differences in detail signify simply that the system is intended to be more efficient in furnishing practical indications to commerce seeking a new channel. If a single change in the laws affecting consular duties can result in so large a saving, the enquiry is certainly pertinent: Cannot other changes be made in them with economical advantage? In discussing this question it may be well to consider in what respects the English consular system differs from our own, and whether the working of that system suggests advantages to be gained by changes in our own.

The instructions of the English consuls do not in material respects differ from those of the United States Manual, but the slight differences are significant. They point to a greater watchfulness to those details which may be practical indications to commerce seeking a new channel. In the charging of fees the English consul is especially enjoined to remember that "the consular system exists for the benefit of trade, and that fees must not be charged in such a way as to oppress the shipping interest, but rather that the consul should enable the ship-master to avoid unnecessary services requiring the payment of fees." In our own service, on the contrary, the efficiency of a consul is supposed to be indicated by the return of his fees, and a consulate which does not pretty nearly pay for itself is supposed to be a burthen on the country. In a large proportion of the English consulates the fees collected would not pay the stationery bill—in only one, New York, do they pay the expenses of the consulate.

But it is in the organization of the service and the development of a peculiar *esprit de corps* that the English Government has made of its consular officers effectual *avant-courriers* of trade; that it has succeeded in pushing English trade into every corner of the earth; by this that you find Abyssinians using English cutlery, kerchiefs of Birmingham on the heads of peasant women of the Abruzzi, the stuffs of English looms everywhere pushing out of the market the native products which have been the marvel of the world so long. *They* send a consul into every nook of the earth where a market can be made or found; we send one with the same instructions, and nominally the same objects, after the trade is established. English merchants seeking a chance for investment go to the Foreign Office returns to know where such and such goods may be pushed in; American merchants have often more reason to complain that their consul comes into and deranges or interferes with their trade for his own benefit. An English consul is the herald of exportation; an American the accountant of importation.

The English Government, again, makes its service efficient by making it permanent, establishing a line of promotion, paying living salaries, and giving pensions to those who have grown old in the service. We make ours inefficient by paying not enough to enable a man to live without some other occupation, removing him as soon as he understands his business to make room for some one who wants to go abroad and have his expenses paid by the Government. The public think it a very fine thing for a man to go to Europe and get a respectable mechanic's wages "for sitting behind a desk six hours a day," and as long as the present system remains it will be, as now, the most remarkable proof existing of the patriotism of American citizens, that a man can be found who will keep a consulate, honestly perform its duties, and obey all his regulations, for the salary he receives. We do not believe that there are six consulates in Europe whose salary will pay the living expenses of the consul, living in the most modest style which would be respectable, if he has a family (and no one else should be chosen for positions where social influence is to be exerted). Fifteen hundred dollars a year—the average salary of our European consuls of the first class—was, ten years ago, a sufficient income for a man of moderate tastes; now every article of necessity has doubled in price, and a house that could afford two servants and an occasional ceremonial dinner in '52, must be content, in '65, with one servant-of-all-work and no society, to live on the same income. We can assert, without fear of contradiction, that no consul of the United States at any city in the civilized world can, on his salary, sustain a respectable appearance among well-to-do people. Since 1848 gold has fallen to one-half of its previous value, and the sum insufficient for credit then is insufficient for comfort now, and the men who are *par excellence* the representatives of America before the populations of the foreign world, who represent us in a hundred places and ways where a minister does in one, are the worst provided for that representation of any men of their class in the world. We take at random a few figures from the English and American consular lists, giving the salaries of the respective consuls at the same places, adding, for information, the amount of fees collected by the English consuls:

	English salary.	English fees.	American salary.
Venice	£800	£76	$750
Antwerp	500	..	2,500
Buenos Ayres	1,400	296	2,000
Canton	1,600	..	4,000
" sub-officers	3,300	..	..
Alexandria	2,550	1,335	3,500
" sub-officers	2,350	..	..
Patras	800	..	..
Syra	500	..	..
Genoa	400	..	1,500
Odessa	1,200	11	2,000
Constantinople	1,800	..	3,000
Jerusalem	950	15	1,500
Smyrna	800	..	2,000
Do. other officials	1,830	..	..

The figures, perhaps, indicate not only the comparative estimation of the consular service by the respective nations, but their comparative value to their trade interests. Our service is ineffective because, firstly,

* "It is the duty of consuls to be conversant with all treaties, conventions, and consular conventions; also with the laws and commercial and other regulations relating to their consular functions."—*Manual.*

it is unorganized, and, secondly, because it is unpaid. The English consular service probably repays the country a thousandfold in the extension of trade effected by the earnest endeavors of a body of men devoted to their service, stimulated by the prospect of promotion and an ultimate provision for their old age or their families in case of their deaths in the service of their country, and directed by a watchfulness and minute supervision which, in preference to cutting off all functionaries whose services can be dispensed with without ruin, seeks every opening where an intelligent officer may be sent to explore new fields or cultivate others newly opened. The British Mercury has borrowed the eyes of Argus, and hunts out every place where he can swap an English jack-knife for any other known or unknown object.

The first thing we have to do is to borrow this larger policy of our mother and school-mistress. Instead of going over the consular list, pen in hand, as we imagine some of our economy-haunted M.C.s doing, to cut off every consulate which does not pay its own expenses, Congress should take the map of the world and find every section of it where there exists a population capable of receiving a cargo of American productions, and in every such district put at least one consul. Then abolish all existing laws on consular organization, and provide by law that candidates for consular appointments shall pass examinations and prove themselves capable of filling the office—that they shall only be removable for cause—that promotion shall be the reward of valuable services—that any man accepting office shall give bonds not to retire within a given number of years except under the penalty of the repayment of a certain portion of his salary received, or from reasons which shall be judged by Government to be imperative, and to be in all cases made public—that consuls who have had a given number of years of service shall be pensioned, or their families in case of their dying in discharge of their duties—that they shall in all cases be paid by salary, and that salary sufficient for the comfortable maintenance of a family, without any allowance for ostentation or ceremony except in places where they have diplomatic functions, in which case such allowance should be made separate from the salary—that an allowance, equal at least to one-third of a year's salary, shall be made to the consul by way of outfit, to be repaid in case of his retiring within a given term—and, finally, that the fees within a certain moderate sum shall go to the payment of a clerk, or clerks, as the business of the consulate may demand.

Then increase the stringency of the rules as much as reason demands, impose penalties for deficiency in duties, or what else may be required to secure efficiency; having paid for good service, insist on having it. Let every consul be obliged to furnish returns of the imports of the country where he lives, in the fullest attainable detail, and as well of the wants of the country not supplied by importation; see that he *is provided with samples of all of our manufactures* which could be introduced into the country to supply those wants, and let his reports be put at the service of the boards of trade in the fullest and promptest manner, and let it be distinctly understood that the value of the services of any consul to our commerce *is in proportion not to the return of the fees of his office from our* IMPORTS, *but to the influence he has exercised on our* EXPORTS, the latter being the true basis of the prosperity of the country so far as that prosperity is involved in commerce and, to a certain extent, in manufactures.

We must not forget in our trade organization that what we export we get paid for in the medium we call for—what we import we must pay for in the medium which suits best our creditors. Stimulate and extend export by all the healthy means possible, and import will respond in those channels which the interest of the country points out.

We have said nothing about the questions of national dignity as involved in our representatives abroad, or the degree of protection for personal rights in foreign countries, because we imagine that neither the one nor the other will be appreciated except by the small class of our people who go abroad. To them we need say nothing—their own experience must have made them sensible how far we are misrepresented abroad either by officers unfitly chosen or by the starveling régime they are obliged to serve under. It does not, to say the least, flatter the national pride to learn, on any casual need to recur to the depositary of America's honor and authority, that we must find the eagle shaking his wings out of the fifth story of a *maison meublée*, and be ushered into an office where is enshrined the representative of our sovereignty, incensed with kitchen smells and accompanied by all the surroundings and concomitants of cheap lodging-houses—to find a man for whose protection we may any day be driven into a costly war so poorly placed and provided for that he is the jest of the people whose respect he should commend, less respectable in all his surroundings than the representative of any fourth-rate European power. To speak clearly and briefly, the position of our consuls is a shame and injury to our country; it is such as to cause us not only to forfeit the respect of other nations, but our own self-respect, when we come to see it; and now that we have entitled ourselves to the honor of the world, let us do that which is necessary to secure it. We are very fond of talking about the republican simplicity which our representatives ought to maintain abroad—we deceive ourselves: it is only a pretext to cover a meanness unworthy of a great nation, and utterly inconsistent with a true policy or a frank self-respect; a pretext which deceives no one else. At home we may make what sumptuary laws we please, but when we send a man to represent us with another nation, let us see that he is enabled to pay some sort of respect to the standard of life and taste of the people he is to live amongst, and not discredit the country for the want of an income sufficient to maintain his own respectability, as is now the case in almost every consulate we have. Wherever a consul goes, the nation is represented by him for good or ill; let us be sure that the selections are good and the maintenance no disgrace.

A WORTHY DITTY

SUNG BEFORE THE PRESIDENT HIS EXCELLENCY AT WASHINGTON, TO A BARREL-ORGAN ACCOMPANIMENT.

As I, one day, went on my way,
A rowdy ill-conducted
Growled, "You low whelp, I want your help
To get me reconstructed;
A gone-up man, I've (hic) a plan
Of asking your assistance;
So give 's your cash at once, by dash!
And keep your (hic) your distance!"

Said I, "You 're not precisely what
I call a civil person;
You 're one I 'd list to use my fist
Much sooner than my purse on;
However, come, give up your rum
And all that 's been your ruin,
Drop your big airs, and your affairs
I 'll see what I can do in."

'T was plain my man from such a plan
Of doing things relucted;
"I do n't," said he, "(hic) want to be
In your way reconstructed;
Not I, by dash! and you I 'll thrash
For treating me this fashion!"
With that he drew a knife, and flew
Into a tearing passion.

Said I, "Heydey, why, that 's the way
They do things in Timbuctoo;
And the police must keep the peace,
And help you reconstruct, too:
Then (as I called and wildly bawled
"Take this man to the lock-up!")
Straight saw I come a giant glum,
With blue close-buttoned frock, up.

Said he, "I think the man 's in drink,
You 'd better not molest him;
'T would only get him madder yet,
If I should try arrest him."
"But do n't you see," I cried, "that he
Upon me run a muck did?"

Said he, "Mere play; it 's just his way
Of getting reconstructed."

I turned to go; my rowdy, though,
Was burning for the strife yet,
And muttered deep, "My grudge I 'll keep,
And have your dash-dashed life yet!"
"Is it not, then, just such vile men,"
I thought, "we 've bolts and keys for?"
And musing went, with eyebrows bent,
"What *do* we pay police for?"

J. R. L.

PEWS.

THE annual pew-renting at Mr. Beecher's meeting-house in Brooklyn concerns so many people, and interests so many whom it does not concern, that it is, in some sort, a public matter, and may be fairly made a subject of comment by the press. It shall certainly have no unfavorable or unfriendly comment from us. We have no reflections to make either on the operation itself or on the details of its conduct. Whatever want of taste there may be in the public exhibition which attracts the large crowd and excites so much pleasantry, is incidental merely, and in no wise detracts from our admiration of the wonderful preacher whose power draws people from vast distances to hear him, and forces them into vehement competition for seats in his sanctuary. In few cases would the system adopted at Plymouth Church be anything but foolish and ruinous. It can succeed only where there is great demand for seats. Only extraordinary power will create such a demand, and, where the demand exists, it is natural that it should be used for purposes of revenue. It is in its general aspects that the question engages our attention. The public are interested in knowing the best way of supporting religious institutions, and, at the same time, giving the advantage of them to the largest number of people, especially to those who most need or desire them, namely, the people in moderate circumstances. Religious instruction has become the luxury of the rich. Is there any help for it? If there is not, religion may as well be handed over to the upholsterers, to be used frankly for purposes of decoration. If there is a remedy, where is it? Must it not be found in some different method of seating people in places of worship? Here is the point. Three methods are in vogue: that of selling the pews and levying a specific tax on them for current expenses; that of annually renting them to the highest bidder; and that of leaving the sittings free and meeting the expenses by the voluntary subscriptions of those who are most interested and can best afford to pay. Of course we have no purpose to discuss at length the actual or the relative advantages or disadvantages of these methods; but the annual rental at Mr. Beecher's suggests a few thoughts bearing on the subject which may be worth considering.

To take, first, the unfavorable side of the Brooklyn plan, as that side is the most obvious, it may not be presuming to intimate that the "temporalities," as they are courteously called—in plain language, the money matters—crop out with an unseemly prominence in this method. When the pews are sold at a fixed price the financial movement is very quiet. The treasurer sends his bills to the proprietors, collects the rents, and makes his annual business statement. Should the revenue be inadequate to meet the expenses, the tax on the original valuation of the pews is increased one or two per cent., and the additional income is gathered up as quietly as before. Nothing is said in church about money. The bare mention of money under this arrangement comes at last to be resented as an impertinence. In the free churches the contribution-box is a frequent apparition, but so frequent as to cause no surprise and occasion no disturbance in the train of thought. The bulk of the expense is carried by a few who privately subscribe and pay their promised sum. But on the auction principle there is no escaping the ring of the coin on the counter. The money-changers have the temple for one memorable evening—the Gospel is put up to the highest bidder, and he who can pay most has publicly assigned to him the best seat. There is the auctioneer, fresh from his sale of dry goods, stirring up the crowd to pay down a good price for their wine and milk, provoking competition, tempting all, perhaps, to give more than they want to, and many to pay more than they can afford, and making no few ashamed of their impecuniosity and their back seat. Dives anticipates his place in the kingdom, and Lazarus must be contented with his dim anticipation of Abraham's bosom. The rich man comes up to the Christ, holds out his porte-monnaie instead of dropping on his knees, and, instead of being sent away sorrowful, is invited to take the front seat. This is not handsome.

It is not handsome either to associate position in the church with money. The aristocratic spirit will find its way into churches fast enough. Fashion will get its ecclesiastical authentication. The first society will have its chosen temple, and its favorite place therein. But these temples are not always associated with money; nor are these favorite places identified with success in trade. The choice seats represent social position on the ground of family or elegance or culture, all implying a certain amount of refined taste—bad enough, to be sure; exquisitely bad; Pharisaism is none the worthier for being graceful, nor is snobbery any the less offensive to the spiritual sense for having its name on the selectest visiting list. Still, though no less offensive to the spiritual sense, to the æsthetical sense it is far less offensive. Worldliness is worldliness; but refined worldliness is less shocking than unrefined. Money may be at the bottom of all of it at last, but money transmuted into gentle sentiment and lovely manners stands less in the way of worship than does money in the shape of bank-notes. There is such a thing as idealizing bullion, and pray let religion have it in its most ideal form.

But to touch a more vital point. What becomes of the poor in churches where the seats are knocked down to the highest bidder, and where the number of bidders is great enough to take up all the seats? The poor it may be said have no chance in any popular church, whatever the mode of raising the income. If the pews are sold, the rich buy them. If they are taxed, the poor cannot pay the taxes. If admitted at all, they must take such places as nobody wants. They may like good preaching as well as their richer neighbors; but if the preachipg be worth having, how are they to get it? True; but they are not usually pushed out as poor. They are not palpably made to feel their poverty. They are not known of all men as persons who are unable to hire seats. They are not forced to sit under the charge of demerit. Under the auction system, if they find admittance at all, they come in to take, not what is generously set apart for them, but what nobody can be found willing to pay for, what has been put up for sale and met no purchaser—in a word, what was left. And is not this to make poverty not only a misfortune, but a reproach, and a reproach in the very place of all places where it should be allowed to forget itself in the company of Him who was the great friend of the poor?

To balance these disadvantages, the rental system has one great advantage which it shares in common with the free system, but which the ordinary system of sale and taxation misses entirely. It breaks up the uniformity of audiences, and allows congregations to change at least once a year. The free system allows them to change once a week, which is better, admitting of a constant flux and reflux, an incessant variety, and at the same time breaking up monotony in the weekly assemblies, flinging the people of all conditions promiscuously together, permitting no associations to become fixed, no places to become appropriated, but enforcing an external semblance of humanity, which becomes more than a semblance in course of time. The custom of proprietorship in pews is fatal to everything of this kind. The society becomes more compact, but it does not become more sympathetic. It acquires an element of permanency, but it loses the element of humanity. It makes sure of people, by pinning them to one and the same spot. The preacher sees before him year after year precisely the same persons. For a generation, perhaps, his auditors may not perceptibly change in character; some will die; some will leave the city or the neighborhood; but the great body of them stay where they are. To the undevout it must seem as if the preacher could not but tell them all he knows a great many times over, and be tempted to tell them a great deal more than he knows for the sake of gaining their attention. The Word finds no vent or diffusion. Often the people cannot get away from the minister if they wish to. Their bodies are with their treasure, while their hearts are elsewhere; they own the pew, and cannot sell it ,so they go to church for their money's worth; they would go elsewhere if they could, but they cannot afford two pews; they wish it were in their power to give place to somebody who would enjoy the ministrations; but it is not.

Often under this system the minister cannot get rid of his people. He knows that they dislike him on account of his opinions. He is sure that they are talking and plotting against him. He would be thankful if they would go and let others in. But how can he make them go? They stand on their rights of property; they fortify their pews against the pulpit; they extend their fortifications by buying more pews, every pew representing a vote. They turn the church into a battle-ground, and are ready to fight it out till the minister leaves. This is no uncommon occurrence where pews are held as property. Under the auction rule nothing of this sort is possible. Discontent cannot be long lived. At the end of the year the malcontents have a chance to go. The preacher may feel all the time that he is preaching to people who, of their own free choice, come to hear him. Each hearer must decide deliberately whether to continue a hearer or not.

If any come who do not wish to, they must be very few. The audience will change materially every twelvemonth, and if they are floating, so much the better, for while they stay they will be alive, and when they go they will go to find something they like better.

But theoretically the free system commends itself as the most rational system. It is the only system that is truly social, hospitable, and sympathetic. It is the only system that fairly puts all worshippers on the same level. It is rarely attempted on a large scale; it is seldom successful even on a small scale. It is not generally deemed practicable. But until it can be made so, the administration of religion will never, we are satisfied, be what it should be. The difficulties in the way of its operation are very great. We have few rich ecclesiastical corporations, very few wealthy religious endowments. We have divorced religion from the state, and forced it to depend for its support on the voluntary contributions of its friends. The consequence is that few will pay for any religion but their own. But the time may come yet when the opulent classes will recognize religion, like education, as being a great public interest, to be maintained by those who are able to support it for those who are not. If that time ever does come, churches for the people will be established, as schools and colleges are, for the general benefit. All alike will share the blessing; those who can will bear the cost.

CERTAIN THINGS IN NAPLES.

I.

PERHAPS some reader of mine who visited Naples under the old disorder of things, when the Bourbon and the Camorra reigned, will like to hear that the pitched battle which travellers formerly fought, in landing from their steamer, is now gone out of fashion. Less truculent boatmen I never saw than those who rowed us ashore at Naples; they were so quiet and peaceful that they harmonized perfectly with that tranquil scene of drowsy-twinkling city lights, slumbrous mountains, and calm sea, and, as they dipped softly towards us in the glare of the steamer's lamps, I thought at once of Tennyson's description:

> "And round about the keel with faces pale,
> Dark faces pale against the rosy flame,
> The mild-eyed maccaroni-eaters came."

The mystery of this placidity had been already solved for me by our captain, whom I had asked what price I should bargain to pay from the steamer to the shore. "There is a tariff," said he, "and the boatmen keep to it. The Neapolitans are good people (*buona gente*), and only needed justice to make them obedient to the laws." I must say that I found this to be true. The fares of all public conveyances are now fixed, and the attempts which drivers occasionally make to cheat you, seem to be rather the involuntary impulses of old habit than deliberate intentions to do you wrong. You pay what is due, and as your man merely rumbles internally when you turn away, you must be a very timid *signorin*, indeed, if you buy his content with anything more. I fancy that all these things are now much better managed in Italy than in America, only we grumble at them here and stand them in silence at home. I remember frightful instances of plunder, in which I was the victim, at New York—in which the robbery had none of the neatness of an operation, as it often has in Italy, but was a brutal mutilation. And then as regards civility from the same kind of people in the two countries, there is no comparison that holds in favor of us. All questions are readily and politely answered in Italian travel, and the servants of companies are required to be courteous to the public; whereas, one is only too glad to receive a silent snub from such people at home. I was once little less than put off a street car, in Boston, because I begged the ruffianly Irish conductor to tell me when we had reached a certain point in Cambridge. Of course he carried me beyond it, but I had been so thoroughly quelled that for a long time I thought his negligence a kind of favor.

II.

The first sun that rose after our arrival in Naples was mild and warm as a May sun, though we were quite in the heart of November. We early strolled out under it into the crowded ways of the city, and drew near as we might to that restless, thronging, gossipping southern life, in contrast with which all northern existence seems only a sort of hybernation. The long Toledo, on which the magnificence of modern Naples is threaded, is the most brilliant and joyous street in the world; but I think there is less of that quaintness of Italian civilization to be seen in its vivacious crowds than anywhere else in Italy. One easily understands how, with its superb length and straightness, and its fine, respectable, commonplace-looking houses, it should be the pride of a people fond of show; but after Venice and Genoa it has no picturesque charm; nay, busy Milan even seems less modern and more picturesque. The lines of the lofty palaces on the Toledo are seldom broken by the façade of a church or other public edifice, and when this does happen, the building is sure to be coldly classic or frantically baroque. You weary of the Toledo's perfect repair, of its monotonous iron balconies, its monotonous lofty windows; and it would be insufferable if you could not turn out from it at intervals into one of those wondrous little streets which branch up on one hand and down on the other, rising and falling with flights of steps between the high, many-balconied walls. They ring all day with the motleyest life of fishermen, fruit-venders, chestnut-roasters, and idlers of every age and sex; and there is nothing so full of local color, unless it be the like little up-and-down-hill streets in Genoa. They are only meant in either city for foot-passengers, and a carriage never enters them; but sometimes, if you are so blest, you may see a mule climbing the long stairways, moving solemnly under a stack of straw, or tinkling gaily down stairs, bestridden by a swarthy, handsome peasant—all glittering teeth and eyes and flaming Phrygian cap. The rider exchanges lively salutations and sarcasms with the bystanders in his way, and perhaps brushes against the bagpipers who bray constantly in those hilly defiles. They are in Neapolitan costume, these *pifferari*, and have their legs incomprehensibly tied up in those stockings and garters affected by the peasantry of the provinces, and wear brave red sashes about their waists. They are simple, harmless-looking people, and would no doubt rob and kill in the most amiable manner, if brigandage came into fashion in their neighborhood. Sometimes the student of men may witness a Neapolitan quarrel in these streets, and may pick up useful ideas of invective from the remarks of the fat old women who always take part in the contests. But, though we were ten days in Naples, I only saw one quarrel, and, indeed, I can have much finer violence among the gondoliers at any ferry in Venice, when I choose to go out. The Neapolitans were only furious in traffic, being noisy in an inverse proportion to the slightness of their wares. They sell a great deal, and very boisterously, the fruit of the cactus, which is about as large as an egg, and which they peel to a very bloody pulp, and lay out, a sanguinary presence, on boards for purchase. It is not good to the uncultivated taste; but any stranger may stop and drink, with relish and refreshment, the orangeade and lemonade mixed with snow, and sold at the little booths on the street-corners. These stands look much like the shrines of the Madonna in other Italian cities, and a friend of ours was led, before looking carefully into their office, to argue immense Neapolitan piety from the frequency of their ecclesiastical architecture. They are, indeed, the shrines of a god much worshipped during the long Neapolitan summers; and it was the profound theory of the Bourbon kings of Naples that, if they kept their subjects well supplied with snow to cool their drink, there was no fear of revolution. It shows how liable statesmen are to err that, after all, the Neapolitans rose, drove out the Bourbons, and welcomed Garibaldi.

The only part of the picturesque life of the side streets which seems ever to issue from them into the Toledo is the goatherd with his flock of milk-goats. These mingle with the passers in the avenues as familiarly as with those of the alley, and thrust aside silk-hidden hoops, and brush against dandies' legs, in their course, but keep on perfect terms with everybody. The goatherd leads the eldest of the flock, and the rest follow in docile order, and stop as he stops to ask at the doors if milk is wanted. When he happens to have an order, one of the goats is haled, much against her will, into the entry of a house, and there milked, while the others wait outside alone, nibbling and smelling thoughtfully about the masonry. It is noticeable that none of the good-natured passers seem to think these goats a great nuisance in the crowded street; but all make way for them as if they were there by perfect right, and were no inconvenience.

On the Toledo people keep upon the narrow sidewalks, or strike out into the carriage-way, with an indifference to hoofs and wheels which one, after long residence in horseless Venice, cannot acquire, in view of the furious Neapolitan driving. That old comprehensive gig of Naples, with which many pens and pencils have familiarized the reader, is nearly as hard to find there now as the *lazzaroni*, who have gone out altogether. You may still see it in the remoter quarters of the city, with its complement of twelve passengers to one horse, distributed, two on each thill, four on the top seats, one at each side, and two behind; but in the Toledo it has given place to much finer vehicles. Slight buggies, which take you anywhere for half a franc, are the favorite means of public conveyance, and the private turn-outs are of every description and degree. Indeed, all the Neapolitans take to carriages, and the Strand in London at six o'clock in the evening is not a greater jam of wheels than the Toledo in the afternoon. Shopping feels the expansive influence of the out-of-doors life, and ladies do most of it as they sit in their open carriages at the shop-doors, ministered to by the neat-handed shopmen. They are very languid ladies, as they recline upon their carriage cushions; they are all black-eyed and of an olive pallor, and

have gloomy rings about their fine eyes, like the dark-faced dandies who bow to them. This Neapolitan look is very curious, and I have not seen it elsewhere in Italy; it is a look of pensive enquiry, and comes, no doubt, from the peculiarly heavy growth of lashes which fringes the lower eyelid. Then there is the weariness in it of all peoples whose summers are fierce and long.

The Italians usually dress beyond their means, and the dandies of Naples are very gorgeous. If it is now, say, four o'clock in the afternoon, they are all coming down the Toledo with the streams of carriages bound for the long drive around the bay. But our foot-passers go to walk in the beautiful Villa Reale, between this course and the sea. It is a slender breadth of Paradise, a mile long; it is rapture to walk in it, and it comes, in description, to be a garden-grove, with feathery palms in it, Greekish temples, musical fountains, white statues of the gods, and groups of fair girls in spring silks. If I remember aright, the sun is always setting on the bay, and you cannot tell whether this sunset is cooled by the water or the water is warmed by the golden light upon it, and upon the city, and upon all the tender mountain-heights around.

III.

Walking westward through the whole length of the Villa Reale, and keeping with the crescent shore of the bay, you come, after awhile, to the Grot of Posilipo, which is not a grotto but a tunnel cut for a carriage-way under the hill. It serves the purpose of a grotto, if a grotto has any, and is of great length and dimness, and is all a-twinkle night and day with numberless lamps. Overlooking the street which passes into it is the tomb of Virgil, and it is this you have come to see. To reach it, you knock first at the door of a blacksmith, who calls a species of guardian, and, when this latter has opened a gate in a wall, you follow him up stairs into a market-garden. In one corner, and standing in a leafy and grassy shelter somewhat away from the vegetables, is the poet's tomb, which has a kind of claim to genuineness by virtue of its improbable appearance. It looks more like a bake-oven than even the Pompeian tombs; the masonry is antique, and in skilful imitation of the fine Roman work. The interior is a small chamber with vaulted or wagon-roof ceiling, under which a man may stand upright, and at the end next the street is a little stone commemorating the place as Virgil's tomb, which was placed there by the Queen of France in 1840, and said by the custodian (a singularly dull ass) to be an exact copy of the original, whatever the original may have been. This guide could tell us nothing more about it, and was too stupidly honest to pretend to know more. The laurel planted by Petrarch at the door of the tomb, and renewed in later times by Casamir Delavigne, has been succeeded by a third laurel. The present twig was so slender, and looked so friendless and unprotected, that even enthusiasm for the memory of two great poets could not be brought to rob it of one of its few leaves; and we contented ourselves with plucking some of the grass and weeds that grew abundantly on the roof of the tomb. There was a dusty quiet within the tomb, a grassy quiet without, that pleased exceedingly; but though the memories of the place were so high and epic, it only suggested bucolic associations, and, sunken into that nook of hillside verdure, made me think of a spring-house on some far-away Ohio farm; a thought that, perhaps, would not have offended the poet, who loved and sang of humble country things, and, drawing wearily to his rest here, no doubt turned and remembered tenderly the rustic days before the excellent veterans of Augustus came to exile him from his father's farm at Mantua, and banish him to mere glory. But I believe most travellers have much nobler sensations in Virgil's tomb, and there is a great deal of testimony borne to their lofty sentiments on every scribbleable inch of its walls. Valery reminded me that Boccaccio, standing near it of old, first felt his fate decided for literature. Did he come there, I wonder, with poor Fiammetta, and enter the tomb with her tender hand in his hold, before ever he thought of that cruel absence that she tells of? "O donne pietose!" I hope so, and that this pilgrimage, half of love and half of letters, took place, "nel tempo nel quale la rivestita terra più che tutto l'altro anno si mostra bella."

If you ascend from the tomb and turn Naples-ward from the crest of the hill, you have the loveliest view in the world of the sea and of the crescent beach, mightily jewelled at its further horn with the black Castel dell' Ovo. Fishermen's children are playing all along the foamy border of the sea, and boats are darting out into the surf. The present humble muse is not above saying also that the linen which the laundresses hang to dry upon lines along the beach takes the sun like a dazzling flight of white birds, and gives a breezy life to the scene which it could not spare.

IV.

There was a little church, on our way back from Posilipo, into which we lounged a moment, pausing at the altar of some very successful saint near the door. Here there were great numbers of the usual offerings from the sick whom the saint had eased of their various ills: waxen legs and arms from people who had been in peril of losing their limbs, as well as eyes, noses, fingers, and feet, and the crutches of those cured of lameness; but we were most amused with the waxen effigies of several babies hung up about the altar, which the poor souls who had been near losing the originals had brought there in gratitude to the saint.

Generally, however, the churches of Naples are not very interesting, and one who came away without seeing them would have little to regret. The pictures are seldom good, and though there are magnificent chapels in St. Januarius, and fine gothic tombs at Santa Chiara, the architecture is usually roccoco. I fancy that Naples has felt the damage of Spanish taste in such things as well as Spanish tyranny in others. Indeed, I saw much there which reminded me of what I had read about Spain rather than what I had seen in Italy; and all Italian writers are agreed in attributing the depravation of Naples to the long Spanish dominion. It is well known how the Spaniards rule their provinces, and their gloomy despotism was probably never more cruelly felt than in Italy, where the people were least able to bear it. I had a heart-felt exultation in walking through the quarter of the city where the tumults of Massaniello had raged, and, if only for a few days, struck mortal terror to the brutal pride of the viceroy; but I think I had a better sense of the immense retribution which has overtaken all memory of Spanish rule in Naples as we passed through the palace of Capo di Monte. This was the most splendid seat of the Spanish Bourbon, whose family, inheriting its power from the violence of other times, held it with violence in these; and in one of the chief saloons of the palace, which is now Victor Emanuel's, were pictures representing scenes of the revolution of 1860, while the statuette of a Garibaldino, in his red shirt and all his heroic rudeness, was defiantly conspicuous on one of the tables.

V.

There was nothing else that pleased me as well in the palace, nor in the grounds about it. These are all laid out in pleasant successions of grove, tangled wilderness, and pasture-land, and were thronged, the Saturday afternoon of our visit, with all ranks of people, who strolled through the beautiful walks and enjoyed themselves in the peculiarly peaceful Italian way. Valery says that the Villa Reale in the Bourbon time was closed, except for a single day in the year, to all but the nobles; and that on this occasion it was filled with pretty peasant women, who made it a condition of their marriage bargains that their husbands should bring them to the Villa Reale on St. Mary's Day. It is now free to all on every day of the year, and the grounds of the Palace Capo di Monte are opened every Saturday. I liked the pleasant way in which sylvan nature and art had made friends in these beautiful grounds, in which nature had consented to overlook even the foolish vanity of the long aisles of lime, cut and trimmed in formal and fantastic shapes, according to the taste of the silly times of bag-wigs and patches. On every side wild birds fluttered through these absurd trees, and in the thickets lurked innumerable pheasants, which occasionally issued forth and stalked in stately, fearless groups over the sunset-crimsoned lawns. There was a brown gamekeeper for nearly every head of game, wearing a pheasant's wing in his hat and carrying a short, heavy sword; and our driver told us, with an awful solemnity in his bated breath, that no one might kill this game but the King, under penalty of the galleys.

VI.

We went one evening to the opera at San Carlo. It is one of the three theatres—San Carlo, of Naples, La Scala, of Milan, and Fenice, of Venice—on which the Italians pride themselves; and it is certainly very large and imposing. The interior has a *bel colpo d'occhio*, which is what many Italians chiefly value in morals, manners, and architecture; but after this comes great shabbiness of detail. The boxes, even of the first order, are paved with brick tiles, and the red velvet border of the box which the people see from the pit is not supported by the seats within, which are merely covered with red oil-cloth. The opera was also second-rate, and was to the splendor of the scenic arrangements what the oil-cloth was to the velvet. The house was full of people, but the dress of the audience was not so fine as we had expected in Naples. The evening dress is not *de rigeur* at Italian theatres, and people seemed to have come to San Carlo in any pleasant carelessness of costume.

VII.

The Italians are simple and natural folks, pleased through all their show of conventionality with little things, and as easy and unconscious as children in their ways. There happened to be a new *caffè* opened in Naples while we were there, and we had the pleasure of seeing all ranks of people affected by its magnificence. Artless throngs blocked the sidewalk day and night before

its windows, gazing upon its mirrors, fountains, and frescoes, and regarding the persons over their coffee there as beings lifted by sudden magic out of the common orbit of life and set dazzling in a higher sphere. All the waiters were uniformed and brass-buttoned to the most blinding effect, and the head waiter was a majestic creature, in a long blue coat reaching to his feet, and armed with a mighty silver-headed staff. This gorgeous apparition did nothing but walk up and down, and occasionally advance toward the door, as if to disperse the crowd. At such times, however, before executing his purpose, he would glance round on the splendors they were admiring, and, as if smitten with a sense of the enormous cruelty he had meditated in thinking to deprive them of the sight, would falter and turn away, leaving his purpose unfulfilled.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXVI.

ATLANTA, Ga., December 31, 1865.

AUGUSTA, the second city in Georgia, and said to be advancing rapidly towards the first rank, is a well-built town, well situated on the Savannah River. My stay there was only long enough for a walk through the principal streets, which are regularly laid out, level, and so exceedingly wide as almost to dwarf the rows of buildings on either side. They were cheerful with a busy press of pedestrians of various colors, and streams of vehicles; there was a vast display of goods in the warehouses and shops, and the newspapers were filled with advertisements of every kind. By its position Augusta is the seat of a large jobbing business, the river and the railroad connect it with the ports of Charleston and Savannah, and it is enabled to avail itself of these advantages, for it has received its full measure of the Northern capital which, since the surrender, has been poured into every Southern town. Concerning this investment of capital, I listened the other day to the opinions of a young gentleman from New York, a man of business, quite young, but with the appearance of a person perfectly well informed: "I 'm posted about this thing," he said; "I 'm acquainted in Wall Street—very well acquainted for a man of my age—and I know their opinions there, and I 've studied the working of it down here. A Northerner need n't come into this country to go into business unless he can put his money into something he can monopolize, or can buy into some Southern firm. You see if these people can trade with one of their own men, they 're not going to trade with you and me. It 's all natural enough—I do n't blame them; but it puts you and me under an immense disadvantage there. Then New York is bound to favor the old houses in every kind of way, and we 're under another disadvantage there. You know how it is with these countrymen and country dealers; they 're used to coming in and hitching their horses to the same post year after year, and you can 't change 'em to a new place; you could n't if there had n't been any trouble, and of course you can 't now when they 're down on us. I do n't believe they 'd speak to a man if they knew he 'd ever passed through Boston. They know in New York that one of us can 't compete with these fellows; can 't begin to do it. Then, again, nine in ten of the Southern business men owe any quantity of money up there, lots of it, and New York is willing to take them and set them up again, and do a great deal better by them than it would by you or me, in order to get its old debts. Of course, it 's all right; I 'd do the same thing myself; but that 's the way it is. I 've got this far looking for a chance to invest $25,000 cash, and I 'm going through to New Orleans; but I 've made up my mind not to go into business unless I can get in with some old house. It would just amount to this—with their advantages they 'd break a new man right down, and he 'd just lose his time and money."

Of mercantile and professional pursuits this may be true. But the inducements to Northern men to come here and engage in agriculture, lumbering, and similar branches of business which, being carried on mainly by the services of the freedmen and for a foreign market, are not subject to the drawbacks above-mentioned, seem to be very great. There is apparent a willingness, often an anxiety even, to secure Northern men as lessees of plantations, and large tracts of land, well improved and productive, are everywhere offered for sale at low prices, sometimes at prices that may be called ruinously low. "These freedmen will work a heap better for a Yankee than they will for one of us," it is frequently said. Other causes of this sacrifice of lands and rents are to be found in the belief that the free labor of the negroes cannot be made profitable, and in the fact that many men who have much land have no money with which to cultivate it. But although much land may still be bought cheap, there are some signs that these causes will not continue to operate so extensively as heretofore. Often I hear it predicted that cotton is going to command a very high price for some years to come; that therefore its culture may be profitable, though the laborers should work a smaller number of acres than in old times; and occasionally some local newspaper announces that the gloomy prospects of the planters are brightening, that the negroes who, after all, showed so commendable a spirit of devotion, faithfulness, and obedience during the war, are beginning, in certain districts, to make contracts and profess a willingness to receive a share of the crop as wages.

But, however the case may be as regards the business relations of Northern men in the South, I should consider it advisable for the newcomer, if he desires agreeable social intercourse with his neighbors, in almost any part of the South that I have yet seen, to restrain the free expression of any social or political opinions distinctively Northern. Frequently this hostility is avowed, frequently men make a merit of disclaiming it, but no one denies its existence.

The Georgia Railroad, 171 miles long, between Augusta and Atlanta, is the best which I have ridden on since leaving the North, the cars being comfortable and commodious, the officials civil, and the rate of speed more than fourteen miles an hour. It was on a Sunday that I made the journey, and all day the rain was pouring steadily, so that we could see the country turning to mud as we passed and every stream growing yellower. We were able to ride all the way, however, for the bridges stood until the following morning, and our train went on without delay. Among the passengers were Jews, drummers from New York, a few women, and men from nearly every Southern State. Everybody seemed resolved to lighten as much as possible the fatigues of travelling. Some slept, there were many whiskey-flasks in circulation, fowls were eaten, the newspapers of Chicago, Louisville, and Nashville could be bought, a one-armed man in the rebel uniform sold cigars, and it was assumed that the ladies would make no objection if they were smoked. In the course of the afternoon two or three of my neighbors, who had told each other all the stories they knew, began comparing their pistols and disputing about the comparative merits of the various patterns. "Good for your side, gentlemen," said a man, drawing near, "if you 've got pistols; but I do n't ask a pistol while I 've got this fellow," and he displayed a heavy knife with a broad blade some eight or nine inches long. He praised it as a faithful companion during the war and as being a fine imitation of the real old Arkansas toothpick. It might be called a toothpick anyhow, for it was a dentist made it, a right clever, ingenious fellow that could make anything. That silver mounting on the handle was four Mexican dollars melted down. In a difficulty it was the prettiest thing in the world; would n't miss and made no noise. All the company handled it and admired it. Then, addressing me, he explained how he could kill me with it in one minute—yes, under a minute, if I did n't understand its use. A man should know the weapon or take something else. Then he showed how a man unaccustomed to it would probably attack with it, and how, in that manner o' fightin', he 'd be killed right away. It should be held in the right hand with the point forward, not downward, and in making a pass with it one must thrust over or under the left arm, which is always to be held as a guard across the heart, protecting the body from the blows of one's antagonist. Of course he always expected to get his left arm pretty much cut up when he fought with a knife.

As we approached Atlanta, of course we saw burned buildings at the way stations, rails fantastically twisted and bent, and ruined locomotives—remembrances of Sherman and Johnston. It was too dark when we arrived in the city to see anything but the lights and an occasional rocket shooting through the rain. It was Christmas Eve, and it appears to be usual in the South to celebrate the coming of this festival with Chinese crackers and other fireworks.

Atlanta, as I saw it on Christmas morning, was a most cheerless and mean-looking place. The sky was dropping rain, and under foot the mud was almost ankle-deep. It had rained for three weeks. People walked slowly, treading with careful steps in the footprints—slowly getting narrower in the soft mud—of those who had ventured before them. The middle of the city is a great open space of irregular shape, a wilderness of mud, with a confused jumble of railway sheds, and traversed by numberless rails, rusted and splashed, where strings of dirty cars are standing, and engines constantly puff and whistle. In one place I saw beside the track a heap of bones and skulls of animals, collected from battle-fields and the line of march for some factory, moulding and blackening in the wet weather. Bricks and blocks of stone and other rubbish were everywhere. Around this central square the city was formerly built, and is now again building. Unfinished houses are to be seen on every hand; scaffolding, mortar-beds, and lime-barrels, piles of lumber and bricks and mounds of sand, choke every street, and the whole place on working days resounds with the noise of car-

penters and masons. The city is hardly less pleasing to the eye than the people. A great many rough-looking fellows hang about the numerous shops and the shanties among the ruins where liquor is sold, and a knot of them cluster at each street corner. The grey coats are almost as numerous as the blue uniforms, often very dirty, of the white and negro soldiers, some of whom are always on guard in the streets. White women are but seldom seen, perhaps because the sidewalks are nearly impassable; the men are obliged to wear the bottoms of their trowsers tucked in their boots. Negroes of all colors abound.

But though Atlanta, in spite of its newness, has a cheap and squalid look, which is depressing, it evinces much energy and life. Trade of all kinds is extremely active; the city is full of goods; and though the number of traders seems inordinately great, new ones are pushing into business. To a stranger it appears as if the feverish activity of the mercantile community must eventually bring on a crash, but the citizens indulge in glowing anticipations of the future prosperity and growth of their town. They point to the railroads centering here, and say that if the country around to be supplied with goods was poorer than it is and less productive, the mere storage and trans-shipment of freight would suffice to make Atlanta a great city.

In walking about the town on Christmas morning my attention was attracted by a crowd of two hundred colored people and a few whites gathered about the door of the City Hall. They were listening to an address from Col. Curkendall, of the Freedmen's Bureau. He had made many a horse-shoe nail, he said, but he had never before made a speech. All his life he had been a working-man, and he supposed that they too would be working-men as long as they lived. He had the meanest kind of a camp close by, with about 650 colored people in it receiving rations from the Government, and if any one of his audience was not able-bodied and could get no work to do and was starving, he would put him into that camp and let him have a little hard-tack and a poor place to sleep till he could find some work to do. There was no comfort for them anywhere without hard work for honest wages. No land would be given them. They knew that, it was responded from the crowd. Very well, then, they probably knew that some persons were expecting a negro insurrection about this time. Yes, they said; yes, colonel, they knew that, too, and they agreed with him that, though he was not a very big man, he would be able to put down all the insurrectionary movements that would be made by the negroes of Northern Georgia. He believed they would behave like men. Every right that he had, except one, was already theirs by law. The right of suffrage they would probably get if they showed themselves qualified to exercise it. In the exercise of every other right he would certainly protect them. Exact justice should be administered, whether it took a black man or a white man to jail. Then the colonel spoke of education, and gave good advice in reference to a great many points of conduct and character, and at the end was loudly applauded. When he told them that there were many good men in Georgia who would be their friends if they were industrious and well-behaved, who would deal justly with them and take care that the bad men of the community did not impose upon them, the negroes cordially assented. "That 's what we want," they said, when he told them that hard work and the education of their children would soon put the ballot into the hands of every negro in the South.

I noticed in the crowd several men with badges of colored ribbons. They were members of two associations, I was informed—the Union League and the Sons of Liberty—which have been formed for mutual aid and counsel. Neither of them is a secret society, and both have invited the inspection of the Freedmen's Bureau. As the meeting broke up I walked toward my hotel, and was soon overtaken by a soldier who walked along beside me and wished me a merry Christmas. "It 's Christmas Day," he said; "that 's what 's the matter." Then in a minute, as we met two negroes, he added, "And I 'm goin' to punch every d—d nigger I see." With that he struck first one and then the other negro a violent blow in the face. The men seemed too much astonished to retaliate. Afterwards quite an affray occurred between some white soldiers and negroes, which resulted in some slight injuries to the latter, two being wounded by bullets, and in the arrest of the soldiers by the provost-marshal's guard, which patrolled the streets for the rest of the day. In the course of the afternoon a colored man was shot and killed by a citizen in an altercation about the right to the sidewalk. I also met a negro who had been severely wounded above the eyes with a knife, and was then on his way to Col. Curkendall to make complaint. Besides these, I heard of no disturbances on Christmas. I had believed that the reputation of Atlanta in respect to these things was never very good, but I am told (it would be hard to say how truly, for the police is inefficient) that no more than five assaults ending fatally had occurred in the city in the preceding months of 1865. In December two were added to this list.

At the office of the Freedmen's Bureau in Atlanta it was said, in answer to my questions, that a minority of the planters are disposed to treat their laborers kindly and justly. A majority are indisposed to give adequate wages and to recognize in practice that the negroes are free; that the negroes evinced an unwillingness to make contracts unless in cases where the person wishing to employ them was a Northern man. The names of three men were given me, all of whom had been officers in the federal army, who proposed planting cotton next year, and who were offering as wages twelve dollars a month, together with board, clothing, and medical attendance; that no courts had as yet been established for the trial of cases in which negroes are parties, but every case is tried, and all sentences are passed, by the colonel himself; that the operations of the Bureau are to a great extent cripp'ed by the want of cavalry; cases of fraud and cruelty occurring at a distance from the town and from railroads necessarily go unpunished; that the military officers throughout the district of which Col. Curkendall has charge could probably be depended upon to do justice between the whites and the negroes; that very few complaints of any kind had ever been reported by the garrison officers in the country. In the Atlanta office I found recorded, as having occurred during the fortnight ending Dec. 13, four cases of abuse and cruelty which had been punished by the imposition of fines varying in amount from twenty to one hundred and fifty dollars. Two complaints, one of assault with intent to kill, and one of assault and robbery, were made while I was in the office. The average number of applications for redress is twelve each day.

Correspondence.

PAPER TOO FINE.

To the Editor of The Nation:

Why should a great standard history be always printed on the whitest of paper? The booksellers and editors seem to make it an important recommendation to such a work that the paper is very fine and very costly. If this point can be secured, in addition to all the rest, it is assumed to be the finishing touch of excellence.

Americans living among Chinamen wonder to see the blindness of that whole people in respect to some things so very obvious that any half-witted boy of our own race perceives them in a moment. A Chinese joiner laying joist for a chamber floor is sure to lay it flat-wise; if he is remonstrated with he cannot see; if his attention is directed to the fact that, if laid on its edge, it holds up the floor without breaking or bending, he only replies that a plank is a thing made to lie flat-wise, and any other position is unnatural and absurd. There is no mystery even in theology greater than that of the intellect of a whole civilized nation being in the close neighborhood of a great improvement—the idea presented and almost pushed in its face every day for centuries—and yet no one, not even the most gifted mind, ever seizing it.

It is truly wonderful that no loud remonstrance, not even a faint expression of uneasiness, so far as I know, has ever been heard on this subject from the reading men of the country at large. The vast majority of them have small salaries; they can spare about so much a year for books; certain famous historical works many of them feel that they must have, if possible. Darker paper, in no way offensive to correct taste; better for the eyes than a brilliant snow-white; equally tough and durable; the surface smooth; the type, the ink, the very same; the thoughts and the style of the historian not a whit the less impressive; the price reduced one-half—why is it not a real benefit, a great benefit? If I can buy Merivale and Palfrey on coarser paper for the cost of Merivale alone on finer, shall I be told that the fine quality of the fine paper of one of them is of more value to me than the learning and eloquence of the other? I have never heard that the Germans find any inconvenience in dark, cheap paper; on the contrary, it enables poor students to buy large libraries.

Strange it is, too, that while our editors are continually preaching to us that the diffusion of knowledge is of the utmost importance to the success of our republican experiment, they are continually commending a practice the tendency of which is to shut out the particular kind of knowledge which, confessedly, Americans most of all need—a large and familiar acquaintance with history. If not the very leaders in the highest sense, at least the transmitters of thought—the multitudes of the country clergy and lawyers, the teachers of academies, the poor printers, the considerable number of well-off farmers, and others who buy books—these are no able

to buy much history, because the paper is so very nice. Many such a man has *some* sense of the value of a standard history; he is willing to give four, five, or six dollars, but not twelve, fifteen, or twenty. When I read editorial praise of splendid paper, I think of a crier going up and down our streets in country and city, calling the attention of the hungry poor to the choice food of a great hotel at five dollars a meal.

The origin of this white-paper bondage, I suppose, was the desire to equal the English press. We ought to have got above that folly by this time. Here we find accumulating a long list of instructive and charming historical works: Vaughan, Craik, Lecky, Palgrave, Palfrey, Parkman, Massy, Merivale, Martineau, Martin—treasures past utterance. Hundreds of men of moderate income could keep up with the press and buy these very important original and elaborate works but for the enormous cost of the fine paper, brought in by a silly, self-destructive rivalry. And it is passing strange that the numerous distressing expenses created by the war have not suggested the thought of cheaper, very much cheaper, paper—at least not to any such extent as to prove a sensible relief. I meddle not with the frivolous; let them have their tinted trash, their lily-white, and their gilt edges. Men who have learned to love history can afford to put away childish things.

If this communication falls under the eye of an enterprising publisher, I venture to propose an experiment: Try an edition of some great history on dark and cheap, but tough and durable, paper. If very dark indeed, darker than any respectable publisher ever ventured upon in this country, dark as some of the paper of the learned and sensible Germans, still it will be so much lighter than the ink that it will be read as easily as the very white. Prejudice will start back; some of the editors may call the paper "execrable," "abominable," "repulsively coarse," "discreditable to the American name," and the like; but if the edition goes off, the victory will be grand, and the benefit to the country, as an ice-breaker, beyond estimate.

N.

SOUTHERN WELCOME TO NORTHERN IDEAS.

CAPE GIRARDEAU, Mo., January 11, 1866.

TO THE EDITOR OF THE NATION:

I am aware that the time of my subscription for THE NATION has expired. I have read it with deep interest and with much benefit to myself, and only regret that I am unable to renew my subscription at this commencement of the year.

I have just returned from a two months' business trip in ——— ———. I left orders to have THE NATION forwarded to me, but soon found it for my interest to countermand them. I found it very unpopular, besides a little unsafe, for a person to be caught reading anything like an anti-slavery or radical journal. The only way that a person can live there in safety and do business (outside of a military post) is to profess to be a Democrat with Southern proclivities, endorse all they say and do, curse the abolitionists, the Republican party with all its leaders, and, in fact, denounce every principle for which we have struggled during this rebellion. They are not a unit on these matters, but sufficient of this spirit exists among all classes to cause it to be unsafe and unprofitable for a Northern man to do business there without adopting this course. To say nothing causes suspicion. Their principal periodicals are a few Memphis dailies and the New York *Metropolitan Record*. This last appears to be their text-book, and the number of copies that are circulated through that country is surprising. They fear and despise the officers of the Freedmen's Bureau, the military, and the negroes. The latter *they wish to control themselves*, or else have them taken from the country.

There is a diversity of opinion regarding labor, and how they are to raise their cotton under the new order of things. Some are in favor of encouraging foreign and Northern emigration. But their prejudices are too strong yet for this scheme to be popular. They hate the *Yankees* (as they term all Northern men) with a vengeance. I heard an ex-rebel officer say that, if this earth was a bombshell, and he held the fuse, he would soon get satisfaction from the d——d Yankees. Such expressions are common.

I intend returning to ——— ——— or going to Texas in the spring, and, of course, shall be deprived of the privilege of reading THE NATION for the present. Respectfully, ——— ———.

[The above communication confirms quite strikingly the statements of 'A. W. K." presented last week. From both it is clear that the influences on which we rely for regenerating Southern society are impotent, for the reason that the South will not tolerate their introduction. In spite of war and victory the North has not gained for her citizens the right to travel from the Ohio to the Gulf with unfettered lips and uncowed consciences. While this is so, it is idle to look for that assimilation on which we depend for the future harmony of the two sections. Until we can have free speech and free thought in every corner of the South, we must despair of shaking the now reigning alliance of brute force, ignorance, and unconquered hatred.—ED. NATION.]

Literature.

LITERARY NOTES.

SCARCELY the ripple of a rumor disturbs the calm surface of the publishing trade in America at the present time. The quiet, however, is not that of death, but of fulness of life. Like the nations who have no history, the absence of notoriety implies plenty and prosperity. New engagements and enterprises are rarely entered on, because all parties find profitable employment in the fulfilment of plans long previously adopted and the supply of stock already established in the market. The constantly increasing cost of manufacturing books, arising from the high price of paper, etc., is the prevailing topic of interest among the trade. It appears certain that a strong effort will be made during the present Congress to relieve all branches of trade connected with the commerce of literature from the taxation of the internal revenue system, as without this the production of books will cease to be profitable—in view of the superior facilities enjoyed abroad—and to increase the duty on foreign books would be a measure at once unpopular, and opposed to the revenue principle of the present tariff. Large orders have gone out for paper from Belgium, forwarded by most of the publishing firms of importance. From some unexplained causes, this youngest of the European kingdoms is monopolizing the supply of the lower-priced printing papers, and has already beaten English enterprise and capital in their own country, the daily customs returns of goods entered at the port of London averaging some hundred bales of Belgium paper. It is used most extensively for newspapers, popular magazines, and other cheap publications, and is now, in spite of a high duty, largely making its way into the United States.

—One of the most curious things in Mr. Wheeler's very curious and learned "Dictionary of the Noted Names of Fiction," lately published by Ticknor & Fields, is his identification of "Mother Goose"—*the* Mother Goose of the world-famous "Melodies"—with a real person of New England origin. According to Mr. Wheeler, she belonged to a wealthy family in Boston, where her eldest daughter, Elizabeth Goose, was married by Cotton Mather, in 1715, to an enterprising and industrious printer named Thomas Fleet, and in due time gave birth to a son. Like most mothers-in-law in our day, the importance of Mrs. Goose increased with the appearance of her grandchild, and poor Mr. Fleet, half distracted with her endless nursery ditties, finding all other means fail, tried what ridicule could effect, and actually printed a book with the title, "Songs for the Nursery; or, Mother Goose's Melodies for Children. Printed by T. Fleet, at his Printing House, Pudding Lane (now Devonshire Street), Boston. 1719. Price ten coppers." Mr. Wheeler does not mention where a copy of this *editio princeps* may be seen or its current value among New England antiquaries. His circumstantial account, which we have abridged above, is written with all the seriousness of truth, but it is certainly a remarkable coincidence that the same name should have been used in another language by Perrault, in his "Contes de ma Mère Oye" (Mother Goose), twenty years before, in 1697. The general currency of cant names and words when once adopted is very remarkable, and has never been explained. There are in works of the beginning of the last century two accounts of a noted commander of the West India merchantman, *Black Eagle*, Captain Fudge, called from his notorious habit of romancing Lying Fudge; and there can scarcely be a doubt that Mr. Burchell's famous exclamation "Fudge," long a part of the language, took its rise from this individual. A better known instance is the verb "to chouse"—this certainly originated with the rogueries and impositions of a foreign impostor who passed himself off as a Turkish "chiaus" or envoy during the reign of Charles II., and is often referred to in the literature of the time.

—Until the publication of his new book, where the fact is mentioned, we were unaware that the long absence and apparent desertion, indeed, of his native land, by Elihu Burritt, "the learned blacksmith," were caused by his official position as United States Consul at Birmingham. The duties of his post are probably not of a confining nature; at all events they did not suffer by the pleasant two months' stroll, on foot, described in "A Walk from London to Land's End and Back, with Notes by the Way," just brought out in

London by S. Low & Co. The adventure was undertaken in the summer of 1864, a year in which Mr. Burritt sums up his exertions by saying, "In addition to this pedestrianism, I have written a book of four hundred pages, travelled several thousand miles by railway, lectured about sixty times, and performed other labors with foot, tongue, and pen; so, on the whole, it has been one of the busiest as well as the most enjoyable years of my life." Mr. Burritt's descriptions and reflections show a mind of native refinement as well as a taste cultivated by learning. The English have had few travellers among them so disposed to take a kindly view of things, and appear well satisfied with the impressions recorded by the author.

—Messrs. Macmillan & Co. announce that they "hope to publish" Mr. Baker's important book, "The Albert Nyanza, Great Basin of the Nile, and Explorations at the Nile Sources," to be illustrated by wood-engravings and chromo-lithographs from Mr. Baker's sketches, and a new map of his route through regions previously unexplored. The fact that in all his arduous and perilous adventures he was accompanied by his wife, "who by her conduct has shown what the wife of a gallant explorer can accomplish in duty to her husband" (to quote the rather awkward words of Sir Roderick Murchison), is a new feature in the annals of African discovery, and lends a more lively interest to the history of the expedition. Mrs. Baker's endurance seems to have been heroic; on one occasion she remained insensible for *seven days* from the effects of a sunstroke.

—The attempt to combine an intellectual feature with the material triumphs of art and industry at the French Universal Exposition of 1867 is likely to meet with success, according to the plan announced by M. Duruy, Minister of Public Instruction. The reports recording the literary, scientific, and moral achievements of France for the last twenty years are being undertaken by the most competent persons, with the certainty of a valuable result. To M. Sainte-Beuve is entrusted the survey of literary subjects; Vicomte de Guerroniere will report on the progress of moral science and political economy; M. Leverrier on astronomy; and M. Dumas on mathematics and physics. Other branches of knowledge will be undertaken by savans equally capable with those already named of doing them justice.

—In a letter to the *Athenæum* Mr. John Payne Collier gives some curious particulars about the destination of his privately printed series of books relating to Elizabethan literature, etc., undertaken with a view of rendering it impossible that some of the scarcest and most valuable English books should ever be lost to our language. Concerning the destination of the fifty copies to which the impressions are limited, he says: "Among the millions who compose our metropolitan population only a single exemplar is taken. The British Museum has not one of the originals (so far as I can ascertain from the multifarious and overgrown catalogues), and yet it has never given the slightest support to my undertaking. In London and its neighborhood there is no library, either public or private, that seems to wish to possess even such a book as a faithful reproduction of the first edition of the works of Lord Surrey and Sir Thomas Wyat, whose poems almost alone fill the long dreary interval between the reigns of Richard II. or Henry IV. and that of Elizabeth. I am not disheartened by this fact, because elsewhere I have met with abundant support, especially in Scotland, Germany, and the United States, while several of my printed performances find their way even to Egypt, the Cape of Good Hope, India, and Australia." A nearly complete set of these choice reprints is in the possession of Mr. David G. Francis, of 506 Broadway, under whose care is rapidly progressing the beautiful "Riverside Press" reprint of Mr. Collier's "Bibliographical and Critical Account of the Rarest Books in the English Language," with the sanction of the venerable author, who expresses his great gratification at this proof of the estimation of his labors in behalf of the early literature of England, the common inheritance of both countries.

—The vagaries of the censorship of the press in France have often been exhibited in a ludicrous fashion, but the last instance of the application of its powers seems really too absurd to be true—as we are assured it is. It seems that a gentleman well known in France as a translator of English books—Mr. William Hughes—lately applied to the office of the censorship, technically known as the Paris Board of Index, for the necessary permission to authorize the sale of a French version of Thackeray's "Jeames's Diary," named for the foreign market "Memoirs of an English Valet." The official stamp legalizing the publication, however, was refused, on the grounds that the book "contains strictures on the British aristocracy of such intense acerbity that remonstrances from her Majesty's Government might be the consequence of its authorized circulation!" It is of course in vain to pry into the mysterious depths of the Imperial policy, but it would almost seem that its creatures had an inkling of the honest warmth and indignation that inspired all Thackeray's writings respecting the unreasoning infatuation of Napoleonism and the tinsel splendors of the Second Empire. An additional evidence of this tendency is given in the last number of the "Cornhill Magazine." It contains a reprint of an entire small volume by Thackeray, "The Second Funeral of Napoleon, by Michael Angelo Titmarsh." It was published in London in 1841, but fell so dead from the press that it is almost as good as MS. The work is not in Thackeray's best vein, and is scarcely worth resuscitating except for the interest now felt in everything belonging to him. A friend communicates a note received from him in answer to the intimation of the non-success of the tiny volume. "So your poor Titmarsh has made another *fiasco*. How are we to take this great stupid public by the ears? Never mind, I think I have something that will surprise them yet." This was evidently an allusion to Vanity Fair, which he had begun at that time.

—Translations of Homer have taken their place as an established literary feature of the time; a new one might be chronicled almost every week. The latest mentioned is a complete version of the "Iliad" by a gentleman whose fame was won in other fields, Sir John Herschel. He is not, however, entirely unknown as a translator, having published the first book of the "Iliad" in the "Cornhill Magazine" a year or two ago. It was in hexameter verse, from which it is fair to infer that the forthcoming version will be in the same measure. A new translation of the "Odyssey" has appeared by the Rev. George Musgrave, in two volumes, similar in appearance to Lord Derby's "Iliad." The author professes to have written it on the sofa during the intervals of a long attack of gout, and adds, "Lord Derby, as we all know, wrote his translation under similar circumstances." This exquisitely simple claim of circumstantial literary relationship reminds one of what Dickens calls "the profoundly unreasonable grounds on which an editor is often urged to accept unsuitable articles—such as having been to school with the writer's husband's brother-in-law or having lent an alpenstock, in Switzerland, to the writer's wife's nephew, when that interesting stranger had broken his own." The highest honors of Homeric translation seem reserved, in the opinion of the best judges, for Mr. Philip L. Worsley, who makes use of the Spenserian stanza in his new version of the "Iliad," as he had already employed it with equal success for the "Odyssey," published a few years since by Messrs. Blackwood.

—The name of Sir Edmund Head is mentioned, apparently by authority, as the probable successor to Mr. Antonio Panizzi on his contemplated retirement from the office of chief librarian at the British Museum. This seems a remarkable change of circumstances for a man who was for seven years, as Governor-General of Canada, viceroy of a great empire. Sir Edmund has, however, shown his literary taste by appearing several times as an author. One of his best known works is "The Hand-Book of Spanish Painters," published uniformly with the first edition of Kugler's "Italian School," and now out of print. His latest book is a small philological tract, "Two Chapters on Shall and Will." Sir Edmund Head is sometimes confounded with his cousin, Sir Francis Head, the better known and highly popular writer of "Rough Notes of a Journey across the Pampas," and "Bubbles from the Brunnen of Nassau," a book that made the fortune of several of the more obscure German watering-places by the crowds of English attracted to them by Sir Francis Head's eulogies of their salubrity and the cheapness of their accommodations. Sir Francis is the senior of Sir Edmund by about ten years, and was born in 1793.

—The number of fine-art biographies will be increased by a book now in press by Messrs. Black, of Edinburgh, "Life of David Roberts, R.A., compiled from his Journals and other Sources, by James Ballantine. Illustrated with etchings by the artist, and engravings from his pen-and-ink sketches." Roberts was remarkable for the neatness and precision of all his drawings, writings, etc. Like Claude Lorraine, he kept a "Liber Veritatis," a catalogue of every picture he executed, with a drawing of it, and the particulars of its sale, purchaser, etc. His diaries, journals, etc., form an unusually ample store of materials for a biographer. It has been remarked that of all professional classes lawyers form the subjects of the most interesting biographies, and doctors of the worst. Biographies of artists have until of late been hardly numerous enough in English to admit of comparison. One of the first of the series—Northcote's "Life of Sir Joshua Reynolds," ranks among the best; and at the very opposite end of the scale must be placed one of the latest and most pretentious, Thornbury's "Life of Turner." The memoirs of William Hunt, the water-color painter, with chromo-lithographs of some of his matchless gems of color, are also promised for the present season.

—The scheme for an exhibition of historical British portraits, forming a chronological series of contemporary representatives of distinguished men of the British Islands, is proceeding to completion with great success, and is expected to form the most interesting of the exhibitions of the

coming season in London, artistically as well as historically. It was set on foot by Lord Derby, with whom most of the nobility and public bodies, as the universities, etc., are in co-operation, under the management of a commission of the fine arts connected with the Government schools of design. The gallery made use of is a portion of the building employed for a similar purpose at the great Exhibition of 1862. It is calculated to hold about eight hundred pictures. This number, it was estimated, would afford sufficient room to include the great men of history as low down as the Revolution of 1688, but it is now said that the *embarras de richesse* will place the limit of this first exhibition about the era of Cromwell and the Commonwealth. In the scrutiny for original portraits now in active operation, many choice pictures will undoubtedly be disinterred from the ancestral manor-houses where they have long remained disregarded. The commissioners have issued a list of persons of whom they desire to procure original paintings. Some of them are known familiarly by engravings, but of course the object is to trace the present abiding-place of the picture from which the print was copied. Among the desiderata are portraits of Sir John Oldcastle, Lord Cobham the Protestant martyr, Cardinal Beaufort, Perkin Warbeck the pretender, John Skelton, the poet, Thomas Sternhold of psalmodic fame, Edmund Spenser, George Chapman, Dr. Donne, Michael Drayton, George Herbert, Richard Hooker, Philip Massinger, William Chillingworth, John Hampden, Sir George Etherege, and Sir Charles Sedley.

—The late work of Dr. Pusey, intended as a peace-offering to allay the heat of the combatants of the Anglican and Roman Catholic Church, has proved to be highly provocative of controversy, and already answers to it are advertised as speedily forthcoming from the three most prominent writers and members of the Catholic hierarchy. They are: "Letter to Dr. Pusey on his recent *Irenicon*," by John Henry Newman, D.D.; "The Leading Topics of Dr. Pusey's Work reviewed in a Letter to Archbishop Manning," by F. Oakeley; and "Doctrine and Practice of the Catholic Church in respect to the Worship of the Blessed Virgin Mary," by the Most Rev. H. E. Manning, Archbishop of Westminster, all to be published by Messrs. Longman, who seem to have become the chief literary organs of the Catholic Church in England.

—By the death of Sir Charles Eastlake, president of the Royal Academy and director of the National Gallery, England has lost a painter of elegant but comparatively feeble executive power, and a connoisseur probably unequalled for his knowledge of art-history and antiquities. Few of his own paintings will endure; but those purchased under his direction for the national collection attest the purity of taste and fine feeling for spiritual art that characterized Sir Charles Eastlake's mental sympathies. In literature, he translated Goethe's "Theory of Colors," and wrote "Materials for a History of Oil Painting" and "Contributions to the Literature of the Fine Arts." His presidency of the Royal Academy dates from 1850, when he succeeded Sir Martin Archer Shee, and was knighted. On the death of Delaroche, he filled his place as honorary member of the French Academy at Rome, and was one of the few foreign members of the French Legion of Honor.

SMITH'S CONCISE DICTIONARY.*

In a recent notice of "Kitto's Cyclopædia" we sketched the progress of Biblical literature from the date when Taylor's edition of "Calmet" was the principal book of reference in this department accessible to the English reader. We also pointed out the characteristic differences between the revised and enlarged edition of Kitto and the "Dictionary of the Bible" edited by William Smith, LL.D., the well-known editor of the dictionaries of "Greek and Roman Antiquities," "Biography and Mythology," and "Geography." Both these works were designed for the use of students and scholars. They are elaborate, critical, and ponderous; dealing much in minutiæ, abounding in learned terms and references, detailing the processes of investigation, and extending, in both cases, to three large and costly octavo volumes. The want of a popular dictionary of the Bible, which should embody in a single volume the best results of all this elaborate criticism, was still to be supplied; and to meet this want Dr. Smith placed his dictionary in the hands of Mr. W. A. Wright, M.A., Librarian of Trinity College, Cambridge, for the purpose of condensation. The result is one volume of 1,040 pages, in place of three volumes numbering in all 3,154 pages octavo, double column.

This "Concise Dictionary" is almost literally a condensation of the original work. In some cases, however, the articles are substantially new and, on the other hand, a few topics treated in the larger work are omitted from this—sometimes, doubtless, through inadvertence (*e. g.*, Areopagus or Mars-Hill). The condensation is effected mainly by the omission of matter not essential to the comprehension of the subject by the general reader, such as collateral illustrations from classical and historical sources, theories of interpretation, disquisitions upon words, etc. Commonly the language of the original article is kept unchanged, and the sentences are so dovetailed together that no break is perceived.

The article on "Moses" is a good illustration. This is condensed from nine pages to three and a half. A paragraph upon the etymology of his name is omitted. The references to the materials for his life are abbreviated by the omission of the clauses of the original which we here indicate in brackets: I. The details preserved in the [four last books of the] Pentateuch. II. The allusions in the Prophets and Psalms [which in a few instances seem independent of the Pentateuch]. V. The Mussulman traditions in the Koran and the Arabian legends [as given in Weil's "Biblical Legends," D'Herbelot, and Lane's "Selections"]. Such omissions do not impair the value of the article for the general reader. A correction of the Koran in its genealogy of Moses, an account of the tribe of Levi, of Aaron and Miriam in their relation to Moses, fables and traditions concerning his life, the amplification of minor points in his history—these all are omitted, while the main biography proceeds naturally and smoothly in the very language of Dean Stanley in the original article. Taken as a whole, the "Concise Dictionary" is a happy example of editorial curtailment.

But Mr. Wright has not altogether succeeded in popularizing the dictionary. The original work was prepared for men of education, and its language and composition are at their level. The mere abridgment of such a work, therefore, retaining its style throughout, does not adapt it to another class of readers. The editor should have re-written the work in a simple, popular style, adhering closely to the results of the original, but avoiding all technical and professional phraseology. Ministers, theological students, and all persons who devote themselves to a critical study of the Scriptures will, of course, require the larger work; and the abridgment should have been prepared without reference to them. Hebrew, Greek, and Latin terms are an encumbrance to a work intended for popular use, and these should have been omitted except where they occur in the English version of the Bible.

The "Concise Dictionary" should also have omitted all unsettled theories of criticism—as belonging to the field of pure scholarship—or have stated them in brief as *theories* with the positive and negative arguments concerning them. For such a work, designed for general use and likely to be taken as an authority, should not be in the interest of any particular school of criticism. The editor appears to have been mindful of this distinction between a book for scholars and a book for the people; and he has omitted much of the destructive criticism which had found its way into the original work. Still, there are traces of this, as in the articles on Genesis and the Pentateuch. It is assumed as a settled point in Biblical criticism, that the Pentateuch "did not assume its present shape till its revision was undertaken by Ezra, after the return from the Babylonish captivity." But this is a point upon which Hebrew scholars are by no means agreed, and many eminent names are arrayed against the conclusion here assumed. This should, therefore, have been given simply as an unsettled theory; and the reasons against its adoption should have been enumerated as well as the arguments in its favor. In the main, however, this dictionary treats such indeterminate questions with candor and with no marked prejudice for a particular theory. It admits, for example, that the Pentateuch was substantially derived from Moses; that "the Books of Exodus, Leviticus, and Numbers are, to a great extent, Mosaic;" that "Deuteronomy, excepting the concluding part, is entirely the work of Moses;" and that "the Book of Genesis was probably brought to very nearly its present shape either by Moses himself or by one of the elders who acted under him." While it adopts the theory that the Book of Genesis was a compilation from older documents it argues that this "does not in the least militate against the divine authority of the book." Indeed, the "Concise Dictionary" distinctly recognizes the inspiration of the Scriptures and the supernatural element which so frequently appears in their narratives. Its treatment of the Christian miracles is lucid and philosophical, refuting the naturalistic and the mythical explanations of them, and showing that it is impossible to account for the existence of the Christian religion and the life and character of Jesus Christ, "if the miraculous facts of Christianity did not really occur." The apprehension of critical and theological unsoundness which was awakened in some quarters by the larger dictionary of Dr. Smith is not warranted by the general tone of the "Concise Dictionary."

The principle upon which questions of natural history and physical science are treated in the dictionary is laid down in the following statement:

* "A Concise Dictionary of the Bible, comprising its Antiquities, Biography, Geography, and Natural History: Being a Condensation of the larger Dictionary. Edited by William Smith, LL.D." Boston: Little Brown & Co.

'The teaching of the Bible is accommodated to the knowledge and opinions of those to whom its language is addressed; and the observations of naturalists are no more an argument against the truth of the Word of God than are the ascertained laws of astronomical science." This, however, is a defective statement; since a manifest contradiction between the facts of science and the declarations of the Bible would impeach the claim of the latter to the infallibility of a divine revelation. The true principle is, that the obvious purpose of the Bible being the inculcation of moral truth, we should not look to it for a scientific observation of the phenomena of nature; and that inasmuch as it is a book for popular and universal use, we must treat its language as popular and not as scientific. Hence seeming contradictions between the facts of science and the incidental allusions of the Bible to physical phenomena may commonly be resolved into peculiarities of Hebrew idiom or the generalizations of popular language. Thus the Hebrew *ehretz* may denote either the *earth* in opposition to the *heaven*, or *country, land*, a portion of the earth's surface defined by natural or civil boundaries, or the earth as *inhabited* and known to us. Hence the geological evidence that the Noachic flood was not universal does not contradict the narrative in Genesis. Neither does the statement concerning the animals taken into the ark require to be literally understood of all species on the face of the globe. But, on the other hand, the "Concise Dictionary" goes too far in affirming that there were many original centres of distribution for the existing species of animals, since that point is not settled by the unanimous consent of naturalists. It is as yet only a theory.

Again, there is a substantial agreement between geology and Genesis in respect to the order of creation; and apparent discrepancies may yet be reconciled by a better systematizing of the facts of geology and a better understanding of the Hebrew idiom concerning "days" and "the beginning." Upon the whole, the dictionary treats of the natural history of the Bible with a wise discrimination as to the relations of science and criticism.

In its articles upon ecclesiastical subjects the writers have not been able always to forget that they were of the Church of England, and the articles on "the Church," "Bishops," etc., propound the episcopal theory as a matter-of-fact. Still, the article on the "Priest" states truly that "there is no trace of an order in the new Christian society bearing the name and exercising functions like those of the priests of the older covenant. It was the thought of a succeeding age that the old classification of the high-priest, priests, and Levites was reproduced in the bishops, priests, and deacons of the Christian church."

A careful revision of the dictionary by an impartial hand would remove the occasional defects which we have pointed out in this article, and would correct the somewhat numerous instances of erroneous and inharmonious orthography and punctuation. But these defects do not greatly detract from the substantial merits of the work. The "Concise Dictionary" is by far the best popular hand-book of the Bible in the English language. It is a monument, too, of English scholarship; for, though German sources have been largely drawn upon in the composition of the work, the articles are all from English writers, with the exception of the contributions of four Americans. The names of these last, however, have been suppressed in the list of contributors, though their labors have been freely used!

HEREWARD.*

Mr. Kingsley has written nothing better than this recital of the adventures of Hereward, son of the famous Lady Godiva of Coventry, and the "grim earl," Leofric, her husband—who as a boy, under King Edward the Confessor, was outlawed, as too hard a case for his parents to manage; who took service with foreign princes and turned sea-rover on his own account; who was the last of the Berserkers and the first of the knights-errant; who performed unparalleled feats of valor and of cunning; who on the Duke of Normandy's invasion of England felt himself, in spite of his outlawry, still an Englishman at heart, sailed over to England, and collected an army to contest the Norman rights; who contested them long and bravely, in the fen-country of Lincolnshire, but at last found the invaders too many for him and was driven for a subsistence to the greenwood, where he set the fashion to Robin Hood and the dozen other ballad-heroes whom the author enumerates; who under his reverses grew cold and faithless to the devoted wife whom he had married out of Flanders, and who had followed his fortunes over land and sea; who, repudiating Torfrida, thought to patch up his prospects by a base union with a Norman princess, for whom he had cherished an earlier but an unworthy passion, and by a tardy submission to the new king; but who at last, disappointed, humiliated, demoralized by idleness, fell a victim, in his stalwart prime, to the jealousy of the Norman knights.

Mr. Kingsley's hero, as the reader sees, is an historical figure, duly celebrated in the contemporary and other chronicles, Anglo-Saxon and Norman. How many of his adventures are fiction does not here signify, inasmuch as they were destined to become fiction in Mr. Kingsley's novel; and, as the elements of a novel by a man of genius, become animated with a more lively respectability than could ever accrue to them as parcels of dubious history. For his leading points, Mr. Kingsley abides by his chroniclers, who, on their side, abide by tradition. Tradition had made of Hereward's adventures a most picturesque and romantic story; and they have assuredly lost none of their qualities in Mr. Kingsley's hands. Hereward is a hero quite after his own heart; one whose virtue, in the antique sense, comes ready-made to his use; so that he has to supply this article only in its modern significance. The last representative of unadulterated English grit, of what is now the rich marrow of the English character, could not, with his generous excesses and his simple shortcomings, but forcibly inspire our author's imagination. He was a hero, covered with those glories which as a poet, of an epic turn, as an admirable story-teller and describer, and as an Englishman, Mr. Kingsley would delight to relate; and he was a man, subject to those masculine foibles over which, in his ecclesiastical and didactic character, our author would love to moralize. Courage has ever been in Mr. Kingsley's view the divine fact in human nature; and courage, as bravely understood as he understands it, is assuredly an excellent thing. He has done his best to make it worthy of its high position; his constant effort has been to prove that it is not an easy virtue. He has several times shown us that a man may be rich in that courage which is the condition of successful adventure, but that he may be very much afraid of his duty. In fact, almost every one of his heroes has been compelled to make good his heroism by an act of signal magnanimity. In this manner Kingsley has insisted upon the worthlessness of the greatest natural strength when unaccompanied by a corresponding strength of soul. One of his remote disciples has given a name to this unsanctified pluck in the title of the tale, "Barren Honors." The readers of "Two Years Ago" will remember, moreover, the pathetic interest which attached in that charming novel to the essentially unregenerate manfulness of Tom Turnall. The lesson of his history was that it behooves every man to devote his muscle—we can find no better name for Mr. Kingsley's conception of intelligence—to the service of strict morality. This obligation is the constant theme of Mr. Kingsley's teaching. It is true that, to his perception, the possibilities of human character run in a very narrow channel, and that a man has done his grandest when he has contrived not to shirk his plain duty. Duty, for him, is a five-barred gate in a hunting-field: the cowards dismount and fumble at the unyielding padlock; the "gentlemen" ride steadily to the leap.

It has been hinted how "Hereward" turns out a coward. After a long career of generous hacking and hewing, of the most heroic brutalities and the most knightly courtesies, he find himself face to face with one of the homely trials of private life. He is tired of his wife, who has lost her youth and her beauty in his service, and he is tempted by another woman who has been keeping both for him through all the years of his wanderings. To say, shortly, that he puts away his wife and marries his unworthy temptress would be to do him injustice. This is what he comes to, indeed; but, before judging him, we must learn in Mr. Kingsley's pages how *naturally* he does so. Hereward is an instance of that "demoralization" by defeat of which we have heard so much within the last five years. He is purely and simply a fighting man, and with his enormous fighting capacity he may not unfitly be taken to represent, on a reduced scale, the susceptibilities of a whole modern army. When, at last, his enemies outnumber him, he loses heart and, by a very simple process, becomes good for nothing. This process—the gradual corrosion in idleness of a practical mind of the heroic type—is one which Mr. Kingsley is very well qualified to trace; and although he has troubled himself throughout very little with the psychology of his story, and has told it as much as possible in the simple objective tone of the old chroniclers to whom he so constantly refers, he has yet, thanks to the moralizing habit which he is apparently quite unable entirely to renounce, given us a very pretty insight into poor Hereward's feelings.

It is the absence of the old attempt at philosophy and at the writing of history which makes the chief merit of "Hereward" as compared with the author's other tales. Certain merits Mr. Kingsley has in splendid fulness, but the metaphysical faculty is not one of them; and yet in every one of his writings hitherto there has been a stubborn philosophical pretension. There is a certain faculty of story-telling as complete and, used in no matter what simplicity, as legitimate and honorable as any other; and this gift is Mr.

* "Hereward, the Last of the English. By Charles Kingsley." Boston: Ticknor & Fields. 1866.

Kingsley's. But it has been his constant ambition to yoke it with the procedure of an historian. An important requisite for an historian is to know how to handle ideas, an accomplishment which Mr. Kingsley lacks, as any one may see by turning to his lectures on history, and especially to the inaugural lecture, in which he exhibits his views on the philosophy of history. But in the work before us, as we have said, he has adhered to his chroniclers; and as there is a world of difference between a chronicler and an historian, he has not been tempted to express many opinions. He has told his story with great rapidity and vivacity, and with that happy command of language which makes him one of the few English writers of the present moment from whose style we derive a positive satisfaction. He writes in all seriousness, and yet with a most grateful suppression of that aggressively *earnest* tone which has hitherto formed his chief point of contact with Mr. Carlyle. He writes, in short, as one who enjoys his work; and this fact it is which will give to "Hereward" a durable and inalienable value. The book is not, in our opinion, what historical novels are so apt to become—a *pastiche*. It represents a vast amount of knowledge, of imagination, and of sympathy. We have never been partial to Mr. Kingsley's arrogance, his shallowness, his sanctified prejudices; but we have never doubted that he is a man of genius. "To be a master," as we were told the other day, "is to be a master." "Hereward" is simply a masterpiece, in the literal sense of the term, and as such it is good to read. This fact was supreme in our minds as we read it, and it seemed more forcibly charged than ever before with the assurance of the author's peculiar genius. What is this genius? It lies, in the first place, as it seems to us, in his being a heaven-commissioned *raconteur;* and, in the second place, in his being a consummate Englishman. Some of them are better Englishmen than others. Mr. Kingsley is one of the best. By as much as he is insufferable when he dogmatizes like a schoolboy upon the characteristics of his nation, by so much is he admirable and delightful when he unconsciously expresses them. No American can see these qualities embodied in a work of art without a thrill of sympathy. "Hereward" is an English story—English in its subject, in its spirit, and in its form. He would be a very poor American who, in reading it, should be insensible to the charm of this fact; and he would be a very poor critic who should show himself unable to distinguish between Mr. Kingsley a master and Mr. Kingsley—not a master.

TUSCAN SCULPTORS.*

THE author of this work is an American, whose name has long been familiar to a small circle as that of a cultivated and liberal lover and follower of the arts. It is to his munificence that Boston owes the finest of her statues—that of Beethoven, by Crawford, which holds a fitting place of honor in her great Music Hall. Mr. Perkins, drawn by natural taste to the study of the fine arts, has turned to advantage the opportunities afforded him by long residence in Italy. Selecting his subject wisely, he has filled an unoccupied space in the literature of art, and has produced a work creditable not only to his industry and patience, but also to his judgment and taste, and useful to every one who desires to inform himself as to the history of Italian sculpture. The work is so honestly wrought, and is marked by such good sense and moderation of statement, as to inspire respect for the author. It is not likely soon to be superseded, and if a compact and cheap edition of it were published, it would be a valuable handbook for intelligent travellers in Italy.

In his introduction, Mr. Perkins gives a sketch of Italian sculpture from the earliest times to the thirteenth century. He begins the treatment of his special subject with the life of Niccola Pisano, the great master of the early revival of the arts in Italy, and in a series of biographical narratives traces the lives of Tuscan sculptors and the course of the art through the four centuries, from the birth of Niccola to the death, in 1608, of Gian Bologna. In casting his work in this biographical form, our author follows the example of Vasari, the most entertaining of writers upon art and artists, and secures for his pages the animation and interest of personal records. So far as the general reader is concerned, he has chosen wisely in pursuing this method; but, although the biographical narratives contain some general views concerning the historic development and intellectual relations of Italian sculpture, the student of the history of philosophy and art will find his curiosity rather stimulated than satisfied as to those conditions of civilization upon which the rise, the progress, and the decline of sculpture, in common with its sister arts, in Italy depended. The value and interest of art to mankind consist not so much in the character and circumstances of artists as in those moral causes which led to the manifestation of genius in this special form. Although it is almost impossible, as Mr. Ruskin has justly remarked in his recent address before the Royal Institute of British Architects, "out of the history of the art of nations to elicit the true conditions relating to its decline, in any demonstrable manner"—and he might have added the true conditions of its rise as well—yet it is only so far as those conditions are investigated and elucidated that the study of art becomes one deserving the attention of serious thinkers interested in the progress of the race. We would not, however, find fault with Mr. Perkins's book for not being other than it is, and within its limits we can give it cordial praise. Occasionally, however, in his investigations into the lives of the artists who are the subjects of his book, we find reason to mark the absence of a justly critical spirit, both as regards the facts of their lives and the worth of their productions. For example, Mr. Perkins accepts, without a hint of suspicion, Vasari's almost incredible account of Niccola Pisano, from which it would appear that at the age of fourteen or fifteen he was appointed architect to the Emperor Frederic II., and employed by him in the construction of buildings of great importance. Vasari's inaccuracy and fondness for traditions, however improbable, are so well known that great caution ought to be exercised in accepting his statements when unsupported by other evidence; and in this case later investigations have rendered it probable that he was here indulging his fancy in pleasant stories. In ascribing, also, certain special works to Niccola, we think Mr. Perkins far too closely follows the Florentine biographer, and that a critical discrimination of the character of the works themselves would have led him to distrust the assertions of Vasari. So again, to take a very different instance, Mr. Perkins, in his life of Michel Angelo, cites the report of the great sculptor's conversation by Francesco d'Ollanda, as professedly given by Count Raczynski in "Les Arts en Portugal," without a word concerning the very unsatisfactory nature of the evidence for its authenticity. There can, indeed, be little question that Raczynski so remodelled and touched up d'Ollanda's report that his relation should be received with great caution, and as the original from which he professes to have copied is said no longer to be found where he asserts that it existed, an unpleasant doubt rests over what would, if authentic, be one of the most delightful and interesting literary discoveries of recent times.

In his appreciation of the works of the Tuscan sculptors, Mr. Perkins is, happily, free from a tendency to exaggerate their merits. His good sense holds him back from the use of the tempting Italian superlative. If he occasionally fails in the recognition of the subtler qualities of genius, in imaginative penetration and sympathetic comprehension, we are bound to remember that we have a right to expect these qualities only from men of the rarest critical powers, and in the absence of them we may well be grateful for such conscientious investigation and such freedom from pretence as distinguish Mr. Perkins's narrative.

The study of such a work opens questions of the highest interest in the history and philosophy of art. It is, indeed, impossible to avoid the fundamental question—What is the value of sculpture to modern civilization? And the answer to which one is compelled is not altogether that which might be anticipated or desired. Here we have the records of four centuries of sculpture, during which the art was practised by men of unquestioned force and originality of genius. Niccola and Giovanni Pisano, Ghiberti, Donatello, Michel Angelo, illustrate the period. But what have they left? What influence on thought or feeling, on the intellectual or spiritual development of men, have they exerted through their works of sculpture? However highly we may esteem the pulpit of Pisa, the bas-reliefs of Orvieto, the St. George of the Or San Michele, the statues of the Medicean Chapel, or any other works greater than these, if any such there be, we must yet confess that, apart from such pleasure as they may afford to a few cultivated persons, they have no very great worth to mankind. They are precious as personal memorials, as illustrations of historic conditions of art, as expressions of individual genius, some of them as embodiments of refined or noble feeling; but they are not instinct with the life of a race, they are not the expressions of its highest thought, and they have no appreciable effect upon the moral or intellectual development of Italy. Part of this comparative powerlessness not only of Tuscan but of all modern sculpture is due to the very nature of the art itself, part to the conditions under which it has been practised in recent times.

Sculpture as exclusively the art of form is the most purely intellectual of the plastic arts. It is degraded whenever the sculptor subordinates form to sentiment. The sentiment which it properly deals with, and to which alone it gives due expression, is that which lies ideally in form. The superiority of Greek sculpture to all other is based primarily on the distinction between the classic and the modern or romantic spirit. The peculiar char-

* "Tuscan Sculptors: Their Lives, Works, and Times. With Illustrations from Original Drawings and Photographs. By Charles C. Perkins." London: Longman. 1864. Two vols. 4to.

acteristic of the classic spirit is its regard for form, that of the romantic its regard for sentiment in expression. The genius of the Greeks was essentially sculpturesque, that of the modern world essentially picturesque.

But besides this broad distinction in the nature of the ancient and the modern mind, as exhibited in the arts, the practice of sculpture was conducted upon very different principles in Greece from those which have guided it in modern times. Sculpture has two provinces; one, its highest, as the handmaid of architecture, in which all its powers are given to the production of the noblest effects of building, in which it associates itself in perfecting the grandest and most beautiful ideas of construction, thereby acquiring a dignity and value which without this association are impossible to it; the other, that of producing single figures or detached groups which shall be either the representation of character in ideal forms, or realistic images of natural objects. In this latter field it has a continual and necessary tendency to become an art of mere luxury, an ornamental art, the servant of selfish tastes, vanity, or ambition. The chief monuments of Grecian sculpture belonged to religious architecture. In these sculpture reached its highest point in expressing the most imaginative conceptions of the national religion, in giving to its figures the inspiration of the life of the soul. But in modern times, except in the Gothic cathedrals, sculpture has been divorced from architecture. It has had no large religious inspiration, it has had no aim higher than to minister to personal ambitions or domestic luxury. In Tuscany such cathedrals and churches as were erected during the Middle Ages did not require or seek its aid in any considerable degree. A few bas-reliefs, a few statues placed with little regard to architectural effect, were all that architecture sought from it. Its works were consequently detached, and it was employed mainly in the production of splendid monumental or memorial effigies. Its grandest conceptions are limited to single figures, or to inconsiderable groups. It lost its power of appealing to the deeper, general sentiment of mankind. It was satisfied with the production of graceful or grand figures—the representation of ideal saints and Madonnas. And thus inspired by large designs, and by the emotions of ideal life, and sharing in the general intellectual decline of Italy, it yielded more and more readily to the attempt to express sentiments which were not within its reach, to the imitation of models with which it had no natural sympathies, to the production of false effects, until, losing all sense of truth, it fell, in the hands of the followers of Michel Angelo, from step to step of baseness and vanity, through the tortured marbles of Bernini to the platitudes and prettinesses of Canova and his followers.

To such broad generalizations as the one preceding, many exceptions may perhaps be taken on one ground or another. It is certain that they seem to do injustice to the greatness of a few works which are among the most interesting productions of modern art, and to the aims of some of the greatest of modern artists. But it is not by exceptional instances that prevailing tendencies of intellectual and moral development are to be judged. Illustrations might be brought from every side in support of the views here advanced. We have spoken, for instance, of the modern genius as essentially picturesque in contrast with the sculpturesque genius of the Greeks. The fact would lead us to anticipate that in the nation in which the modern genius for art has found its fullest development, we should find painting held in higher regard, and far more widely resorted to as a means of expression than sculpture. Such is, indeed, the case. And not only have the chief artistic powers of Italy shown themselves in painting, but the tendency to seek pictorial effect has manifested itself even in sculpture from the beginning, and has been one of the most potent causes of its inferiority and decline. The bas-reliefs of Orvieto are pictorial in design; the bronze gates of Ghiberti show how far sculpture may be pushed in this direction, and how little the true limits of the art were appreciated by those who could regard such works as worthy to be the gates of Paradise. Even the surpassing genius of Michel Angelo, strongly bent as it was towards sculpture, partakes of the same tendency. Imbued as he was with the spirit of ancient sculpture, his chisel could not be satisfied with the production of the effects proper to its art, but sought to unite to them what painting alone was capable of rendering. His statue of Giuliano de' Medici is of the pictorial order; his Deposition from the Cross is the work of a painter in marble. But the provinces of the two arts must for ever remain distinct. It is for sculpture to represent character, and only in so far as passion or sentiment has become a habit of the soul, marked in distinct permanent outward characteristics, can sculpture deal with them and preserve its own absolute power.

In the preface to his book, Mr. Perkins suggests that the reasons why Italian sculpture has, in comparison with Italian painting, found but few admirers or illustrators, lie in the existence of an antique standard of which all modern sculpture falls short, and in the fact that it is much less known because it can be studied only in Italy. But we think that the more general causes which we have attempted to point out are the true ones for the comparatively low regard in which it has been held. The subject tempts us on; but the limits of our space are already passed, and we must leave for some future occasion the discussion of the position and value of our contemporary sculpture, the relations of the art to existing culture, and its prospects in America.

We trust that the success of Mr. Perkins's work may encourage him to complete it with a similar account of the sculptors of the rest of Italy, of which he holds out the promise in his preface, and to give us a second and revised edition of the present volumes.

BUSHNELL'S VICARIOUS SACRIFICE.*

Dr. Bushnell is one of the few men of real and conspicuous genius in the American church. And his genius is wholly consecrated to religion; not to religion in the technical sense, not to the building up of the church establishment, the defence of a creed, the authentication of a tradition, or the instituting of a ritual; but to religion in its proper sense as importing the vital relation of man to God, and the terms on which that relation is sustained or forfeited. At this problem no man works more devoutly than he. He brings to the task many rare gifts not often united in the same person, very seldom combining, even in the same person, in one effort for one purpose, and usually, when distributed among different persons, opposing and counteracting each other. To a severe intellect, trained by the sharpest discipline, practised by constant exercise of speculation, analysis, and criticism, he unites the imagination of a poet and the spiritual fervor, almost the mysticism, of the devotee. In the theological arena, on the seer's mountain top, in the closet of prayer, he seems equally at home. His audacious reason goes on, spite of all remonstrances from his friends, pulverizing creeds, one after another, till credence itself seems likely to be reduced to ashes; and, this work done, his reverent imagination gathers up the ashes in a memorial urn, which consecrates them anew, and claims for them a veneration such as they had never received before. He is destroyer and builder both, and he destroys the more ruthlessly because he believes that from the existing materials which lie about he can erect a far more beautiful temple than he has thrown down. No man, even of the rationalists, has subjected the dogmatic formularies of orthodoxy to such terrible criticism as he. And no man claims to be more calmly, clearly, and devoutly orthodox. Every article of his church under its accepted form he has riddled with argument, logic, wit, we may almost say invective. Yet here they are, not only unharmed but glorified. The orthodox theology being in its nature imaginative—calling itself in fact the interpretation of a drama—suggests a highly imaginary treatment; not only allows it, but demands it; and it has always been a surprise to us that those who accepted it in its popular statement should insist on dealing with it in the dismally prosaic manner they do. None but poets can appreciate it. None but poets can give an exposition of it worthy of its character. A great poetic mind, gifted with popular eloquence and boldly trusting to its wings, would even now give a value to it which rationalism would find it hard to resist. Dr. Bushnell is a poet, and a very eloquent one; but he cannot accept the orthodox theology under its popular statements; he refines it too much for popular apprehension; and thus, at the same time, fetters his own flight, and so confuses the minds of his audience that they find it difficult to fly at all.

This criticism we feel to be justified by the work under review. The substance of its theory is rationalistic. The vicarious sacrifice is treated of as "grounded on principles of universal obligation;" it is tried, that is to say, by the tests of the natural conscience and the natural heart. No claims of the reason or the moral sense are postponed in deference to consecrated interpretations. "There is no stranger freak of dulness in all the literary history of the world, and nothing that is going to make a more curious chapter for the ages to come, than the constructions raised on the vicarious forms of Scripture." "How often has the innate sense of justice in men been mocked by the speculated satisfactions of justice or schemes of satisfaction made up for God." "Plainly enough we can mean nothing by a merit that is outside of all our standards of merit." "If we cannot find a Saviour under just our laws of good, we shall find him nowhere." "The supreme art of the devil never invented a greater mischief to be done, or a theft more nearly amounting to the stealing of the cross itself, than the filching away from the followers of Christ the conviction that they are thoroughly to partake the sacrifice of their Master." And so on, without end. "Christ is a mediator only in the sense that, as being in humanity, he is a *medium* of

* "The Vicarious Sacrifice. By Horace Bushnell." New York: Scribner & Co 1866.

God to us." "Intercession means literally intervention—that is, a coming between; and it is not God that wants to be softened or made better. The stress of the intercession is with us and in our heart's feeling." "Expiation in the sense which belongs to it whenever we speak of expiatory sacrifice, which is to placate a feeling in God, has no character that makes it approvable by intelligence, or endurable by a true sentiment of God's worth and justice." This is precisely what the Unitarians have said, and it goes as far. Indeed, the essential doctrine of this book is Unitarian, and will doubtless be cordially accepted by Unitarian divines. For instance, Dr. Bushnell says: "The bearing of our sins means that Christ bore them on his feeling, became inserted into their bad lot by his sympathy as a friend, yielded up himself, and his life even, to an effort of restoring mercy; in a word, he bore our sins in just the same sense that he bore our sicknesses. Understand that love itself is an essentially vicarious principle, and the solution is no longer difficult." "Given the universality of love, the universality of vicarious sacrifice is given also." "It is not something higher in principle than our human virtue knows." "Take your enemy upon your love," he says; "bear him and his wrong as a mind's burden, undertake for him, study by what means and by what help obtained from God you can get him out of his evils and make a friend of him. Do this, and see if it does not open to you a very great and wonderful discovery—the sublime reality and solidly grand significance of vicarious sacrifice." This is very like rationalism, and it is fortified by a logic, illustrated by a rhetorical beauty, and warmed by a moral fervor which rationalists might envy. Yet Dr. Bushnell is no rationalist. In more than one place he speaks with mild severity of the system which substitutes a beautiful, a gentle, or a loving God for a just God, who has a strong element of wrath in him; for all systems which "dress the soul in what is called beauty of character."

For now, having strained all the accepted meaning out of the current formulas and charged them with the significance of pure naturalism, the seraphic doctor goes manfully to work at reconstruction. All the materials which belonged to the old scheme are used without hesitation. After undergoing a process of shaping and polishing to accommodate the new intention, the old drama is brought on the stage again, somewhat expurgated, and with scenery freshly painted to suit the modern taste. We have the eternal plan, the race of moral natures throwing off the law, breaking loose in a condition of unsubjection, and losing themselves in all sorts of confusion; the loving God suffering agonies of patience through the long ages of preliminary discipline which were necessary before his goodness could work upon the rebels to bring them back, waiting for a better possibility till he could open to them his whole heart's love—"tenderly watching the turning of the ages," "grieving forty years for his people in the wilderness, rising betimes to send his messengers, protesting that he is weary," and experiencing a blessed relief when he came to Mary with his "All hail!" and broke into the world as a God, "come at last to disburthen his heart by sacrifice." We have Christ as the divine love and patience incarnate; we have the ministry of prophets and angels, and all the other accessories of the scheme. The history of the world is made to hinge on the purpose of salvation. Government is supposed to have been instituted to that end. The divine mission of the Hebrew people is recognized as cordially and submissively as ever; the Hebrew dispensation is accepted in its full typical significance; the inspiration of the Scriptures is assumed; the ceremonies, sacraments, and altar forms are reinstated; the disparaged doctrines come to their rights again, the doctrine of eternal perdition among the rest; the shades of venerated beliefs which were hastily departing are summoned back and reclothed in "objective form" as representative figures; and by the close of the volume we see everything looking very much as it did before.

We have considered this work as a work of exposition merely, for that is what it claims to be. As such it is singularly brilliant and ingenious; nay, as such it is singularly luminous, consistent, persuasive. But while one large class of thinkers object to its substance, and another large class of thinkers object to its form, it will probably meet the fate of all attempts, however able, to put new wine into old bottles, and will stand as a most interesting monument of the genius and faith of an individual mind. Of this difficulty he is himself not unconscious. In fact, no man should know better than he how deeply forms of thought become saturated with errors in the course of time, and how hopeless seems the task of cleansing them and restoring them to their proper uses again; but he has faith that, in a case like this, where the forms are so precious and the errors are so palpable, this reclamation may be effected; he urges preachers to attempt it, and persevere till they succeed.

We hope they will attempt it, and that they will succeed, for his theory involves thoughts of great value. We think he has strained Scripture here and there to bring it into concurrence with his principle; we think he has tried needlessly to preserve certain "altar forms," as he calls them, which might have been permitted to pass away; we think he has burdened his theory with some fanciful conceits which sober people will take as indicating an unhealthy judgment; but he has unfolded some deep, vital, noble ideas which all men will be the better for receiving; and if they will receive them under the ancient forms, so much the better, for then these forms will render a double service: exercise their own peculiar influence, and convert to wiser uses symbols that have been misunderstood.

The Good Gray Poet. A Vindication. (Bunce & Huntington, New York.)—The event which gave rise to this pamphlet bears about the same relation to the manner in which it is treated as the refusal of England to give a king to Greece bears to Ruskin's denouncement of it as "the darkest of all dishonorable and impious captivities of this age." It will probably be news to ninety-nine-hundredths of our readers that Mr. Walt Whitman was turned out of office on Mr. Harlan's accession to the Department of the Interior because the Secretary thought that "Leaves of Grass," of which Mr. Whitman is the author, was an indecent book, and therefore opposed to "the principles of Christian civilization" upon which he had determined to govern his department. Mr. W. D. O'Connor asks us to make common cause with him in rousing upon this act "the full tempest of reprobation it deserves." We shall sufficiently indicate his argument by a single quotation:

> "I claim that to expel an author from a public office, and subject him to public contumely, solely because he has published a book which no one can declare immoral without declaring all the grand books immoral, is to affix a penalty to thought and to obstruct the freedom of letters."

Of the grievance itself we can dispose in a very few words. Mr. Harlan chose to give his reasons for an act which did not require any reason, since he can dismiss as he employs, at pleasure. Judging Mr. Whitman from his book, he thought him an immoral person. We know that political appointments are not generally governed by the individual purity of candidates, and it may be a question how far private character can be consulted in cases of eminent fitness for public service. If Mr. Harlan thought it not enough that his clerk was a very capable one, but required certain moral qualities in the man with whom he and his subordinates must have dealings, we may esteem him fastidious but hardly reprehensible. Granted the sincerity of the Secretary, his course is not to be compared with that expulsion from office which has no other justification than political differences of opinion.

That Mr. Harlan was mistaken in his estimate of Mr. Whitman is quite possible; and if he ever acknowledged his mistake, reparation would have been only fair. But he is not likely to be convinced by this "vindication," which, of all extravagant and hyperbolical utterances we ever read, seems to us the most so. We have too much respect for its author to condemn his motives or to impeach his mental balance; yet he has not scrupled to do this with those who differ from him in their valuation of "Leaves of Grass." He says:

> "Enough for me to pronounce this book grandly good and supremely great. Clamor, on the score of its morality, is nothing but a form of turpitude; denial of its greatness is nothing but an insanity; and the roar of Sodom and the laughter of Bedlam shall not, by a hair's-breadth, swerve my verdict."

Surely, there was never such wild and fulsome laudation poured out on any man or any book as in this pamphlet. From its fantastic rhetoric we learn that Mr. Whitman is "greater than Plato"—"he is democracy," and "his conversation is a university." He is also "the proudest man that lives," and "deserves to be considered the grandest gentleman that treads this continent." "To call one like him good seems an impertinence." His seems to Mr. O'Connor "a character which only the heroic pen of Plutarch could record, and which Socrates himself might envy." Particularly is he "kosmos," "the Adamus of the nineteenth century—not an individual, but mankind." Furthermore, he has voted at every election for eighteen years, refused to skulk from the draft under cover of his grey hairs, and served tenderly in soldiers' hospitals during the whole of the war. And if any one wishes to see how these not particularly rare or startling virtues are made the most of, let him read pages 10, 39–44.

We have already quoted Mr. O'Connor's opinion of "Leaves of Grass," but only in part. "Nothing," he avers, "that America had before in literature rose above construction: this is a creation. Idle, and worse than idle, is any attempt to place this author either among or below the poets of the day." And whatever it contains, either plain spoken or indelicate, is compared most elaborately with those parts of the compositions of great authors which, in many instances, to Mr. O'Connor's horror, have been expurgated by later editors and publishers. The apology is so weak as almost (except for the spirit in which it is made) to surpass the assumed offence. One is apparently asked to believe that the greatness of Homer, Shakespeare, and the rest, is inseparable from what are now esteemed their improprieties; and, indeed, that an author's genius is established if it can only be shown that he has incurred the reproach of broad and immoral writing. Mr. O'Connor would probably agree with Victor Hugo, whom he cites with the enthusiasm of a worshipper, in extolling the monosyllabic response of the French officer at Waterloo when called on to surrender, as may be read in "Les Misérables." But the discreetness of the translator, who leaves the word in the original French, saves the unwitting from disgust and amazement, and the novelist from ridicule or contempt. Mr. O'Connor has by this "vindication" involved himself in another: which is, that of his capacity for intelligent literary criticism.

He has himself written some good things. He has poetic feeling and a lively (a very lively) imagination. But he has grave faults of exaggeration, due, no doubt, to unusual earnestness of conviction, and he has damaged his own reputation as a writer much more than he has helped his friend's. He is a victim of that "Titanic richness and strength of phrase" which he discovers in Mr. Whitman's description of "the immutable granitic pudding-heads of the world."

The Fire-Fiend, and Other Poems. By Charles D. Gardette. (Bunce & Huntington, New York.)—The fact that the poem called "The Fire-Fiend" in Mr. Gardette's volume should have been mistaken by criticism in England or America for the work of Edgar A. Poe, argues less familiarity with the genius of that poet than we believed to exist. It is, of course, easy enough to say, now the harmless fraud is confessed, that we could not for a moment have supposed "The Fire-Fiend" to be Poe's; but, honestly, we find so much in it that Poe was, according to his own theories, utterly incapable of writing, that we are surprised it should ever have been attributed to him. We are still more surprised that it should have received flattering comments from the deluded critics, for, intrinsically considered, it cannot commend itself to praise. It is written in the long, swelling lines of that trochaic measure which Poe loved, and used variously in "The Raven" and "Lenore," and it has something of that weird feeling which is conjured up by the assemblage of ghastly images and the pathetic music of rhymes without distinct relation to ideas. In so far it is like Poe, but Poe (though unpleasant person enough in some things) could not have written a verse so revolting as this:

"And my brow grew cold and dewy, *with a death-damp stiff and gluey*;"

nor one so paltry as this:

"And I slumbered like an infant in the 'Cradle of the Deep.'"

"Golgotha," a poem conceived in similar spirit, and written in like measure, is far more perfectly expressed, and is more like Poe—because better and more equal—than "The Fire-Fiend."

Following this are certain lyrics called "War-Echoes," and then the rest of the book is made up of short poems written on different themes and called "Vagaries."

The latter include what is best in the book, and are easy and graceful. Perhaps we shall best convey an idea of their quality by quoting one which pleases us most:

UMBRA:

A HALF-SUNG SONG.

I am singing in the sunshine:
You are singing in the shade:
Wherefore sigh when I am singing?
"Shadow is of sunshine made."

Cynic! Answer! What are shadows,
But the fleeting ghosts of Light?
Night is cradle of the Morning:
"Rather Morn the tomb of Night."

Nay, then, I will change my measure:
Faith is night, and Hope is morn:
Noon is love: behold the zenith!—
"Child! I was not eagle-born."

No! but born of woman, surely.
What am I? O! look, and find,
In my eyes, Love's noontide blazing!—
"Haply! Love has long been blind."

Cruel, cruel! Say, blasphemer,
By what altar do you pray
That is never sun-illumined?—
"Peace! By that of Yesterday!"

It is saying a great deal in Mr. Gardette's favor to say that, except in the two poems confessedly imitative of Poe, his manner is quite his own. The stream of his poetic feeling is rather thin and a little cold, but it has its spring in his own life, and not in the books he has been reading.

Thomas à Becket, a Tragedy; and other Poems. By G. H. Hollister. (Boston: Wm. V. Spencer. 1866.)—A play involving the career of Thomas à Becket from the time of his elevation to the primacy of England by Henry II. to the time of his assassination by the King's agents, must needs abound in dramatic incident, and Mr. Hollister has fully availed himself of the strength of his subject. His tragedy is one which reads well: events succeed each other rapidly; people forbear to make long speeches; we have no doubt that it is a good acting play; and if we cannot give it the highest praise, a certain applause is due to it in an age when tolerably good plays are the exception. It is now and then marred by excesses of metaphor, and one does not well see how fair Rosamond's fate can be justly linked to the fierce primate's, nor, indeed, what she has to do in the tragedy, except to be used in making deeper the King's remorse and abasement. One of the best scenes is that in which she meets Henry after her discovery that he has another wife, and reproaches him with his treachery. The character of Becket is drawn with boldness and force, and there is fine movement in those scenes where he confronts and abashes the King, who had thought to make him the minister of his frauds upon the church. The King and Queen Eleanor have also a proper life, but the remaining characters are of rather vague individuality.

Mr. Hollister's other poems are a kind of idyl called "The Phantom Ship," and some lyrics and sonnets. "The Phantom Ship" came to a New England village, in the old time, in the place of the ship that sailed away long before with Esther Vane's lover. It is a pathetic story, prettily told in as nearly the manner of Tennyson's idyls as imitation could make it. The tragedy is a better poem than the idyl in respect of original treatment. Any man of fair poetic culture could have written "The Phantom Ship," if he had known the story. In the play there is something authentically Mr. Hollister's. If the latter is the later work, there is hope for the author, which we could hardly feel if the idyl were the more recent of the two poems.

The Young Man's Friend. Containing Admonitions for the Erring, Counsel for the Tempted, Encouragement for the Desponding, and Hope for the Fallen. By Daniel C. Eddy, D.D. (Graves & Young, Boston.)—This series of lectures or sermons bears the name of an earlier series by the same author, which had a remarkable sale, and, we hope, effected a proportionate good for those to whom it was addressed. The present volume is marked by earnestness, directness, and force in its appeals and exhortations, but displays no special aptitude for reaching the minds of youth. There is in its advice to young men a perhaps inevitable sectarianism—a degree of narrowness and pre-judgment, not to say prejudice—without which Dr. Eddy might have been less faithful to his evangelical training, but not less the friend of his audience. It is a very restricted view, for example, of the power of truth in a free discussion, or of the value which scepticism has for the ideas which it assails, to pretend that it were "better if Renan had been incapable of producing his 'View [Life] of Jesus.'" Such a remark reflects so immediately upon the Divine wisdom for furnishing M. Renan with his rare intellect, that we should hardly have expected it from so reverential a person as Dr. Eddy, who, besides, cannot be blind to the great services rendered to enlightened Christian belief by a book which has caused believers everywhere to examine their claims to that title. There are also occasionally what we may venture to call tricks of the pulpit, such as appear throughout the chapter on "Investments;" and it sounds very like a joke when, in a serious and for the most part discriminating talk on reading, the lecturer suddenly asks his hearers if they can read their title clear to mansions in the skies!

The Friend. Vol. I., No. 1. (New York, 48 Beekman Street.)—There have been numerous prize essays on the causes of the decline of Quakerism, but the moderate-sized periodical before us is almost the first step we have witnessed to check that decline. The Friends' journals heretofore brought to our notice maintain a dull existence by publishing ever-to-be-continued extracts from Clarkson's "Portraiture of Quakerism" or Woolman's "Diary," with such husks, by way of selections, as the latest excavation at Pompeii or the commonplaces of natural history. Of quite another order is *The Friend*, which fears that the torpor of the society will presently end in the sleep that knows no wakening, and is determined to prevent such a catastrophe if possible. Its first number attacks the conservative restraints of the society on free thought and publication, and exposes the unreasonableness of Quaker peculiarities of speech. There is an appreciative article on Whittier, "The Poet of Friends," though the theory which accounts for his appearance ought, if correct, to have more than this solitary illustration to support it. The politics of *The Friend*, for it has politics, are based on the brotherhood of the race as taught by the great Friend of all the human kind. The monthly is a quarto of twelve pages, to be enlarged, we understand, one-third. With a few exceptions its typography is excellent.

"Progress" is the title of a weekly journal published in this city, and devoted to contemporaneous history and literature. It is not of so recent origin, we believe, as it is new in our eyes, and we are informed that it is so far obedient to its name as to have taken an enlarged shape and called to its editorial chair one whom we know to be a very learned student of history, present and past. We recognize his criticisms in the numbers before us, and they are a marvel of conscientious, minute painstaking. When, as in the case of Mr. John S. C. Abbott, they occupy three pages, without being concluded at that, it is very certain that the authors criticized will not complain of a lack of attention. The paper, to judge from its advertisements, has a special circulation among our Hebrew population, but the scholarship of its editor is not confined to any nationality. The several tables of contents confirm this statement. We have the Polish Insurrection of 1863–4; James Buchanan and the Anti-Lecomptonites; Grant and his Subordinates; Hungary; Vámbéry on the Jews of Asia; Inauguration of Leopold II.; German Arctic Expedition; England's International Shortcomings; Mexico, etc., etc. The selections are very judicious and readable.

Roanoke; or, Where is Utopia? By C. H. Wiley. (Philadelphia: T. B. Peterson & Bros.)—We are unable to decide from anything in this novel whether it is now published for the first time or is here re-issued from some former edition. We believe, however, that it is not so well known as the author's other novel, "Alamance," and, making use of a somewhat remote perusal of that work for the contrast, we think it is not so good. Like "Alamance," this is a story of life in North Carolina, and it abounds, like "Alamance," in a certain kind of wild and fantastic incident, which seems the peculiar invention of its author. It is probable that some of the characters of the book are drawn with sufficient fidelity to the place and period, but the author's touch is not strong nor sustained, and his characters generally do not work to bring about the end he has in view. In spite of great defects the novel has a charm of its own, consisting partly in the picturesqueness of its scenes, partly in the simplicity of the author's narrative style, partly in a magic like Hawthorne's (but very rough, indeed, as compared with that master's) of casting a weird unreality upon matter-of-fact events and persons. From the first excellence of romance there are narrow escapes in the book; but, on the whole, "Roanoke" must fall into the second class of novels, and be blamed for occasional lapses even below mediocrity.

Hans Brinker; or, The Silver Skates. A Story of Life in Holland. By M. E. Dodge. (James O'Kane, New York.)—Though a little late for the holidays, this boys' and girls' book is appropriate to the season and yet quite independent of it. To be sure the plot is woven about a skating match, and there is a grand tour on skates undertaken by a band of clever Dutch young-

sters. But this is really incidental to most agreeable descriptions of Amsterdam, Haarlem, and Leyden, and the Hague; to scraps of Dutch history; to pictures of the general scenery, position, popular life, and manners of Holland; and to the instructive development of character in the hero and heroine: just as good reading, every bit, for midsummer as for midwinter. The authoress has shown in her former works for the young a very rare ability to meet their wants, but she has produced nothing better than this charming tale, alive with incident and action, adorned rather than freighted with useful facts, and moral without moralization.

Record of the Federal Dead buried from Libby, Belle Isle, Danville, and Camp Lawton Prisons, and at City Point, and in the Field before Petersburg and Richmond. Published by the U. S. Christian Commission from Reports of its Agents. (James B. Rodgers, Philadelphia.)—The humane endeavor of which this volume is the product fails of its highest achievement because of the fact that there is no alphabetical index of names by which the relatives of the fallen, often in utter ignorance of the place where they lie buried, may be guided thither at once. Even under the several heads of prisons and cemeteries there is no attempt at an alphabetical arrangement, nor does the surname precede the Christian name or initial letters. These very serious defects might be easily remedied, and, we trust, will be, in another edition or supplement.

Ballads and Translations. By Constantina E Brooks. (New York: D. Appleton & Co. 1866.)—The larger part of Miss Brooks's ballads are on legendary and imaginative themes, and the rest are historical. All are marked with genuine poetic feeling, which, if not rising at any time into great poetic art, never suffers her to make despicable failure. There is evidence in the volume of an unusual culture, and the translations from the Greek poets are very graceful and spirited, while those from the Scandinavian have a more positive value as contributions to literary knowledge. We like best, among the historical ballads, "Lutzen."

Science.

SCIENTIFIC NOTES.

ALL chemists are now well agreed that the old phlogistic theory of the last century was of great service to science in that it formed the nucleus around which the facts of chemistry first crystallized into regular, systematic shape. In a note in the Proceedings of the Royal Society of Edinburgh, Dr. A. C. Brown goes much further than this. Starting with Whewell's idea, that in this theory, which during more than a century was recognized as the foundation of chemical science, we might reasonably suppose that there should exist some germs of important truth, he maintains that the theory itself, as stated by its founders, Becher and Stahl, if not strictly true, is at least a very close approximation to what we now recognize as truth. According to Stahl, all combustibles contain one and the same substance in different proportions, according to the degree of their combustibility. That substance is phlogiston; and when a combustible is burnt, or a metal calcined, its phlogiston is given out. When charcoal or oil is heated with a metallic calx, the phlogiston leaves the former and passes into the metallic regulus. Now, if we disembarrass ourselves of some habitual conceptions, we shall admit that a combustible loses something when it is burnt; it loses combustibility, or the capacity of burning. In the same way, in the preparation of phosphorus, or the reduction of a metallic calx to a metal, the charcoal loses this capacity, while the phosphorus or the metal acquires it. This capacity of burning is essentially the power of emitting a certain quantity of heat, and as we know from the researches of Rumford, Davy, and others, and from the later and more exact determinations of Joule, that heat is a peculiar form of motion, a manifestation of what has been called kinetic energy, we can have no difficulty in admitting that the power of emitting a certain quantity of heat is a particular form of potential energy. If, in the statement of the phlogistic theory, we read potential energy for phlogiston, and understand that when phlogiston is lost by one body and not immediately acquired by another, as in combustion, this potential energy is converted into kinetic energy, we have a tolerably complete account of what we now know of the matter. Whether we choose, with Becher and Stahl, to call phlogiston a substance or not, depends on our definition of the term substance. If we restrict that name to ponderable matter, of course it is not a substance; but when we consider that energy is as indestructible as matter, that we can trace it through its various combinations and double decompositions, and that we are in a fair way to discover not indeed its atomic weight, for it has none, but its chemical equivalent, we shall recognize the fact that these two conceptions of phlogiston on the one hand, and of a chemical element on the other, are much more nearly allied than they have generally been thought to be. It may be objected to the phlogistic theory, as thus explained, that it is not the combustible alone, but the combustible and oxygen, that have potential energy, and that it is only when the two unite that this potential energy is transformed into kinetic. This objection is equally valid against the statement that a clock, when wound up, contains potential energy. It is not the clock, but the clock and the earth, which contain this energy, which is brought into play only when the clock-weight and the earth approach each other. In fact, energy is not conceivable without a system of at least two bodies. In their ignorance of the existence of oxygen, the phlogistic chemists attempted to explain, by means of their favorite theory, facts such as the increase of the weight of a combustible when burnt, which were really the effects of the play of those forces which we now know to reside in that centre of forces called oxygen. They were thus led to modify the original theory and to ascribe to phlogiston negative weight, and to identify it sometimes with carbon and sometimes with hydrogen gas. These mutilations of the original theory soon led to its complete overthrow, and we have only to regret that the anti-phlogistic chemists destroyed the wheat quite as effectually as they did the tares, so that we are only now again beginning to see, what was perfectly obvious to such a man as Stahl, that oxide of iron does not contain metallic iron; that no compound contains the substances from which it is produced; but that it contains them minus something—minus the potential energy which they before possessed and have lost in effecting the combination. We now know what this something is, and can give it the more appropriate name of potential energy; but there can be no doubt that this energy is what the chemists of the eighteenth century meant when they spoke of phlogiston.

—Reproduction without impregnation has been long known to exist in many of the lowest animals, especially polyps, jelly-fishes, star-fish, and also in some of the parasitic animals, as the tape-worms. In all of these the new generation is unlike that immediately preceding it; in some cases it is the result of budding, and in others of the spontaneous division of the body. One or more generations may be produced in one or the other of these ways, but the perfect form at last returns. Among insects the "plant lice," or aphides, for more than a century furnished the only known instance of reproduction without impregnation. In this case the perfect insect lays impregnated eggs; these hatch and give birth only to imperfect females, which are wingless; these in turn, without impregnation, form eggs; the young are developed, hatch within the body of the parent, are born alive, and are imperfect females. This process goes on for nine or ten generations, when at last perfect males and females are born, lay eggs, and the round above described is repeated. A few years ago, Siebold brought forward evidence to prove that while the eggs producing queen and worker bees require impregnation, those producing males or drones do not; and it has been further shown that among some of the moths, as in those of the silk-worms, their eggs, though not impregnated, may give rise for one or two generations to fertile males and females. The observations lately made on more than one species of insects by Wagner, Pagenstecker, and Genine have demonstrated the existence of a much more remarkable and unexpected kind of reproduction, which has greatly surprised naturalists. This is found in some of the flies allied to the "Hessian" or "wheat fly," an insect but too well known to agriculturists both in this country and in Europe. The extraordinary circumstance is this: that it is not the adult, as in the case of the bee or the silk-worm moth, or the almost perfect insect, as in the aphis, that reproduces, but the embryo, in the shape of the maggot or larva. Both Wagner and Pagenstecker were able to detect eggs in these larvæ, in all stages of formation and development, but failed to detect the ovary from which they came. This ovary Genine afterwards succeeded in finding. It appears that the perfect insect lays about five impregnated eggs of large size; the embryo is developed in these, is hatched, and then, without undergoing any metamorphosis, and without being impregnated, begins to form eggs, sometimes as many as

fifteen, more than half of which, however, do not mature. In those that mature, the young develop just as in impregnated eggs, changing their skins, however, once before hatching. After leaving the eggs, but still remaining within the body of the parent larva, they subsist on her fluids, she becoming largely distended as they increase in size. After a while she ceases to eat, undergoes an imperfect moulting, in which the old skin, though detached, is not shed, and then enters into a state analogous to that of a chrysalis. Now comes the most remarkable and novel circumstance of all. The larvæ having thus far lived at the expense of her fluids, begin to devour the solid parts, and one organ after another is eaten, until at last the whole substance of the parent, excepting only her skin, is converted into that of her parent-devouring progeny. This process has been observed through a second generation. Thus we have two remarkable and hitherto unobserved phenomena, viz.: First, the larva of an insect capable of producing other larvæ; and, secondly, these developed in her body, and at last consuming it for food.

Fine Arts.

FRENCH AND BELGIAN SCHOOLS OF ART.

In speaking of French painting, it is important to bear continually in mind how different are its circumstances from those which surround the infant art of America. It is an immense industrial interest, and other industrial interests yet greater depend upon it. Thousands of men and women live in France and Belgium by the direct practice of fine art, as only a few score live in America; and the whole population, at least of the cities and towns, are brought face to face with the fine arts, and have them for a part of their daily life. Almost every family has one or more members connected with art. Every young man, if not himself an artist, has a friend or two who are artists. Everybody is brought into constant contact with artists, and hears continual talk about art. The Government showers honors on artists thought successful, as on its soldiers. Each annual exhibition adds new names to the roll of the Legion of Honor, and raises this painter or that sculptor of old renown from the simple rank of chevalier to the *grade d'officier*. There are medals of first, second, and third classes; there are grand medals of honor on special occasions; there is now a new prize, to be given every five years, the *grand prix de l'Empereur*, a simple gift of a hundred thousand francs. These prizes are contended for by a host. The Paris Salon of 1865 contained more than two thousand eight hundred pictures and drawings, and three hundred works of sculpture. It will be seen that the jury of admission and the committee of reward have tasks of magnitude. The French critics, moreover, have work before them when each exhibition opens.

It is important to remember that these critics, as a body, do their work well—with tact, cleverness, and literary skill as yet unequalled in other lands. Among them are a few very able critics, equipped with natural delicacy of perception, with accurate if bounded knowledge of the arts of the past, and with judgment too purely intellectual, perhaps, and too intellectually trained, but seeing clearly as far as it sees. Those of them who are the wisest and keenest-sighted are not content with French painting as it is. Those Frenchmen who can think wisely and see keenly are very sad because of the growing and still growing estrangement of their countrymen from ennobling pursuits and worthy enjoyments. The Imperial Government energetically and successfully pursues its object of making the people careless except for military glory, and uninterested except in daily amusement. "A despairing abandonment of personal liberty and freedom of opinion; a popular literature of heathen depravity; a loss of moral objects of interest, while military glory and material aggrandizement are worshipped in their place,"* are some of the results of the Empire. What the people want for themselves is amusement, and, above all, display. What they want for France is physical power, and, above all, the power of armies.

It is not to France that we need look just now for art which is wholly great or satisfactory. We have before seen reason to believe that the French painting of our time has two grave faults: it is not, as a school, noble in color, and it is not, as a school, wise in its choice of subjects. Grey shadows and subdued tones harmonize well with *genre* painting, which has become principal, no longer secondary and accidental; and both are tending to make of the art of painting a mechanical art which photography will soon excel.

We may insert here a few words by one of the cleverest of the French critics of whom we have spoken—a far wiser and juster judge of art than some whose names are much better known. Eight long articles M. Charles Clément had devoted to the pictures in the last salon, and the ninth article begins with the words that follow:

"We frankly confess that it is with real pleasure that we quit the pictures to study the works of sculpture exhibited in the garden of the Palace of Industry. All those little landscapes and *genre* pictures, however ingeniously composed and skilfully executed they may be, get to be very tiresome (*finissent par fatiguer beaucoup*), and I fear that on this point my readers will only too readily agree with me. Here [*i. e.*, among the sculpture] we find ourselves before works which are less witty, less amusing, I admit, but more important, more masculine, more serious, more matured. . . . We see this beautiful art resist, much more successfully than painting, the temptations and influences of fashion. It does not, indeed, escape completely. The *genre* spirit has invaded this art also; but it does not control it, and on the whole our school of sculpture maintains itself at a very respectable level."

There is in France, to-day, no very decided or visible improvement on the state of things which the most eminent of French art critics, M. Gustave Planche, truly characterized ten years ago. He thought then that there was no rivalry in merit except among a few *esprits d'élite;* that "the greater number of the artists see, in the annual exhibitions, only a market for the products of their industry; mercantile activity has replaced emulation. The greater number hasten to produce, and pity the ingenuous minds who dream of glory; the desire to do good work fades from day to day, the studios are transformed into factories, and, if this fever of gain continues, it will soon be impossible to distinguish art from industry." And note what M. Planche thinks to be the reason for this: "The painters use nine months of the year *working for amateurs*, and, when the salon draws near, then they hasten to compose a work somewhat serious in character; but it is in vain that they redouble their zeal, rise with the lark, and wield the brush till the sun sets; time fails them to meditate—to conceive—to finish." And what he thinks of the effect on the painters of this working for the amateurs the next sentence tells us: "Amateurs, who too often encourage the vices of their [the painters'] talent, instead of aiding them to free themselves from them."

The amateurs come from a class of people the nearest to the Imperial court, the most immediately under its influence, and more than any other class deprived of worthy objects of interest and ennobling pursuits. To the members of this class extravagant display is the one enjoyment left, the Imperial family and the court setting the example of lavish expense in this pursuit to the best of their large ability. The purchase of pictures by popular artists is a sort of display very agreeable to the taste of some men who, under happier circumstances, might really have loved art, and to many others who care only for the society (always agreeable) of artists and for the reputation of having good taste. "Every one says you're such an excellent judge of paintings." "I a judge of paintings?" "Oh yes, sir! did n't you buy the great Correggio for ten thousand pounds?" "So, ten thousand pounds make me a judge of paintings?" It is not every picture-buyer who sees, with Bulwer's Alfred Evelyn, how poor is the foundation of his reputation for knowledge of art.

In the hands of the large majority of living French and Belgian painters the art is not of such character as to command respect. M. Clément is right in his unspoken assertion that, on the whole, the French school of painting fails to maintain itself at a very respectable level. If we say over again what we have often said of the technical skill of the French and Belgian painters, if we recognize and admire a skill in drawing and manipulation which seems almost national, so common is it and so superior to what other nations have, we find nothing in that which can satisfy one who knows what art has been, feels what it might be, and longs for the time when it will be what he dreams. What, to a lover of art, is M. Charles Baugniet's "Attentive Lady's Maid," noticed before, or M. Coomans' "Rendezvous," No. 22a (new catalogue), or M. Schlesinger's "Spanish Girls" and "Ladies in Balconies," or even such works of patience and skill as M. Meissonier sends us, none more remarkable than the "Soldiers in Guard-Room," No. 102, of the French Exhibition? There is no pleasure to the lover of art in these works, or only a moment's pleasure, to be succeeded by sadness and pain. Art is thought or feeling expressed—in the case of painting—in form and colo But the approved modern *genre* picture must have the least possible modicum of feeling and *no* thought, its message, of little meaning, to be conveyed in elaborate and careful drawing and delicately finished painting.

We say again—in the hope, perhaps vain, of avoiding the misunderstanding to which articles in periodicals are especially liable—that there is French painting which we greatly respect, and something in French painting, as a whole, which we greatly respect. But it must be evident, we repeat, to any one who knows what art can be and has been, that in French art of the present day there is much that is discouraging, much that is of ev tendency

* Goldwin Smith—"On the Study of History."

much that is of fatal influence. The evil at least has been great enough to bring about a counteracting tendency toward reality, at least.

It is in reaction against the school of fashion, of frivolity, and of vice that that strange Flemish army has taken the field of which Baron Wappers was, perhaps, the first soldier, and which Baron Henry Leys has long and gallantly led. In its inception this enterprise seems to have been a national one. The founders of it seem to have regretted the influence of the French school over the art of Belgium, not only because it was a bad influence but because it was a foreign influence. To them Belgium is only temporarily and accidentally French, essentially and historically Teutonic. Proud of an historic past of unsurpassed interest, they wished to draw inspiration from this and from no foreign source. Proud of a school of Christian art for which France had no rival or equivalent, they wished to study its remains, and to follow Jan Van Eyck, Hans Memling, and Quentin Matsys, rather than the other and inferior masters whom the French school has set up for itself.

The school, though few in numbers, has been signally successful. There has been a power in it that has made itself felt throughout Europe, in spite of the almost universal opposition of critics and the outcries of easy-going artists disturbed in their quiet. The "emulation" which M. Gustave Planche looked for too often in vain, the Belgian reformers have perhaps a surplus of. They are very much in earnest, and always mean something. But, good as these traits are, and noteworthy as they are now-a-days, they do not make good art; in good times of art they would not be noteworthy, but things of course. It is difficult to say how much of the celebrity, influence, and importance of the school is due to the great abilities of Leys; but that much of it is so due, there can be no question. The reputation of it abroad is surely in a large measure due to him. Read, in partial proof of this, the words of M. Ernest Chesneau, no friend of Leys and his school, no friend of the novel and the free in art, a critic of the old school, if there ever was one, a seer of the surface of things and reputation rather than of the essence of things and of character: "—the archaic resurrections of a painter of Antwerp, M. Leys, whose ability and sincerity, however, no one will be tempted to despise. . . . The æsthetic doctrines of M. Leys are very questionable (*sont fort contestables*), I repeat, but are still very excusable. His attempt is very serious; it has in the Belgian school many imitators, convinced that they too are working to restore the national art. But by what bond does M. Tissot, born at Nantes, hope to attach himself to a movement of the school of Antwerp; what cause does he serve in wasting his talent in Gothic fancies having no roots in the past of French tradition? And yet M. Tissot is not without taste or knowledge," and so on. Belgium is more of an independent nation through the work of her great painter and his followers, than in literature, politics, or such military enterprises as the renewed fortification of her often fortified old cities.

Leys is a colorist, one of the first colorists of his time. Even his slighter work, such sketches as the three in the Tenth Street gallery, "The Reception," "The Arrival," "Preparing for the Banquet," Nos. 94, 95, and 96,—even in such slight work as this, with local color hardly suggested, and intended, as report says and appearances confirm, as cartoons or studies for permanent work elsewhere—even in such incomplete work his rare power is indicated. The very precious picture which was in Mr. Knoedler's gallery a year ago, "The Minstrel," is the only important work of his which we know to have been brought to America. But even this gives but a partial idea of the surpassing merit and charm of color of the larger pictures representing important scenes in the history of the Netherlands.

Leys is a great poetical master of expression. His insight into character is matched by his dramatic power of relation. He is a dramatic poet in color very much as Robert Browning is a dramatic poet in words; a certain resemblance seeming, indeed, traceable between these gifted, accomplished, and intensely individual artists. He is also as learned as Browning, or seems to be. His knowledge of his chosen epoch is profound and accurate, and he feels with his countrymen of the fifteenth and sixteenth centuries as Browning with the Italians of the Middle Ages.

Leys is a "realist" of the truest type, one whose power it is to conceive of every scene as it might have happened and probably did happen; to imagine every man's face and figure as it might have been and probably was; to show armor and costume that could be worn, and clad in which the man could stand and move; to ascribe to his characters gesture and action which is not impossible nor borrowed from the stage. We have had occasion to speak before of his pupil Tissot's naturalness of conception, but we found reason to believe M. Tissot's work rather reasoned out than felt. It is not so with Leys. There is a profound and active imagination in him which takes care that things be living and true.

We have described a great historical painter, and such we think this artist to be. The powerful and, on the whole, happy influence which he has exercised over his numerous pupils, and the real excellence displayed in the works of some of these seem to give promise of good art in Belgium to come as well as past. And there are others who have not been his pupils who yet are working in such concert with them as to help rather than hinder. Pictures painted in pursuance of the *doctrines æsthétiques*, which M. Chesneau thinks *fort contestables*, supply much of the strength of the Tenth Street collection, of which the principal claim upon our gratitude is just the presence of the valuable works of MM. Alma-Tadema, Koller, Lagye, and De Brackeleer, painters whose works have been almost unknown in America before.

Is, then, the charge of archaism and fanciful reproduction of the past a charge of no weight? "Résurrections archaïques" is M. Chesneau's phrase for M. Leys' work in general. Probably this charge—if serious charge it is—would not be urged against historical pictures representing scenes in bygone times. Probably even M. Chesneau would allow the figures in such a picture as, for instance, "The Massacre of the Magistrates of Louvain, 1379," to be clothed in costume of the fourteenth century, and the weapons used to be of a somewhat antiquated type. The charge can be seriously made against such pictures only as seem to show deliberate choice of "archaism." For instance, in the three studies at the Studio Building, said to be for decorative paintings in a private dining-hall in Antwerp, probably for the painter's wealthy friend and early patron, M. Couteau—why are these mediæval? "The Arrival" shows a gentleman and lady at the entrance-door, awaiting admission; with them is a half-grown boy who has in his left hand a long link or torch which he has just extinguished, and under the other arm he carries his master's sheathed rapier and belt; all the persons are in costume of the fifteenth century. In "The Reception" the guests are entering the room where is the host, who welcomes them. In "Preparing for the Banquet" a table is shown, covered with hanaps, cups, and other table furniture, among which is the ornament of the feast, the mighty peacock with body of pastry and his own neck and head and full suit of plumage; the surroundings, the screen and tapestry and table-cover, are full of interest. There are two figures only. In all three pictures the figures are evidently portraits. Why, then, is everything about them mediæval?

In the first place, because it was necessary that everything should be beautiful. Decoration was the purpose in view. Would it serve any decorative purpose, the painting of a modern dinner-table, though laid out never so splendidly? The only object which can find a place there, which has any chance to be beautiful, is a dish of fruit; and these the skill of a professed waiter easily makes hideous. But the necessary vessels on a fifteenth-century table were many of them splendid in color and imagery, all of them pleasing in form, all interesting because all differently designed, each by itself. So with costume; the housekeeper who stands at the head of the table, pausing a moment with knuckles on the board before whisking away about her duties of hospitality (perhaps too conscious, as well, that her portrait is being painted), would not have been an especially pleasing object in the costume of 1865. A handsomer woman than she would have been made hideous if her dress were faithfully rendered in full color. We have actually *no* costume. Now and then a lady combines two colors prettily, or (less often) achieves a graceful outline for her whole draped figure, but it is only as a gentleman sometimes wears a prettily colored scarf. Costume! We have even forgotten its nature and purpose, and hardly ever realize our deprivation. Even the dress of women is in almost every respect æsthetically wrong, and, which is the worst, is season by season growing worse. Mr. William Burges, the architect and excellent ornamental designer and sagacious critic, shows that the want of costume is one of the three great impediments to any progress in ornamental design in England, and quotes with approbation from Mr. Beresford Hope a sentence we have not elsewhere seen: "The ladies' costume has very greatly deteriorated within the last dozen years, and if we search into the reason for this falling off, I am afraid we must refer it to no less a person than the Empress of the French." And, continues Mr. Burges, "when she attained her present high position there was a glorious opportunity open to her; and had she possessed a really artistic taste she would gradually have given the ladies a costume that sculptors would have delighted to carve and painters to paint." He thinks, and we think with him, that it is rather hard for the painters and sculptors now to find anything to delight in.

But, in the second place, M. Leys purposely puts his thought into the past rather than into the present, because the past of Antwerp and the country around her is glorious, the present a little tame. The independence of Belgium is guaranteed by the Great Powers. There is no national life

within the circle of that guaranty; and the student's thoughts go back to the times when there was, and to the

"pageants splendid, that adorned those days of old;
Stately dames like queens attended, knights who bore the Fleece of Gold;
Lombard and Venetian merchants with deep-laden argosies;
Ministers from twenty nations, more than royal pomp and ease."

The humor and spirit of the great scenes among which his serious work is done cannot leave him when he is at play.

We shall find the same attention to things not of our time, and careful study of them, in studying the works of many of the ablest and truest painters now alive. However they differ in temperament and in *doctrines æsthétiques*, they agree in their love for beautiful things of past times and foreign climes.

The New Novel.

MARIAN ROOKE;

OR,

THE QUEST FOR FORTUNE.

BY HENRY SEDLEY.

London: SAMPSON LOW & CO. 3 Vols. $7 50.
New York: SHELDON & CO. 1 Vol. $1 75.

*** Commended in high terms and at great length by leading English reviews, and is now

FOR SALE EVERYWHERE IN THE UNITED STATES.

"A book full of humor, of suggestion, and of instruction."—*The Spectator*, London, Nov. 18.

"It has rare and numerous merits. . . . It is above all things interesting. . . . It is soundly and instructively well written."—*The Morning Post*, London, Nov. 3.

"The character of the Indian chief will stand comparison with that of Uncas in 'The Last of the Mohicans.'"—*The Athenæum*, London, Dec. 2.

"It has a value not to be awarded to ordinary novels."—*The Reader*, London, Oct. 7.

See also *The Observer*, *The News*, *The Illustrated Times*, etc.

"The tale is told with absorbing effect. The characters are naturally conceived, well drawn, and the interest is continually intensified to the end."—*National Intelligencer*.

A COMPOSER'S LIFE.

HURD & HOUGHTON,

459 Broome Street, New York,

PUBLISH THIS WEEK:

THE LETTERS OF

WOLFGANG AMADEUS MOZART,

Translated, from the collection of Ludwig Nohl, by LADY WALLACE. With a portrait and fac-simile.

In 2 Vols. 16mo. Price $3 50.

The Letters cover the period from 1769 to the time of Mozart's death (1791). They are complete and unabridged.

"Who, that is at all familiar with the great musical composer, will not hail with delight these letters, that reveal the disposition, tastes, habits, the very life of the celebrated man? They are carefully collected, said to be translated with surprising accuracy, and certainly abound with interest. The books are beautifully bound and printed."—*Pittsburg Chronicle*.

"They are perhaps the most characteristic letters of a great man ever published. We see in them the versatility that never becomes desultory, the gaiety that is never frivolous, the reverential worship of all that is choicest in art and nature, the spirit of religious grandeur, and the divine fire of genius that lights up all with its indescribable beauty."—*Chicago Republican*.

THE PILGRIM'S WALLET;

Or, Scraps of Travel gathered in England, France, and Germany. By GILBERT HAVEN. 1 vol. 16mo. Price $1 75.

POEMS.

BY MISS EDNA DEAN PROCTOR.

1 vol. 16mo. Price $1 25; cloth gilt, $1 50.

SHAKESPEARE'S MENTAL PHOTOGRAPHS.

A COMPANION FOR WINTER EVENINGS.

1 vol. 16mo. Price 50 cents.

TALES, ROMANCES, AND EXTRAVAGANZAS.

BY THOMAS HOOD.

Containing numerous Illustrations from the Author's own designs. 1 vol. crown 8vo. Price $2.

REJECTED ADDRESSES.

BY JAMES AND HORACE SMITH.

With Portraits and a Biographical Sketch. Edited by EPES SARGENT. 1 vol. crown 8vo. Price $2 25.

Sent by mail, prepaid, on receipt of prices annexed.

READY MONDAY, 29TH INST.

THE HISTORY OF THE FIVE INDIAN NATIONS

Depending on the Province of New York.

BY CADWALLADER COLDEN.

(A fac-simile of the original New York edition, 1727.)

WITH INTRODUCTION AND NOTES BY

JOHN GILMARY SHEA.

(Edition Limited.)

100 copies octavo at $5 each; 25 copies imperial octavo at $12 each.
As there remain but 23 octavo copies not subscribed for, the price will be raised on and after the 15th of February to $10 each.
Large-paper copies *all* taken.

NOW IN PRESS,

RECORDS OF THE NEW YORK STAGE,

Historical and Biographical, from 1750 to 1860.

BY JOSEPH NORTON IRELAND,

(H. N. D.)

(Edition Limited.)

200 copies octavo, on fine paper, at $15 per copy.
60 " quarto, on heavy tinted paper, $30 " "

Two be in two volumes of about 600 pages each.
The publisher reserves the right to advance the price on and after March 1, 1866, as follows:
Octavo edition to $20 per copy; Quarto edition to $50 per copy.
A priced catalogue of a fine collection of English and American books now in preparation.

T. H. MORRELL, 134 Fulton Street.

COTTON STEALING.

A NOVEL.

A very lively story of Southern life, both before and during the war, divulging secrets the cotton speculators must wince to see in print.—*Chicago Journal*.

487 PAGES. $2.

Sent by mail on receipt of price.

Published by

POEMS RELATING TO THE AMERICAN REVOLUTION.

By PHILIP FRENEAU.

With Notes and an Introductory Memoir by Evert A. Duyckinck, author of "Cyclopædia of American Literature," "Portrait Gallery of Eminent Americans," etc., etc.
A handsome crown 8vo volume, with Steel Portrait, price $2 50.

This collection embraces all of Freneau's Poems relating to the American Revolution. No collection of this kind has appeared in America since the edition, now exceedingly rare, published in Philadelphia in 1809. The Poems of the Revolution, by which the author's reputation was established, are now brought together in one volume for the first time.

One hundred copies on large paper, royal 8vo, uniform with Dr. Francis's "Old New York." Portrait (in India proof) engraved by Halpin expressly for the work; fac-simile manuscript poem; and a portrait on India paper of John Paul Jones, from a miniature in the possession of the Naval Lyceum, Brooklyn, L. I. Price to subscribers, $12.

ALSO, READY AT THE SAME TIME,

DR. FRANCIS'S OLD NEW YORK; OR, REMINISCENCES OF THE PAST SIXTY YEARS.

By the late JOHN W. FRANCIS, M.D., LL.D. With a Memoir of the Author by Henry T. Tuckerman, and a new engraved portrait, by Burt, of Dr. Francis, from an original pastel drawing by Julius Gollmann. Handsome crown 8vo, price $2 50.

The book is replete with anecdote and biographical information respecting the past celebrities of New York from the days of the Revolution, including Statesmen, Politicians, Editors, Actors, Physicians, Lawyers, Divines, and others.
Some idea may be formed of its interest as a memorial of the past from the Index which numbers over five hundred personal references.

STRAHAN & CO.'S MAGAZINES
FOR FEBRUARY.

I.

ALEXANDER STRAHAN
HAS JUST PUBLISHED

I.

MILLAIS'S ILLUSTRATIONS.
A Collection of Drawings on Wood. By JOHN EVERETT MILLAIS, R.A. In royal quarto, $7 50.

"Foremost among the Christmas books deserves to be named Mr. Millais's 'Collected Illustrations.' Mr. Millais has qualities as an artist with which few authors can dare a comparison. What these qualities are may be inferred from the fact that here are his best illustrations collected together—separate from the text to which they belonged. They are works of art that need no letter-press—no comment; they speak for themselves, and have an interest by themselves. They nearly all display extraordinary power, and some of them are in their way quite perfect."—*Times, Dec.* 14.

II.

CHRIST THE LIGHT OF THE WORLD.
By C. J. VAUGHN, D.D., Vicar of Doncaster.

CONTENTS:

I. Why He Came.
II. The Lamp and the Light.
III. Nunc Dimittis.
IV. Uses of Light.
V. A Man of Sorrows.
VI. The Gospel of the Fall.
VII. The Gospel of the Flood.
VIII. Christ the Lord of Nature.
IX. Christ the Conqueror of Satan.
X. Christ the Destroyer of Death.
XI. Christ the Sinner's Friend.
XII. Cast Out and Found.

In small 8vo, neat, cloth, $1 50.

III.

MAN AND THE GOSPEL.
By THOMAS GUTHRIE, D.D., Editor of "The Sunday Magazine."
In crown 8vo, 460 pages, cloth, neat, $2.

Sold by all Booksellers, and mailed on receipt of price by the publishers,

and 178 Grand Street, New York.

THE BEST HOLIDAY GIFT
FOR
BOYS AND GIRLS
Is a Year's Subscription to

THE LITTLE CORPORAL.

Acknowledged by the leading papers to be the

Best Children's Paper in America!

Published Monthly by

ALFRED L. SEWELL,

Chicago, Illinois.

PRICE ONE DOLLAR A YEAR, IN ADVANCE,
Including a
BEAUTIFUL STEEL ENGRAVING AS A PREMIUM TO EVERY SUBSCRIBER.

SAMPLE COPY, TEN CENTS.
CIRCULARS SENT FREE.

Every person who shall send six subscribers, and six dollars, will receive as a premium one extra copy for one year, and also a copy of the Engraving.

Other inducements for *larger clubs*.

All pages are electrotyped, and back numbers can always be furnished.

READ WHAT THE PAPERS SAY:

"*It already excels every children's paper that we know of in this country.*"—*Chicago Evening Journal.*

THE LITTLE CORPORAL.—The *Pittsburg Christian Advocate* says: "The best paper for children published in this great country of ours, is *The Little Corporal*. It is a gem in the catalogue of monthlies."

Forney's Philadelphia *Daily Press* says of it: "*The Little Corporal is destined to become the great children's paper of America.*"

"*We cannot say too much in favor* of this beautiful paper."—*Bryan* [O.] *Press.*

"*The Little Corporal* sparkles all over with vivacity and entertainment. It is, without doubt, the best and cheapest children's gazette published anywhere."—*Marshall* [Mich.] *Statesman.*

"THE LITTLE CORPORAL.—Though modestly calling itself by a subordinate title, it is really a very major-general among the children's magazines."—*Chenango Telegraph* [Norwich, N. Y.]

"*The Little Corporal* is the most interesting and instructive monthly in the Union."—*Louisville Democrat.*

"*The Little Corporal* is universally admitted to be the best juvenile paper now in existence."—*Dubuque Daily Times.*

"We like it better than ever."—*N. W. C. Advocate.*

"It strikes the right key, and is admirable—neither heavy nor silly, but simple, fresh, buoyant, and earnest."—*Adams* [N. Y.] *Visitor.*

"Its influence for good can never be estimated."—*Grand Haven News.*

"Indeed, there is no paper of the kind published that approaches it as a juvenile journal."—*Poughkeepsie Daily Press.*

"Of all the children's papers which are competitors for the patronage of the public, we know of no one which so nearly approximates to our standard of what such a paper should be. The terms are most liberal."—*Batavia* [N. Y.] *Republican Advocate.*

"The children will be better and happier from reading it."—*Henry* [Ill.] *Courier.*

"*The Little Corporal* really excels any child's paper we have seen. The premium picture is of itself worth a year's subscription."—*Sandusky* [O.] *Reg.*

"We consider it the best, decidedly the best, journal of the kind for children that we ever saw."—*Star of the Valley* [Newville, Pa.]

"We have the first two numbers of *The Little Corporal*, which are edited with unusual ability. They sparkle with originality, and are attractive on every page."—*Worcester* [Mass.] *Palladium.*

"*The Little Corporal* is the most readable and interesting and instructive paper for children we have ever perused."—*Farmington* [Maine] *Chronicle.*

"It is the cleverest thing of its kind yet realized in America."—*Roxbury* [Mass.] *Journal.*

"THE LITTLE CORPORAL.—Certainly, we have seen nothing in the shape of a child's paper which could compare with this, which comes to us from over the prairies."—*Portland* [Maine] *Daily Press.*

The above are only a tithe of the many beautiful notices our young soldier has received.

FINANCIAL REVIEW.

Nation Office, Saturday Evening, January 20, 1866.

The week which ends to-day has been quieter than the preceding week. Gold has not fluctuated actively. It has been as low as 137½, and as high as 139¾, closing to-day at 139. A large short interest in gold remains uncovered, and in certain circles the idea prevails that the premium must soon decline to 130 if not to 125. Operators attach considerable importance to the clause of Mr. Morrill's financial bill which permits the Secretary of the Treasury to negotiate sterling bonds with interest payable in Amsterdam or London. It is assumed, on fair evidence, that if the credit of U. S. securities remains unimpaired in Europe, it would be possible to dispose of at least $2,000,000 a week of new bonds in Holland and Germany, which, with the customs revenue, would give to the Treasury Department an income of not less than three-quarters of a million per day in gold. Such resources would enable the Secretary to flood the gold market from time to time, in the event of new speculations for the rise, and so to assist the speculation for the fall as materially to diminish the interval which now divides specie and legal tender paper. Two objections have been raised to the "foreign bond" clause of Morrill's bill. The first is that it is derogatory to the dignity of the United States to seek financial aid in foreign countries; the second is that the United States cannot afford to export the gold which would be required to meet the interest accruing on United States bonds held abroad. Both objections may be equally met by the simple statement of fact that, whether Government negotiates the bonds abroad or at home, they are sure to go abroad in large quantities. If Mr. McCulloch does not send them out, Mr. Von Hoffman, Mr. Belmont, and Mr. Marcuse will. In the old dark days of the war, when the life of the Republic was trembling in the balance, and no man could tell whether we should emerge from the war triumphant or broken and bankrupt, Mr. Chase, then Secretary of the Treasury, in appealing for aid to the bankers of New York, mentioned that he had been offered money by Dutch bankers on the condition that he should make his bonds payable, interest and principal, at Amsterdam, and added, in a voice broken by emotion, that "in this dark hour of his country's sorrow, he would never, never go to the foreigner to beg for money; he would rather resign his office to-morrow." Circumstances are altered now. Our national credit now stands upon such a basis that no humiliation would be involved in the negotiation of a foreign loan. Foreigners already hold more than half the whole amount of 5-20 bonds in existence. We do not consider that the possession of these bonds by our German friends involves any humiliation to us, nor do sound reasoners anticipate future mischief from the semi-annual transmission of interest due on them to the other side. All other things being equal, it would be more convenient and more dignified for the United States to make their bonds payable, principal and interest, at a point within their own jurisdiction. But if a 5 per cent. bond—payable, principal and interest, at Amsterdam—can be sold in Europe on the same or nearly the same terms as a 6 per cent. bond payable here, there seems to be no good reason why Government should not let our foreign friends have a couple of hundred millions of such 5 per cent. bonds in the shape they want them.

Money has become easier during the week. Loans at 4 per cent. have been made on Governments, and at 5 per cent. on miscellaneous collaterals; on Friday and to-day it was difficult to place money at 5 per cent. Business paper, with the exception of strictly first-class, is not much in demand. Almost all articles of general merchandise are selling at a loss, and holders are understood to have suffered.

Exchange is quoted at 108½ to 108¾ for bankers' bills—a rate which precludes heavy shipments of gold. The market is glutted with cotton bills, and, as usual on a declining gold market, importers remit no more than they can help. The cotton question gains interest daily. We in this country are holding back the cotton in the face of increasing supplies. In England, every effort is being made to force us to ship, and the Bank of England has already raised the rate to 8 per cent. in order to check investment in our securities. It remains to be seen whether we or they are the stronger. The old United States Bank, just thirty years ago, tried in the same way to "carry" the cotton crop, in order to keep up the price, and broke in the attempt, carrying down with it nearly all the merchants of the country. We are richer and stronger now than then. If we can afford to ship no more cotton than is required to feed the Liverpool market to the extent of its actual consumption, we shall realize thrice as much for our cotton as we did when every surplus bale was sent to England as a matter of course. If, on the other hand, monetary disturbance here should compel holders to ship, a heavy decline would follow, and England would get the cotton she needs at so much the less. With regard to the prospects for 1866, very little can yet be said. The cotton circulars are not to be relied on. They are mostly issued by firms connected with the late pro-slavery interest, and the writers all seem to assume that no labor can be got out of the negro unless he be in a state of slavery. This much is certain: that the planters throughout the South are going to try to raise a great crop, and to rely exclusively on the West for food.

The following table will show the course of prices during the week in the stock, exchange, gold, and money markets:

	Jan. 13.	Jan. 20.	Advance.	Decline.
United States Sixes of 1881	104	104	....	....
5-20 Bonds, old	103⅞	103¾	....	⅛
5-20 Bonds of 1865	101¾	101¾	....	....
10-40 Bonds	93⅜	92⅞	....	⅝
7.30 Notes, second series	98	98¾	¾	....
New York Central	93¾	92¼	....	1½
Erie Railway	91	87 ex d.	....	...
Hudson River	106	103½	....	2½
Reading Railroad	102¼	101¼	....	1
Michigan Southern	69	70	1	....
Cleveland and Pittsburg	77½	84½	....	7
Chicago and North-western	32	31¾	....	¼
" " " Preferred	58¾	58	....	¾
Chicago and Rock Island	103½	102½	....	1
P., Fort Wayne, and Chicago	95	95¼	¼	....
Canton	43	44	1	...
Cumberland	42½	46¾	4¼	....
Mariposa	12¾	14	1¼	....
American Gold	139¾	139	....	¾
Bankers' Bills on London	108⅞	108½	.. .	⅜
Call Loans	7	5	....	2

The market has been feverish and variable throughout the week. Among speculators and investors the impression has generally prevailed that prices were going to decline. Railway earnings show a steady diminution, week after week, and it is now abundantly evident that the water-line of the Mississippi will next year resume its old share of the traffic from the West to the seaboard, at the expense of the roads running eastward from Chicago. Notwithstanding a reduction in freights which leaves little or nothing in the shape of profit to the carrier, the trunk lines are receiving less than usual, the farmers alleging that they had rather hold back their produce in the hope of a short crop in 1866, than ship it at present prices. Wealth is now as generally the rule among Western farmers as poverty was three or four years ago, and the national banks of that section are only too ready to carry produce for indefinite periods. A leading feature of the week has been a spasmodic advance in the shares of the Cleveland and Pittsburg Railroad Company. They sold ten days ago at 74½, yesterday at 84, and to-day as high as 90, closing at 84½. The Company paid 4 per cent. dividend last year, and to do that sold a million of stock at 80 per cent. It is generally understood that the new direction elected at the December meeting was pledged to adopt the policy of the Fort Wayne Company, with which the Cleveland and Pittsburg Company is practically associated for the next twenty-four years; and it is likewise understood that it is the policy of the former company to have the Pittsburg suspend dividends altogether for two years, until a connection is built with the Marietta and Cincinnati. Under these circumstances 50 would appear a high enough price for the stock. But so many speculators in Wall Street have undertaken to sell it short, that a clique has easily contrived to corner it and force up the price. In the end, it is far from probable that such cornering movements can prove profitable; but they prove none the less ruinous to the bears. Erie sold down to-day to 85 ex dividend, but closed at 87, with every appearance of renewed activity. The usual 4 per cent. dividend has been declared, much to the surprise of conservative friends of the property. The New York Central directors have declared a dividend of 3 per cent.; the stock declined, on the announcement, to 92. Among the soundest of the dividend-paying stocks the decline is marked; real holders appear to be converting them into money in order to be prepared for currency contraction. A movement has been inaugurated in Cumberland, which advanced 3 per cent. last week; a winter rise in this stock is usual. Atlantic and Pacific Mail both declined heavily during the week, on the prospect of a substantial opposition line.

THE ANNUAL REPORT OF THE DIRECTORS OF
THE NINTH NATIONAL BANK
TO THE STOCKHOLDERS.

NEW YORK, January 9, 1866.

The Election was held this day, and the undersigned were unanimously re-elected Directors for the ensuing year. For this renewed and flattering expression of confidence on the part of the Stockholders, the Directors return their thanks.

The following is a

STATEMENT OF THE CONDITION OF THE BANK,
TUESDAY MORNING, JANUARY 2, 1866.

RESOURCES.		LIABILITIES.	
Loans and Discounts	$3,596,645 63	Capital Stock	$1,000,000 00
Government Securities	1,884,625 54	Surplus Profit after Paying Dividend	192,204 56
Furniture and Fixtures	13,000 00	Dividends Unpaid	53,336 58
Specie and Legal Tender	2,382,294 66	Circulation	894,940 00
Checks and Bills on other Banks	959,171 71	Deposits	7,451,367 63
Due from Banks and Bankers	756,111 23		
	$9,591,848 77		$9,591,848 77

In explanation we will say that, during the fiscal year, we have paid two Dividends of FIVE per cent. each, and the Government taxes, and now exhibit an actual SURPLUS, over and above all losses, expenses, and dividends, of NINETEEN per cent. on the CAPITAL STOCK.

From the earnings of the last six months we have applied $50,000, that is, five per cent. on the Capital Stock, to the extinguishment of the premium account; and although the Stockholders do not get this five per cent. in a dividend, yet it is represented in the United States Stocks held by the Bank.

During the past year, your Bank became a member of the New York Clearing House Association, by a unanimous vote of that body.

We are able to report that your Bank has well fulfilled its patriotic mission of aiding the placing of the Government Loans. The amount of subscriptions to the 7.30s was Forty-three Millions, Two Hundred and Sixty-two Thousand, Three Hundred Dollars ($43,262,300), this being the largest subscription taken by any one Bank. To appreciate this result, we would remark that had nineteen other banks taken each the same amount, the whole loan would have been taken by the twenty.

This gives us opportunity to say that, having served our beloved country in its hour of peril, we desire now to turn all our efforts to the securing in all legitimate and honorable ways the increase of our business with the community. To that end we invite the cordial co-operation of each Stockholder.

Our organization is now so well perfected as to give us all much satisfaction, and the relief from so much Government business gives our officers time to attend to individual dealers.

Our Deposits have been large, at times during the year reaching almost Twenty-one Millions of Dollars; but that was during the time the people were rushing to us with patriotic zeal to offer their money to their country. Now we can take the deposits of the business community; and we hold ourselves in readiness to DISCOUNT GOOD BUSINESS PAPER, payable at short dates. Such paper, being based on the sale of commodities, is in our opinion the safest business a bank can do.

DIRECTORS.

WILLIAM A. KOBBE, GEO. A. WICKS, GEO. A. FELLOWS, CHAS. MINZESHEIMER, THOMAS A. VYSE, JR., BARNET L. SOLOMON, SOLOMON L. HULL, J. O. WHITEHOUSE, JOSEPH U. ORVIS.

THE UNION MUTUAL LIFE INSURANCE COMPANY

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom, and disinterested philanthropy. It offers superior advantages to the life-ensuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies by receiving a note for one-half when the premium amounts to over $30.

THIS COMPANY offers PECULIAR ADVANTAGES to persons intending to ensure their lives.

Since its organization it has paid (chiefly to Widows and Orphans) for losses by death,

$912,342 00,

and

$412,748 00

in Dividends—a total of over

ONE AND A QUARTER MILLION

of Dollars, and now has, in its Capital and Accumulations, securely invested for the Payment of Losses and Dividends, a fund of

$1,400,777 16.

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the policy holders.

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

WEED SEWING-MACHINE CO.,

STORE, 506 BROADWAY, N. Y.

GROVER & BAKER'S

SEWING MACHINES

WERE AWARDED THE HIGHEST PREMIUMS

At the State Fairs of

New York,	Illinois,	Virginia,
New Jersey,	Michigan,	N. Carolina,
Vermont,	Wisconsin,	Tennessee,
Pennsylvania,	Iowa,	Alabama,
Ohio,	Kentucky,	Oregon,
Indiana,	Missouri,	California,

And at numerous Institute and County Fairs, including all the Fairs at which they were exhibited the past three years.

The GROVER & BAKER ELASTIC-STITCH SEWING MACHINE is superior to all others, for the following reasons:

1. The seam is stronger and more elastic than any other.
2. It is more easily managed, and is capable of doing a greater variety and range of work than any other.
3. It is capable of doing all the varieties of sewing done by other machines, and, in addition, executes beautiful embroidery and ornamental work.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars

They are more fire-proof.

They are more burglar-proof.

They are perfectly dry.

They do not lose their fire-proof qualities by age.

Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

NEW YORK

LIFE INSURANCE COMPANY,

112 AND 114 BROADWAY.

This is one of the oldest institutions of the kind in America, having been chartered in 1841, and commenced business in May, 1845.

EVERY ONE SHOULD ENSURE.

While we live we may protect those dependent upon us; but when death severs the tie of all others most dear, it is a consolation to know that our prudence and foresight have made provision for the wants to which we can no longer minister; and the man who has the power, and neglects the opportunity, of providing in this way for the comfort and independence of his family, fails in the duty which he owes to them and himself. Therefore let every one who has not obtained a policy of Insurance upon his life no longer neglect this imperative duty. GREAT CARE SHOULD BE MANIFESTED IN THE SELECTION OF A COMPANY.

The

NEW YORK LIFE INSURANCE CO.

Offers the following highly important essentials:

It is a strictly Mutual Company;

It has had Twenty Years' Business Experience;

It has large Accumulated Assets;

It gives Liberal Assistance in the payment of Premiums;

Its Dividends are declared Annually;

It is prompt in the Payment of all Losses.

IN FACT,

Special care in the selection of its risks, strict economy, and a safe and judicious investment of its funds, emphatically characterize the management of this Company.

Assets over

$4,500,000.

Annual Dividend, January 1, 1865,

50 PER CENT.

Amount Returned Premiums (Dividends) paid,

$1,700,000.

Amount Claims by Death paid,

$3,500,000.

During its existence it has issued

Over 36,000 Policies.

TEN-YEARS NON-FORFEITING POLICIES.

The *New York Life Insurance Company* originated, and was the first to bring before the public, the *Ten-Year Non-forfeiting Plan*, which has so fully commended itself to the judgment of thinking men that it has become the most popular mode of assurance, and is rapidly superseding the old method of life-long payment. It has received *THE UNQUALIFIED APPROVAL OF THE BEST BUSINESS MEN OF THE LAND*, large numbers of whom have taken out Policies under it as an investment.

TEN-YEARS NON-FORFEITING PLAN.

A Party ensuring by this table, after the second year, cannot forfeit any part of what has been paid in, and his policy becomes a source of income to him while living.

ANOTHER NEW FEATURE.

TEN-YEARS NON-FORFEITURE ENDOWMENT POLICIES.

A party ensuring by this table the amount is received by the assured himself, upon his attaining a specified age, while full provision is made for death occurring prior thereto. As a sure and profitable investment for one's declining years, they deserve the attention of all. These policies are coming into general request. *The New York Life Insurance Company* have recently prepared *A NEW TABLE BY WHICH THE PREMIUMS CAN ALL BE PAID IN TEN YEARS AND THE NON-FORFEITURE BENEFIT ALSO SECURED.*

POLICIES ISSUED IN ALL THE USUAL FORMS.

MORRIS FRANKLIN, President.

ISAAC C. KENDALL, Vice-Pres't.

WILLIAM H. BEERS, Actuary.

☞ Parties desirous of acting as Agents will please apply personally or by letter.

UNIVERSAL CLOTHES WRINGER,

WITH COG-WHEELS.

The World's Fair in London, the Mechanics' Institute, and Eleven State Fairs have decided that the U. C. W. is THE BEST.

We also WARRANT IT THE BEST and most durable Wringer made. Over 200,000 have been sold, and each family can testify to its superior merits.

"It saves its cost in clothing every year."—ORANGE JUDD.

"One of the most useful articles in my house."—MRS. HENRY WARD BEECHER.

"I heartily commend it."—REV. DR. BELLOWS.

Call or send for illustrated circular, with testimonials, retail prices, and terms to salesmen.

Money can be made rapidly selling them in every town.

R. C. BROWNING, GENERAL AGENT,

347 Broadway, New York.

RAVEN & BACON'S PIANO-FORTES.

(ESTABLISHED 1829.)

A full assortment of these Instruments, which have been well known in the New York market for more than thirty years, constantly on hand. We are continually adding improvements to our Pianos, and our facilities enable us to furnish them at terms and prices satisfactory to purchasers. Pictorial circulars sent by mail.

Wareroom, 135 Grand St., near Broadway, New York.

Bradbury's Pianos "the Best."

Pronounced "THE BEST" by the most renowned artists. SUPERIOR in tone, touch, power, DURABILITY, and elegance of finish." Warerooms 425 and 427 Broome Street corner of Crosby. Call or send for circular.

WM. B. BRADBURY.

Saleratus.—B. T. BABBITT'S SALERATUS, 70 Washington Street, N. Y. If you want healthy bread, use B. T. Babbitt's best medicinal Saleratus, made from common salt. Bread made with this Saleratus contains, when baked, nothing but common salt, water, and flour. B. T. BABBITT, 64, 65, 66, 67, 68, 69, 70, 72, and 74 Washington Street, N. Y.

JESSUP & MOORE,

27 NORTH SIXTH STREET, PHILADELPHIA,

128 WILLIAM STREET, NEW YORK,

PAPER MANUFACTURERS,

Have on hand, or make to order at short notice, all qualities of Book and News Printing Papers at current market prices.

Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

THE President, according to the agent of the Associated Press, has delivered himself to a "distinguished senator" on the subject of negro suffrage in the District of Columbia, as well as upon the proposed amendments to the Constitution changing the basis of representation. If his remarks upon the attempt to establish negro suffrage in the District be correctly reported, he will probably veto the bill. The arguments against the measure which the telegraph puts into his mouth are none of them strong, and some of them very odd. That the measure will "engender enmity, contention, and strife between the two races," may or may not be true; it is natural for the President, born and bred in a slave State, to think so; but even if it is true, it is an objection which has always lain against the elevation of a race previously degraded and oppressed to an equality, political or social, with its oppressors. This irritation and annoyance on the part of the dominant class is one of the unavoidable accompaniments of any great social or political revolution. You might as well look for disease without pain as expect a caste to surrender its peculiar privileges without much bitterness and heart-burning. This, in our minds, is one of the smallest of the objections to the bill; the serious one is, that Congress in it deliberately declares that no amount of ignorance ought to disqualify a man for voting. The President's fear that the agitation of the question will lead to a war between the two races which "would result in great injury to both and the certain extermination of the negro population," is, we presume, expressed in the language of the reporter and not in his. Any injury the negroes may sustain over and above "certain extermination" will hardly be worth considering. Mr. Johnson's remarks on amending the Constitution are sensible and timely. If it is to be recast, a constitutional convention is the proper body to do it.

A GOOD illustration of the difficulty of protecting the public against corporations by any system of inspection, or perhaps we should rather say, of the extent to which all systems of inspection are dependent for their efficiency upon the character of the officials who administer them, has just been afforded in the case of the Columbian Marine Insurance Company, of this city. This company suspended payment about ten days ago, to the consternation of its stockholders and creditors—but without surprising many people actually engaged in the insurance business. On turning to the report of the State Superintendent of the Insurance Department presented to the Legislature in March, 1865, we find that the Columbian did not file, as the law requires, a "detailed statement of its assets and liabilities" at the close of 1864. It simply, says the superintendent, "alleged that it was unable to prepare the required statement, although companies with much larger assets and business have promptly complied with our State laws, and made the exhibits required by the department." Instead of at once instituting an investigation into its affairs, however, and proceeding to wind it up within sixty days, as the law requires, he allowed it to go on and to serve for another year as a snare for the unwary. We have heard of one case in which a lady last summer invested her whole fortune in it, of course in ignorance of its condition. The superintendent offers no reason or excuse whatever for this extraordinary neglect of his duty. The only statement of his which will bear the appearance of an excuse is his own acknowledged failure to prepare, though he had nearly nine months to do it in, a new form prescribed by the Legislature early in 1864 for the annual statements of the insurance companies. Characteristically enough we find several pages of his report devoted to a bombastic and irrelevant disquisition on the comparative growth of population in the United States and in foreign countries, in which he demolishes Malthus, and calls increase in wealth and numbers "*spolia opima*."

NEW JERSEY ratified the Constitutional Amendment on Tuesday week, January 23.

THE public have been assured during the past week that the admission of Tennessee would take place very shortly. We are as ignorant of the authority for this statement as we are of the peculiar merits of the State in question. It is true she has, with undisguised reluctance, consented to conditional negro testimony in her courts; but that is about the measure of her willingness to abandon the ways of slavery for those of freedom. A free-school bill was defeated in the Senate last week, and the action may be viewed as the determination of the hitherto ruling class to maintain its supremacy by the enforced ignorance of its subjects, and as an additional bar to the immigration of Northerners, whose solicitude for the education of their children precedes that for a fertile soil and abundant crops.

THE New York correspondent of the London *Spectator* informs that journal that Carl Schurz is "the reputed author" of the letters entitled "The South as It Is," appearing in THE NATION. How they came to be ascribed to Mr. Schurz, we do not well know. Many people endeavor to discover the authors of articles in THE NATION by an *à priori* process which, in nine cases out of ten, leads to false conclusions, and we presume Mr. Schurz got the "repute" of doing us the honor of corresponding with us, in the same way. It is but justice to him to say that when travelling in the South on official business for the Government he never sent us a line on any subject whatever, and was never requested by us to do so.

SENATOR COWAN, of Pennsylvania, stated last week in his place that there were seventy amendments to the Constitution then pending! The very number may comfort the opposition, to which Mr. Cowan belongs. So much budding zeal will add very few branches to the parent stock of our Government. Even if they all passed, one could h[ardly] expect to outlive their ratification by the several States [of the] amendment, with all its popularity and pressing import[ance] a year in being ratified. Kentucky has not yet giv[en] and says she never will, if only because she has o[ffered] The only workmanlike way, if so much amending [is] a constitutional convention. Meanwhile, it i[s well] "Constitution as it is" is put to its highest [use]

to answer well enough our present purpose, which is to give reality to our republicanism and equal protection to all men under the laws.

MR. POLLARD, who recently assaulted the *Times* correspondent in Richmond, was brought before the mayor on the Wednesday following. Mr. Brooks admitted that he had dressed his account of the shooting affair in the Capitol, of which he was not a witness, "to make it more acceptable" to the readers and proprietor of the newspaper which employs him; and that if spoken to Mr. Pollard's face, it would have been "grossly insulting." "Some license," however, he urged, "is allowed to newspaper correspondents in their publications." Judge Crump, the counsel for Mr. Pollard, alluding to Mr. Brooks as one of the "jackals of the press," thought he had only received a merited chastisement by "that most degrading of all weapons, the cowhide." Except that he was careful to state whom he considered degraded by it, we might have supposed the judge meant his client. Perhaps the mayor himself had this doubt. At all events he remarked with great profundity that "the opinion of the court, sitting on the bench, is not the same as if the court was not sitting on the bench;" and ordered Mr. Pollard to give bail for his appearance at the February term of the Hustings Court. So the doubt becomes a standing one.

IT seems to us that Mr. James Brooks raised one very good objection to the amendment introduced by Mr. Stevens from the Reconstruction Committee. The scheme for forestalling the Southern reactionists by changes in the Constitution would be far more plausible than it is if it were not still an open question by whom those changes can lawfully be made. Its supporters, clearly, believe that the conquered South is debarred from all share in ratifying or rejecting them. The President, on the contrary, takes the opposite view, as was evident to everybody in the case of the abolition amendment. Until this difference is settled, Mr. Stevens's policy is as uncertain and unpromising as it is in any event tedious. If Congress think Mr. Seward's proclamation bad arithmetic, it is high time to inform the Executive.

THE Springfield *Republican* had, a few days ago, some excellent remarks, which we regret to be unable to copy entire, on "flunkeyism," apropos of the difficulty experienced by the Massachusetts Senate in agreeing both with Governor Andrew and Senator Sumner in taking opposite sides of the same question. The fact is that party discipline has been brought to such perfection, and its obligations have with most men acquired so much force, that criticism of the conduct of a party leader, even by those who agree with him as to general aims, is getting to be looked on as a kind of *scandalum magnatum*, of which nobody but a political profligate will be guilty. Being thus all but released from the wholesome and necessary restraint of the only public opinion about which they care anything—that of their own supporters—party leaders are getting into the way of indulging all kinds of caprices, and then treating any failure to applaud their performances as an indication of treachery to the cause.

OUR attention has been called to a misapprehension which might have arisen in regard to our paragraph last week on Mr. Sherman's re-election. The vote of 94 to 41, which we mentioned rather incidentally, being that of the Senate and not of the Republican caucus, of course was strictly a party vote; and the friends of Mr. Sherman and Mr. Schenck alike united to defeat the Democratic nominee.

IN a report made by Sam Adams to the Massachusetts House of Representatives, in March, 1767, concerning Hutchinson's claim to a seat in the Council, Hutchinson being at the time Chief-Justice of the col- is the following passage. The political wisdom it embodies re- forcing now quite as much as a hundred years ago:

> of a chief-justice is most certainly incompatible with The cool and impartial administration of common monize with the meanders and windings of a e integrity of the judge may sometimes embar- here is infinitely more danger, in the long run, of good and upright judge. This has often urse of things may be expected again."

NEWS of the death of Frederika Bremer reached this country last week. She is known here not only by her novels, which had a wide circle of readers, but by her personal presence some sixteen years ago. The friendships she then formed, among widely different classes, are probably still green, at least in the North. She was a good woman, of very broad sympathies, interested in all that concerned the welfare of society and the improvement of the people. She was fortunate in securing the Howitts as translators for her works, for they possessed a spirit kindred to her own, and in reproducing her but gave expression to themselves.

A BLOOD-RED blossom of war (which it would not be violence to call a Prim-rose in this case) has burst forth in Spain, and the Government which has been going about of late correcting poor little republics all over the world has now trouble enough to engage it exclusively at home. All that is certainly known about the revolution is that it is under the direction of the democratic leader, General Prim, and that it began with a revolt in two cavalry regiments. There have been disturbances and arrests in most of the cities, and martial law is enforced wherever the Government prevails. La Mancha is the seat of so much actual war as there is. All intelligence comes through Government channels, and tastes of them.

THERE is some excited journalism both in England and France over the denunciation by the *Moniteur* of the extradition treaty between the two countries, which has just been abruptly terminated by the French Government as of no effect. The Imperial press declares that no criminal has ever been delivered to France under this treaty, while the liberal French papers and the English journals assert that England had given up twenty-four rogues for fourteen received from France. There was some anxiety felt in England lest the friendship of the two governments should be imperilled by a demand for the extradition of political conspirators under a new treaty, a demand to which England could never accede. The Government papers at Paris deny that the Emperor had any such ulterior motive in denouncing the late treaty.

THE oracular response of the French Emperor to the New Year's felicitations of the Diplomatic Corps, for which all Europe waits with such great anxiety, has had this year even less meaning than usual. The Emperor was happy, he said, in the experience of accomplished events, which permitted him to predict for the world long days of peace and prosperity, and so dismissed the diplomatists with heartfelt thanks. The *Journal des Débats* finds nothing in the speech but the compliments of the season. *Au contraire*, the *Constitutionnel's* notion is that the speech is grandly significant, and that it will produce a profound impression in France and an immense sensation throughout the world.

THERE is rumor of an alliance between Austria and France, which it is said Austria greatly desires, that she may be the better able to carry out her plans for internal reconstruction, and at the same time oppose an added force to the pretensions of Prussia. The *Débats* sees an almost insuperable obstacle to the alliance in the widely different views which France and Austria entertain in regard to Italy.

THE Prussian Parliament was to meet on the 15th inst., though for what purpose it is hard to tell. An official paper announced that the course of the session would depend greatly on the attitude of the members, which is interpreted to mean that members might discuss public affairs in favor of the Government, but in case of opposition would be sent back to their families like insubordinate students. Some anxiety is felt at Berlin concerning the rumored alliance between France and Austria.

THE complications in Greece have become so serious that it is said the three protecting powers, Russia, France, and England, are about to send vessels of war to the Piræus, to sutain the faltering dominion of King George. A much happier plan would be to leave the Greeks to arrange their affairs without foreign protection or interference.

THE new Italian cabinet is composed of Sig. Pettinango, Minister of War; Sig. Berti, Minister of Public Instruction; General Angioletti (continued), Minister of Marine; Sig. Scialoja, Minister of Finance. During the late ministerial crisis the Italians behaved with great patience and moderation, and added another proof to those already given of the qualifications of that people for self-government.

FRANCIS II., of Naples, and the Grand Duke of Tuscany, have recently made claim, through the good offices of France, for their private property, now in the hands of the Italian Government; and the latter has replied that it is not its intention to appropriate this property, but that its repossession cannot be effected through diplomacy. The exiled princes must make their claims regularly through the Italian tribunals. It is supposed that they will be slow to do this, inasmuch as an action brought by them in an Italian court would be a formal recognition of the existing government in Naples and Italy.

CONGRESS.

WASHINGTON, Jan. 27, 1866.

THE leading development of the week has been the report from the Joint Committee of fifteen on the condition and right to representation of the late rebel States. The constitutional amendment recommended by the committee, basing representation and taxation upon actual population, excluding from the enumeration all to whom the elective franchise is "denied or abridged on account of race or color," awakened the most animated discussion of the session. On the one hand, the measure was denounced by the opposition party as a bill to postpone indefinitely the restoration of the Union, and to force negro suffrage upon the South. On the other hand, the Union men were greatly divided in opinion as to the policy and effect of the proposed amendment. A majority of Western members appear to favor a rule basing representation in Congress upon actual voters alone, leaving direct taxes to be levied upon population or upon property. This is opposed by the New England members, and by many others, as unfairly reducing the representation of States where voters are fewer on account of the preponderance of the female element in the population. Others oppose the amendment of the Joint Committee on the ground that it holds out a direct premium upon the disfranchisement of whole classes, upon grounds other than race or color. They argue forcibly against inserting into the fundamental law of the republic a rule which admits of any State denying the elective franchise to its poorer citizens, for example, by a property qualification, thus constituting an oligarchy instead of a republican form of government, while still counting the full numbers disfranchised as a basis of representation in Congress. There are others who object that the proposed amendment recognizes the right of the States to disfranchise, on account of color, large bodies of their citizens. These objectors demand an amendment investing the federal Congress with power to prescribe the qualifications of electors who are to participate in the federal Government. This latter view, although not yet very fully insisted upon, is felt by a large share of the Republican majority to be the strongest and most logical position that can be maintained. It is unquestionably more simple and freer from practical objections than any of the other propositions. It would establish a uniform rule throughout the nation, to be modified or amended only by national law. Why should each State be permitted to prescribe a different rule as to who shall be competent to vote for officers of the United States? Now that slavery is got rid of, the obstacle which prevented the slavery-bound founders of our civil polity from making a uniform rule of representation no longer blocks the way.

Of course, this plan will encounter the opposition of all the Democratic party, as well as of the so-called Conservatives. The battle of the champions of the State-rights heresy, as against the power and authority of the nation, will be vigorously renewed. But since this school is just as intensely opposed to any disturbance of the Constitution at all, and it is questionable whether twenty-seven States (three-fourths of thirty-six) can be got to make even the amendment proposed by the committee a part of the Constitution, is it not just as well to make the issue upon ground that is tenable, and sure to be reached at last, if we are to continue a nation, and not an aggregate of warring sovereignties? Thaddeus Stevens, indeed, significantly assumed that but nineteen States are needed to make the amendment he reported valid as a part of the Constitution; but this theory, which counts eleven States as out of the Union, has been practically ignored by Mr. Seward in his proclamation of the adoption of the anti-slavery amendment, as well as by sundry statutes in the past legislation of Congress.

The passage of the Freedmen's Bureau act, substantially as it was originally reported by the Judiciary Committee of the Senate, leaves that body free to proceed with the bill regulating suffrage in this District, as well as with Mr. Trumbull's bill to enforce the Constitutional Amendment guaranteeing the freedom of all persons. Both measures are expected to pass by about the same majority as made the Freedmen's Bureau bill a law.

It is more and more evident, as time advances, that no progress toward the renewed representation of the South in the federal Government is to be made during this session of Congress. Not even the Tennessee members are likely to be admitted to seats, and it is only candid to state that the evidences of continued disloyalty constantly coming up from those States are the chief obstacles which prevent Congress from recognizing their claims. No members are more strenuous in opposing hasty "reconstruction" than the four radical Congressmen from Kentucky, and the seven or eight (including the two senators) from Missouri.

DIARY.

Monday, Jan. 22.—In the Senate, Mr. Sumner offered a petition from the colored convention of South Carolina praying Congress to secure them in their lives, liberty, and property, and grant them equal suffrage. Referred. Mr. Fessenden, from the Joint Committee on Reconstruction, reported a proposed amendment to the Constitution as follows: "Representatives and direct taxes shall be apportioned among the several States which may be included in this Union according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed; *Provided*, that whenever the elective franchise shall be denied or abridged in any State on account of race or color, all persons of such race or color shall be excluded from the basis of representation." Laid over. Senate bill providing that in any trial before United States courts for capital offences the case may be carried to the Supreme Court by writ of error, and questions of law there determined and the judgment of the court below affirmed or reversed, also authorizing persons to act as jurors in such cases, notwithstanding an opinion formed or expressed, was taken up. Mr. Sumner and Mr. Davis objected that the latter provision set aside the universal law of the courts of the United States, as laid down by Chief-Justice Marshall in the Burr case. The bill was postponed. The resolution referring to the Reconstruction Committee all papers relating to the condition and representation of the late rebel States was passed, with the verbal understanding that it did not embrace credentials. The bill to enlarge the powers of the Freedmen's Bureau was discussed by Messrs. Cresswell, Wilson, and Trumbull in its favor, and by Cowan, Davis, Saulsbury, and Guthrie against it.

In the House, Mr. Finck offered a bill amending the oath of office, so as to make the requirement of loyalty to the U. S. Government prospective, and not retrospective. Referred. Mr. Stevens moved to instruct the Judiciary Committee to enquire whether legislation is necessary to enforce the taking of the test-oath by all officials, South as well as North. Adopted. Mr. Ashley offered a constitutional amendment that in case of the death or disability of the President or Vice-President, the Chief-Justice shall act as President; also, that in case of no election by the people, Congress shall elect a President in joint session. Referred. Mr. Jenckes offered a bill providing for the regulation of elections in the District of Columbia. Referred. Bills were offered and referred, to construct a ship-canal around Niagara Falls; to admit Colorado as a State into the Union; to grant pensions to soldiers of the war of 1812; to establish a navy yard on the Delaware; to provide for defence of the North-eastern frontier; to authorize the President to appoint certain officers of his household, and fixing their salaries; and to grant bounty land to soldiers of the U. S. Mr. Williams offered resolutions for the trial by military commission for violation of the laws of war, and not by civil courts for treason, of leaders of the rebellion now in custody. Referred. Mr. Niblack offered resolutions of commendation of the President for refusing to accept presents, and censuring all officials who accept presents from their subordinates in office. Laid over. Mr. Stevens, from the Joint Committee on Reconstruction, reported the constitutional amendment already cited in the Senate proceedings, and proposed to call the previous question, and to have the resolution passed before the sun went down, after one speech on each side; whereupon a lively discussion arose, developing great differences of sentiment among the Union majority. Mr. Conkling, of New York, made an extended speech in behalf of the amendment, and Mr. Rogers against it. Mr. Stevens said as twenty-one State legislatures were now sitting, and nineteen States would constitute the three-fourths necessary to amend the Constitution, he should urge immediate action.

January 23.—In the Senate, Mr. Conness presented resolutions of a California Miners' Convention, protesting against the bill for the survey and sale of all mineral lands of the United States. Mr. Henderson, of Missouri, offered a constitutional amendment prohibiting the States from discriminating against any of their citizens on account of color or race in prescribing qualifications for electors. The Freedmen's Bureau bill was discussed by Messrs. Fessenden and Trumbull in its favor, and by Messrs. Saulsbury, Hendricks, Davis, Johnson, and McDougall against it.

In the House, Mr. Henderson, of Oregon, offered resolutions declaring that rebel States have forfeited their rights and existence, and that their government belongs to

the United States; also, that the negro race ought to be colonized in Texas and protected as a dependency of the United States. Referred. Mr. Grinnell moved that a census of the United States be taken in the year 1866. Referred. The constitutional amendment reported by the Joint Committee of fifteen was discussed during the whole day. Mr. Brooks introduced into the debate the petition of sundry "women's rights" advocates in New York for female suffrage, and gave notice that he should move to amend by inserting the words "or sex" into the constitutional amendment.

January 24.—In the Senate, Mr. Kirkwood, of Iowa, senator elect, was qualified and took his seat. Mr. Trumbull, from the Committee on the Judiciary, reported against repealing the test-oath of July 2, 1862. Mr. Wilson offered a constitutional amendment prohibiting any payment by the United States or any State for emancipated slaves, or for any debt incurred in aid of rebellion. Mr. Dixon offered a resolution looking to legislation for the protection of loyal citizens whose property had been confiscated by the Confederate Government. Referred. The Freedmen's Bureau bill was again discussed. Mr. Davis offered eleven amendments, aimed at curtailing the operation of the Bureau, all of which were rejected.

In the House, the constitutional amendment as to the basis of representation was again discussed, occupying the whole day.

January 25.—In the Senate, a bill authorizing the Postmaster-General to employ twenty-nine additional clerks was passed; also, a bill providing for an additional land district in Oregon. Mr. Davis spoke three hours against the Freedmen's Bureau bill, after which it was passed; yeas 37, nays 10.

In the House, the constitutional amendment prescribing the basis of representation was debated during the entire day. Mr. Julian offered a resolution looking to the protection by United States laws of the lives of passengers on railroad cars. Referred.

January 26.—In the Senate, a bill for the relief of seamen on board vessels wrecked in the naval service was passed. Also, a bill extending to four years the time for withdrawal of imported goods from bonded warehouses. Mr. Howe's resolution for provisional governments over the late rebel States was taken up, when he made an argument to show that the insurgents have not surrendered their cause.

In the House, it was ordered that the debate on the constitutional amendment, reported by the Committee of Fifteen, be closed on Monday, January 29, and that the vote be taken January 30. The measure was then discussed by Mr. McKee, of Kentucky, in its favor, and by Messrs. Harding, Kerr, and Wright against it. The House passed a bill granting a copyright to Mrs. Herndon for the republication of Herndon's "Exploration of the Valley of the Amazon," heretofore published by Congress.

January 27.—The Senate was not in session. In the House, the day was spent in Committee of the Whole on the State of the Union. Speeches were made by Messrs. Smith, Baker, and Broomall, all discussing the conditions of restoration of the late rebel States.

THE FREEDMEN.

General Saxton's report for South Carolina and Georgia estimates the number of acres of abandoned lands seized by him for the Bureau at 312,014, and the number of houses transferred by the Treasury Department at 120. "Under the provisions of Circular No. 15, from the War Department, these have mostly been restored to their former owners." On some of the Sea Islands the freedmen colonized under General Sherman's order "have established civil government, with constitutions and laws for the regulation of their internal affairs, with all the different departments for schools, churches, building roads, and other improvements." The number of colored children now being educated in South Carolina is 6,000. "The entire want of capital on the part of the planters to pay for labor is undoubtedly the principal reason why the planters cannot, at present, secure all the labor they require. As a rule, the freedmen are ready to work where they are sure of receiving their pay."

General Gregory reports that the crops in Texas, of all kinds, are garnered, and the subsistence for the coming year for blacks and whites is abundant. The cotton crop, though only half as large as in former years, was so well gathered that, under present prices, it will bring more wealth into the State than any heretofore grown. This has been accomplished chiefly by the labor of the freedmen amid the distractions and uncertainties of their transition. "They are, as a general thing, strongly impressed with religious sentiments, and their morals are equal, if not superior, to those of a large majority of the better informed and educated." Their desire to learn is intense. Their testimony is admitted in some of the judicial districts, but excluded in others. Where federal troops have not been quartered, the blacks are not unfrequently restrained of their liberty as of old.

Colonel Robinson's report for the district of Mobile (embracing seven counties) is a powerful argument for continuing the Bureau, and endowing it with higher powers. The press and the civil courts unite in wilfully impeding the elevation of the freedmen, and seek to deprive them of security. "If the matter of enlightening them by a school of education was left to the white citizens, the unfortunate class would be indefinitely continued in ignorance and mental darkness such as slavery alone could entail."

Colonel Osborne has submitted to General Howard a plan for colonizing freedmen in Florida. He proposes that the Government shall procure by purchase and erect as a Territory all that portion of the State below the 28th degree of latitude. None but freedmen to be allowed to buy or pre-empt land, and each head of a family to have 80 acres. About 400 townships, or an area of 9,000,000 acres, are suitable for settlement and cultivation, accommodating 115,000 families in the ratio mentioned.

—Gen. Terry has again pulled rein on the reconstructed Virginians. The Legislature enacted a law applicable to vagrants, among whom are reckoned those who, not having wherewithal to support their families, live idly and refuse to work for the usual and common wages given to other laborers in the like work in the place where they then are. This was in manifest complicity with such combinations of employers as we noted last week in the case of the James River planters, and Gen. Terry so regarded it. The penalty for vagrancy was compulsory hire for three months, or four if escape was attempted, with authority from a justice of the peace to work the offender with ball and chain. This the general regarded as another form of servitude, between which or the insufficient wages of their employers the freedmen must choose. He accordingly ordered that no magistrate, civil officer, or other person should in any way apply or attempt to apply the provisions of the statute to any colored person in the department.

—The Senate passed on Thursday the bill "to enlarge the powers of the Freedmen's Bureau," by a vote of 37 to 10. It was substantially that introduced by Senator Trumbull on the 5th of January; but for sections 4 and 6 were substituted sections 5 and 6 of Representative Eliot's bill, and section 5, confirming and making valid the possessory titles granted under Gen. Sherman's order, was so altered as to protect the occupant from disturbance or ejectment during three years from the date of that order, unless the owner shall be able to make with him a settlement satisfactory to the Commissioner of the Freedmen's Bureau. The Senate refused to except Kentucky from the surveillance and authority of the Bureau. The Bureau continues until otherwise provided by law.

—The Sampson County (N. C.) court recently sentenced a negro to be sold into servitude on a charge of drawing a pistol on a white man. Major Wyckersham, of the Freedmen's Bureau for that district, at once ordered the court and all the parties concerned to be placed under arrest in Raleigh.

—The Tennessee House of Representatives passed a negro testimony bill on the 24th ult. by yeas 44, nays 32.

—There are upwards of 23,000 colored persons in Washington city. In 1860 there were less than 15,000, bond and free, in the entire District. The white population of Washington at that time amounted to 11,138.

Minor Topics.

The advent of the new year suggested to us the idea of noting down a few of the material indications of the progress made by the world since the beginning of the century, and we speedily made out a list of things which are so familiar to us that we have not only ceased to think of them as novelties, but very few of us can even fancy the world getting on without them, though our grandfathers had never heard of them. The material progress made within the present century is, to be sure, a trite subject, but, then, we doubt whether, in spite of all that has been said upon it, many people have sufficient acquaintance with its details not to be startled by seeing them grouped together. A man need not be very old to remember the time when there were no railroads, no locomotives, no steamships, and no telegraph wires—no gas-lights, no petroleum, no California gold, no india-rubber shoes or coats, no percussion caps or revolvers, no friction matches, no city aqueduct, no steam printing-presses, no sewing-machines, no reaping machines, no postage stamps or envelopes or pens of steel or gold; when there was no homœopathy or hydropathy, no chloroform or teeth extracted without pain; when there was no mesmerism, no biology, and no table-tippings and marvels from the spiritual world; no planet Neptune, no Stuart's syrup, no Hecker's flour, no temperance societies;

no sax-horns or cornets or Boehm flutes or seven-octave pianos; no photographs, no paint-tubes for artists, no complete stenography, no lithography or anastatic printing or etching on stone, no illustrated news, and hardly a decent wood engraving; when omnibuses and street-cars were not dreamed of; when dull street-lamps lit with whale-oil were a luxury, and the Metropolitan Police an Utopian vision; when there was no unpopular Christianity, no Emerson or Parker, no slavery agitation, no Garrison or Phillips; Tennyson, Browning, and Carlyle were in embryo, and even Wordsworth was hardly known; when there were no public schools, no special departments of science in colleges, no gymnasiums, no art unions, no literary or political clubs, no lyceum lecturers, no wisely organized and widely operating philanthropic societies, no prison discipline, no good lunatic asylums, no houses of employment and reformation for young scamps—and generally very little hope for reform in young or old scamps.

In those days people drank green tea, and ate heavy suppers, and went to bed with warming-pans and night-caps, and slept on feather-beds, with bed-curtains round them, and dreaded the fresh air in their rooms as much as sensible folks now-a-days dread to be without it. And if they heard a noise in the night, they got up and groped about in the dark, and procured a light with much difficulty, with flint and steel and tinder-box, and unpleasant sulphur matches. And went to their medicine chests and took calomel and blue pills, and Peruvian bark, and salts and senna, and jalap and rhubarb. In those days the fine gentlemen tippled old Jamaica and bitters in the morning, and lawyers took their clients to the side-board for a dram—while the fine ladies lounged on sofas reading Byron, and Moore, and Scott's novels. In those days long leather fire-buckets were hung in the entries, filled with water, and, when a fire broke out, every citizen was a fireman. In those days gentlemen chewed tobacco, indifferent where they expectorated, and ladies cleaned their dental pearls with snuff, and wore thin shoes, and laced themselves into feminine wasps and consumption. Babies were put to sleep with spanking and paregoric. Urchins were flogged at school *à posteriori*, and subjected to all sorts of unheard-of chastisements. Picture-books and toys were dear and poor. Big boys played *hockey* (or, as they called it South, *bandy*) in the streets, with crooked sticks and hard wooden balls (policemen being unknown), and went home to their mothers to have broken shins anointed with *opodeldoc*. Street-fights occurred between schools, and schoolmasters were persecuted by the biggest boys. Young ladies danced nothing but formal and decorous cotillions, or fast and furious Virginia reels, in wide entry halls, by the light of candles that called for snuffers every ten minutes—to music by black fiddlers or cracked and jingling pianos; while mothers sat darning stockings, and fathers played backgammon, or gambled, and swigged brandy-and-water—or came home late, roaring bacchanalian songs, and enquiring of their sleepy wives in which brown-paper parcel the *milk* was tied up. Boarding-school misses in calico gowns practised the "Battle of Prague" or the "Caliph of Bagdad" or Clementi's "Sonatas" on instruments not much bigger than a modern young lady's travelling trunk, strung with jangling wires that were always snapping: and occasionally chirped Moore's "Melodies," or such airs as "Gaily the Troubadour," or "Pray, papa, stay a little longer," or "The banks of the blue Mosche-he-he-helle." Guests sat on hard wooden chairs, sometimes with their feet up, over roaring wood fires, "spittin' round and makin' 'emselves sociable," with juleps, egg-nogg, apples, and cider. Every man shaved; wore a bell-crown hat; a swallow-tail coat with a horse-collar; carried a turnip-shaped timekeeper in his waist-band, with a heavy seal hanging out; had his breeches' pockets full of silver half-dollars; wore round-toed boots and linen shirts; cased his throat in a high black satin neck-stock or heavy cravat, with high standing shirt-collars; ate all manner of indigestible food; swallowed all manner of nauseous quack medicines; dined at one o'clock, some families eating the pudding before the meat; took naps in the afternoons (on Sundays preferring the pews for that purpose); had nothing to say against slavery or rum; took a meagre weekly newspaper; smoked "long nines;" ate fried oysters, and lobster salad, and Welsh rarebit with plenty of red pepper, and drank fiery Madeira or punch, at twelve o'clock at night; got his feet wet on slushy, snowy days; took awful colds and rheumatisms; sent for Dr. Sangsue, and was bled, blistered, and leeched; had nightmares, headaches, dyspepsia, fever, delirium, death and darkened rooms. In those days a journey from New York to Albany took as much time and thought as a voyage now to Panama; and a voyage to Europe was like a departure to the next world. We saw our friends aboard ship with sobs and tears, and a letter from across the ocean was like an angel's visit.

Such are a few of the reminiscences of fifty, nay forty, years ago. No doubt our horizon has expanded in a vast number of directions since then. But, *per contra*, have we not lost as well as gained? If we are better provided with ways and means for material comfort, have we gained also in self-reliant and industrious and simple habits? If we are all more on a level, are we as courteous? If riches abound more, do not luxury and extravagance threaten us proportionally? If we have grown more intelligent, have we grown wiser? If human and philanthropic associations overspread the country, are we individually less selfish? But we are not going to preach.

The delicacy of General Delafield ought not to go unsung by a muse vigilant to celebrate the progress of refinement; for since the first days of the war, when our generals fought the enemy in a spirit of brotherly kindness and conciliation, we have not seen so great proof of tenderness for the rebellion as General Delafield has lately shown. In an old army man, too, it is all the more surprising, for it must be confessed that soldiers—those surgeons of civilization—get rough habits of frankness, and like leeches, who make a great deal of incision, have a certain ruthlessness of touch. But General Delafield has preserved all the sensitive courtesy of his youth, and will not call a spade by its name in the presence of gardeners' children.

It is known that in the course of the late regrettable hostilities the Government troops took from the rebellious forces some thirty guns, which were sent to West Point, there to be inscribed with the names of the actions in which they were captured, and kept as trophies. The Secretary of War has now transmitted to Congress the correspondence between the Academy and the chief engineer of the army, in relation to these cannon, from which it appears that General Delafield, with the delicacy which we admire, replied to Captain Balch's request for leave to mark the guns with the proper inscriptions, that it had better not be done. In speaking of the pupils of the Academy, he said:

> "It should be our study with these young men to permit nothing of an irritable or boastful spirit to be placed constantly before the sight of those whose section of country suffered by the rebellion. Let history tell the evils this rebellion has produced, and let us, through the instrumentality of the Military Academy, renew its powerful influence in establishing national feelings through the friendships that are sure to flow from a scholastic fellowship under military training for years. These guns should be preserved only as historical of the artillery arm of the service, indicating the period and place of manufacture of each, calibre and description of gun, omitting everything connected with their capture or use."

No one can deny that this is thoughtful and amiable in General Delafield. To be sure, the gentle purpose might be more perfectly accomplished by melting down these unhappy guns and substituting others just like them for use in the study of historical gunnery; but still it is to be hoped that the young gentlemen of the North and West will emulate General Delafield's generosity, and never allude to the capture of the cannon in the presence of their Southern fellow-students. Too many of those who remained true to the Government in the hour of its calamity, and helped beat down armed treason in the bloody field, cherish an indecent pride in the recollection of their deeds, which cannot be rebuked with sufficient severity; and the sooner their sons can be taught to forget the whole affair the better. There is a peculiar propriety, moreover, in hushing up the secret of the insurrection at West Point; for it is well known that some of the most distinguished chiefs of the treason were educated at that Academy; and if there were anything there to remind the Southern students that the treason had suffered an utter and inglorious defeat, it might not only wound their high-toned sensibilities, but would, perhaps, warn them that rebellion is disaster.

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE CONSTITUTIONAL AMENDMENT.

THE amendment to the Constitution reported by the Joint Committee—excluding from the basis of representation all that portion of the population of any State which may be disfranchised by the State laws on account of race or color—has some manifest advantages over the proposition to make legal voters the basis of representation. In the first place it does not, as the latter would have done, punish the older States for sending large drafts of their young men to the West, by depriving them of a large proportion of their federal weight. In the next place, it does not tempt the States into competing for voters, and getting them of whatever quality, where and how they can, and at whatever cost. It would leave the public judgment free to decide whether any qualifications are necessary for the exercise of the franchise, and, if any, what they ought to be.

But, then, it would not settle the Southern difficulty. It does not restore or secure any human being in any of the revolted States in the possession of his rights. It does not provide for freedom of speech or freedom of the person or freedom of instruction. It does nothing for the restoration of industry. It does not furnish any Southerner with a single reason for laying aside his old fear or hatred for the Union, or for desiring to be in feeling, as well as in fact and in law, one of its citizens. It does not remove any of the causes, whatever they may be, which now either hinder or retard the assimilation of society in both sections into one homogeneous whole. We do not say that its failure to do any of these things is a good reason for opposing it. It may have uses, and great and grave uses, without accomplishing one of these results. But then these are after all the great ends of any process of reconstruction. Any amendment of the seventy now before the public that does not help us, and materially help us, to obtain these results, ought to have very striking merits of some kind to entitle it to weeks of debate, and the solemn confirmation of a national vote.

What will this amendment accomplish? It will certainly, as long as the Southern States do not choose to admit the colored population to political equality, diminish the representation of those States in Congress. This may be a gain; for the present, and as long as they exhibit the least restlessness under the public debt, or the least disposition to make us pay for the damage done to their property in following their armies over their territory, it certainly will be a gain. If they do admit the negroes to political rights, there is, of course, every probability that the vote of the latter will be cast on our side, and that the addition they would make to the Southern delegation would weigh in our favor. But, then, suppose the South should give up all hope of damaging the public credit—suppose they should consider any such scheme Quixotic; should perceive that, owing to the mode in which the public debt was contracted; owing to the character and influence and wide diffusion through the land of those who hold it; owing, too, to the sacredness of the associations which surround it, to the strong hold it has on the heart of the North, as the very price of national existence, they should abandon definitively all hope of either impairing its value or swelling its volume by adding to it any portion of their own burdens—suppose they should be satisfied, after a little better acquaintance with Northern feeling, that the least attempt to lay a finger on it would cause the very stones of the free States to rise and mutiny, and should make up their minds to sit down quietly and pay the taxes necessary for its redemption—what then?

We should undoubtedly have escaped a great danger. But where should we stand? The South would have a few delegates less in Congress than it would like to have, and one great cause of Northern uneasiness would have been removed. But then the problem of all others which puzzles us most just now—the problem of social and political inequality at the South, would remain as far from solution as ever. A large portion of the Southern population might still, probably would still, be permanently excluded from the citizenship on grounds which we all hold to be absurd and unchristian, if not utterly repugnant to the spirit of our institutions. Caste at the South might still be created and perpetuated. A feudal system, based on serfdom, would still be possible under the Constitution. But this is not the worst of it. All this we have had in times past without considering ourselves morally responsible for it. The trouble is that, the present amendment once passed, we *should* be morally responsible for it. The question would have been solemnly submitted to the Congress and people of the United States, whether a State with a "republican form of government" should have a right to disfranchise a portion of its population for being of a particular color or belonging to a particular race, if it chose to cut down proportionally its representation in Congress; and would have been solemnly answered in the affirmative.

The choice in this case does not lie between an exercise of the "war power" and a constitutional amendment, as it did when negro suffrage began to be first debated, but between two constitutional amendments. An amendment forbidding any man's exclusion from political rights on the ground of race or color is still possible. It would, perhaps, hang fire for the present in some of the Northern States, but it would certainly be carried before very long. In days when New Jersey votes for the abolition of slavery, nothing is impossible. And we confess we believe that the submission to the country, by the national legislature, of a proposition to strike out at once and for ever from every statute-book the last traces of the great stain of our history, might bring the matter home to the national conscience with a force which would soon show that the votes in some States, such as Connecticut or Wisconsin, did not, after all, express the feeling of the people in its highest and noblest moods. At all events, we should be saved from the danger which now threatens us of establishing a bad precedent for the sake of avoiding a temporary inconvenience.

OUR INDIAN POLICY.

THE Government, in attempting to solve anew, in a statesmanlike manner, and once for all, the question, What shall be done with the Indian? is not left wholly in doubt what course to pursue. The faith of the nation has been pledged to the treaty Indians, and it must be sacredly kept with them. It is clear, also, that the discharge of this duty falls properly upon the civil Department of the Interior, acting through the Indian Bureau, as at present. Important measures, in fact, were inaugurated last summer in this direction, and gave promise of good results. They began in the councils at Fort Smith, Arkansas, with the Indians of the Southern Territory, who had, by participating as nations in the late rebellion, violated treaty stipulations. These, accordingly, had to be made anew. The other councils were those held by General Sanborn, and agents of the Indian Bureau, on the Little Arkansas, and the council presided over by General Curtis at Fort Rice on the Upper Missouri. The result of the Sanborn council is to remove into the western part of the Indian Territory the tribes which have been engaged in hostile operations along the Kansas and Colorado frontiers, and upon the overland and Santa Fé roads. General Curtis's council projected treaties with nine different bands of Sioux, and opened negotiations which will be continued favorably in the spring. The stipulations will mainly confine the North-west Indians to the region lying between the North Platte and the Upper Missouri. A number of contiguous reservations are to be located on or near the river. The chiefs begin to realize that they must become cultivators of the soil, or in a few years perish from the land. The Sioux are a fierce, warlike, and powerful people, occupying nearly the whole of Dakota. Several of their largest bands have increased in numbers during a few years past—a significant fact when contrasted with the general result.

Among the propositions which for some years past have been growing upon the attention of public men is one providing for the organization of the country south of Kansas into a Territory, with a

proper form of civil government. In this it is proposed to settle all of the reservation Indians who are willing to remove, and do not desire to take their present lands in severalty and assume citizenship, thus losing their race identity to become one with us. Within its boundaries there are already living about forty-five thousand Indians, a majority of whom are quite well educated and count many able and intelligent men. They have written constitutions and forms of government, and are, consequently, qualified for ultimate relations with the people at large. Before the rebellion they were among the most prosperous communities on the continent. It will take but a short period for them to recover somewhat of their old position.

In the provisional treaties made at the Fort Smith council the idea of an original Indian territory was kept in view. Conditions were made for the purchase of land for the settlement of civilized tribes from Kansas and elsewhere, as fast as arrangements could be made. The western portion of the territory can and will be used for the hunter tribes. The Little Arkansas council had this in view when locating the Arapahoes, Cheyennes, Kiowas, and Comanches in the region lying between the Arkansas and the Canadian Rivers. The Osages, a tribe living in Southern Kansas, have agreed to a treaty by which they move to the south-west of the proposed territory. All of the hunter Indians south of the North Platte and east of the mountains could be readily concentrated into the western half of the territory, especially if the parallelogram of Texas known as "Young's Territory," running between that State and New Mexico to within half a degree of the Kansas line, could be added thereto. It is an excellent hunting and grazing region, and, with proper direction, the nomads could be transformed into shepherds and herdsmen. The civilized tribes will inhabit the largest half to the east. They are farmers now. As before stated, they are partially educated, and the Southern tribes have been trained to participation in government. They could become a capital police force to keep the peace with the more unruly tribes of the west. Their intelligent men ought to have due influence in determining policies designed for their race.

Commissioner Cooley's treaties wisely embrace propositions for the organization of a territorial government, for the settlement of other tribes in its borders, for the aid of these tribes in suppressing disorders among the marauders of the plains, and for the development of the country by the encouragement of railroads. Two very important routes are projected: one towards the Gulf, from Kansas to Galveston; the other towards the Pacific, from Missouri to San Diego, California. Another provision is the recognition of the freedmen's citizenship among them, and providing for their proportionate possession of land. General Sanborn, as acting commissioner of freedmen, is engaged in carrying out these requirements.

A bill has been introduced into Congress providing for the organization of a territorial government. Should it become law, as is likely, we shall see a worthy attempt made to enable the Indian to perpetuate his existence, not as a wandering, begging, marauding savage, or a pauper on the bounty of the Government, but as a part of our common country, and entering at the proper time the family of States. In connection with it provision should be made for as early an abolition of tribal distinctions as can be brought into practical effect. Further, while indiscriminate trading should not be allowed, measures ought to be adopted looking to the abandonment of the present system of licenses. In fine, just as fast as is compatible with the Indian's ability to take care of himself, it should be the aim of Government to withdraw its guardianship.

The proposed territory lies between the 34th and 37th parallels of latitude and the 93d and 100th of longitude. It contains an area of 74,127 square miles, 47,441,480 acres. It is 320 miles from east to west, and 220 north and south. On the same range as Arkansas, Tennessee, Virginia, it possesses a delightful climate. Its agricultural advantages are unsurpassed, the soil being fertile and capable of raising abundantly all the cereals of the temperate zones and the staples of the South. The scenery is lovely and inviting, especially in the eastern part. The finest mill privileges are found on the streams flowing into the Arkansas, on the Canadian, and the tributaries of the Red River of Texas. W. T. Powell, civil engineer, who was chief rebel engineer in this region, says that coal of a superior quality is found over the entire country from Fort Smith, Arkansas, to Boggy Dépôt, a distance of one hundred and forty-five miles. From this stratum the rebel government obtained its trans-Mississippi supplies. Mines were worked at Boggy Dépôt and at other points east to Jenny Lind, Sebastian County, Arkansas. Lead, gypsum, copper, and the ores of iron are also found in various quantities. No portion of the continent is better adapted for grazing and cattle-raising. Immense herds of cattle still exist, while for four years two large armies have been fed therefrom and millions of dollars' worth stolen and driven out of the territory.

The projected Indian territory is worth duplicating. The region itself is ample enough for all the Indian race. But the removal thither of all is simply impracticable. The mountain Indians cannot be transplanted, nor can those from the Pacific or North-west. For the last-named, the region indicated by the treaties projected at the Fort Rice council, or the section lying between the James River, the Upper Missouri, the mountain base, and the British line, affords ample room. It is a good grazing region, frequented by the buffalo, has abundant timber, and, being fertile, the short summers would afford sufficient return to industry. It was in this region that Gen. Pope proposed to carry out the plans he submitted to the War Department. Within our vast mountain territory we certainly can find a spacious and suitable section into which might gradually be brought the eighty or ninety thousand Indians who are likely to be in our and their own way. If the practicability of this be doubted, an examination of the Navajo settlement at the Bosque Redondo, or of the methods pursued towards the Puebla and Mission Indians in New Mexico and California will, it is believed, satisfy any doubt. Nor should there be found much difficulty in concentrating on the Pacific coast. This policy is now framing in California.

It may be urged that such plans would be attended with too great expense. Not so much certainly, in the long run, as attends the present system of scattered reservations, multitudes of agents and traders, and annuities. A fit and accessible place once obtained, the next step will be to insure the Indians protection in it, and speedy punishment of the wrongdoer, whoever he may be. Then to provide them with suitable teachers—persons who can teach them to farm as well as to read, their women to cook as well as dress decently. Industrial civilization will pave the way for religion, and the missionary should be last though not least. The money paid them for lands should be laid out directly in improvements, clothing, and food. So much for a permanent policy, looking alike to our security and their preservation and welfare.

The present disturbed condition of such large bodies of Indians affords an opportunity of adopting a beneficent and sagacious policy. One thing should *not* be done. No peace ought to be made which has not been preceded by a warfare so vigorous as to impress upon the Indians the futility of further resistance. We like the ideas advanced by General Pope on this point. As proposed by him, the control of Indians at war should be placed entirely under the military authorities, and a line of posts be extended around the section already indicated in Dakota, hemming in all the North-western hostile Indians. They should be required to remain there as prisoners of war, having the limits of that region and no more. No traders should be allowed to go among them. All treaty stipulations, having been violated, should be considered annulled. Such payments as would have been made to the tribes in peace should be administered directly in their behalf. They should be kept from starvation and encouraged to hunt and farm. At certain designated stations, and no others, trade should be allowed. Here, also, schools and farms might be established where the Indians, persuaded to settle, could receive direction and support. On no account should they be allowed to pass the boundaries; any outrage or violation by individuals being considered a declaration of war, to be followed by suspension of trade, supplies, and more or less active hostilities until the transgressors were given up. Being under martial law, any trespassing or marauding whites could be readily punished. This rule should be maintained until the necessity had passed.

It is understood that General Grant has determined, first, to afford ample protection to the great lines of travel; second, to put in the field a sufficient force to subdue the Indians; and third, to carry out a plan like this of General Pope's. The result may safely be left to the future.

THE FRENCH STUDENTS.

In this time of congresses, the Belgian students thought they also must have a congress. They invited their friends of the French and German universities. Six French students accepted the invitation and went to Liege, the old episcopal town where the meeting took place. In Belgium—a free country, the freest in Europe—nobody paid much attention to the proceedings of the students. But the French police had followed the six young representatives of the Academy of Paris; their words and their actions were as carefully watched as if they had been great statesmen instead of foolish and enthusiastic young men. If we can believe the police reports, wisdom did not mark their conduct. Elated and intoxicated as it were by the atmosphere of liberty which they breathed, they indulged in every sort of revolutionary nonsense; but their worst crime seems to have been to refuse to figure in a great procession of the students with the tricolor French flag; they carried instead a black flag, and offered themselves to the quiet and bewildered population of Liege as the mourners of French liberty. After this holiday, they quietly returned to France, trusting that they could not be punished in their own country for deeds committed across the frontier.

Not a human being in France had heard of the speeches pronounced by the students at Liege, and their very names were as unknown as if they had never been born. There is no law yet by which a French citizen can be prosecuted before a court of justice for what he has done out of France. But Mother University has her own laws; her authority may be regarded as a sort of paternal authority; so it is at least in England and in Germany. Oxford has its own tribunal, and the Vice-Chancellor acts often as a justice of the peace. In France the jurisdiction of the university is not as extended as in England or in many German towns; the student has no privileges; he is treated by the law like any other citizen. Students are sued for debts like anybody else; there is no university prison or university police. M. Duruy, however, the present Minister of Public Instruction, and head of the university, thought it necessary to punish the students who had gone to Liege. Long after the ill-fated congress had taken place, he convoked the *Conseil Académique*, formed of the deans of the various academies and of some professors, submitted to them the police reports of Liege, and, at his suggestion, the Council pronounced the perpetual exclusion of the six students from the Academy of Paris.

What does this exclusion mean? It means that they will not be allowed to take their degrees, as all of them are medical students; it means that, after several years already spent in the hospitals of Paris, the title of doctor of medicine will never be granted to them by the Academy.

> "Non dignus, non dignus est intrare
> In nostro docto corpore."

As the jurisdiction of the university is considered as a quasi-paternal one, as its authority professes to be simply substituted for the authority of the family (and under no other pretext could the university have extended its disciplinary power over acts committed outside of France), this decision has generally been thought very hard and tyrannical. All the students, who till it was promulgated had taken no interest in the orators of Liege, immediately espoused their cause. Their speeches were not known to the majority of them, and those who had heard of them mostly disapproved of their tone and their tendencies; but the ostracism of the Academical Council raised questions of a higher importance. It was known, besides, that M. Duruy, the minister, had only prosecuted the six students in order to ingratiate himself with the Empress Eugénie, who never liked him and who once turned her back upon him before all the other ministers. The students, therefore, of the Academy of Law as well as of the Academy of Medicine took in hand the cause of their comrades, and resolved that no lectures should take place as long as the decision of the Academical Council was maintained. The spirit of the revolutionary times once more visited the old Quartier Latin, changed as it is by M. Hausmann's streets and boulevards. The old type of the student is no more to be found there than the old houses, where hope and poverty lived gaily together, where the *grisette* (an extinct species also) shared the modest fare of the young *bacheliers* and learned from them the songs of Béranger. Béranger is dead, the grisette *a passé l'eau* (has crossed the Seine) and has become a *lorette*, the student is now a *gandin* and wears the latest fashions. Still, something of the old spirit seems to be preserved in him. One after the other the learned doctors and jurists were obliged to retire before the good-humored but deafening noise of a thousand excited youths. This went on day after day till the Government became uneasy. A regiment of policemen was sent to the colleges, and a note appeared in the *Moniteur* announcing that, as some individuals *not belonging* to the academy had tried to foment trouble, each student must come to the lectures provided with his card. The young men were obliged to go to their lessons between two rows of policemen, one by one, and their card in hand. The noisiest were arrested, put in prison, and their last *inscriptions* were lost. (An *inscription* is the fee paid from time to time to the university; an examination can only take place after a certain number of inscriptions are paid.)

The students were not to be calmed by such proceedings, and became only more excited. An occasion was soon given to them. A new drama was to come out at the Théâtre Français, under the name of "Henriette Maréchal;" the authors are two brothers, MM. de Goncourt. Before the play was given to the public, they had read their drama in the salon of the Princess Mathilde and placed themselves, so to speak, under her patronage. This was quite sufficient for the students. On the morning of the first representation, small placards were fixed on the walls of the Quartier Latin inviting the students to go to the Théâtre Français in the evening. The placards were signed by this odd name: "Pipe en bois" (wooden pipe). "Pipe en bois" was obeyed. When the curtain rose, hissing began at once, and, to the horror of MM. de Goncourt, and of their august protectress, Princess Mathilde, who was seen in the Imperial box, the piece could not be played. The actors screamed in vain as sailors would in a tempest. The drama became a mere pantomime. For eight nights in succession the same demonstration took place, and the authors were finally obliged to with draw their play.

Matters becoming serious, the professors of the two academies held a meeting, under the presidency of M. Tardieu, the dean of the Faculty of Medicine. M. Tardieu had made himself obnoxious to M. Duruy; for, though he could not hinder the policemen from abusing the students on the Place de l'Ecole de Médecine, he would not allow them to enter the lecture rooms. While the meeting of the professors was taking place, a despatch arrived from M. Duruy, "the meeting could not be held without the minister's authorization and must be at once dissolved." Such was the substance of it. M. Tardieu read it to his colleagues, and proposed to continue the proceedings—a miniature of the famous *Serment du Jeu de Paume*. We doubt, however, if M. Tardieu looked as fierce as Mirabeau, when he exclaimed to the king's messenger: "Allez dire à votre Roi que nous sommes ici par la volonté du peuple, et que nous n'en sortirons que par la puissance des baïonnettes!" The other professors, at any rate, did not feel in themselves the spirit of Mirabeau; they quietly went home. M. Duruy, hearing of M. Tardieu's proposition, sent him a most impertinent letter, to which M. Tardieu simply answered by his resignation. Thus matters now stand. Of course a thousand young men cannot long check the most despotic government of Europe; order must be and will be restored by some means; the students cannot for ever do without lectures, without examinations, without degrees. We note these facts as symptoms, as signs of the times; without in the least trying to exaggerate their importance.

THE REIGN OF TERROR IN JAMAICA.

If any proof were wanting that it was time for England, with the new year, to turn over a new leaf with Jamaica, the last West India mail supplied it. Enough facts had already transpired to strip the colonial government of even the poor defence of having acted under a panic. Perhaps one of the most striking indications of their madness was the introduction into the legislature of a bill of pains and penalties directed against all "dissenters," and particularly suppressing all

forms of worship except those of the Anglican, Scotch, or Roman Catholic churches.

It is not surprising that Governor Eyre, in his address to the Assembly, declined to accuse by excusing himself. He found it much easier to congratulate them on the summary suppression of the "rebellion" than to state the extent of the conspiracy, the amount of resistance encountered by the military authorities, or the losses on either side. And when a member made bold to move for official returns of the persons killed by the rebels, the number of rebels tried by court-martial, with the result, and the number of those shot, hanged, flogged, or otherwise punished without trial, the Government party refused to vote the enquiry. It was even a condescension for the Governor to furnish some of his grounds for believing that the disaffection was not over, and that they were still on the eve of a general insurrection. Col. Whitfield—the only, and, it is to be inferred, the strongest authority that could be adduced—had observed and reported "men of sullen and dissatisfied looks riding about the country in all directions," and giving him the impression that they would like nothing better than to cut his throat if they could. It is the old story of the perversity of the negro race. There had been, in the events of the just preceding weeks, such capital incentives to mirth and hilarity, such irresistible provocation to relax every muscle with laughter, such reasons for devout satisfaction with their appointed lot, that a sour-faced black was very naturally regarded, first with positive amazement, and then with commendable suspicion. The pity is that the Governor and his backers were so selfishly disposed to have the fun all to themselves. In the smothered resolution of enquiry, what a chance for a new series of *contes drolatiques!* There was once, you know, a merry massacre in Jamaica—of humble origin, for it began in the stealing of threepence-worth of cocoa-nuts from a deserted plantation. For this the culprit was condemned to pay a fine of four shillings (to help establish the title to the estate), and costs amounting to twelve shillings and sixpence, or suffer thirty days' imprisonment. This judicial severity in a district from which an upright and humane magistrate had been jealously removed, excited a riotous interference on the part of the people of color, in which they lost as many lives as they took, not exceeding a dozen. Thereupon the Governor, declaring the outbreak a rebellion and proclaiming martial law, immediately despatched his forces to the disturbed locality, and did not recall them until three thousand (always retreating) blacks had been shot on the roads and in the woods, or hanged by drum-head court-martials, and an unknown number of both sexes flogged, including those executed, while some three hundred young women and girls were "catted." Of the soldiers and sailors engaged in these drolleries, not one, fortunately, received a scratch; and the Maroons, on their return, were the objects of every demonstration of gratitude and respect.

We can imagine nothing better calculated to breed a general insurrection, not confined to the blacks alone, than the régime of Governor Eyre since the close of "hostilities." There has been a gag on the minority in the Assembly, and a gag on public expression in words or through the press. No man dared speak his mind in opposition to what had happened, for fear of arbitrary arrest or proscription. Only in private letters home could any one venture to narrate the truth. "The publication," says such a correspondent, "of the notes taken at the trial of the late G. W. Gordon, with his defence, was strictly forbidden." But the authorities, not content with this terrorism, attempted, by radical measures, to secure for themselves a virtual monopoly of political power. At the suggestion of the Governor, bills were introduced empowering him to proclaim martial law at any time, by and with the advice of the Privy Council; to abolish the volunteer force and coerce its members into a permanent militia; to prevent rebellious proceedings, among which are reckoned "seditious articles" in the newspapers, for which the penalty, if conviction is had in any court appointed by the Governor, is hard labor for seven years in the penitentiary; and to regulate the places of religious worship, to which we have referred above. On the 7th of December Governor Eyre approved a bill to try by military tribunals certain offences committed under military law, and another amending the constitution in the interest of despotism, provided, however, in each case, that the Queen should add her consent. The latter bill, as first drafted, abolished the franchise for ever, and substituted for the Legislative Council and House of Assembly a single Chamber, to consist of twenty-one members nominated by the Governor. Afterwards it was so modified as to allow one-half the representatives to be elected, with such qualifications of membership and suffrage as to disfranchise nineteen-twentieths of the population.

Sir Henry Stork now temporarily displaces Governor Eyre while instituting an enquiry into his conduct. He is to have as his assessors two London lawyers of character and distinction, and unless Governor Eyre has in reserve a large stock of justificatory evidence, which he has so far declined to produce, it is hard to see how the investigation can avoid ending in his removal. Whether anything more serious than removal will befal him will depend very much upon the relative strength of rival parties at the opening of Parliament. For the Jamaica affair, atrocious as it is, will doubtless, like the American war, be made a strictly party question, on the one side the Radicals and Dissenters, and on the other the Tories, High Church, and pro-slavery men. A vigorous effort will probably be made by Mr. Gordon's friends to have Governor Eyre, or at least the members of the court-martial, tried for murder. The trial was absolutely illegal upon every possible theory of gubernatorial power.

THE LATE AFFAIR AT SERINGAPATAM.

Speculation had long been rampant at Seringapatam. One class of wise men—Parsees—had predicted that business would decline and that prices would fall; but another class of wise men—Banians—had stuck to it that business would increase, the value of the currency decline, and prices advance. In no security had the contest between Parsee and Banian been so hotly waged as in the stock of the Bangalore and Bednore Railway—which, as everybody knows, is the leading speculative security of the Stock Exchange of Seringapatam.

The leading director of the Bangalore and Bednore Railway was Dhan Dhrahu, a Banian of vast wealth, strict probity, and so high religious repute that he might almost have become a Brahmin any day he chose, and many wondered why he adhered to the lower caste. Like Warwick, he preferred to be king-maker rather than king. He created and paid the chief Brahmins, but himself remained in the humble caste of Banians.

Now Dhan Dhrahu was a believer in an advance in prices—what we in New York should call a bull. He was especially a believer in an advance in the stock of the Bangalore and Bednore. So believing, he had been a large buyer of the stock; and finding that, notwithstanding all his purchases and all his vaticinations, it did not advance, but, on the contrary, when he stopped buying, tended downward, he resorted to various devices to make it do that which, according to the best of his judgment and belief, it ought, as a well-mannered stock, to have done of its own accord.

It seems that, on the Stock Exchange of Seringapatam, brokers are in the habit of borrowing stocks of each other, to be returned on demand. The venerable Dhan Dhrahu, as a large holder of Bangalore and Bednore, had lent stock in considerable quantities to the pestilent Parsees, who persisted in selling it short. Once, twice, thrice, he required sharply that this stock should be returned to him, and refused to re-lend it; so creating an unexpected demand for cash stock, and forcing up the price for the moment. But the effect was short-lived. As soon as the immediate demand was supplied, down fell the price. To realize his object new methods were necessary.

There happened to be in Seringapatam a firm of brokers who did business under the name of Banbox & Barriman—young and enterprising people, who had a fair credit and commanded a good capital. To these—who were Banians of his own caste, though by no means of as high standing as he in the Hindoo Church—went Dhan Dhrahu, and told them that the stock of the Bangalore and Bednore Railway was going up so fast that incalculable fortunes were to be made by buying it, and that the man who neglected to secure a quantity of it that day was a traitor to his family. To do them justice, Banbox & Barriman were disposed to take the same view of the matter, and were easy converts. Seeing them well-disposed, the veteran proposed to them to buy 6,000 shares of B. and B.; agreed to take one-fourth of the pur-

chase; and, almost in so many words, guarantied a profit on the whole. Banbox & Barriman at once swallowed the bait.

They bought the 6,000 shares at pretty high prices. But they were not satisfied. Being enterprising men, and having a robust faith in the judgment of the veteran Dhan Dhrahu, they bought 5,000 more for their private pocket.

The veteran had told them that the stock was so scarce—having been bought up by shrewd capitalists at Seringapatam as an investment for their families—that they would find it very difficult indeed, and a matter of many days' work, to obtain so much as 6,000 shares.

Banbox & Barriman were agreeably disappointed in this particular. They not only got the 6,000 shares in a few minutes, but they likewise secured the 5,000 extra shares without the least difficulty.

When their brokers reported the purchase of 11,000 shares in an hour or two, and the price still remained steady, mild misgivings began to creep over the soul of Banbox.

He instituted on the following day a system of espionage, with a view to ascertain whence so much stock had come.

The veteran, according to his own statements, was a large buyer, not a seller. The Seringapatam capitalists, on the same authority, were investing their savings in the property. Who, then, in view of the advance which Dhan Dhrahu pronounced inevitable, had sold the 11,000 shares which Banbox & Barriman had bought?

In the Presidency of Madras, as every traveller in India is aware, a judicious person can obtain much valuable information by cultivating pleasant relations with the bank officers of the country. Our friend Banbox had established such relations, and now began to use them.

They soon informed him that the stock which he had bought was coming through various devious channels from his ally and adviser, Dhan Dhrahu, and that the money he was paying for said stock was going through the same crooked ways to the same Dhan Dhrahu. With this light it took but a few minutes to enable Banbox to realize the state of the case.

He grasped the situation. In ten minutes he had discovered his remedy. Of the 11,000 shares he had bought, 1,700 were yet to be delivered by one house and paid for by him, Banbox. Instantly ascertaining from his cashier his balance in bank, he drew it out in money. When the 1,700 shares came in he paid for them in a beautiful check, with the name of the firm chastely engraved thereon, and a signature affixed which was a marvel of caligraphy. Pocketing the 1,700 shares, he purchased a tooth-brush and a shirt-collar and took the boat for Pondicherry.

About the time he was departing, the venerable Dhan Dhrahu was informed by his brokers that a check for 162,500 rupees, drawn by Banbox & Barriman in payment for 1,700 Bangalore and Bednore, was so much waste paper. A messenger, despatched in haste to the office of Banbox & Barriman, brought back word that these gentlemen had gone to Pondicherry—possibly for some time.

In a fury the veteran appealed to the police, and his agent, a polished diplomatist, took command of the chase. He was not successful in discovering the signers of the check. But he soon met a man who was empowered to represent them.

"What is your pleasure, gentlemen?" said the man.

"We desire to arrest Messrs. B. & B. on a charge of swindling, obtaining stock on false pretenses."

"Gently, gentlemen, gently!" said the man. "Let us quite understand each other. You desire to arrest my principals. Very good. They will offer every facility. And I have no doubt these same efficient policemen will execute a warrant I hold in my hand for the arrest of your principal on a charge—let me see—yes—a charge of swindling—obtaining money on false pretences."

The practised diplomatist who represented the veteran Dhan Dhrahu was staggered.

"What do you mean, sir?" said he.

"Simply this, my dear sir. Our principals have both been victims of a sad mistake. You told us that Bangalore and Bednore was going up, and that if we bought we should make money. We bought; it did n't go up; you prevented it going up, in fact; and so we did n't realize our hopes. It was a mistake of yours. On the other hand, you delivered us 1,700 shares of stock, and we gave you in payment a check which we said was good. You took it; the check was not good; we prevented it being good, in fact; and so you did not realize your hopes. It was a mistake of ours. The circumstances strike me as precisely parallel."

A moment's reflection satisfied the diplomatist that whatever the issue of a lawsuit might be, sound policy dictated a compromise. He asked what the enemy wanted.

"Oh! very little. We bought 11,000 shares, on your advice, at say 96¾ per cent. The present price is 89. We are not covetous. Take our stock off our hands at 96¾, and the check for 162,500 rupees will be paid."

It was simply a question whether it was better to lose 85,000 or 162,500 rupees, and the judicious diplomatist did not hesitate an instant. The bargain was closed on the terms offered.

Private letters from Seringapatam say that this is the first occasion on which the veteran Dhan Dhrahu has ever been fairly outwitted.

FREE FICTION.

We lately took occasion to speak of the Boston Public Library in a manner which showed our high appreciation of its value. No more liberal or sagacious educational foundation exists, to our knowledge, in any other city in the United States, nor any, perhaps, of similar character, which does not equally share the defect we purpose now to remark upon. Borrowing recently a catalogue of the popular department of this library from a young woman to whom it belonged, we found that she had noted for her own reading every book of prose fiction contained in the collection. She had not been at all squeamish, for her signature ranged from "Tristram Shandy" to "Cœlebs in Search of a Wife;" from "The Decamëron" to "Mrs. Opie's Illustrations of Lying." She had marked, even, "The Manikins" of Mr. Cooper, although, being human, it is safe to affirm that she never has read it, and that she never will read it, except under press of a famine of fiction which the liberality of the trustees of the Boston Public Library will not allow us to anticipate. We thought, as our eyes ran down the attractive columns, in which the story-tellers dominated over the sages, of the distresses of our grandmother, trembling at midnight at "The Horrors of Oakendale Abbey," or furtively devouring "Clarissa Harlowe" in a corner. What would she have said if statutes had been enacted, if stately buildings had been erected, if dying men had made testamentary provision, if librarians had been appointed, that she might have more novels than she could read, with the privilege of reading as many as possible, under sanction of the municipal authorities? Such a license, if it had not at once destroyed, would certainly have moderated, her appetite; and it is really a matter of congratulation that in Puritan Boston novels are no longer in the category of prohibited enjoyments. For the most rigid supervision never was effective, and girls were no more to be kept from romance reading than from chalk and charcoal. The supply of trash was endless, and the appetite of Angelina unfailing. The staples of the Minerva Press were monotonously alike, but they never wearied; the loves, the murders, and the apparitions were always relishing. Those who would appreciate the utter worthlessness of this class of books must study the catalogues of the circulating libraries sixty or seventy years ago. It is hard to believe that these forlorn and forgotten volumes, constructed upon one bad pattern, and each the sighing echo of the other, stuffed full of maudlin sentiment and all the frivolities of artificial coquetry, were once in as high fashion as "The Newcomes" are now, were welcomed with a like trembling eagerness, and read with a similar avidity. But how should they escape oblivion when it is sure to overtake and cover up works of genuine merit? Who reads "Zeluco" or "The Man of Feeling" now? or the novels of Robert Bage? of Sophia and Harriet Lee? of William Godwin? of Thomas Holcroft? of Mrs. Brunton? of Lady Morgan? of Lady Blessington? What a noise Maturin made fifty years ago, and where is Maturin now? or Monk Lewis? or Beckford? or Miss Ferriar? There are old-fashioned people who still swear by Sir Walter Scott; but ten readers seek "The Caxtons" for one who calls ever for "The Antiquary;" and "Jane Eyre," a very clever but a very crude book, is exalted above the admirable stories of Maria Edgeworth. We sneer at the romantic nonsense of the last age, but will our children hold us in any higher esteem when they learn that we bought and read twenty editions of Miss Braddon's novels? that Ainsworth and Bulwer and James were eminently popular? that Dickens was esteemed (especially by the ladies) above Thackeray?

The value of lending-libraries, if we may indulge in a truism, depends very much upon the quality of the books which are lent. Reading is unquestionably a refined amusement, but it seems to us that the object of a great free library is not to furnish gratuitous amusement merely. It is hardly worth while, however innocent novel-reading may be, to take it under public patronage, and to furnish it to eager school-girls as bread is furnished by charitable associations to the poor. We have no other statistics to guide us except those which this catalogue affords, but it is a little discouraging to examine its pages and to find upon the very first leaf twenty volumes of history by Rev. Jacob Abbott and eight volumes of history by Rev. J. S. C. Abbott, since these are fictions concerning the immoral influence of which there can be no dispute. We take it for granted, when those who are charged with the purchase of books for this and similar institutions think it necessary to furnish so much of what is absurdly called light literature, that there must be a demand for it; and the librarian's records would show, we suspect, if they were examined, that this demand is as constant as, it appears to us, it must be unhealthy. The leading idea of those who manage these institutions seems to be that any reading is better than no reading at all—an axiom at once false and full of mischief. A knowledge of the alphabet is desirable, but there are books so utterly abominable that it would be better for a young person to remain incapable of distinguishing one letter from another if, through his ignorance alone, he might escape their perusal. Those who affirm that nobody is made the worse by reading must be prepared to maintain the converse, and to show that nobody is made better—a proposition which, if it were once established, would be fatal to all libraries whatsoever. The Boston Public Library has a complete set of the works of Sir Bulwer Lytton. It lends to school-boys and to school-girls such books as "Pelham," "Alice," "Eugene Aram," and "Lucretia." Of the first named it has four different editions to supply the demand; of the second, three; of the third, five; and of the fourth, three. Because these books do not damage those of adult age who can make a shift to read them, it does not follow that they are precisely the pabulum for young and growing natures. The false taste which they must engender is bad enough, but what is it to the bad morality which they inculcate? Compared with Fielding and Smollett they are as absinthe compared with some natural and generous wine. Read at an age when the taste is unformed, when the passions are just developing, when the will is feeble, principles are unfixed, and resistance to temptation is difficult, if they do not utterly spoil the inquisitive minds which are attracted by their glittering mediocrity, it will be because nature is stronger than education, and original vigor more than a match for enfeebling moral influences. Yet these books are furnished at the public expense by the city of Boston to its youth! The library has one edition of the works of Dr. Channing, and three or four different editions of the works of Bulwer. Are we to take it for granted that this provision is made according to the laws of supply and demand?

It will not do to undervalue works of fiction. Perhaps the poorest of them, if they are not absolutely vicious, have their uses; an extremely bad novel may be as entertaining as a good one. The author of the "Elegy in a Country Churchyard" thought nothing would be finer than to be stretched all day upon a sofa reading eternal romances by Crebillon. Charles James Fox was an inveterate novel-reader, and so was Dr. Parr. Chief-Justice Marshall was wont to read such books upon the bench while the young lawyers were making their arguments. "I like Mr. James's stories," we once heard Mr. Thackeray say at a dinner-table, "especially when I am getting up from an illness." But while we can well enough understand the weariness which seeks in such perusal a pastime, a relaxation, or an anodyne, we confess that there is to us something wonderful in the appetite which, leechlike, still cries Give, and in the gluttonous passion for new stories which all Mr. Mudie's library fails to satiate. Granted an intellect only tolerably robust, we do not understand why routine should not weary it; why the ceaseless narrative of one single human passion, not subordinated as in Shakespeare to the facts of life, but dominant and out of all proportion to reality, should not tire; why a succession of almost identical tales, making the name of novel a misnomer, should not drive the consumer to the mathematics of Newton or the philosophy of Kant, to books which charm by their incomprehensibility or, at least, pique the mind to something like muscular exertion. Gin-drinking is a ruinous custom, but gin stimulates; opium-eating is very wrong, but opium gilds the dreams of its votaries and dulls the tooth of pain; there are fifty bad habits which provoke pleasure, mental or physical, but the hunger which nothing but novel-reading will satisfy, which is not palled by gratification, which feeds as keenly upon the thousandth romance as upon the first, can hardly be called a taste, is scarcely respectable enough to be termed an intellectual pleasure, and may be fairly set down as one of those minor manifestations of the second nature which sometimes exhibits itself in taking snuff, sometimes in the retailing of gossip, and sometimes in a morbid affection for cats and canaries.

The acquisition of a private collection of books, however small, is usually creditable to the collector, for it rarely happens, even when his resources are unlimited, that anybody makes a large private collection of novels. The circulating or public library is often, though not always, the resource of those who care to spend little or no money upon these mental pleasures. A young man who is willing to pinch in other expenditures for the sake of being the owner of a few books, generally selects good ones. There are certain standard volumes which he is ashamed to be without, and he buys these not to be once carelessly run through, but that he may again and again read and refer to them. He becomes a master of their contents, familiar with their pages, and attached to their physiognomy; he makes them perhaps more valuable by annotation; and as one cherished book makes necessary another, he indulges in small but well-considered additions to his stock. Such a collector knows better the worth of books than any biblomaniac who ever screamed at a sale or bent over a Nassau Street stall. His little treasury of knowledge represents his self-denial, his disregard of coarser pleasures, his cultivation of purer tastes, and his mental prudence and provision. His shelves, few and narrow, are dearer to him than the widest public alcoves. His books were not brought to his door, they were not thrust upon him by municipal authority, they were not borrowed to be speedily returned, they are his beloved companions, in sickness his consolers, in doubt his assurers, and, as his mentors and helpers, they will be vigilantly cherished until he shall read no more. It was thus that Franklin bought books and kept them. The mention of that venerable name reminds us that he too was the founder of a public library. Whether he would have thought money for supplying the rising generation with unlimited romances a judicious device, we leave those acquainted with his solid character to decide.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXVII.

MACON, Ga., January 12, 1866.

WHILE staying in Atlanta I heard a strange story, which, perhaps, should not be related in a correspondence professing to give only undoubted facts, for in repeating it I give currency to a report which, indeed, seemed to me probable, but which I am not in a position to prove. If, however, the business to which the report refers is not actually in existence, it would be so easy to establish it, and at the same time secrecy would be so necessary for its establishment, that I may be excused if I give publicity to what I heard.

Since August last, my informant stated, a traffic in negroes has been carried on between several points on the Southern coast and the island of Cuba. The negroes are hired as if to work at lumbering in Florida and Georgia, or, in fact, for work of any kind in any place so distant as to furnish a pretext for taking them on board a vessel, and then they are at once run over to Cuba, where purchasers are readily found. The negroes cost little or nothing, and the business is exceedingly remunerative.

A steamer is spoken of which was partly freighted in Augusta, and made the trip only three weeks ago, and it is said that more than one party in Charleston have made very profitable ventures. Their secret having become known, certain other persons were desirous of embarking in the same enterprise, and it was from some of the efforts of these latter to obtain the requisite capital for their purpose that the facts which I give transpired and became known to me.

In my last letter I spoke of the charge which is brought against the Southern people of being hostile to the settlement of Northern business men among them, and gave it as my own conclusion, from what I had seen and heard, that this hostility did exist to such a degree as that the immigrant, unless he was willing to be cut off from all agreeable intercourse with the people among whom he lived, would be compelled to restrict his accustomed freedom of speech and action and defer to the social and political theories and opinions of his neighbors. Since arriving at Macon, I have heard the particulars of two or three cases which appear to show that in some communities even the acceptance of such conditions as these is not enough to disarm the ill-will of the native population.

Major R., of the 187th Ohio Volunteers, and Captain C., of the same regiment, not along ago secured a three years' lease of two plantations situated in Stewart County, and owned by a Mr. W. They intended to cultivate cotton, and, having purchased all the requisite implements and a sufficient number of mules to stock both places, they sent down forty negroes to live

on one of them, while they themselves remained in Macon and awaited the mustering out of their regiment. This event, however, not taking place so soon as was expected, Captain C. went down into the country to perfect his arrangements for planting, and, very much to his surprise, was met by his landlord with a proposal that he and his partner should withdraw from the further prosecution of their enterprise, inasmuch as persisting would bring trouble upon all concerned in it. The neighbors, he was told, had given Mr. W. to understand that no Yankee should be suffered to live in that country; that if he rented land to those two Yankees his tenants should n't live to harvest their crops, and his own house should be burned over his head. Out of consideration, therefore, for him and his property, if not for their own safety, he begged them not to disregard these threats, which were made by men who would carry them out, but to abandon their project. If they came down he would be exposed to constant losses and danger, and if they did not lose their lives, their operations would be interfered with in every conceivable way. He would take all the tools and animals off their hands and buy back the lease, or, at any rate, one year of it. Perhaps at the end of a year the feeling against Northern men would not be so strong. These proposals were agreed to, and the captain and his friend have given up all intention of planting in Georgia, and propose to invest their money in some Northern State. Another gentleman who, during the past summer, administered a military office which brought him into contact with very many people and gave him opportunities for conferring obligations upon all of them, said that when a few months since he left the service and went North, he flattered himself with the idea that he had a great many warm friends in Georgia, and was exceedingly popular throughout the district in which he had been on duty. He decided to return, therefore, and establish himself in business in one of the most flourishing towns in the State. He had an intelligent partner, and both members of the new firm worked hard and paid close attention to business, without, however, reaping any adequate reward for their exertions. By-and-bye he learned, through the detectives employed by the district commander, that there were several persons who entertained the intention of killing him as soon as an opportunity presented itself. He became aware, also, that it was commonly said in the town that he should not sell goods there or grow rich on Southern money. He could see nothing better to do than to sell out his share in the business to his partner, who was a Southerner, and the store is now, he tells me, quite liberally patronized. To the recital of these facts he adds the remark: "This country won't be any place for Yankees or niggers when the troops are mustered out. When the military goes, I 'm going too."

The knowledge that such a state of feeling exists, coupled with the belief that there is no good reason for its existence, gives rise to a corresponding hostility on the part of those who are its objects. The other day I heard several officers talking upon this subject, and one who spoke as follows was applauded by the company: "My heart never was in this war all the time that I was fighting. I never hated a Johnny, you know, and I guess all our fellows felt the same way. But, by Jupiter, I wish now that they 'd leave off singing the 'Bonnie Blue Flag' and damning us poor devils that have to stay down here in their God-forsaken country, and try pitching in again. I want 'em to get up another war, you know, and then I want a cavalry command. Won't I raid through Georgia! There sha' n't be anything left behind me. I 'll destroy every house and barn and plantation. The voice of song shall cease; there won't be anything left to feed the little birds, you know, and they 'll all die, except the buzzards. Every buzzard shall be filled. No; but, confound 'em, I mean if they have another war I 'm going to go for 'em with a will."

The condition of the freedmen in the country around Macon, so far as I could learn from the Sub-Asst. Commissioner of the Bureau, is exceedingly satisfactory. This officer has his headquarters in Macon, and the district over which he presides embraces thirty-four counties. In each county he has three subordinates, who were appointed from among the citizens on the recommendation of the delegates to the Constitutional Convention, and many of the delegates having been willing themselves to accept the government of the freedmen in their own neighborhood, the office was, in many instances, conferred upon them. They receive no salary, but in all cases which are tried before them they are allowed to retain such fees as are customary in justices' courts. The Bureau, I was informed, contrary to the character which it generally bears, is quite a popular institution in the Military District of Columbus.

The negroes are quiet and well-behaved, and conducted themselves admirably during the holidays, not a single complaint having been made against them. The white people were very apprehensive of a rising of the freedmen, and in some places the militia picketed the roads and patrolled the country in all directions. During the last week of 1865 three negroes were killed, and, of course, a great many outrages of less consequence were committed. The murderers of one negro had not been arrested, but those of the other two were caught, and were now awaiting trial before a military commission. The power of the Sub-Asst. Commissioner extends no further than to impose a fine of $150 or a term of three months' imprisonment.

From General Dawson, who is in command of the sub-district, I learned further particulars of the picketing above mentioned. The United States officers in Georgia refuse, I believe, to supply the State militia with arms, call on them for no assistance, and hardly recognize that they exist. In Monroe County, contrary to the proclamation of the provisional governor, the citizens formed not one but two or three companies of volunteers. Then they requested the withdrawal of the federal troops, and the request was complied with, the garrison being withdrawn a fortnight before Christmas. During Christmas week the difficulties between the militiamen and the freedmen began. Negroes were stopped on the roads, which were all patrolled or picketed; some of them were beaten, all were searched and compelled to give an account of themselves, and one was killed. The general has seven men who are charged with the murder under bonds of two thousand dollars each, and the evidence against two of them is so strong that he expects to secure their conviction before the civil court of the county, and, at any rate, intends that they shall be tried there rather than before a military commission. He wishes to establish a precedent for the conviction of a white man for murder by the testimony of negro witnesses. The battalion of militia in Monroe County has been disbanded, and the citizens have been threatened with the establishment among them of a garrison of colored troops.

General Dawson, as well as some of the gentlemen mentioned above as having suffered from the hatred of the Southern men toward their Northern countrymen, unite in saying that the persons who disgrace themselves and the community to which they belong by outrageous acts and words are but a minority of the Southern people, and that the men of wealth and social standing, and, in general, the elderly men, as distinguished from the young men and the women, are well disposed towards the United States Government. He deprecated the complete removal of the United States troops from the country, and thought the process of mustering out had already gone too far.

The negroes, I was told, are very generally entering into contracts with the planters, and it is thought that almost all will have found employers before the 1st of February. All negroes who at that time shall be unemployed and not willing to make contracts, it is the intention of the Commissioner to arrest and treat as vagrants. The demand for labor is greater than the supply, and the Commissioner has frequent calls made upon him for able-bodied men to go to other States and to other parts of Georgia. With these calls, however, he does not comply, being unwilling to drain off all the young and strong men, and leave in his district a disproportionate number of women, children, and aged persons. By a recent order of General Tillson, the compensation for the labor of a full hand is fixed at $12 a month, food, and proper medical attendance. This order creates much dissatisfaction among the planters, as they had previously been hiring laborers for food, medicine, and $10 a month. I believe the soil in this part of Georgia is not very productive, and that a planter thinks he does well if he gets a bale of cotton of five hundred pounds weight from three acres of land.

An Alabama planter with whom I conversed upon the prospective profits of cotton planting, informed me that in his neighborhood a negro on a plantation, properly supplied with mules, was in old times expected to cultivate fifteen acres of cotton land, and would now be expected to take care of ten acres. The planter in this part of Georgia may, therefore, calculate on something like 1,600 lbs. of cotton from each full hand, the money value of which will probably be not less than $400. As corn is worth $1 50 per bushel and bacon is worth $35 per cwt., the food of each laborer who receives his full allowance of 13 bushels of corn and 200 lbs. of meat would cost $89 50. His wages being added to this amount makes the total year's cost of the laborer $233 50, and the employer's profit on his labor in an ordinary year may be set at $166.

COLUMBUS, Ga., Jan. 17.

In the journey by rail from Macon to Columbus there is little to interest one who has previously travelled for any considerable distance in the South. All along the road is the familiar scene of their desolate-looking forest, with now and then a way-station with its dozen or so of loungers and its negro women selling cakes; and now and then a watering tank and a wood-pile, where usually the passengers walk about a little, examine the engine, look back at the long, undulating line of the track, and wonder, perhaps, that such rails have been able to bear the train safely thus far. Inside the cars also the scene is familiar—here and there a uniform, grey or blue; one or two

families, man, wife, and children, who seem to be seeking a new home, or, more likely, returning to an old one which is safe now that the war is done and the husband is out of the army; a few Northerners and many men unmistakably Southern in manner and language.

The conversation, which may be heard by snatches, is on various topics, the two chief being the war and its experiences and the negro. I very seldom hear anything said now about colonization, and the race is less frequently pronounced worthless; but the prospects of making cotton by free labor are often discussed, and one man gives another details of his farming plans for the coming season, and tells of the operations of the Freedmen's Bureau, an institution which commonly is severely denounced, though once in a while a man commends its action in his particular case. I hear President Johnson praised at the expense of the radicals in Congress, and not unfrequently Maximilian is mentioned. I judge it to be the prevailing opinion in this part of the country that the United States should let him alone. "When Kirby Smith broke up, you know," I heard a young man say yesterday, "we met one o' them Juarez colonels and he offered captains' commissions to Tom and me if we 'd go into his regiment. 'Not much,' I told him; 'I 'd been whipped once, and I did n't want to be again.' No, sir; if I was going into that fight I 'd go in on the other side. Did n't tell him that, you know, but that 's what I 'd do."

While riding on this train I noticed, also, one or two illustrations of the fact that the women of the South are outspoken in their dislike of the federal soldiers. Just in front of me were two young ladies, and, as the cars stopped at a little village, we saw two men on crutches. On the platform were also some of the garrison. "It makes my heart ache," murmured one of the ladies, "to see our poor wounded Confederates. And look at those creatures in blue mixing with them!" Not long afterwards these ladies left the cars and their places were occupied by three others of less pleasing appearance, whose voices could be heard even above the noise of the wheels. Two soldiers sat in a seat across the aisle, and were compelled to hear much loud talk about "the miserable Yanks" who had stolen the corn and meat of such a person, or who were the probable destroyers of this or that building by the roadside "when they made one of their brave raids." Officers on duty in this city tell me that some of the women still carefully gather up the folds of their dresses when they approach a man in the federal uniform, and prefer crossing the street to walking under the national flag. Manifestations of the same feeling have fallen under my observation at Liberty, Lynchburg, and Danville, in Virginia; at Raleigh and Salisbury, North Carolina; at Charleston, South Carolina, and at three cities in Georgia. The most amusing instance occurred in Lynchburg. A lady called from an upper window to a little girl on the sidewalk: "Julia, come in this minute, child. That Yankee will rub against you if you stay there." The Yankee referred to was a soldier, a dull-looking fellow, who appeared confounded at this attack upon him. He quickly recovered himself, however, and, turning his face towards the chamber window, addressed the little girl, who was obeying her mother with alacrity: "Yaas, go 'long in, you skinny little thing! Do n't rub against the Yankee. I guess your father tried it on down at Petersburg, and *he* did n't like it, you know."

Columbus is about a hundred miles from Macon, and the journey was made in nine tedious hours. The town is built on flat land, and is a pretty place, with many trees, and like Augusta in the great width of its thoroughfares. These are not in the best order; but that is a matter of small consequence, for each driver has a broad expanse of roadway from which he may choose a path. Cows and pigs wander up and down in them without molestation. One of the pigs I praised as I was standing in a shop on Broad Street. "Yes," said the shopman, who was a small dealer in groceries, and an Irishman, "'t is a fine hog, and ye may be sure it 's a nigger's. One o' them would ha' knocked it on the head if 't was a white man's was runnin' the street like that." Then he went on to lament the changed times and customs. The niggers was above work now and was all for living like gentlemen and ladies. Every one o' them in Columbus had seven or eight other ones living about him and stealing for him. When they was slaves they all had plenty o' money, and eating and drinking to their hearts' content, and now they had nothing, and would n't work to earn. It would be a fine day when the Yankees should be off about their business, and the people left to manage their own niggers themselves. Then they 'd be brought to their senses. When one o' them runs away from his lawful work, then a man 'll just take his pistol in his hand, and get on his horse, and, faith, if the nigger won't come back with that, he 'll be welcome to stay where he 's left. It was nothing but the Yankees made them so much above themselves.

Like the other large towns of Georgia, Columbus wears an appearance of more prosperity than is seen in other Southern cities, and seems to be a busy place, its show of activity being perhaps partly due to the large number of idle people in the streets. The Chattahoochee, a reddish stream of considerable size, whose further shore is in Alabama, runs close by the town, and adds much to its beauty. The weather during my stay has been charmingly mild and soft; many of the trees are green, the flowers are in blossom in the gardens, it is so warm, and under my open windows the children are playing barefooted.

I find that the freedmen and the farmers in this part of Georgia are now busily preparing for the work of the coming season. Since the 1st of January the officers of the Freedmen's Bureau have recorded in their books ninety-nine contracts, the great majority of which were entered into by the plantation negroes with their employers, and each day several new ones are brought in for approval. In the month of December six contracts were put on record. The branch of the Bureau here established has charge of three counties, Chattahoochee, Muscogee, and Talbot, and it is by citizens of this district that nearly all these contracts have been made, although a few of them made in other counties, and a few made by parties living across the river, in Alabama, have, for convenience sake, been recorded at the office in Columbus.

The amount of compensation given the laborer is very variable. I was told that the order issued by General Tillson, fixing the minimum rate of wages at $12 a month for a full hand, had never been enforced here, and, indeed, that it had never been heard of. Most of the negroes, therefore, have been hired for less than that, though I am informed that now $14 per month is offered. By permission I copied from the books some of the contracts which have received approval:

"This contract, entered into on this 26th day of December, between David J. Shipp of the one part, and the freedmen hereinafter named of the other part, witnesseth that the said freedmen contract to remain on the plantation of the said Shipp during the year 1866, and perform such reasonable labor of any kind as he or his agent may require of them; their whole time to be employed by said Shipp, and they to accept for their services such compensation as is hereinafter annexed to their names, in addition to the usual allowance of shelter, food, clothing, and medicine given to field-hands, except that Silas, Maria, and Billy Shipp and Joseph Jones are to pay for their clothing and food furnished by said Shipp out of their hereinafter named compensation.

"Said freedmen are to be obedient, honest, and faithful, and shall remain in the employment of the said Shipp until the expiration of the contract, when they are to receive the full amount of wages due them. But should they prove disobedient, faithless, and dishonest, or leave their employment, they shall be dismissed from service and forfeit whatever wages may be deducted by the proper authority.

"In case of illness requiring the attendance of a physician, the employer will hold himself responsible for the bills, and deduct the amount from the wages of those for whose benefit they may have been made, also making a deduction for the time lost in sickness. The said Shipp binds himself to comply faithfully with his portion of the contract, and to treat his employees with humanity and justice, and protect them in all their rights of person and property so far as is in his power.

"George Bernell, $60; Georgianna, $40; Little Rick Shipp, $50; Dock Shipp, $60; Rick Shipp, $60; Amy Totman, $40; Sally Totman, $40; Tilda Shipp, food and clothing; Silas Shipp, one-third of the produce of twenty acres of land; Maria Shipp, do.; Billy Shipp, do.; Joseph Jones, do. and $40."

Another contract, which I copied, was the following:

"COLUMBUS, Ga., Jan. 2, 1866.

"Contract and agreement entered into between R. A. Martin, of the first part, and Kendle Souther, freedman, for himself and family, of the second part. The second part agrees to labor faithfully for the first part, and to obey all orders given by the same, and to be responsible for all property entrusted to his care; the first part promises to furnish him with a house to live in so long as he may be in his employment, and to pay him $135 and board for them that labors, and sell him provisions at the market price for them that don't work, and nothing more. In witness whereof we have set our hands and signatures.

"R. A. MARTIN,
his
"Approved. "KENDLE ⋈ SOUTHER."
mark

In the majority of the contracts which I examined, the planter binds himself to pay the laborer for one year's work $120 and his board. In the printed forms for contracts which are now used in this office at Columbus, it is provided that "for neglect of duty—or other misdemeanor—or any question of doubt arising, the same to be referred to the nearest officer or agent of the Bureau or justice of the peace."

I found five instances in which negroes had leased land. In one case a third of all the produce was to be given to the owner as rent; in another, one-fifth; in another, where forty acres of land were rented, the lessees were to pay $250 and 48 bushels of meal; in another, one-half of the crops was to be paid, and in this case the negro seems to have been considered a farmer of some skill and character. The agreement reads as follows:

"STATE OF GEORGIA, Muscogee Co.

"An agreement entered into this 7th day of December between D. W. Urquhart, proprietor, on one part, and a freedman, Thornton Allen, on the other part, witnesseth that the said Urquhart covenants and agrees to furnish the said Thornton Allen a house and lands, to wit: The Joe Diamond place, with 140 acres, more or less, of land for cultivation; and, furthermore, to furnish the said Thornton Allen $500 worth of provisions and two mules to assist in cultivating said land. And the said Thornton agrees on his part to well and faithfully cultivate said land, and put not less than 60 acres in cotton, and all the balance in corn and other grain and suitable crops of sweet-potatoes and melons, to put the orchard and vineyard in proper trim and cultivation, and that he, the said Thornton, will faithfully market the products of said orchard, vineyard, melons, and potatoes, and freely and honestly pay over to said Urquhart the one-half of the products of lands so cultivated and the products so marketed, and pay the one-half of the corn and cotton on lands so cultivated into the store of the said Urquhart."

There was one record of an indenture of apprenticeship. A boy of seven years old had been bound out by his mother for fourteen years, the master agreeing "to provide for all his temporal wants and learn him to read and write if he will take it, and at twenty-one give him a suit of clothes."

The officer of the Bureau in Columbus, who is very soon to be mustered out of the service, is decidedly of opinion that a large majority of the planters will be kind and just towards their laborers, and that his successor will have but little difficulty in his dealings with those two classes of persons. He congratulates himself, however, that he is relieved from duty before the militia is allowed to take the place of the United States troops. The withdrawal of the federal troops he considers equivalent to the withdrawal of the Bureau.

ENGLAND.

LONDON, 6th January.

EVERY day diminishes the few that still remain before the opening of the new Parliament, and yet nothing indicates the probability of any vigorous political action on its re-assembling. The Ministry still remains incomplete. For the last three months we have got on "indifferently well" without a President of the Council; and I suppose if we were never to have another again, the world would go on pretty much the same. Such a heresy, however, as this is one which a Whig Premier would be the last to entertain; and, practically, the vacant post is not filled up because the requisite occupant cannot be found. Earl Russell is well aware of the weakness of his cabinet, and wants to get assistance which will strengthen without eclipsing him. Overtures were made to Lord Stanley, though without success, and since this ineffectual attempt to form a coalition between the moderate Whigs and the still more moderate Conservatives, Earl Russell has turned his attention to the advanced Liberals and has formed a sort of quasi-ministerial alliance with Mr. Bright. The truth is, that the men whom the Premier would like to have as his colleagues hang back till he has declared his programme of reform. Many are afraid it will prove too liberal; a few that it will not prove liberal enough. Moreover, the antagonism between the Palmerstonians and anti-Palmerstonians in the present cabinet is already making itself manifest. It is reported that the Premier wished to offer Mr. Stansfeld a post in the Ministry. This gentleman, as you may perhaps remember, was driven out of the late cabinet in consequence of his close connection with Mazzini, and his supposed complicity in some anti-Napoleonic conspiracy instigated by the great Italian agitator. On the offer becoming known, Lord Clarendon declared, it is said, that he should resign his office of Foreign Minister if it was not withdrawn, as the re-appointment of Mr. Stansfeld would throw difficulties in the way of our friendly relations with the French Government, and in consequence Earl Russell had to withdraw the offer. But the incident shows the want of harmony between the members of the Russell-Gladstone administration. This want of harmony will, I have no doubt, become conspicuous if ever a Reform bill is seriously introduced as a cabinet measure. The old Whigs, as a body, are opposed to any extension of the suffrage that is likely to materially alter the distribution of political power; and any measure of reform calculated to satisfy Mr. Bright will most assuredly cause a split in the ministerial ranks.

My own suspicion is that the Ministry have not really made up their minds what they are going to propose; they are waiting to see which way the wind blows—and as yet there is no sign of wind from any quarter of the political sky. Mr. Bright, however, either conceives that Earl Russell has decided on his programme, or else, as I rather incline to think, he assumes that the programme is determined in order to force the hands of the Ministry. For the last few weeks he has "taken the stump" upon reform, and has delivered a series of brilliant orations in favor of a scheme which he intimates has been adopted by the Ministry. This scheme leaves the arrangement of the seats just where it is now, leaves the ballot an open question, and reduces the borough franchise to a five-pound, and the county franchise to a ten-pound, rental. Now, if this proposal should be made law, a million of voters would be added to the million and a half of which our electoral body is now composed. Personally, I should be glad if such a bill could be passed; in the first place, because I think we have no right to exclude anybody from the suffrage; in the second place, because it would give a more democratic character to our system of government. But, putting personal wishes aside, I can see little prospect of any proposal of this kind being really carried through Parliament. The Tories would oppose it energetically; the Whigs would support it languidly, and counteract it privately; and a large section of the genuine Liberals would throw in their influence against it. There is no good in disguising the fact that the reform would alter the whole character of our constituencies. The million of new voters would be taken exclusively from the operative and mechanic class, and thus the election of members would be thrown into the hands of the hitherto unrepresented masses. This is a consummation at which a large section of our English Liberals stand aghast. Even so genuinely liberal a paper as the *Spectator* is never tired of protesting against the peril of swamping the educated classes. John Stuart Mill himself is an advocate of some scheme like Mr. Hare's, by which workingmen should have a certain number of votes, but yet the ruling power should still be retained in the hands which exercise it at present. My own view, that a country should be ruled according to the wishes and interests of the majority, and that, as the working-men form the vast majority of English men, they ought to have the upper hand in government, is one which, I own, finds favor with very few Liberals of the class to which I belong. Under these circumstances, I cannot think that any Reform bill which could add a million of working-men to the constituencies can possibly be carried, except under the pressure of intense popular excitement, and as yet there is no indication of any popular agitation whatever.

It is, I think, to the credit of the nation that—as I stated in a former letter—the excitement created by the Jamaica massacre should have superseded for the time the interest in the question of reform. Though for the moment the agitation has been pacified by the appointment of the commission of enquiry, yet the suspension of outcry is, I think, only a temporary one; and a singularly foolish speech of Mr. Cardwell, declaring that the Government had no intention of inflicting any slur on Governor Eyre's character by an investigation into his conduct, has created a demonstration of feeling in the country which showed that the popular sentiment on this topic cannot safely be trifled with. On Monday the two fellow-commissioners of General Storks—Mr. Russell Gurney, the Recorder of London, and Mr. Maule, the Recorder of Leeds—sailed for Jamaica. Their appointment on the whole, has given satisfaction. They are both men of high character and of considerable reputation for ability and fairness in the discharge of their official duties. Very great difficulty was experienced in getting men to serve on the commission. All men who had expressed, or were known to entertain, opinions on the subject, were considered disqualified from acting as investigators; and to men who took no especial interest in the subject one way or other, a more ungrateful task could hardly be offered than that of conducting a Jamaica enquiry. If they espouse the side either of the planters or the negroes, they will give deadly offence to one of two very powerful interests in England, and will be bitterly abused by their respective organs in the English press. If they side with neither, and try to take an impartial view, they will, unquestionably, be abused by both parties. I am not over-sanguine of the success of the commission. The Government is trying to perform an impossible task—to satisfy the demands of those who call for justice in respect of these Jamaica outrages, and yet to avoid offending the governing classes, who sympathize with Eyre. Between two stools they will, probably, fall to the ground. Meanwhile a legal difficulty has already been suggested. It seems the crown has no power to issue a commission without the consent of the legislature of the island; and, therefore, if the planter parliament should think fit to resent the slight upon their conduct conveyed by the mere appointment of such a commission, it is not clear what the gentlemen sent out will be able to do. However, I am afraid the planters are hardly likely to be so infatuated as to throw open difficulties in the way of the enquiry. My fear is that they will endeavor to gain their cause by apparent frankness. The first principle the commissioners ought to lay down—as a friend of mine who had lived long amidst a subject race said to me the other day—is that pleasant-spoken, courteous gentlemen, who seem the very soul of honor, will lie, on such questions as are under investigation in Jamaica, like any pickpockets; and this is exactly what, from my knowledge of the commissioners, I fear they are not likely to appreciate.

Then, too, I should say that the prevalence of the Rinderpest rendered the season an inauspicious one for the successful introduction of a reform bill.

In the counties, people are too much absorbed in devising means for checking the progress of this murrain to think much about politics. Last week there were nearly eight thousand cases of malady, as against a little over six thousand to the preceding one. As all cattle affected had to be killed, the week's loss to the owners and breeders of stock cannot, at a low average, be reckoned less than a hundred thousand pounds. The country, at last, is really becoming frightened about the pestilence; and, under the influence of panic, the most drastic remedies are being adopted. In Northamptonshire, for instance, regulations have been issued by the county magistrates, absolutely precluding the removal of cattle from one field to another, and forbidding their being even driven to the butchers for immediate slaughter. If other counties follow this example, the sale of beeves and stock will be almost suspended. The butcher will have to go and kill his meat on the farmer's premises; and the consequence will be an enormous increase in the cost of meat, and, in consequence, in its market price. How far these remedies are likely to prove effectual I greatly doubt. London cannot live without meat; and so long as the markets are held, as they must be, in the metropolis, the cattle disease must be propagated by contact. Moreover, according to the theory of which Professor Gamgee is the exponent, the mode in which the infection is conveyed is so subtle as almost to preclude detection. It is seriously alleged that the contagion is carried by foxes from one farm to another, though they themselves are not affected by the disease. And in order to remedy this danger, the suspension of hunting, and even the wholesale destruction of foxes, have actually been proposed in Northamptonshire. The proposition, I am bound to say, met with no encouragement; and to anybody who knows the "shires," the mere fact that such a proposal should have been even mooted there speaks volumes.

Taking things altogether, I should confess that we were approaching a period of trouble and disturbance. With the optimism which has become so much an article of faith in our papers, we are told that we are entering once more on an era of domestic prosperity and foreign peace. I hope it may be so, but I cannot see the grounds for the belief. One small circumstance has already happened, which to me appears suggestive of trouble ahead. The French Government has given notice of its determination to terminate the extradition treaty with England, on the ground that it does not work. Of course we are assured that this means nothing, and that the idea of demanding greater concessions with respect to the rendition of political fugitives has never entered the head of the Emperor. But Napoleon III. seldom does anything without motive. There is something curious in the revival of the old complaint that the license of our English laws is a danger to the Continent. We shall certainly not alter our laws to suit French ideas. But if our refusal should lead to unsatisfactory relations between France and England, the dream of coming prosperity will be rudely dispelled.

PARIS GOSSIP.

PARIS, Jan. 5, 1866.

THE New Year's display of this quick-witted city usually reflects the leading interest of the preceding twelvemonth. That which followed the close of the Crimean campaign was marked by the imitation of Russian forms and styles and the prevalence of unpronounceable Russian names. The war in China overwhelmed us with "Chinoiseries," from squat mandarins to the elaborate imitation of Chinese patterns in every imaginable object. The Italian campaign sent us back to the days of ancient Rome and yet more ancient Etruria. This year not having brought us any special nationality for the inspiration of Parisian ingenuity, the fancy of each maker has had free sway, and every shop-window has rejoiced in its special group of elegant novelties. And what a show we have had! From the dazzling display of Samper, whose windows contained more than a million sterling in pearls, diamonds, rubies, and their sister sparklers, down to the humblest sausage shops (in some of which that favorite Parisian delicacy, truffled pigs-feet, has just been seized by the police at the instance of indignant customers who found the slices of the precious tubers to be represented by bits of black merino), the enumeration of all the fine things on which Paris has been feasting its eyes for a fortnight would read like the catalogue of an industrial exhibition. Suffice it to say that dolls have reached, this year, a pitch of perfection, in the way of speaking and moving, unknown before; that the various mechanical toys are more wonderful than ever; that among them the cheapest are some thousands of birds cut out of white wood and representing the casoar, which is being acclimatized in this country, whose head and tail keep up a constant oscillation, to the immense delight of youthful purchasers; while one of the most seasonable is a sturdy workman laying about him in all directions with a pick-axe, and christened "The Municipal Demolisher;" that Siraudin's four new comfits, the "Ambrosial," the "Ephemeral," the "To be Alone," and the "Spirits of the Wood," surpass everything yet achieved by the confectionery art; and that the array of boxes and baskets, running up in price as high as a thousand francs, are miracles in their way. A really curious trifle among the mass of cheap wonders sold by the humblest class of dealers—those who display their wares on small tables or a square bit of oil-cloth laid on the ground between the booths—is the decanter which, though holding water when let alone, opens out, when the neck is pulled upwards, into a long spiral coil of glass wire, that settles again, of its own accord, into the shape and nature of a decanter when your hold on the neck is loosed. The pale, yellow-haired youth who sells these queer specimens of the craft of the glass-worker, who has been discoursing on the wonders of his wares incessantly from early morning till midnight for ten days past, and is no doubt expatiating thereon with unflagging eloquence as I write, is always surrounded by a crowd, and is probably making a good thing of his persistent vociferation.

The Emperor is not known to have had his usual evening stroll with the Empress, *incog.*, along the boulevards, during the height of the New Year excitement. But her active and fun-loving Majesty, with one or two of her favorite ladies, all very plainly dressed, and wearing thick veils, took a walk, a few evenings ago, along the greater part of the animated thoroughfare, stopping the oftenest at the booths, from which she bought largely, especially from those whose owners looked the poorest, to the amazement of the dealers, leaving gold where *sous* were looked for, sometimes stuffing her purchases into her pockets, but more often leaving them, with a request that they would keep them "until she came back."

The bands of the regiments garrisoned in the capital have ushered in the new year with their usual magnificent performances in the court of the Tuileries, and been rendered happy by the bestowal of the usual Imperial gratuities; the usual receptions of the dignitaries of church and state, domestic and foreign, have taken place at the Tuileries, to the satisfaction, let us hope, of those who figured in the brilliant ceremonial, as well as to the dense mass of spectators gathered outside the palace to enjoy the spectacle of all the grand carriages as they rolled by, with the many-colored glories of liveries without and of uniforms within. It may interest distant readers to know that His Majesty, who was unusually smiling and chatty in his reception of the diplomatic body, talked longer and more graciously with the representatives of Austria (Prince Metternich) and of the United States (Mr. Bigelow) than with any of the others. The reception of the wives of high officials, formerly held on the second day of the new year by the Empress, was left off last year, because it often happened that the ladies of the prefects, many of whom would come to court on these occasions for the first time, would contrive, under the combined influence of nervousness and court-trains, to get their feet entangled in the latter, and finish their elaborate curtsies to the Empress by a sudden descent upon the floor.

The distributions of bread, fûel, and money which are made on New Year's Day among the poor of Paris have been as liberal as usual. The Imperial family, the leading capitalists, and others contribute largely for this purpose, the distributions being made, according to the decisions of the examining officers, at the "beneficence offices" of the various wards and at the innumerable convents, which would fain secure the monopoly of these annual benefactions.

Victor Hugo—who, like two or three others of the principal actors in the scenes fifteen years ago, prefers occupying the pedestal of voluntary exile to returning to obscurity in France—has also been celebrating Christmas by giving, as he has done for some years past, a dinner, warm clothes, and toys to the children of the corner of Guernsey in which he has taken up his abode. A complimentary notice of this little fête having been published in some of the English journals, the poet has come out with a modest disclaimer of the praise thus bestowed on his charitable work, most amusingly characteristic of the writer, who speaks of "his plan" of giving flannel and dolls to the children of the poor at Christmas as a novelty that "has been most successfully adopted in many parts of England and America," but declares that it is not absolutely original on his part; "the first idea of it not being mine, but the great and noble example of Jesus Christ," whose command, "Suffer little children to come unto me," M. Hugo considers himself to have thus carried out. He expatiates on the moral and physical benefit the children are found to have derived from this annual treat, and rises to lofty eloquence in passing from the Christmas-tree to the tree of liberty, which, he says, "is yet to be planted by enslaved humanity." According to the not very amiable reminiscences of the Parisians, the poet's head must have undergone, of late, a rather decided development of the bump of philoprogenitiveness, as his relations with his own children were not considered in his younger days to be characterized by indulgence.

The Bavarians are still quarrelling about the recent expulsion of Dr.

Richard Wagner from their little kingdom. It appears that the young King was brought up by his sire and predecessor in the style of what the Parisians would term "Victor Hugo's earlier manner." He was kept in total retirement, never allowed to see or hear anything of interest, his education neglected and deprived of all suitable companionship and amusement. Called suddenly to the throne, invested with a freedom as entire as had been the restraint of his former life, it is not surprising that the young King should have committed among other mistakes in the choice of his surroundings that of mistaking Dr. Wagner for an artist, and his hideous cacophonies for "the music of the future." As Dr. Wagner has the reputation of being an innovator in other matters besides music, and is abused by the clericals as a republican, socialist, atheist, and so forth, the great intimacy which had speedily sprung up between him and the young King provoked the clamors of the court and the priestly party to a pitch that at length alarmed the new votary of the "Tannhäuser," and induced him to send its author out of Bavaria. Public opinion, in that country, is excited in regard to an affair which looks, to outsiders, very much like a "tempest in a teapot;" but the Bavarian people are a good deal in advance of their Government, and, though not caring a straw about Dr. Wagner and his musical vagaries *per se*, they are indignant at the ignominious treatment which they regard as aimed rather at his anti-absolutist tendencies in governmental matters than at his heresies in the field of art.

Our late visitor, the young King of Portugal, a lover of music of a very different calibre from his brother of Bavaria, having been greatly delighted with his impromptu visit to Rossini, when he passed through Paris on his way to Italy, sent word to the maestro before leaving, last week, that he was coming to see him in the course of the morning. Rossini, on receiving this message, sent off in haste for Verdi, Auber, and a few others of the most illustrious composers and performers now in Paris, who were all assembled in Rossini's hospitable drawing-room when the young King arrived, attended by the Portuguese minister, Viscount Paiva. His Majesty, delighted at meeting so many illustrious representatives of his favorite art, soon seated himself at the piano, playing various *morceaux* from the works of the composers present, airs, duets, and trios being thus executed with the greatest spirit, and all joining in at the choruses, to the immense satisfaction of all present.

The little diplomatic difficulty which occurred at the wedding of Princess Alexandrine of Prussia, when, in consequence of there having been no seats reserved for them at the royal table, the French and English ministers, with their ladies and the members of their respective legations, left the palace, on the conclusion of the ceremony in the Royal Chapel, thus missing the banquet, has had an amusing *finale* in the shape of a communication addressed by the grand chamberlain to the chief of police, and informing that functionary that "certain ill-advised persons," as the chamberlain mildly puts it, "have stolen various pieces of plate from the royal wedding-table—among others two silver dishes, ten large spoons and five forks of the same metal, and one dozen of plated spoons and forks, which were doubtless supposed to be of silver!" STELLA.

Correspondence.

WIT AND HUMOR.

TO THE EDITOR OF THE NATION:

Your contributor in No. 29 came to the conclusion that wit and humor are only different names for the same thing. It is, indeed, often difficult to distinguish the one from the other, as in the prismatic spectrum we cannot fix the precise spot where one color begins and the other ends; but most of us know green from yellow, and it seems to me that, when we use the words wit and humor, we feel a difference that really exists.

Leaving aside any psychological examination of this peculiar and pleasant form of mental action, I think we may arrange a scale after the manner of the prismatic, at the top of which shall stand wit, humor next, and so on downward to burlesque and buffoonery. They all spring from the same source, and each one passes into the next below it by a gradation as imperceptible as the dividing line of the colors in the spectrum—but, as I said before, it is easy to see that yellow is not green.

When wit and humor come nearest together, a difference suggests itself at once. Wit is condensed, crystallized, polished—sharpened to an edge and to a point. No one ever called an epigram humorous. If wit and humor are made of the same stuff, so are a diamond and a lump of coal. Wit flashes and sparkles like the diamond, and, like it, lasts a very long time.

Then, wit is always more in earnest than humor. I know no better definition of wit than Addison's: "A truth in the understanding is, as it were, reflected by the imagination"—reflected and photographed. There must always be a truth, or what passes for one. Wit explains, illustrates, and drives this idea home and clinches it—represents it to the judgment in so strong a light that it is fixed for ever. Wit without ideas is like a vine without a trellis to grow upon; it lies upon the ground, and bears no fruit worth the gathering, only jests, quips, and verbal jingles.

Wit, then, must be like McClellan's theory of a campaign: short, sharp, and decisive; and it must have a genuine meaning in it. Brevity is not the soul of wit, in spite of the proverb. Brevity is its body, its soul is good sense.

Under the stimulus of a grand or solemn subject wit may rise into the region of metaphor and poetical imagery. Addison's famous comparison of the soul aspiring to divine perfection to one of the asymptotes—"a line that may draw nearer to another to all eternity without the possibility of touching it"—is genuine wit of the highest class; and so is Coleridge's saying, that human experience is "like the stern-lights of a ship at sea, which illumine only the path we have passed over."

But humor deals with everyday life. It contrasts small things with greater. It is a good-natured comparison of the weaknesses of human nature with a higher ideal—a kindly *reductio ad absurdum* of the trivialities of society. And the reason why women so seldom show a sense of humor is that they see nothing trivial in the doings and sayings of society. They believe in the importance of all that goes on in the circle about them.

The humorist writes as a superior being, although full of the best of feeling towards his inferiors; when we read and enjoy his descriptions, we unconsciously assume the same position. But humor must always be good humor, or it turns sour and passes over into satire. Hence, according to my theory, the range of humor is limited, but that of wit knows no bounds.

May I give a few examples of humor, as I understand it, which occur to me at this moment? Washington Irving on his first visit to France writes home: "I took Paris by the tail." Charles Lamb meets a newly married lady "who marvelled that an old bachelor like him should assume to know anything about the propagation of oysters." Addison, in a sketch of the fashionable *décolletées* young ladies of his time, candidates for matrimony, says: "Many a man has been hindered from laying out his money on a show, by seeing the principal figures of it hung out before the door"—and has been "so attentive to those objects he could see for nothing that he took no notice of the master of the show, who was continually crying out: 'Pray, gentlemen, walk in!'" The whole paper, by the way, is not at all out of date. And Goldsmith, in an essay on critics: "Another has written a book himself, and being condemned for a dunce, he turns a sort of king's evidence in criticism, and now becomes the terror of every offender." This I call humor. The following I should call witty—Voltaire's hint to writers: "The adjective is often the enemy of the substantive even when they agree in gender, number, and case." Pope's: "Some solitary wretches seem to have left the rest of mankind, only as Eve left Adam, to meet the devil in private." Quintilian's advice how to deal with short-witted people: "A narrow-necked bottle must be humored; pour gently, or you spill instead of fill." Coleridge's comparison of language, as ordinary men use it, to a barrel organ, "that supplies at once both instrument and tune." Mme. de Staël's criticism on the ontological systems of her German friends, "that they had all the darkness which preceded the creation without the light that followed it." The Bishop of St. David's suggestion that the many insignificant names signed to a certain petition were like zeros preceded by a decimal point, "however far the series may be prolonged, it can never rise to the value of a single unit."

I do not offer the foregoing as the choicest specimens of either class, but I think they will serve my purpose. No one will call Addison's "show" witty, or the Bishop of St. David's hit humorous. One word on puns before I end. This despised species of pleasantry deserves all the contempt it has received when it consists in a mere verbal jingle, and offers only sound to the ear that is expecting sense. There is no class of harmless men more insupportable than the parrots without feathers who wish their hearers to consider the repetition of a sound a joke. But let a pun have a meaning to back it, and it may be genuine wit; often more effective on account of the sound; as rhyme adds to the effect of verse. What is Dr. Channing's famous saying, that a man is not to be judged by the rightness of his doctrine, but by its uprightness, but a kind of pun? Is not Burke's, "Majesty stripped of its externals—a jest," witty? And this old conundrum, which Fenians may relish: What makes treason reason in Ireland? The absent *t*. Is not that good wit? Or Jerrold's definition of dogmatism, Puppyism come to maturity? or Lowell's favorite conundrum: Why is a

ship called she? Because the rigging is worth more than the hull. And to descend lower in the scale, there is wit in the *Saturday Review* when it says an election bribe is the modern votive offering, and in Blackwood's Piccadilly when he calls a fashionable ball in London a "daughtercultural show."

X.

Literature.

LITERARY NOTES.

THE list of book announcements just issued by Messrs. Ticknor & Fields is almost enough to redeem the whole publishing trade from the charge of inactivity. It comprises nearly twenty different works, all to appear during the present season. Among them are: "The Biglow Papers, Second Series," by James Russell Lowell; "Snow-bound, a Winter Idyl," by John G. Whittier; an edition of Mr. Swinburne's first work, "The Queen Mother, and Rosamond;" "Drift, a Sea-shore Idyl, and other Poems," by the late George Arnold, edited by William Winter; "Lucy Ailin," by J. T. Trowbridge, author of "Neighbor Jackwood;" "St. Martin's Summer," by Anne H. M. Brewster, author of "Compensation," etc.; "Honor May," a novel; "Geological Sketches," by Louis Agassiz; "The Masquerade, and other Poems," by John G. Saxe; "Asphodel, a Romance;" "The South since the War," by Sidney Andrews ("Dixon" of the Boston *Advertiser*); "Spare Hours, Second Series," by Dr. John Brown, author of "Rab and his Friends;" "Royal Truths," by Henry Ward Beecher; "The Life of James Gates Percival," by Julius H. Ward; "Poems," by Florence Percy; and "The Flowers of Liberty," edited and illustrated by Julia A. M. Furbish—"a unique volume containing forty chromo-lithographic illustrations of Union emblems, accompanied by a choice collection of poems, original and selected, from leading American poets," to be sold exclusively by subscription. Messrs. Ticknor & Fields have always been remarkable among publishers for the encouragement they have afforded to young and comparatively unknown authors; and it is but a well deserved return for their enterprise, that the productions of some of the most valued writers of the day are included in their list of publications. A large portion of the above announcement, it will be seen, is composed of works of this character by writers yet "unknown to fame," whose books may be expected with interest, as their acceptance by the firm that issues them is in some measure a guarantee for their merit.

—The passion for establishing new magazines seems to have reached this side of the water from England, where it has prevailed extensively for some time. In addition to several new weekly periodicals, we have now the announcement of a fortnightly magazine, "Town and Country," devoted to American literature. The enterprise is undertaken by Messrs. Bunce & Huntington, who promise that its outward shape will be a large octavo of eighty pages, printed on fine paper in clear type, and that it will be the aim of its intellectual portion "to portray and illustrate all the varied phases of town and country life; to delineate, under the forms of fiction or essay, the labors, the festivities, the humors, the pathos, the refinement, and the tragedy of life in town; accompanied with pictures of the sports, the employments, the adventures, the pleasures of the woods and the waters, the firesides, and the comedy of life in the country." This sufficiently extensive programme will be accomplished solely by original contents, consisting of contributions from the foremost names in American literature. Each number will contain illustrations, principally from drawings by our best known painters—the fresh, vigorous, and truthful designs of the new schools. "Town and Country" is to see the light in April next, when we doubt not that the public will be ready to respond to the enterprise of the publishers.

—Messrs. Hurd & Houghton's professional activity does not appear to be retarded by removal of their establishment from the noisy region of Broadway to the comparative quiet of Broome Street; on the contrary, being less occupied with general miscellaneous business, more may be expected of them in the publishing department, and as an earnest of this they have already issued announcements of several new books intended to appear during the spring season. Among them we notice "Our Mutual Friend," by Dickens, Household Edition, completing the series of his works, in four volumes, with illustrations on steel from designs by Darley; a new and complete edition of the "Works of the Hon. J. P. Kennedy," comprising "Horse-Shoe Robinson," "Swallow Barn," "Rob of the Bowl," "Quodlibet," and "Life of Wirt," in five volumes crown octavo; "Pictures of Country Life," by Alice Cary; "The Authorship of Shakespeare," by Judge Holmes of the Supreme Court of Missouri; a new novel by Bayard Taylor; "Explorations toward the North Pole in the Years 1860-61," by Isaac L. Hayes, M.D., commander of the expedition, with illustrations designed by Church, De Haas, Darley, and others, in one volume octavo, uniform with "Dr. Kane's Arctic Expedition," etc.; "Poems by Thomas Hood," People's Edition; a reprint of the late English edition of Douglas Jerrold's "Mrs. Caudle's Curtain Lectures," illustrated by Charles Keene; and "Out of Town," by Barry Gray, author of "Matrimonial Infelicities," illustrated by Bierstadt, Gifford, Beard, and other artists.

—A new feature is to be noticed in the publication of American local histories—the appropriation of a sum of money by a town for the preparation and publication of the record of its past history. Prof. Fowler, well known for his work on the English language published by Messrs. Harpers, "Memorial of the Chauncey Family," and other scholarly works, is a resident of the town of Durham, Connecticut, and has for some time been engaged in researches among the papers of his own and other families for historical purposes connected with the settlement and early progress of the State. With the intelligence characteristic of New England, his fellow-townsmen have resolved that a work interesting to all should be brought out under the public auspices, and have voted an appropriation to provide for the appearance of Prof. Fowler's book in a style worthy of the subject. The printing is now going on by the Hartford Publishing Company, by whom the work will be issued, at the expense of the town. Durham is one of the thoroughly rural towns of Connecticut, in Middlesex County. Its origin is derived from New Haven, whence it was settled in 1698. Prof. Fowler has just delivered an address before the Colonists' Society of New Haven on the same subject, which will also be printed.

—After a long silence, Mr. George Catlin, the Indian traveller and artist, is heard from by the publication of a prospectus of an intended work meant to embrace the whole results of his many years' wanderings and residences among the Indian tribes of North America. He feels a natural pride in the perpetuation of these hard-earned illustrations, the fruit of the exertions of the best years of his life, obtained under peculiarly favorable circumstances, and now, from the rapid changes in the circumstances of the country, impossible ever to be repeated. He proposes to embody these unique traits of a vanishing people, preserved by his pencil and gathered from an intercourse with sixty-two different tribes, speaking distinct languages, in a work entitled "Souvenirs of the North American Indians in the Middle of the Nineteenth Century: a numerous and noble race of human beings fast passing to oblivion and leaving no monument of their own behind them. The result of eight years' travel and residence amongst the wildest and most interesting tribes of North America. By George Catlin, of Wilkesbarre, Valley of Wyoming, State of Pennsylvania, United States." If sufficient encouragement is given, the work will be brought out in three volumes, elephant folio, containing several hundred plates, none of which will represent less than three figures.

—An important landmark in the progress of Oriental civilization and Christianization has been placed by the appearance of "The Koran of Mohammed" in a Turkish version, forming two volumes octavo. It is the first authorized translation of "The Koran" out of the original Arabic ever made in the East. It has been undertaken and completed by command of the Sultan, who wishes every educated Turk to read the sacred book of his religion in his own language. The strict Mohammedans looked upon the proceeding as little less than impious, and remonstrated vigorously against the proceeding, but without avail. The only reply they could elicit from the authorities was "that the Christians were placing translations of their sacred books into Turkish in the hands of the Turks, and it was necessary, in defence of the Moslem faith, to counteract their teachings by enabling the faithful to fortify themselves against Christianity by reading 'The Koran' in their own tongue." This is a recognition of the efforts of our missionaries so decisive, because unconsciously and unwillingly given, that they may well be proud of, and it will no doubt stimulate them to further exertions. An account, by President Woolsey, of the Oriental version of the Scriptures now in process of publication by the American Bible Society, was one of the papers read at the semi-annual meeting in October last of the American Oriental Society at New Haven. It had a special reference to the great undertaking of stereotyping the new and most carefully revised Arabic Bible, translated by Drs. Smith and Van Dyck, now in progress at New York.

—One of the most enjoyable books printed for a long time is the new series of "Curiosities of Natural History," by Frank Buckland, just published in two volumes, with illustrations, by Mr. Bentley. Mr. Buckland is surgeon of the 2d Regiment of Life Guards, and makes it a practice to learn all he can wherever he goes, and to talk to every one he meets, especially to aged people. An old village gossip gives him the greatest delight, and his book abounds in curious stories respecting nature and her works gathered

from oral sources of information, corrected by the scientific knowledge of the writer. He goes—in principle—to see all the shows, gets intimate with the dwarfs, bearded ladies, fat boys, spotted children, etc., gives dinner parties to the giants, measures them at his leisure, prescribes as an amateur medical man for the animals in the Zoological Gardens, dissects them when dead, and has something interesting to tell about them all. *Apropos* to osseous relics of various kinds, he relates the true history and fate of the skull of Ben Jonson—respecting which there have been some newspaper paragraphs of late. The father of the author, Dr. Buckland, was Dean of Westminster at the time the grave of the poet was exposed by the preparations for the interment in the Abbey of Sir Robert Wilson, and he had, consequently, every facility for examination. His account is well calculated to show the uncertainty attending such relics and the folly of attaching any considerable value to them, as it shows that on four separate occasions, by himself and an official of the abbey, unknown to each other, the skull in question was removed on purpose to preserve it from depredation, until its identity was quite lost and no one could tell which it really was. The most probable skull still had remains of red hair attached to it. A curious confirmation of a popular tradition was given by the fact that the remains of the dramatist were found to have been interred upright, instead of the usual recumbent position. All who wish to learn about talking fish, happy families, mermaids, how to train "industrious fleas" and breed salmon, should consult the "Curiosities of Natural History," with a certainty of getting satisfaction on these and a hundred other kindred topics.

—A novelty in catalogues has just been brought out, relating to the public library of the University of Cambridge, being a separate catalogue of the "Printed Books containing MSS. notes and adversaria preserved in the University Library, Cambridge," by Messrs. H. R. Luard & Churchill Babington. Books so often derive additional value from preserving traces of the studies and tastes of the eminent men through whose hands they have passed, that the idea of giving an account of them by themselves, so as to save them from being lost in the general collection, is a praiseworthy one, that might be imitated with success in other quarters rich in literary remains. The library in question has for the last three centuries been the general receptacle for the books of many of the greatest scholars of the time, particularly in classical and Oriental literature, from the days of the Reformation downwards. The books particularized contain the annotations of Dr. Edward Castell, Bentley, Dr. John Taylor, the editor of "Demosthenes," Richard Porson, Elmsley, Godfrey Hermann, the German critic, and others. One of the most careful annotators of his books was the famous antiquary, Francis Druce, whose rare and curious library was bequeathed as an addition to the stores of the Bodleian at Oxford. Almost every book in the collection contains its literary history, curious notes, etc., relating to the subject and its author, by the former possessor, whose long life was devoted to such researches, though he never published any works except his "Illustrations to Shakespeare" and treatise on Holbein's "Dance of Death." It has been proposed to publish a selection from these MS. collections. They would make one of the most curious books of literary "ana" ever produced.

—It is remarkable how the general taste for investigations proves that the existing stock of what used to be considered the heaviest and most unsalable books in the world is insufficient to meet the requirements of students, rendering new editions imperative. No less than six reprints of the immense "Jewish Talmud" are now being published in Germany. Two editions of the still more voluminous "Acta Sanctorum, or Bollandist Collection of the Lives of the Saints," the great treasure-house of mediæval history, are also in progress, and every day brings notice of other undertakings of the kind.

—A splendid work on dogs will shortly be issued in London by Mr. Hardwicke, the natural history publisher. The author is the well-known naturalist, J. R. Jesse, Esq. It will be entitled "Researches into the History of the British Dog," and contains a vast amount of curious and interesting matter from old records, charters, and historical documents, hitherto unpublished, forming two volumes octavo, illustrated by about fifty spirited etchings by the author.

—By what we cannot but consider a mistake in judgment, Gustave Doré has been persuaded to undertake the illustration of Tennyson's "Idyls of the King." We say persuaded, because it is put forth officially that M. Doré is not sufficiently acquainted with the English language to read the poem in the original, and we cannot conceive that any artist would by preference employ his pencil in the illustration of a work whose purport he can but dimly understand through the medium of an imperfect version, while all the finer shades of poetical expression and subtle meaning, instinct with the life that should inspire his hand, must be entirely lost to him. There is one work fortunately existing in both an English and French original which M. Doré seems born to illustrate, and which it is surprising has not attracted his attention. We refer to "Vathek," by Beckford. The supernatural splendor and gloom of that unique romance, with its cynical tone of comment on human life, would find apt expression in the genius of the artist, who is in every fibre a Frenchman of the Voltaire school, if it is allowable to draw such a parallel between literature and art. The success of the Bible and Dante's "Inferno" is causing a transference of all Doré's works to editions with English text. The last that has appeared is his "Baron Munchausen's Adventures," from electrotypes of the original cuts, published in a handsome imperial quarto volume—the first time most unquestionably that the Baron has ever appeared in this aristocratic form, and an honor due solely to the artist.

—Dr. Julius Petzhold, of Dresden, well known as one of the highest living authorities on all that relates to books and literary history, has just published an important book, whose circulation will, however, be more limited than it should be, as it is written in German. It is called "Bibliographia Bibliographica: a Critical List of the literature belonging to the whole range of Bibliography, systematically arranged, with Alphabetical Indices." The work is founded in every instance on a personal examination of the books enumerated and characterized. It includes not only reference works, but also the bibliographies appended to other books, as transactions, memoirs, etc. The want of such a guide has been long felt and recognized. A translation has been proposed by an American scholar, who, we hope, will be encouraged to persevere in the attempt.

—A new tale of individual adventure and suffering, equal in vivid attraction to the most glowing pages of the romance writers, and with the advantage of being a record of undeniable facts, is one of the novelties of the present publishing season in London. The book is announced by Messrs. Lockwood & Co. as "The Modern (and True) Robinson Crusoe," "castaway on the Auckland Islands, a narrative of the wreck of the *Grafton*, and of the escape of the crew after twenty months' suffering, from the private journal of Capt. Thomas Musgrave, together with some account of the Auckland Islands; also, an account of the sea-lion and its habits. Originally written in seal's blood, as were most of Capt. Musgrave's journals. Edited by John J. Shillinglaw, F.R.G.S."

PERRY'S POLITICAL ECONOMY.*

The study of political economy is at so low an ebb in the United States that any honest man who sits down to write about it renders a service to the public. Let him acquit himself of his task ever so poorly, the mere discussion of the theories of the science cannot but do good. There is probably no branch of human knowledge with which most of us fancy we are so familiar, and there is probably none about which the mass of us are so ill-informed. The country is full of practical men, men of shrewdness and sagacity, who have achieved, or are achieving, remarkable success in every walk of trade, commerce, and manufacture. They have every operation of business at their fingers' ends. They, therefore, naturally enough find it hard to believe that scholars, philosophers, and professors can have anything to tell them that they do not already know about such matters as exchange, production, profits, wages, interest, rents, and taxation. The idea of there being anything too recondite for their "common sense" about processes which they are every day performing, and have been performing ever since their boyhood, with an ease that has made them almost mechanical, seems ridiculous. And yet, as a matter of fact, the most outrageous nonsense on these subjects that has ever appeared in print—the wildest schemes that ever have been propounded—have emanated from "practical business men;" while the whole science of political economy, so far as it can be called a science—for it must not be forgotten that its claims to that appellation are disputed—has really been built up by men of the closet. In every country in which it has been successfully cultivated, most of the contributions to it of any value have been made by writers who were not of the business world, but surveyed its operations from a distance; men for whose opinions on "business matters" few merchants or manufacturers would have given five cents. There are several ways of accounting for this, some of them obvious enough, such as the blunting effect which constant contact with details is apt to have upon the generalizing faculty, and the indisposition, if not inaptitude, of most business men for protracted investigation into abstract questions, and the strong and clouding influence on the judgment which close attention to the best manner of realizing imme-

* "Elements of Political Economy. By Arthur Latham Perry, Professor of History and Political Economy in Williams College." New York: Charles Scribner. 1866.

diate profits is apt to have with regard to all calculations touching remote results.

In this country the general and extraordinary prosperity has spread a sort of poetic haze over the whole machinery of society, and made all enquiry into the laws of its working seem a kind of idle speculation. There is, probably, no state in the world in which so large a proportion of the population are engaged in working out the theorems of the science, and yet we have in eighty years produced only one author, Mr. Carey, who has made any important contributions to it, and only one or two attempts have been made to "popularize" it. Now that men of intelligence at the North are released from the really ridiculous task of proving that slavery is not a divine institution, we may fairly look, however, for a more vigorous discussion of politico-economical questions than has ever before been bestowed on them. No such field for the examination of them was ever before offered to the student as this country affords, for in none are the laws of human nature, on which the science is based, left so free in their working; and the immense complication in our financial system wrought by the war will, doubtless, prove a constant stimulus to enquiry.

For all these reasons we should have cordially welcomed Professor Perry's book even if it had had less merit than it really possesses. It is in its main features rather what is called a "manual" for popular use than a treatise. He presents in a clear and concise shape the conclusions of American and foreign economists, wherever they agree on all the leading questions of the science, and, where they disagree, states the points of difference neatly, and pronounces his own judgment with almost an excess of modesty. He has adopted, and largely illustrated, M. Bastiat's definition of value, as "the relation between two services exchanged." In discussing exchange, he lays down the doctrines of free trade in the broadest manner. The chapters on labor and capital are amongst the best examples of lucid, popular statements on these subjects we have met with, and we cordially recommend them to the perusal of the advocates of the eight-hour movement. He adopts, with strong and well-deserved eulogy, Mr. Carey's law of the distribution of products between laborers and capitalists; but Mr. Perry shirks the discussion of the law of population in a way that shows that the man of science is not, after all, always uppermost in him. He says:

"The law of population and of human fecundity is just that with which God saw best to endow the race; that experience has shown that it is not too strong for the purpose for which it was given; and that the same law of population which produces laborers produces capitalists as well; and that the restraints on population which political economists have recommended are as likely to keep capitalists out of the world as laborers, which would be a disadvantage to the latter" (p. 126).

Now, the only restraints on population which political economists, except Aristotle, have recommended, are the refusal of permission to marry or cohabit to paupers supported by the public, and the prohibition of marriage in the case of other young persons until they can prove the possession of property sufficient to support and educate a family. Both of these restraints have, wherever put in force, worked tolerably well. The right of paupers to support is undoubted; but their right while in this condition to produce other paupers is incapable of proof, and society is bound in its own interest and that of possible children to deny it. Whether it is best for the state to make enquiries as to the ability of people to support a family before permitting them to marry, is a question which has not arisen, and is not likely to arise, in this country; but in old countries it does arise, and it is not met by the assertion "that the law of human fecundity is that with which God saw best to endow the race." We might as well say that the law of God which doomed children to suffer for the sins and shortcomings of their parents was a bar to compulsory education of the young. The whole question of legal restraints on population really turns on the extent to which the state can be considered responsible for the well-being of the next generation. The drunkard or profligate who brings children into the world for whom he cannot and will not provide obeys the "great law of human fecundity;" but have the children, possible or actual, no claim on public protection? Professor Perry lays it down that "economy being the science of exchange, presupposes the actual existence of men in society, and therefore it is without its province to discuss the laws under which they are born into society." This would be very true if the laws under which they are born into society did not materially affect their condition in it. But they do. The too rapid multiplication of laborers under these laws may, and does, produce extreme misery, and often without the laborers knowing why. It is the business of the political economist to call attention to the relations of capital to labor, and if there be any special cause, such as the habit of contracting improvident marriages, operating to produce superabundance of the latter, he is bound to mention it, and leave governments or individuals to do as they please about it. Whether preventive legislation be expedient or not, is, perhaps, not the business of an economist to discuss; but it is undoubtedly his duty to do what he can as a public teacher to excite public reprobation of any abuse of men's liberty which seems likely, by producing and perpetuating poverty, to retard human progress.

Professor Perry's theory of rent is striking and, we believe, original; the chapter on money is excellent; but the following is another example of hazy thinking. At page 255 he says the United States legal tender notes have

"Been more or less depreciated from the first—and at times very much depreciated; and this not because there has been *any doubt* about their ultimate redemption, not because of a lack of confidence in the stability of the Government, for thousands had been freely loaned by the people to the Government on the public faith in the interval, but partly on account of their excessive quantity and *partly on account of the nature of credit money unfitting it to maintain a high and steady value.*"

Now when paper money in time of war depreciates, it is partly owing to overissue, but partly also to want of confidence in its redemption. It is true that millions in the United States had no doubt of the will and ability of our Government to pay its debts, but a great many had, and the rest of the civilized world had no faith whatever, or very little. The effect of this was, of course, to diminish the market for the currency, and therefore depreciate it. Nothing but *universal* faith will keep paper money up to par. Even if *all* the inhabitants of a country have full faith in it, if the rest of the world has not, it will inevitably fall below gold, because it cannot be used at par in the purchase of foreign products, even if it do not exceed in volume what the country requires. And, in fact, the ups and downs of the gold market during the war were so many indications of variations in public confidence, and little else. Speculators speculated, but they speculated on public fears and anxieties. All this seems plain enough, but Professor Perry refutes his own doctrine elsewhere. At page 261 he says of the paper currency, "that, after all that can be said in favor of it, it is *credit money still*—and exposed to the dangers inseparable from credit money—namely, *distrust of the people*, the undue enlargement and sudden diminution of its volume," etc. Speaking, too, at page 310, of the National Bank paper, he says that

"Their circulation is nothing but *credit money*, and liable in some degree to the disorders *inseparable from every form of credit. Credit is not payment*, but a promise to pay. The promise may be good; it may be sure to be fulfilled; but it is not and never can be made the same thing as fulfilment. . . . And men are so constituted and society so delicately organized, that times are liable to come when men shall have a general distrust of mere promises, and shall desire to see them changed into fulfilments."

Nothing can be sounder than this. The "patriotic citizen" of the newspapers here disappears, and the political economist speaks his honest thought.

We cordially recommend Professor Perry's book to all, of whatever school of political economy, who enjoy candid statement and full and logical discussion. But we would suggest to the author that he revise it carefully if, as we hope it may, it should reach a second edition. It is marred by colloquialisms, vulgarisms, and, in a few instances, downright bad grammar, which, considering that the work issues from a university, is not permissible. Such expressions as "Man does not ache so *bad*" (p. 91); "Capitalists, do not feel too much *stuck up* towards your workmen;" and the constant use of such abbreviations as "do n't" and "won't," ought not to appear in any book written by a man laying claim to a good education. Political economists, too, are just as much responsible as others for the use they make of the people's English.

WINIFRED BERTRAM.*

"WINIFRED BERTRAM" is, in our judgment, much better than the author's preceding work: it is in fact an excellent book of its class. This class it is difficult to define. Were it not that in a certain chapter where Sunday literature is brought into question, the author fails to express her sympathy with it in a manner so signal as almost to suggest an intent to deprecate, we should say that her own book was fashioned on this principle. The chief figure in Miss Winifred Bertram's world, and one quite overshadowing this young lady, is a certain Grace Leigh, who, albeit of a very tender age, is frequently made the mouth-piece of the author's religious convictions and views of life. She is so free from human imperfections, and under all circumstances gravitates so infallibly and gracefully towards the right, that her attitude on any question may almost be taken to settle that question for spirits less clearly illumined. She administers a quiet snub to "Sunday books"

* "Winifred Bertram and the World She Lived in. By the author of 'The Schönberg-Cotta Family.'" New York: M. W. Dodd. 1866

by declaring that she possesses none. "I do not think Shakespeare is quite one," she adds, "nor Homer, although it often helps me on Sundays, and every day, to think of them." The truth is, however, that this young lady is so instinctive a respecter of Sunday that she can very well afford to dispense with literary stimulus. Wherever we place this work, its generous and liberal tone will assure it a respectable station; but is the author confident that she has not been liberal even to laxity in the comprehensive *bienveillance* which she attributes to Miss Grace Leigh, when the latter affirms that "all sermons are nice?" It is true that she qualifies her assertion by the further remark that "at least there is something nice in them," namely, the text. But the whole speech is a very good illustration of the weaker side of the author's spirit. It is indeed the speech of a child, and may have been intended to indicate her character rather than to express a truth of the author's own intelligence. Nevertheless, as we have said, this precocious little maiden is somehow invested with so decided an air of authority, that even when she is off her stilts the reader feels that he is expected to be very attentive. Now the word *nice* as applied to a sermon is thoroughly meaningless; as applied to a Scripture text it is, from the author's point of view, almost irreverent. And yet the reader is annoyed with a suspicion that the author fancies herself to have conveyed in these terms a really ponderable truth. Here is another instance of the same gushing optimism. Having put forward the startling proposition that "everything is pleasant"—it will be observed that our young friend is of a decidedly generalizing turn—Miss Grace Leigh proceeds to confirm it as follows: "It is pleasant to wake up in the morning and think how much one has to do for people—and it is pleasant to mend father's things—and it is pleasant to help the Miss Lovels with their scholars—and it is pleasant to make the cold meat seem like new to father by little changes—and it is pleasant that Mr. Treherne [the landlord] is a greengrocer and not a baker, because there are never any hot, uncomfortable smells—and," to conclude, "it is pleasant that there is a corner of the churchyard in sight." In other words, we would say, with all deference, it is pleasant to be able to be sentimental in cold blood. This pleasure, however, is to the full as difficult to grasp as the converse luxury of being reasonable in a passion.

In spite of this defect, it is very evident that it has been the author's aim to advocate a thoroughly healthy scheme of piety. She had determined to supersede the old-fashioned doctrinal tales on their own ground; to depict a world in which religious zeal should be compatible, in very young persons, with sound limbs and a lively interest in secular pastimes; in which the practice of religious duties should be but the foremost condition of a liberal education. This world of Miss Winifred Bertram is, accordingly, a highly accomplished one. It recalls those fine houses with violet window-panes, in whose drawing-rooms even the humblest visitors are touched with a faint reflection of the purple. Sin and sorrow assume a roseate hue. Candid virtue wears the beautiful blush of modesty. We have seen how the little girl above quoted gets "help" from Homer and Shakespeare. So every one about her is engaged in helping and being helped. She herself is the grand centre of assistance, in virtue, we presume, of her being in direct receipt of this favor from the great sources just mentioned. She walks through these pages shedding light and bounty, counsel and comfort; preaching, prescribing, and chiding. She makes as pretty a figure as you could wish; but she is, to our mind, far too good to be true. As the heroine of a fairy tale she would be admirable, but as a member of this working-day world she is almost ridiculous. She is a nosegay of impossible flowers—of flowers that do not bloom in the low temperature of childhood. We firmly believe that children in pinafores, however rich their natural promise, do not indulge in extemporaneous prayer, in the cogitation of Scripture texts, and in the visitation of the poor and needy, except in very conscious imitation of their elders. The best good they accomplish is effected through a compromise with their essentially immoral love of pleasure. To be disinterested is among the very latest lessons they learn, and we should look with suspicion upon a little girl whose life was devoted to the service of an idea. In other words, children grow positively good only as they grow wise, and they grow wise only as they grow old and leave childhood behind them. To make them good before their time is to make them wise before their time, which is a very painful consummation. The author justifies the saintly sagacity of little Grace Leigh by the fact of her having been obliged to look out for herself at a very tender age; but this very competency to the various cares and difficulties of her position, on which the author dwells so lovingly, is to us a thoroughly unpleasant spectacle. An habitually pre-occupied child is likely to be an unhappy one, and an unhappy one—although, like Mr. Dickens's Little Nell, she may never do anything naughty—is certainly little more than an instrument of pathos. We can conceive of nothing more pernicious for a child than a premature sense of the seriousness of life, and, above all, of that whole range of obligations to which Miss Grace Leigh is so keenly sensitive—the obligations of charity, the duties of alms-giving. Nothing would tend more to make a child insufferably arrogant than the constant presence of a company of pensioners of its own bounty. Children are essentially democratic, and to represent the poor as in a state of perpetual dependence on them is to destroy some of their happiest traits.

But there is a great deal in these pages which is evidently meant for the parents of the little boys and girls who read them. There is, for instance, the episode of the conversion of Mrs. O'Brien from elegant carelessness, and heedlessness of her opportunities for beneficence, to an ingenious and systematic practice of philanthropy. We have no doubt that many idle women with plenty of money may derive considerable profit from the perusal of Mrs. O'Brien's story. And there is a great deal more which they may find equally entertaining and instructive—many a forcible reminder of the earnestness of life, and of the fact that by taking a friendly interest in their cooks and housemaids, and bestowing kindly words and thoughts as well as loaves and purses upon the inhabitants of tenement-houses, they may diminish the sum of human misery. We agree with the author that there is a wise way of giving alms as well as a foolish one, and that that promiscuous flinging of bounty which saves the benefactor all the trouble of enquiry and of selection is very detrimental. But, in our opinion, it is especially detrimental to the active party. To the passive one—the pauper—it is of comparatively little importance whether assistance is given him intelligently or not. We should say, indeed, that the more *impersonally* it is given, the better for both parties. The kind of charity advocated with such good sense and good feeling in these pages, is as good as any charity can be which is essentially one with patronage. To show that patronage may be consistent with humility has been—practically, at least—the author's aim. In the violet-tinted atmosphere of Miss Winifred Bertram's world, this may be so, but hardly, we conceive, in the daylight of nature. Such books as these—books teaching the rich how to give—should always carry a companion-piece showing the poor how to take. The objects of the enlightened charity practised in these pages are invariably very reasonable as well as very sentimental. A little wilfulness, a little malice, a little blockheadedness, a little ingratitude, and the position of the alms-dealer becomes very ungraceful; and Miss Winifred Bertram's companions are nothing if not graceful. As a serious work, accordingly, we do not deem this account of them very strong. As an exhibition of a very beautiful ideal of life by a person who has felt very generously on the subject, it deserves all respect; but we cannot help feeling that religion and human nature, and good and evil, and all the other objects of the author's concern, are of very different aspect and proportions from those into which she casts them. Nevertheless, her book may be read with excellent profit by all well-disposed persons: it is full of incidental merit, and is uncommonly well written. Little girls, we suppose, will read it and like it, and for a few days strive to emulate Grace Leigh. But they will eventually relax their spiritual sinews, we trust, and be good once more in a fashion less formidable to their unregenerate elders.

STEVENS'S CENTENARY OF AMERICAN METHODISM.*

The history of Methodism is a record of the most marvellous activity and the most extended success. It began in England at a time when the very existence of Christianity seemed to be seriously threatened; when the Protestant churches appeared to be dying from sheer inanity; when its friends and clergy were ridiculed, and its utter falsity seemed almost taken for granted. True, there were a few who had not bowed the knee to Baal. Some of these were men of rare endowments and sincere piety, but they seemed like mere waifs amidst the fragments of the general wreck. What was wanted was a real spiritual power, entering into the very depths of the national life, quickening the conscience, bringing home the dormant sense of the *divine*, and applying the truths of Christianity as a remedy for human ills.

This want was most singularly met in the rise of Methodism. The real founders of the great rejuvenation were John and Charles Wesley and George Whitefield. At Oxford these, with others, showed what might be called ascetic tendencies, in the formation and proceedings of the well-known "Holy Club." They led austere, self-denying lives; and met frequently for prayer, mutual counsel, and study of the Scriptures. But all these things still left English unbelief untouched. In this merely ascetic form their

* "The Centenary of American Methodism: A Sketch of its History, Theology, Practical System, and Success. Prepared by order of the Centenary Committee of the General Conference of the Methodist Episcopal Church. By Abel Stevens, LL.D." With a statement of the plan of the Centenary Celebration of 1866. By John McClintock, D.D. New York: Carlton & Porter. 1865.

lives were not the needed power. This was only a preparatory stage, in which they were being fitted for a further step—to become the receptacles and bearers of a vital force which should quicken the dead mass. It is a strange fact, which the student of history and of mind will do well to note, that the Wesleys and Whitefields only began to move and reform the English masses after they themselves had passed through a certain and similar religious experience. Upon an honest belief in the Bible and a scrupulous performance of every duty, there supervened a new fact, what to them was a new life, an assured sense of divine favor. Wesley expressed it by saying that at a certain time he "felt his heart strangely warmed, and that an assurance was given him that his sins had all been taken away."

With this phase of their inner life, the Wesleys and Whitefields began their work. The new apostles gathered crowds to hear them in every nook and corner of England; the whole island trembled with excitement, both hostile and friendly; and multitudes of the people forsook their evil courses and became orderly, upright, and religious.

The origin of the denomination in this country was somewhat different from its first rise in England. The Wesleys and Whitefields were men of culture. Whitefield was, perhaps, never surpassed by any man in effective eloquence; and both the Wesleys were graduates of Oxford. The planters of the new sect in this country were quite unlearned. Barbara Heck and Philip Embury, who formed the first Methodist society in America, had nothing in common with the Wesleys except the new experience. They had passed through the Methodistic fire; they, with their leaders, had experienced that strange "warming of the heart" which to Wesley came along with assurance. Around precisely that point gathered the Methodistic power. That wanting, learning was naught; that possessed, learning was not necessary. It only required good plain sense in these two persons to tell the story of their inner life as it had been developed under the Wesleyan teaching. They told it, and organized into a church the receptive hearers of their story. Hence American Methodism, with its century of strange scenes, its tireless work, and wonderful success.

We cannot here mention many of the distinguished names of the denomination; we must content ourselves with one—namely, Francis Asbury. If he did not first plant Methodism in the New World, he at least replanted and developed it. Under his vigilant eye it grew from a mere "reed, shaken by the wind," into a tree, sheltering, at the time of his death, seven hundred travelling preachers and between two and three hundred thousand members. He rode over the continent on horseback, with little regard for distance or fatigue. His life was crowded with work, until the very hours seemed to lag; he had no time to marry, no time for intentional recreation; but little need of human sympathy or human counsel or close social intercourse. He was frank as light, and yet reticent and mysterious. His appearance was stern, but covered a restrained and gentle humor which knew how to disclose itself upon any fitting occasion. He was the bishop of a continent, and yet the elder brother of his flock; he had the power of a king, and used it like a father. Under his labors and rule the denomination grew with a rapidity which seemed almost necessarily to imply and foretell early and disastrous collapse, and yet when he died it seemed only to plume itself for loftier flights and to aim for still broader conquests.

The statistics of Methodism now, considering the period of its life in the country, are remarkable in a very high degree. It far outstrips all the other Protestant sects, both in the number of their churches and of their communicants. Its missionary collection for the last year rose above half a million of dollars; its missionaries are numerous both at home and abroad; and its contribution to the ranks of the Union army is estimated by Dr. Stevens at 100,000 white and 75,000 colored soldiers. Such, too, is the vigor of the denomination that they came out of the war appropriating $1,000,000 to home and foreign evangelization, and resolving to raise several millions more during the centenary year for education and for other purposes in the church.

When this success is looked at, and deliberately compared with that of other ecclesiastical bodies, we naturally begin to ask for the reason of the difference. Where lies its peculiar power, its secret? This has sometimes been sought in its peculiar organization, especially in its itinerant ministry and its love-feasts and class-meetings. But these are its mere instruments, outgrowths, expressions of its inherent energy. It was, indeed, natural that a power such as Methodism has demonstrated itself to be should project a system of means suited to the intensity of its life and the rapidity of its movements; but this machinery is no more its power than pistons and cranks are the power of the locomotive. At other times the power of Methodism has been sought especially in its doctrines. But it has, in fact, no peculiar doctrines. It teaches, indeed, and lays stress on Christian perfection, and yet in the same breath denies and rejects sinless perfection. It holds a universal atonement, and so do other Protestant sects; it believes in the doctrine of assurance which the early reformers also held, and which is substantially accepted by several other of the modern churches.

Its power and secret lie not in the doctrine held, but in the manner of apprehending it. The genuine Methodist preacher of the Wesleyan or Whitefieldian type had but little thought of creed or catechism as such. With him definitions were translated into fiery convictions. In his own experience he had *felt* sin rather than defined it, and, when he came to preach about it, he had no thought of a treatise or discourse, but aimed only to show its "exceeding sinfulness." So, too, when his hearers yielded to his sturdy blows, and cried for mercy, if he attempted at all to define the process of conversion, it was only in the interests of an actual and pressing want; he cared but little for the case he made out, if he could only see in the burdened and struggling soul the dawn of the new spiritual consciousness. He preached faith when he did not and could not explain it.

The difference between the early Methodists and other religionists, therefore, lay not in what they believed, but in the way they believed and in the way they felt. They trembled at sin as if it had been a second fearful personality confronting them in the human soul; they were as well assured of pardon as of existence; heaven seemed to them no further off than the neighboring hill-tops. Their feeling was therefore intense, and the word *feeling* gradually came to express their whole spiritual state. This, of course, might easily run into abuse, and sometimes did. It was not the doctrine of Methodism that overcame, but the blaze in which it was wrapped; it was not the itinerancy that raised up the new people; a vapid orthodoxy on the itinerant's horse would have deepened the popular slumber; it was experience that set heart and doctrine on a flame, and out of the fire was born a conquering organization. The true power of Methodism lay precisely in that strange "warming of the heart" of Wesley, which for substance was the same in all Methodists, however variously expressed. To tell this, to watch it, to conserve it, to spread it, cultivate it, deepen it, and make it the all of life, was the work of Methodism.

It is true that much of this glow and confidence has entered into other sects, and doctrinal differences are falling before its advances. Yet the great characteristic of Methodism still remains, and reveals itself in its stateliest churches. They cannot sing their old hymns without giving a ring of warmth to both the prayer and the sermon which follows it.

This peculiarity of *Methodism* has, no doubt, greatly contributed to its remarkable catholicity. Experience, not forms or doctrines, became the keystone of its arch, and Calvinist and Arminian, on this principle, came together most lovingly. Wesley himself found piety worthy to be printed for the benefit of his own people in Roman Catholics and even in Unitarians. For entrance into his societies he required only the condition of "a desire to flee the wrath to come, and be saved from sin;" and these societies, grown into churches, now mingle freely with all evangelical bodies where sectarian exclusiveness does not repel advances.

The period for the more complete consolidation of Methodism is now opening. Whether or not the great educational schemes of this denomination and the spirit of other churches will modify it injuriously or beneficially is hard to say; that will greatly depend on the wisdom and goodness of those who give tone to its advancement. Dr. Stevens's book is a revelation to the outside world; its style is warm and bright, remarkable at once for suppleness, vigor, and beauty.

FROTHINGHAM'S LIFE OF WARREN.*

GIBBON tells us that whenever he was about to read a new book, he first turned over the subject in his own mind, in order to bring together what he already knew of it, and thus prepare himself to form a just idea of what he might learn from the new volume. This rule of the great historian is also the best rule for the critic in approaching all that class of works which undertake to add to our knowledge of facts, principles, circumstances, or character. Works of imagination, like works of mere amusement, require a different test; but history—and biography is history from an individual point of view—has no claim to our attention unless it add, either by freshness of form or novelty of matter, to what we had already learnt from other sources. For every work that does this there is room in every library; the many that daily fail to do it, we commend, in all sincerity, to the trunk-maker and the grocer.

In applying this test to Mr. Frothingham's "Warren," it can hardly be necessary to tell the American reader that of all the names in our history there is none that stands so high as Warren's with so narrow an historical

* "Life and Times of Joseph Warren. By Richard Frothingham." Boston: Little, Brown & Co. 1865. 8vo, pp. 558.

basis. It is the first that springs to our lips when we would speak of Bunker Hill; it is closely associated with the uprising at Lexington and Concord; it meets us twice on the anniversaries of the Boston massacre; and it is constantly present with an indistinct and mystic grandeur through the eight years of intellectual warfare which preceded the first shedding of blood in battle. But of the words which he wrote and said, of the ideas and principles which he enforced or developed, of the methods by which his influence was won, and the manner in which he exerted it, history hitherto has told us so little that it has hardly been possible to form any definite idea of him either as a public or a private man. Eliot, his contemporary biographer, has given him but five pages; his latest but eighty-five, of which forty are devoted to his three orations. Out of Everett's ninety duodecimo pages fifty-five are given to Bunker Hill. Had he fallen in repulsing the foraging party at Grape Island instead of falling after twice helping repulse the best troops of the English army at Bunker Hill, although his coolness and intrepidity were the same on both days, what would have been his place in history? "Il ne suffit pas d'être grand homme, il faut venir à propos." Never was historical *à propos* more perfect than Warren's. He died on a great day, and history, without pausing to take note of his life, classed him unhesitatingly among those who are made great by death.

It is from this unsatisfactory though brilliant position that Mr. Frothingham has undertaken to remove him, assigning him a definite place among his fellow-laborers and connecting his name by documentary evidence with that series of wise, bold, and consistent measures by which resistance gradually passed from the pen to the sword. We hasten to add that we think he has, in a great measure, accomplished this difficult task, and that, in bringing Warren nearer to us as a man, he has taken nothing from him that belonged to him as a hero.

The materials for a life of Warren, although less complete than they might easily have been made had any of his fellow-laborers told us all that they knew about him, are still sufficient to confirm his claim to the prominent place which has always been accorded him. The records of the various public bodies of which he was a member have been carefully preserved, and in these his name meets us on every important committee. Frequently, too, the communication between these and other similar bodies was in writing, and the pen was placed in his hands so often that it is impossible not to acknowledge that he had fully won the confidence of his colleagues. Many of his private letters, also, have been preserved, and in these, his thoughts flowing with the freedom wherewith thoughts naturally flow in the intercourse between friends who have the same interests and the same objects, he unconsciously gives us the measure both of his statesmanship and of his feelings. But the speeches and debates of the time have not been preserved. The newspaper reports and official records are provokingly and often puzzlingly meagre. Yet, by a patient and thorough examination of them all, Mr. Frothingham has been enabled to follow Warren, for the first time, from meeting to meeting, from committee to committee, establishing in one place his claim to the authorship of important official papers, in another to the composition of spirited essays which passed rapidly and at the right moment from hand to hand in the columns of the Boston *Gazette*. From these sources he has derived sufficient confirmation of all that had been told and believed of his subject as a public man. In these laborious researches Warren gradually passes from a brilliant myth to a distinct historical reality, losing by the transition nothing of that moral grandeur which has always raised him so far above the men of selfish aims, of that tender halo which, from the day of his death, has surrounded him as "the first great martyr" of the Revolution. As a material contribution to our knowledge of facts, Mr. Frothingham's "Warren" deserves a prominent place in the library of American history.

Yet there are some things wanting in it which we would have much desired to find in the life of such a man. It is impossible to look upon Warren's portrait without feeling a sadness and a longing gradually steal over you as if you were looking upon features which you had known in life. Its oval is of that just proportion which takes at a glance and satisfies the eye. It is neither too long nor too broad, but both above and below forms lines wherein strength and gentleness are suggestively blended. You could hardly add to the open forehead or take from it without disturbing its harmonious relation to the softly rounded chin. There might have been something of coldness in the firm outline of the Grecian nose but for the sweetness that rests upon the lips and beams from the eye. And as you gaze you feel that there is a warm, earnest, tender human soul looking through these features; you feel that, where great thoughts are to be uttered or great things to be done, those gentle eyes may flash with indignation, those calm lips curl with ineffable scorn or tremble with conviction; and that, underlying all that gentleness and sweetness, there is no common force of will, but strength to love a noble cause and die for it.

Now, we could have wished that Mr. Frothingham had followed up the line of enquiry which Warren's portrait suggests, and tried to tell us more at length what kind of a man he was among his friends and by his own fireside. We have great faith in biography, and believe, with our great poet, that when it is worth writing at all, it is worth writing fully. Although but the instrument of a higher power, man is still a conscious instrument, laboring by force of will; seldom, indeed, reaching his own aims, but always the faithful representative of the aims and relative position of his age. And if invention of character is one of the greatest gifts of the poet, delineation of character should be held one of the choicest distinctions of the historian. Livy's "pictured page" has been the delight and marvel of eighteen centuries. Even in his own day, one of his readers is said to have gone from Spain to Rome in order to look upon his face, and, having seen him, to have returned home without caring to see anything more of the wonders of the great city. But Livy's marvellous strength is in the painting of character, and in this he can hardly be called second either to Homer or Shakespeare. Rome lives through him with a freshness and fulness of moral power which makes her great names as familiar to-day as they were in the day of her physical power. Curiosity, therefore, about the lives of great men seems to us one of the most laudable forms which that stimulant of enquiry can take. It springs directly from human sympathy, and leads directly to juster and kinder appreciations of our fellow-men, strengthening our heads for action and our hearts for endurance and our minds for the acceptance of truth. But to work this good we must be brought near by it to man as man, and allowed to see all the traits which we have in common with him as well as the peculiar characteristics whereby he is raised above us. Now, with all that he has added to our knowledge of Warren, Mr. Frothingham has failed to give us that intimate knowledge of him which is essential to a perfect delineation. It is probable that the materials for doing it fully were wanting; still we feel that he might have done somewhat more towards it.

The general literary execution of the work is good. The style, though neither very graceful nor very warm, is clear and manly. Mr. Frothingham knows what he wants to say, and says it distinctly and directly. He is happiest, perhaps, in narration. The stories of "The Boston Massacre" and "The Boston Tea Party" are told with great richness of detail and true narrative power. We have here and there found some questionable rhetoric, such, for example, as the *rushlight and the sun*, on page 216; and occasionally, also, an approach to declamation, rendered all the more noticeable by the general level of style from which it rises somewhat too abruptly to satisfy a rigorous taste. We prefer his own declamation, however, to that of Mr. Knapp, which adds nothing to the distinctness of our conceptions or the warmth of our feelings. Indeed, we are not a little surprised that so good a scholar and so accurate an historian as Mr. Frothingham should have overlooked, for the sake of Mr. Knapp's Fourth of July rhetoric, such a blunder as this: "Tully poured the fiercest torrent of invective when Catiline was at a distance and his dagger no longer to be feared." Sallust tells us, "Tum Marcus Tullius consul, sive præsentiam ejus timens, seu ira commotus, orationem habuit luculentam atque utilem reipublicæ, quam postea scriptam edidit." We had always supposed this oration to be the first Catilinarian, second for fierce invective to none that the great orator ever pronounced; and as to the dagger, Sallust also tells us of Catiline, "Ipse cum telo esse, item alios jubere."

This is Mr. Frothingham's second contribution to our Revolutionary history. His "Siege of Boston" has become a work highly esteemed for accuracy and extent of research. The "Life of Warren" will take equal rank for the same reason, and we believe that the author is still young enough to justify us in looking for some future volume to bear them company in the same rich and useful field.

A GOBLIN ROMANCE.*

THIS is a goblin romance, indeed; the most goblin, we think, that we ever read. It concerns a maiden who was spirited away by fairies, in Ireland, and left her lover to die. It is not a long story, and yet it takes a good while to tell it in verse. It begins with a weird picture of twilight, when all the natural objects contribute to the beauty of descriptive writing, and even among the grass

> "The dry stems wheeze a tiny pipe,
> To show they wakeful lie;
> As urchins mumble unknown type,
> When pedagogue struts by."

About this time in the evening the youth and maiden of the romance made

* "Eva: A Goblin Romance. By John Savage." New York: James B. Kirker, 1865.

love to each other, the youth having suffered physical torments from the glance of the maiden's eyes:

"Eyes of such unearthly light,
Though dark as ever wrought,
By heavens! they twist me as a sprite
Though I but see in thought.
Much more they twisted you poor soul,
The brave youth at her side."

Surviving, the youth sang a song concerning a true lover who

——"gazed on his love as martyr would
On the hope that raised his soul,
And his eyes to her rolled as the halo should
Round the head of the Virgin roll."

Won by the appeal, the maiden confesses her tenderness for the youth:

"My heart is throbbing like the sea,
And could sea span the skies above,
I feel its vast immensity
Could not cradle half my love."

The maiden's confession roused the ghosts in the old church near which they stood, and the spectres all united in a goblin merry-making, led on by the immortal part of a remorseless baron, who in life

——"had been known to brag
The number of vassals he clove with his mace;
And he took less delight racing after the stag
Than he did in staying the human race."

As for the phantoms of certain unfaithful wives, when the

"'Yes' from Eva's mouth
Proclaimed youth Kevin's bride
All swirled, as though the grapes of the south
Were gurgling their skulls inside."

One of the greatest rogues among the fairies was Thatchet, and when the fairies assembled to plot the abduction of Eva

"Thatchet sneaked off in the crowd
Under the wing of a fly,
And he tickled the fly's kind shroud,
For tears came in laughter's eye."

The fairies sang with the voice of the lover (in order to lure and bewilder the maiden) a love-song, of which the burden, frequently repeated, was:

"Not in fields of clover,
Neither in the bower,
Nor by rushing rover,
But *here*, at this hour."

Then the fairies, triumphing in their cruel deceit, exulted and sang:

"From the prismal—sunlight glory,
To the dismal—caves of earth;
From the flood-god's—Sagas hoary,
To the wood-god's—give us mirth!"

The poor, forsaken youth, coming, ignorant of his loss, to greet his love, chides his heart for its rapture:

"Ah! happy me! O proudest one!
Restrain thy throbbing side,
It swells amain with radiant pain,
Till comes thy radiant bride."

His death shortly follows. On the whole the poem is wildly original, and reads like the production of a man who was not friends with his printer: say the production of a Mahony Fenian put in type by a Roberts Fenian.

THE MAGAZINES FOR FEBRUARY.

We suppose the droll people who have been shocked at the publication of extracts from "Hawthorne's Note-book" will renew their dismay over the present number of the "Atlantic," for these extracts are continued in it, and form, by all odds, the most attractive paper of the magazine. We find them of singular value, both as means of knowing the literary methods of Hawthorne, and as a study of that part of his life with which his admirers have a right to be acquainted. The extracts are made with taste and tact, and contain nothing to wound the sensibilities of those most jealous of the great romancer's "sacred riches of private reputation." The passages given in the February "Atlantic" are somewhat longer than those of the preceding number, and have rather the character of entries in a diary than of jottings in a note-book. They tell of a visit made at a friend's house near the Canadian border of Maine, and abound in sketchy descriptions of the half-French, half-Irish population of the region. There is a French language-master who is presented much as he would have been in one of Hawthorne's romances, if the author had spoken of him in the person of Miles Coverdale. The pictures of natural scenery are *more* Hawthorne: a thought or emotion lurking in every part of the landscape, as in those caprices of Kaulbach's where the woods and fields are full of human faces. —We have found the quietude and gravity of Rossetti's "English Opinion on the American War" rather too much for our interest, but there is no doubt that the paper is written candidly, and if Americans have not ceased altogether to care about English opinion, good or bad, concerning the war, many will find it profitable to read Mr. Rossetti's paper to the end.—It is a good notion to print "The Freedman's Story" just as the freedman wrote it, and the story happens to be interesting, which is better.—"A Landscape Painter" is a very charming love-story indeed, written with grace and spirit.—Whittier's poem, "Two Pictures," is scarcely worthy of him. There are many beautiful lines in it, but the story is not well told. The moral, however, is the grain of sand which breaks the reader's back. The poem teaches that if young ladies marry apparently poor young men for love, they are very likely to find them rich after all.—As for "Riviera di Ponente," the less we say about that poem, the better for the poet. It is rhyme of a revery at Nice, and deals with the past and present in such dreamy fashion as conveys little idea of either scenery or history, and imparts scarcely a sentiment of time or place to the most receptive reader. Besides, it is full of such rhymes to Riviera as fairer, sharer, air are—rhymes utterly inadmissible, unless, indeed, the reader cherishes the provincial vulgarism of omitting to enunciate the letter *r*. Let us write one stanza of the poem, with printing to suit the pronunciation and meet the requirements of prosody:

"There black waw-ships doze at ancha, in the bay of Villa-Franca;
Eagle-like, grey Esa, clinging to its rocky pe'ch, looks down;
And upon the mountains dim, wearied, shattehed, ste'n and gwim,
Tu'bia sees us through the ages, with its auste'e Roman frown,
While we climb, where coola, rara
Breezes sweep the Riviera."

—One is glad, in "Griffith Gaunt," to be assured (though of course one knew it from the first) that neither Griffith nor Neville was killed in the duel; but the story leaves off, as before, at a point most distressing to the reader. It is droll to find Reade quoting Artemus Ward, and calling him "Artemus the delicious."

In "Harper's Magazine" "An International Affair" is concluded, and it is decided that the fiction is both a love-story and a horse-story. The American hero wins the Englishman's beloved, and the American's mustang beats the Englishman's thorough-bred. The story is well told, and its hints on horsemanship are no doubt valuable.—The magazine opens with a highly illustrated paper on the "Hospital of the Insane at Blackwell's Island," which is professedly written by a gentleman lately under treatment there for lunacy. It is full of amusing sketches, which we doubt the justice of printing. The author may urge his late disorder in extenuation of the error committed, but what has the editor, who cannot plead insanity, to say in defence of publishing pictures and histories of the unhappy people whose infirmities certainly render them interesting to science, but do not justly make them material for magazine literature?—The poetry of the number seems to us rather better than usual.—There is a very interesting and instructive paper, illustrated, on "Diamonds and other Gems," which tells something of the manner of cutting precious stones, and recounts the history of famous gems.—The "Editor's Easy Chair" is the most attractive part of the magazine to us, and in the present number we think it delightful. One may always turn to it with the certainty of finding some interesting topic of manners or morals discussed with exquisite grace and faultless good-breeding.—"The Monthly Record of Current Events," which has been such a valuable feature in "Harper's," is much extended, and will contain a résumé of the Congressional proceedings.

The second number of "Beadle's Monthly" impresses us favorably enough with the character of a magazine which does not aspire, we suppose, to take a place in the first-rate periodical literature. It is illustrated after the manner of "Harper's," and it seems to us that the illustrations are as well conceived and executed as those of the magazine named. In the February number we observe that five out of eleven papers are illustrated: one of these is a poem, and another is one of those articles made up from new books which have heretofore been the monopoly of "Harper's." The quality of the prose in "Beadle's Monthly" is strictly second-rate, and there is nothing in the poetry to put the prose to shame. We think the best paper in the number before us is that on "William of Orange," and the best poem is the "Ballad of the War."

A very pleasant magazine article is that on "The Struggle in Tyrol," with which "Hours at Home" opens. It acquaints us easily and entertainingly with the life and character of a people concerning whom most of our ideas are from picturesque tradition and conventional sentiment, rather than actual knowledge; and it recounts the events of a still existing struggle in the Tyrol between the modern Protestant spirit and the Catholicism of the Middle Ages. The writer describes the Tyrolese as a people of pure and diligent life, devoted with entire sincerity to their ancient faith and to their

Kaiser, and their priests as men of unselfish and benevolent purposes toward all within the pale of the church, but merciless bigots and unsparing of heresy. The Tyrol united with great unanimity, in 1861, to demand of the Austrian Government the withdrawal of the Protestant rights of residence and free worship, and the Diet voted to petition a law from the Kaiser, forbidding Protestants to hold real estate or form parishes in the Tyrol. The Imperial Government has evaded compliance with this petition, the courts have been obliged to decide in favor of the Protestants, and the Tyrol continues agitated by this curious struggle of bigotry to assert a supremacy which long ago passed out of the hands of the church.—Mr. Wm. Swinton, who had the best opportunities of studying the *morale* of our army, contributes some notes on the religious sentiment of the Union forces, from which it appears that as a general thing they differed in habits of parlance from "our army in Flanders." These notes are interesting and valuable, for they are testimony from an intelligent observer to the high character of the troops with whom God was not alone because their battalions were strongest.

The "Boston Review" for the present quarter has certain spirited and timely articles, of which the greater number are of a theological character, but of which some discuss secular topics. We have rather relished the exposure of a "Fraud in Authorship," wherein S. Emma E. Emonds, "nurse and spy in the Union army," is shown to be also a sad plagiarist and a person of exceedingly doubtful veracity. "George Fox" is an article which will attract those interested in a now waning sect:

> "The old order changes and the new succeeds,
> And God fulfils himself in many ways."

Quakerism is passing, but we must all respect it and honor it as one of the most effective agencies for good ever known, and we may read the history of its creation with edification even in a time which requires no such protest against its sins.

The Life and Public Services of Andrew Johnson. Including his State Papers, Speeches, and Addresses. By John Savage. (Derby & Miller, New York.)—In comparing this biography with Mr. Frank Moore's, which we noticed on another occasion, we do not perceive that it possesses any decided superiority. It is more minute and extended, but it presents very few new facts, and the old ones are brought out or slurred over very unskilfully for a partial and would-be laudatory narrative, or very uncandidly if a simple fidelity to truth was the aim of Mr. Savage. Mr. Johnson's hostility to the right of petition in the days when John Quincy Adams defended it, almost alone, in Congress, was a fact which would naturally have suggested an apology to the biographer of a Democrat *par excellence*. At the least, he might have let it pass without comment. Mr. Savage is at the pains to say of a certain speech by Mr. Johnson, in reply to Mr. Adams, that it "was characterized as a highly creditable effort." So it is rather awkward to revive at this day Mr. Johnson's naïve avowal with regard to our war with Mexico, that it must have been just, "or it never could have been crowned with such unparalleled success." For the comment is too ready, that the success of that war was a large part of the success of the rebellion, which, for the rest, by Mr. Johnson's rule, must either have been half right or right half the time. In Mr. Moore's biography every speech is reproduced entire; in Mr. Savage's, scarcely in a single instance is this the case. The sentence in which Governor Johnson offered himself to be the Moses of the colored people of Tennessee, is alone preserved from the famous Nashville speech of October 4, 1864. As for rhetoric, Mr. Savage tells of the "Greenville debating society, hugged in the romantic grasp of the Alleghany and Cumberland Mountains," and, with some confusion of metaphors, how Mr. Johnson, "under the loving tutelage of his wife, soon wielded the pen and the slate-pencil; and these *doors* being open, she soon presented him at other *shrines* of useful knowledge." The book is well printed, and the steel portrait by Ritchie seems to us better than that by H. W. Smith.

The Works of the Right Honorable Edmund Burke. Revised edition. Vol. III. (Little, Brown & Co., Boston.)—Two-thirds of the present volume are occupied with Burke's "Reflections on the Revolution in France." Everybody knows that they were by no means favorable to the greatest overthrow of modern times. He could not conceive of a state of society so bad that it was easier to destroy and reconstruct than preserve and amend it; or, to use his own words, "how any man can have brought himself to that pitch of presumption, to consider his country as nothing but *carte blanche*, upon which he may scribble whatever he pleases." The right of a people to frame and administer its own government has become somewhat more respectable than it was when these words were written.

Naval Duties and Discipline. With the Policy and Principles of Naval Organization. By Lieut. F. A. Roe, U. S. N. (D. Van Nostrand, New York.)—This work is a familiar conversation on the topics indicated in the title, and lacks the dignity and precision of a treatise or a text-book. The author is very much enamored of the theory of naval organization, and grieved at the departures from it in our service. He himself, however, takes the liberty of departing from the accepted theory of English grammar too often; as when, for example, he says: "I had as soon think" (p. 81).

BOOKS RECEIVED.

Mind in Nature; or, The Origin of Life, and the Mode of Development of Animals. By Henry James Clark, A.B., B.S. D. Appleton & Co., New York.

A Concise Statement of the Action of Congress in relation to a Navy Yard for Iron-clad Vessels. New London, Conn.

Social Life of the Chinese. By Rev. Justus Doolittle. Two Vols.—A Third Reader. By Marcius Willson.—Half a Million of Money. By Amelia B. Edwards.—Guy Deverell. By J. Sheridan Le Fanu. Harper & Bros., New York.

A Light and a Dark Christmas. By Mrs. Henry Wood. T. B. Peterson & Bros., Philadelphia. (F. A. Brady, New York.)

Our National Finances. A Review of the Report of the Secretary of the Treasury. By a Patriot. Baker & Godwin, New York.

Miss Oona McQuarrie. A Sequel to "Alfred Hagart's Household." By Alexander Smith. Ticknor & Fields, Boston.

The Dragon of the Enchanted Valley. By Rev. O. C. Dickerson. Jacksonville, Illinois.

The War: Its Causes and Consequences. By C. C. S. Farrar, of Mississippi. Blelock & Co., Cairo, Memphis, and Paducah.

Mildred's Wedding. By Francis Derrick. Bunce & Huntington, New York.

Alcoholic Medication. By R. T. Trall, M.D. Miller, Wood & Co., New York.

Sadliers' Catholic Almanac and Ordo, for 1866. D. & J. Sadlier & Co., New York.

Old New York; or, Reminiscences of the Past Sixty Years. By John W. Francis, M.D., LL.D. With a Memoir of the Author, by Henry T. Tuckerman.—Poems Relating to the American Revolution. By Philip Freneau. With an Introductory Memoir and Notes, by Evert A. Duyckinck. W. J. Widdleton, New York.

Fine Arts.

FRENCH AND BELGIAN PICTURES ON EXHIBITION.

The more important and valuable of the pictures which Mr. Pilgeram has to show us in Tenth Street, and Mr. Knoedler in Broadway, seem to be—and, so far as we know the modern art of Europe, are—stray studies of a new and promising school of historical art. Now, it is not many years since there arose a doubt in the minds of those who cared for painting, whether there were any real historical painting or could be, and if so, then what it was or would be like. The fine arts of design had become very tiresome, from the way they had been practised, and people were impatient of them. Historical painting, having been the most pretentious and the least valuable, for half a century at least, of all the arts, was the most irritating and the least beloved. That so-called historical painting which sought to represent the past stood condemned of all readers of history as crude fancies of what the past might have been, reflecting entire ignorance of what it actually was. The truer historical painting which sought to represent their own time they had, indeed, but did not value nor call historical. It seemed to be written in the book of the future that the painters were to paint history no more, but landscapes and illustrations to the poets and domestic scenes—these last being historical, indeed, after a fashion, but not by themselves making a school of historical art.

But, while history was not to be painted, it began to be written as never before: with accuracy and research, and with an attention to minor details very much like what we expect of fine art. Arnold's description in words of the Roman army at Cannæ, how it looked before it joined battle and was destroyed; Motley's revivifying of the men of Ghent and Bruges in their habits as they lived; Macaulay's minute descriptions of the towns and lands through which his showy narrative was to march, are intellectual efforts which the painters could not but feel to be akin to their own work. It became difficult to keep all the painters away. Most of that trade were, indeed, only too willing not to undertake a task so formidable as painting true history of the past. But some were very ready to work at archæology and antiquities with the writers; the more heartily that the best materials at the disposal of either were rather the painters' than the writers' property in the first place—coins, painted vases, bas-reliefs, and miniatures in manuscripts. Here and there an artist has painted pictures which are really historical in the truth of both the greater and lesser details of scenes reproduced from past time; and the widely diffused and popular art of book illustration, harmful to art in some respects, has made possible a general familiarity with historical truth in art, and compelled the painters to avoid anachronisms under penalty of even popular ridicule.

Among those painters who have, with learning and sympathy, painted the history of the past, Leys, as we have seen, stands high. Nearly all his serious work has been unadorned relation of actual events, chapters from the history of the Netherlands, correlative to Motley's chapters. Not to make a selection of our own, take the list of his important works, to be found in Vapereau's "*Dictionnaire des Contemporains*," edition of 1858, article, *Leys:* out of twenty-three names of pictures, eight are of actual events, eleven of historical compositions, true illustrations of history (as "A

Marriage in the Seventeenth Century" and "An Execution in the Middle Ages"), four only are out of both these categories. And his mission now seems to be to paint the whole history of Antwerp, page by page, on the walls of her town-hall. Other things, like the studies in the Tenth Street gallery, and the larger pictures painted from them (in his own dining-room, we are informed, and not, as was hinted last week, in another's), are of little importance in estimating the nature and importance of his work.

It is to be believed that the careful and elaborate work of his pupils, Alma-Tadema, Lagye, Koller, and the younger De Braeckeleer, and of his French follower, Tissot, is meant but for thorough study, and that they, also, will bend their maturer energies to the true painting of history. If this is to be, since their work now is very good and promises much, they will, one and all, be excellent artists and excellent historiographers, if not historians in the largest sense. But, of course, we cannot wish them to go on for ever with such subjects as they now select. They can do better. Not that the pictures now in New York are uninteresting. M. Alma-Tadema's picture, for instance, No. 2 of the catalogue, "Congregation Entering Church," is worth a brief description for those who cannot see it. The spectator is supposed to be standing within the doorway of a Flemish Gothic church, facing the people who enter from the porch. There must be a screen behind us as we look, for the people do not come full toward us, but turn off to the right or left. We do not stand opposite the middle of the door, but to the right, and see all the pier on the right hand, and beyond it a cluster of people who are evidently gathered before a minor altar in a chapel. At our feet, level with the rich pavement of tiles on which we stand, are several monumental brasses. This is probably not one of the great Flemish cathedrals, but an important parish church, and this seems to be the western door we are observing. A holy-water font against the pier stops the people as they enter, but three or four have passed it and are nearer to us. A magnificent man is in the centre of the picture, clothed in a sweeping sombre robe, embroidered all over with a sort of design of quatrefoils, enclosing, alternately, his crest and a floral pattern, a sort of Phrygian bonnet on his head, a collar of some honorable order over his shoulders, and a huge rosary in his hand; a lady on the right, her head covered with an elaborately arranged hood of white linen, secured with a jewel, and falling on her shoulders and down her back, a dark upper cloak, and a superb dress of white, embroidered thickly with a rich flower pattern in brilliant colors, all the lines of her figure and drapery quiet and graceful; with her a little girl, whose long auburn hair falls loose, who holds a big rosary in her hand, and looks up, suddenly, as she enters, at the groined roof of the church, which we cannot see though she can—all these and half a dozen other figures, types of classes of mediæval man. This is admirable study. The selection of the dresses, the types of face, the action, the architecture, even, little as is seen of it, have been made with care and after investigation and according to deliberate choice. There is more of a similar but different kind of study in No. 4—"New Year's Presents"—in which there is delightful painting of an interior one might be glad to have reproduced in his study; the walls covered, above the wainscoting, with stamped and gilded leather hangings, a marble or scagliola door-frame with a shield of arms on the lintel above, a curtain across the door now drawn back, a richly-painted writing-table and embroidery-covered chair, a beautiful dress on a pretty young lady, and other good costumes to match, natural and easy action. These two pictures are charming, and come near being the gems of the collection. But we hope to see the learning, the skill in drawing, the good if not yet wholly delightful color, and the naturalness of conception which this painter's work shows, used on subjects of the first importance. It may be soon, for M. Alma-Tadema has made his name and a certain fame, having taken a medal at the Paris Salon of 1864, and being already the cause of much patriotic rejoicing to the Antwerp press.

M. Koller, a German, as his choice of subjects shows, has already tried serious history. One little picture of his is here, "Philippine Welser before the Emperor Ferdinand." Another was in the gallery, but was sold at the private view, a "Faust and Marguerite." They are delicate and refined in drawing, and the compositions are skilfully worked up, with plenty of care and study; but there is little expression and little charm of color in either. M. Lagye is very "archaic," as M. Chesneau would say. Certainly the quaintness of the resolute mediævalism is not yet, in his pictures, raised to high historical dignity or invested with any poetical charm. But the power, even the present power, and the promise of these men can only very imperfectly be estimated from the two pictures of each which are here, for we have never seen work of theirs before. M. Henri De Braeckeleer is a nephew of Baron Leys, a very young man as yet, a skilful painter already, and fond of a photographic accuracy of reproduction. Of the two pictures in the present collection, No. 13, "Interior of a Tailor's Shop, Antwerp," is the better, we think, because the subject, humble as it is, is really more interesting, and is treated with at least equal skill. The panorama of red-tiled roofs, seen through the window, is pleasant to those who think, as lovers of color ought, a red-tiled roof by itself a good subject for a picture. But in his faithful painting of the poor room and forlorn array of utensils and unfinished work, M. De Braeckeleer has found latent color and developed it. He has painted the copper vessels on the old chest with a skill worthy of Leys himself.

M. J. J. Tissot is quite well known here through his work, and highly esteemed, young man though he is and without the sacred endorsement of the French *jury*, which has not yet singled him out for reward. It is very fortunate that there is at Goupil's a recent and important picture by him, for his last picture here, the "Faust and Margaret in the Garden," was very faulty, as we had occasion to point out in a former article, and there is none by him in the collection in Tenth Street. "Un Tentatif d'Enlèvement" is the title of the present picture, badly paraphrased on the card appended to the picture as "The Duel." A high terrace occupies the foreground, on which the action takes place. A wooden trellised arbor occupies a part of it, and an ornamental piece of water with marble rim is in the extreme front; high trees form a background; a château is on the left in middle distance. It is a grey, lowering, autumn day, the fallen leaves scattered on grass and gravel. In the centre two combatants are engaged. A young lady with yellow hair, in a black gown of heavy stuff, terrified and trembling, stands on the left, partly leaning on the parapet of the terrace. We read the story thus: The elder of the combatants has brought his servants with him, and endeavored to carry off by force the young lady before us. The other gentleman—husband, brother, lover, or friend—has come upon the scene in happy time; he rushes past the lady, draws and lunges furiously at the would-be ravisher. He, an old hand, is cool and on his guard; he has thrown off his black domino and drawn, but still seeks, as if instinctively, to conceal his face, while he easily parries his antagonist's thrust in carte. The sword of the latter, turned aside, has glanced along a post of the arbor nicking off the paint, has caught in a moulding, and bends in an arch with the force of the lunge. The cowardly servants of the villain of this tragedy are off, over the terrace wall and away. The assailant's hat is thrown away, and out of it or with it flies an opened letter, probably the anonymous one which warned him of the attempted villany and brought him here in time. His little dog rushes furiously at the stranger. Every living thing in the picture, except the lady, is in rapid motion, and every line expresses it. There is stir enough here, well managed and dramatic. The skill and knowledge that go to the making up of such a picture will be very effective when the painter begins to do work that shall be wholly worthy of his power. We of course expect, as we have a right to, that he who can draw when he tries will not again exhibit such too visibly bad drawing as some of former years. Although his work seems to us lacking in much of the charm of color and the strength of imaginative conception which one or two of his contemporaries attain, it cannot fail to be valuable and interesting if worthily applied.

There is one recent picture by M. Gérome in the Tenth Street collection, "Muezzin Calling the Hour of Prayer: Evening, Cairo," a small picture and of simple subject. There is, also, a larger work in his earlier manner, dated 1852. No other of his is now on exhibition in New York. This is, therefore, not a favorable time to speak of his work, except in the most general terms. But his position as an historical painter is, in some respects, independent of his purely artistic power and accomplishment. Whether he is a great and true painter or not, he is assuredly a historian of great eminence and high rank. His historical work has been of two kinds: reproduction of a past age, and record of this, especially as he has found it in foreign and unfamiliar lands. In both, his careful choice of subject and thoughtful treatment of it have secured for him the attention of thoughtful people. But the success as intellectual efforts of his great designs from classic history, has, as yet, been unequalled by his more recent study in modern Egypt. Perhaps it never may; it is hard to imagine what pictures could be painted from subjects furnished or suggested by the Orient in 1857 to compare with the great compositions, satires at once and honorable tributes, which the modern Empire has offered through Gérome to the memory of its prototype. Modern France had tried before to honor the shade of ancient Rome, and had failed—witness, among many, M. Couture's "Romans of the Decadence," one picture among many without much meaning, worse than many of its kind in all artistic qualities. That picture was exhibited in 1847, and in the same collection with it was M. Gérome's first exhibited work, "The Cock-fight," still so well known by photographs. The old school of historical painting

achieved a characteristic failure in the former. M. Couture's huge picture, taking Juvenal's famous lines for text:

"Nunc patimur longæ pacis mala; sævior armis
Luxuria incubuit, victumque ulciscitur orbem,"

pretended to portray on one canvas the corruption and luxury of the later Empire. But the learning was insufficient, the antiquarianism false, the perception of antique character and beauty very imperfect; no part of the historical composition even approximately truthful except the architecture. And in artistic merit it was not more admirable, for even the drawing was faulty and the color monotonous and cold. In contrast with this came the severe and moderate little picture named above—just such a study of a would-be historian as we have said M. Alma-Tadema's pictures seem to be. Out of that little episode of the Greek boy exciting the birds to fight and the girl looking on, were to come the elaborate pictured histories of Greece and Rome, which the painter has since given the world.

"Ave Cæsar, Imperator, morituri te salutant."

In that motto, in the face of the emperor, in his name below, "Vitellius, Imperator," the women and courtiers near him, the ranged seats with the vast audience, the grouped gladiators on the sand, and the bodies of the slain which attendants drag away with hooks, there is the true spirit of the Romans of the Empire when not busy with conquest and organization, but relaxed in amusement. There is another side of that strange creation, the Roman character, in the "Death of Cæsar." And there is still another facet that flashes in the "Two Augurs." "Cato mirari se aiebat, quod non rideret haruspex, haruspicem quum vidisset." Cato said that he wondered how an augur could help laughing whenever he met an augur. These two augurs have met before the coops of the sacred chickens, and they cannot help laughing. This solemn farce is just as necessary to witness, if you would understand Rome, as the blundering patriotism and jealous selfishness of the murder of Cæsar or the heartily-enjoyed slaughter of the arena. In these and all the classical compositions of the painter, the completeness and elaboration are wonderful. The highest creative imagination, indeed, is not to be ascribed to him, but his power of discovery, of ascertaining the essential facts, is so great as to raise him almost to the rank of a truly imaginative artist.

The more recent works of Gérome, painted since 1857, and generally representing scenes of actual everyday occurrence in the East, are as carefully elaborated as the others. Several of these have been exhibited here, the highly finished and effective picture of the Cairene dancing girl, "L'Almée" (which is owned in New York), the "Prayer in the Desert," and now "The Muezzin." In this last-named picture the shadows fall very steeply for "evening," that is to say, sunset, the time of the Muezzin's evening call. The picture is very interesting. The quiet figure of the summoner to prayer, with his hands laid upon and just holding the slender railing, his head thrown back, and his face raised toward heaven as he chants the sacred words of the summons; this and the "dim rich city" far below, and the architecture of the minaret on which the figure stands, and which connects it with the world of men, harmonize perfectly, and make a picture which we cannot doubt is truly Cairene. Except from internal evidence we offer no opinion as to the accuracy of M. Gérome's account of Egypt; but he certainly has what M. Renan truly said Washington Irving had not, "un sentiment historique fort élevé," and he has had abundant opportunities for study. We find record of two voyages by him in the East, one before 1856 and one in 1856–7.

Space fails us to speak, as we should wish to, if at all, of several eminent and meritorious painters, particularly M. Edouard Frère, M. Plassau, and M. Heilbuth. The last-named is connected by his work with our present enquiry, for his principal pictures are of considerable historical value as well as interesting from their artistic merits. M. Plassau seems to have a love for and power over color not common in modern France.

But importation of European pictures has begun in earnest. Hereafter we shall have opportunities of seeing and studying good art in New York, and consequently less need of crossing the sea to seek it. There is comfort and help for the painters, also, in such importation, if they choose—danger as well; but we may be allowed to hope that the danger will be avoided and the good seized.

MUSIC.

CONCERTS OF THE WEEK.

THERE were three good concerts in New York during the past week, besides the matinées of Mr. Wehli. Mrs. Fanny Raymond Ritter gave a concert at Dodworth's Hall, on Tuesday evening, to an audience composed very largely of musicians, where all the music was good, but where the performance of Mrs. Ritter herself was below the level of that of her assistants. That is to say, she is not so good as a singer as Mr. Mills or Mr. Thomas are as players on the piano or violin. Her voice is moderately sweet and flexible and has good compass and power, but is not as sympathetic as Mr. Bergner's violoncello even, though her execution is equal and correct. She appeared to better advantage in the arias from Gluck and Händel than in her other selections. The arietta of Händel, "Lascia ch' io pianga," is interesting as well as beautiful. It is from the almost forgotten opera of "Rinaldo," the first work of Händel after his return from Italy, and said to have been written within fourteen days. The air itself is reported to have been originally a minuet written for some dance-music in Hamburg. There are three or four other airs in this once immensely popular opera that are well worth being hunted up and performed for their intrinsic worth as well as their curiosity. Messrs. Mills, Thomas, and Bergner played Schumann's second trio, Op. 80, for piano, violin, and violoncello. This was written in 1847, in Schumann's prime, and is more conventional in form and shows the influence of contrapuntal studies more than his first trio. It is in four movements, the second of which is very beautiful and finely worked up.

Messrs. Mills and Thomas also played the famous sonata, Op. 47, of Beethoven, dedicated to the celebrated violinist, Rudolph Kreutzer. This sonata, written in 1805, is almost a concerto, for the two instruments vie with each other throughout, not to display the skill of virtuosos, but in the full expression of their being. It demands two performers of equal knowledge and soul, and animated by one spirit. The rendering on this occasion left very little to be desired. Mr. Mills played as always, and Mr. Thomas, evidently stimulated by the presence of Mr. Rosa, did excellently. The effect was splendid. The whole sonata is a joyous dream, with its slow introduction in D minor, changing into the lively *presto* in A minor. The *andante* with variations breathes a more quiet devotional spirit of glad rest. The variations are singularly good, with the well-managed contrasts of the two instruments. The final *presto* in A major, which renews the feeling of the first part, was originally written for the first sonata with violin of Op. 30 There were besides two pieces of Chopin played by Mr. Mills, and the variations for piano and violoncello, Op. 17, of Mendelssohn, by Mills and Bergner.

Messrs. Mason and Thomas and their supporters gave the second of their eleventh series of soirées of chamber music on Wednesday evening. Slowly but surely these concerts are making themselves felt, and gradually a refined taste is spread by their influence. But they do not reach as wide a circle as they ought. There are many who are capable of appreciating such music as is performed here, and enjoy it when it is brought to them, who never make any effort to go to hear it. They are not sufficiently ardent to give up a party or some other place of amusement. Let such persons stay away if they choose, but let them subscribe, and give away their tickets to some cultivated friend whose purse is too small to gratify wishes and needs which are constantly enlarging with culture. The music on this occasion was the sextet in C, Op. 140, of Spohr; the trio of Schumann in G minor, Op. 110; and Beethoven's quartet in E flat, Op. 74.

The sextet, for two violins, two violas, and two violoncellos, was written just after the commencement of the revolutionary movements in Europe in 1848, at a time when Spohr, in common with the rest of Germany, was very much excited by the outbreak and fruition of the ideas of brotherhood and freedom. In entering the piece in his list of works he adds, "Written in March and April, at the time of the glorious revolution of the peoples for the liberty, unity, and grandeur of Germany." Something of this spirit of unrest is seen in the first and third parts, while the *larghetto* expresses his dream of peace, hope, and concord. Spohr is manifestly a musician of the second class, yet his works compare very favorably with those of the masters. They show, as this sextet does, a wealth of melody and thorough musical science, united to a good management of the instruments; but they seldom seem spontaneous, and rarely develop unexpected and, therefore, beautiful passages. We would gladly hear more of his works—an occasional symphony would not be uninteresting—and we should then recur with satisfaction to the old and new masters.

The trio of Schumann for piano, violin, and violoncello is a beautiful imaginative work, richer and better in every way than the second trio of which we spoke above. The *finale* displays humor which is not often seen in music of this character other than by Schumann, but which is rightly introduced here. The piece was written between October 2 and 9, 1851. It is a little singular that both this and the previous trio contain themes that are afterwards touched on by the author in his fourth symphony. We were not so much pleased with Mr. Mason's rendering of the piano part as we were with the playing of Mr. Mills. His musical feeling is exquisite, but he seemed to hesitate in his touch, and betrayed a want of practice, especially in the first movement.

Nothing better could be desired than the excellent and exact rendering that was given to Beethoven's quartet. The performers seemed animated with one soul, and seemed contained in one body. The first movement contains many beautiful and salient points; one passage of scales gradually increasing from four to twelve notes in each bar was very striking; another beautiful place is where the theme is played *pizzicato* by the violins, with a bowe daccompaniment of the other instruments, and then the reverse. The repetition of this and similar passages in this movement has given the piece the name of the "harp quartet." The *presto* was also very effective with its repetition of the principal part three times, and of the trio twice, ending in a transition to the *dndante*, which, without the variations, would be a sufficient and worthy *finale*. The variations are uninteresting, and seem appended merely to stretch the *finale* out to a proportionate length.

Of the Philharmonic Concert, on Saturday evening, we have only room to say that the chief and most interesting orchestral piece was the symphony by Berlioz, Op. 14, entitled "Une Episode de la vie d'un Artiste." Mr. Wehli played two solos for the piano. His playing is good technically, but tasteless, and he is incapable of performing the best kind of music.

A SEQUEL

TO

ALFRED HAGART'S HOUSEHOLD.

Messrs. TICKNOR & FIELDS publish this day:

MISS OONA McQUARRIE.

A Sequel to "Alfred Hagart's Household."

By ALEXANDER SMITH, Author of "A Life Drama," etc. 1 vol. 16mo. $1.

The story of "Alfred Hagart's Household," to which this new volume is a sequel, was received with general and warm commendation. As a simple story of domestic life, abounding in skilful sketches of character, bits of eloquent description, and delicate humor, it has few equals in fiction. A few notices from leading journals are appended:

"'Alfred Hagart's Household' is a fragment—but it is a fragment of rare loveliness and significance."—*The Albion.*

"A simple, charming sketch, such as a poetic and cultivated scholar can make of real, not imagined, people and lives."—*Hartford Press.*

"It is full of wise maxims, quaintly uttered, and cannot fail to leave a healthy impression on the mind of every reader."—*National Intelligencer.*

"A simple delineation of household life. It contains some exquisite touches of pathos, and is a pure, well-written, and altogether very readable book."—*The Methodist.*

*** A NEW EDITION OF ALFRED HAGART'S HOUSEHOLD IS NOW READY.

☞ For sale by all booksellers, or sent post-paid to any address on receipt of the advertised price by the Publishers.

TICKNOR & FIELDS,

124 Tremont Street, Boston.

THE MARINE STEAM-ENGINE.

By THOMAS J. MAIN, F.R. Ast. S.,

Mathematical Professor at the Royal Naval College, Portsmouth,

AND

THOMAS BROWN, Assoc. Inst. C.E.,

Chief Engineer R.N. Attached to the Royal Naval College. Authors of "Questions Connected with the Marine Steam-Engine" and the "Indicator and Dynamometer."

With Numerous Illustrations. In One Volume 8vo. Price $5.

Publishers and Importers, 646 Broadway, New York, make

IMPORTATION TO ORDER A SPECIALTY.

They will send to any address, on receipt of 24 cents for annual postage, their

AMERICAN AND EUROPEAN LITERARY BULLETIN.

A Monthly List of the most prominent English, French, and German Publications, with occasional notes on Dutch, Danish, Swedish, Italian, Spanish, Portuguese, and other foreign Books, with critical notices, from the best authorities, of important new and forthcoming Publications.

Both by its character and costume, the new-comer challenges the hospitality of the household doors at which it knocks for admission.—*New York Tribune.*

If the magazine holds out as well as it has begun, it will be a great success. Interfering with none at present established, it promises to open quite a new path for itself. —*John Neal, in Portland Daily Star.*

The first number is an excellent one, and, if its promises are fulfilled, we are sure that the magazine will be very popular.—*Boston Journal.*

The Choicest Magazine of the Month!

READY TO-DAY,

THE FEBRUARY NUMBER OF

BEADLE'S MONTHLY:

A MAGAZINE OF TO-DAY.

The magnificent success of this "new candidate for favor" is not likely to be dimmed by a comparison of its *quality* and *tone* with any magazine issued in this country. All the publishers ask of those seeking for what is fresh, original, *American*, in literature, is to

EXAMINE THE FEBRUARY NUMBER.

CONTENTS:

FOR WHAT? A BALLAD OF THE WAR—Illustrated. A very impressive poem from a favorite poet.

THE DEAD LETTER—CHAPTERS V., VI.—Illustrated. A second instalment of this superb story. Its development of character and involvement of mystery show the master hand of a great writer.

TO THE RED RIVER AND THE WOOD CREES' COUNTRY—Illustrated. A narrative of an expedition to discover a North-west Passage to the Pacific through the British Possessions; full of interest and the novelty of adventure in that far north-western clime.

ASSASSINS AND THEIR WORK—WILLIAM OF ORANGE. Few historic sketches can rival this in its power of narrative and impressiveness of story. Our young men should read it.

LIFE IN REBEL PRISONS—(Second Paper). The narrative of an officer captured on the Red River Expedition and consigned to Texas Prisons. It is an instructive and sadly interesting paper.

THE PRAIRIE DOG AT HOME—Illustrated. A complete revelation of the habits and manners of this queer little inhabitant of the plains, who consorts with rattlesnakes, owls, and foxes.

TOBACCO: ITS WHEN, WHERE, AND HOW—Illustrated. A "paper of tobacco" which will arrest attention—as full of historic associations as a bonnet of to-day is full of flowers. Those who *will* use the weed should read it.

A MAD NIGHT—A Story. Part I. From the pen of one of the most noted writers in American fiction. A very singular and startling story.

CHRISTMAS IN ROME. All about the great holiday in the world's old capital.

MOONLIGHT: A Poem. A most exquisite piece of word-painting by one of our well-known poets.

CAMPHOR AND COLOGNE: A Love Story.

PHYSIOLOGY OF PERFUMES.

LEARNING TO SKATE: A Humorous Story.

ON GROWING OLD: An Essay for the Old Folks.

CURRENT NOTES ON BOOKS, PEOPLE, AND EVENTS.

Sold by all Newsdealers and Booksellers at the good old price of

TWENTY-FIVE CENTS A NUMBER.

BEADLE & COMPANY, Publishers,

118 WILLIAM STREET, NEW YORK.

Judging from the merits of the first number, this new magazine is destined to achieve a success. It is filled with interesting and entertaining matter, illustrated by numerous and *good* wood-cuts.—*Philadelphia Inquirer.*

It is put forth without bluster or promises. No long array of writing talent is quoted as about to adorn its columns. The publishers evidently intend to push their work upon its own merit. For this first number we can say that it is readable throughout, stories and all—which is more than we can affirm of some of the older magazines. It is tastefully illustrated.—*Norwich (Conn.) Bulletin.*

The magazine is most attractive looking, illustrated as fully as Harper, and displaying an array of original tales, poems, etc., of a varied and "taking" character.—*Hartford (Conn.) Times.*

MESSRS. BUNCE & HUNTINGTON will publish, in April next, the first number of a new Periodical, to be entitled

TOWN AND COUNTRY:

A Fortnightly Magazine,

DEVOTED TO AMERICAN LITERATURE.

"TOWN AND COUNTRY" will be a large octavo of eighty pages, printed in clear type, on fine paper, and stitched in a handsome cover.

Its contents will be solely original, and will consist of contributions from the foremost names in American literature.

Its design will be to supply a superior entertaining literature for home or travel, adapted to the wide range of human interests and cultivated tastes.

It will aim to photograph the very life and spirit of the hour, excluding dry abstractions and learned speculations, and dealing only with living, human themes. Brilliant, but not flippant; rapid, sparkling, fresh, but at the same time dignified and sensible, it will endeavor to unite the highest excellence with subjects that are at once familiar, attractive, and within the scope of social sympathies.

To furnish a superior fiction, both in the form of SERIAL NOVELS and SHORT STORIES, will be a paramount object; but graphic and entertaining papers on Literary, Scientific, Art, and Social subjects, with sketches of Adventure and Travel, will also be furnished by the best pens in their several branches.

It is, in brief, the purpose of the Editors *to portray and illustrate all the varied phases of Town and Country Life*—to delineate, under the forms of fiction or essay, the Labors, the Festivities, the Humor, the Pathos, the Refinements, and the Tragedy of *Life in the Town*; accompanied with pictures of the Sports, the Employments, the Adventures, the pleasures of the woods and the waters, the Firesides, and the Comedy of *Life in the Country*.

Each number will contain Illustrations, principally from drawings by our best known painters—the fresh, vigorous, and truthful designs of the new schools.

Its Fortnightly issue, occurring at an intermediate period between the weekly newspapers and the slowly recurring "monthlies," will, it is believed, be a welcome feature.

The Publication Days will be the 1st and 15th of each month.

☞ Further particulars will be given in future announcements.

BUNCE & HUNTINGTON, PUBLISHERS,

459 Broome Street, New York.

COTTON STEALING.

A NOVEL.

A very lively story of Southern life, both before and during the war, divulging secrets the cotton speculators must wince to see in print.—*Chicago Journal.*

487 PAGES. $2.

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening, January 27, 1866.

GOLD has not varied much during the week. Most of the leading operators are bears, but the prevailing uncertainty with regard to the financial measure before Congress and the advance of the rate of interest on the other side have checked the decline. The lowest point touched during the week was 138¾, on Tuesday, and the highest 139⅞, to-day; this evening it closes at 139¾. Exchange continues to rule ½ to ⅝ per cent. below the point at which coin can be profitably shipped as a remittance. Considerable anxiety prevails in London on the subject of trade with the United States. A leading authority figures a balance of $40,000,000 in gold due Great Britain by the United States on the interchange of produce and merchandise during the year 1865, and argues that the merchants of this country must be indebted to the merchants of England in some such sum. The error in the reasoning is so obvious that it will soon be detected. If we owed Europe $40,000,000 in gold, exchange would not rule at 108½ to ⅝. It would be 109¾ to 110. The fact is, we have lately shipped so many 5-20 bonds to Europe at 65 to 67 in gold, and so much Erie, Illinois Central, and Michigan Central—to say nothing of Massachusetts State bonds and other State and county securities—that the balance of trade has turned in our favor instead of being against us. The difficulty in London is not, as the London *Times* intimates, that liberal British manufacturers are selling too many goods on credit to shaky American importers, but that far-sighted Englishmen are buying at 66 and 67 United States bonds which the same London *Times* warned them not to touch, on peril of ruin, at 35 to 40. American credit is beginning to be understood in Europe, and the natural consequence is that money is flowing to the point where it is worth most. Stout resistance is being made to the movement by the Bank of England and the other financial authorities of Great Britain. But unless they can convince their people once more that 5-20 bonds are not worth buying, their labor will be in vain. A further advance in the Bank rate to 10 or 12 per cent. has been predicted. This would gravely embarrass British trade and industry, and would put an end at once to speculation as well in United States as in all other securities. But it is not clear that it would induce *bona fide* holders of 5-20 bonds or Illinois Central shares to sell them, so long as interest on the one and dividends on the other are duly paid. It is argued in some quarters that the advance of the rate of interest must tell on the price of cotton. This will be the case if large quantities of cotton are held on speculation on the other side. At present, the European stock of American cotton is not far in excess of the actual wants of spinners, and is therefore beyond the influence of the money market. If, owing to financial pressure at home, our merchants should ship excessive quantities of cotton to the other side, a heavy decline in the price would become inevitable from the difficulty of borrowing money in England. But so long as our people can hold their cotton, and only ship moderately

it does not seem that the Bank of England can even affect the price of this staple.

Money continues easy. The rates are 5 to 6 per cent. on choice collateral, and 7 per cent. for first-class mercantile, paper. Some deposits have been made during the week in the Sub-Treasury at 6 per cent. No further action has been taken in Congress on the subject of the Morrill bill, but the impression gains ground that it cannot become a law in its present shape. A bill has been drafted by a committee of financial men in this city, among whom the late Sub-Treasurer, John A. Stewart, is said to have been prominent, which looks to the funding into a thirty-year 6 per cent. stock of all the 7.30 notes, interest-bearing legal tenders, debt certificates, and temporary deposits. This measure would enable the Secretary to clear the way for a real commencement of funding, and commands the approval of many good judges. It is, and, indeed, always has been, understood in this city (whatever may have been imagined in Washington) that no substantial reduction of the currency can be effected so long as Government owes money on short-date paper, of various denominations, which it has not the means of paying except by the negotiation of other securities. It may seem, at Washington, a feasible project to blow hot and cold at the same time. But at this, the financial centre of the country, it is well understood that Government cannot pursue two antagonistic policies simultaneously. It cannot contract the currency and at the same time negotiate loans. It can contract the currency, and thus reduce the price of everything, including Government bonds; but in this case it cannot negotiate new bonds. Or it can negotiate new bonds, and float them at a fair price, so as to absorb its troublesome short-date paper; but in this case it cannot contract the currency until it has completed its negotiations. It was reserved for the Committee of Ways and Means to suggest the simultaneous adoption of both policies: to make money dear, and at the same time to offer bonds which could only be negotiated in a cheap money market; to ask the people to give up their currency in exchange for other securities, and at the same time to leave them no currency to give up. Time will develop these little incongruities in the Ways and Means Committee's scheme, and the members of that Committee will doubtless be as ready to correct their errors as they were in the matter of the gold bill. It would be a saving of time and expense, to be sure, if a few constituencies somewhere in the United States would send to Congress members possessed of elementary notions on the subject of finance. But in the end even Mr. Stevens can be brought to admit that water cannot be made to run up hill.

The following table will show the course of prices during the week in the stock, exchange, gold, and money markets:

	Jan. 20.	Jan. 27.	Advance.	Decline.
United States Sixes of 1881	104	103¾	....	¼
5-20 Bonds, old	103¾	102⅞	....	⅞
5-20 Bonds of 1865	101¾	101¾	....	....
10-40 Bonds	92⅞	92⅞	....	....
7.30 Notes, second series	93¾	93¾	....	....
New York Central	92¼	91⅞	....	⅜
Erie Railway	87 ex d.	81½	....	5½
Hudson River	103½	101½	....	2
Reading Railroad	101¼	99¼	....	2
Michigan Southern	70	68¾	....	1¼
Cleveland and Pittsburg	84½	78¾	....	5¾
Chicago and North-western	31¾	28½	....	3¼
" " " Preferred	58	54¾	....	3¼
Chicago and Rock Island	102½	98¼	....	4¼
P., Fort Wayne, and Chicago	95¼	93½	....	1¾
Canton	44	44½	½	....
Cumberland	46¾	44½	....	2¼
Mariposa	14	13	....	1
American Gold	139	139¼	¼	....
Bankers' Bills on London	108½	108¾	¼	....
Call Loans	5	6	1	....

The feature of the week has been a general decline in prices. This has been more marked in high-priced, dividend-paying stocks than in the "light timber" of the Stock Exchange—an indication that the public are selling their stocks in anticipation of reduced dividends and increased activity in money. Thus, Illinois Central, which we do not quote in our list, as it is mostly held in England, has declined 10 per cent. in a fortnight, Michigan Central 6 per cent., and Toledo 10 per cent. In these stocks there is little or no speculation, and the decline arises from forced sales by real holders, who seek to realize, not from any tight money market, but from apprehensions of reduced dividends in the future. Reading, Rock Island, and Fort Wayne have likewise fallen considerably. The Reading receipts show no material variation in the business. But the Rock Island traffic—which was doubled by the closing of the Mississippi River during the war—is falling off at the rate of $25,000 a week, $100,000 a month, or $1,200,000 a year. If this decline continues, the stock may again sell below 50. Fort Wayne sold as low as 91½ last week, on a reported decline of over $100,000 in January. The Pittsburg corner culminated last Monday, and was the most successful affair of the kind ever known in Wall Street. The party bought 75,000 shares of the 100,000 in existence, and within a week sold them out at a profit of some $175,000. It need hardly be said that the great difficulty in corners is to dispose of the stock bought. Thus, the silly speculators who, a few weeks ago, cornered Prairie du Chien and forced up the price to 250, have got every share of the stock on hand now, and could not sell it at 45. The Pittsburg operators were smarter. Their purchases averaged less than 80 and their sales over 82. Certain smart individuals who got wind of the movement and bought above 80, have not yet sold out, and are fidgeting with the stock with a view to create the belief that it is not yet done with. But they can neither tempt the public to buy, nor, after their recent bitter experience of the stock, the bears to sell. A party is understood to have been made up in Michigan Southern with a view of cornering the shorts. But so loudly has the intended corner been proclaimed that most of the bears have taken fright in advance and bought in their shorts. The Erie party have not yet disposed of their stock, and whenever they attempt to do so, shrewd speculators, aware of their position and watching their movements, anticipate their sales. Thus, this afternoon the price was forced down to 81, against 97 only three weeks ago, by an attempt of the leading bull to dispose of a few hundred shares. New York Central is inactive and rather steady. The managers have no hesitation in confessing in private conversation that materials, labor, and taxes are so high, while fares and freights are so low, that the road is earning very little money indeed. A large quantity of the stock of the Chicago and North-western has changed hands during the week at a decline of 3 and 4 per cent. A similar decline has taken place in that other cheap and once popular fancy, Ohio Certificates. For the moment, in a word, railway stocks are out of favor with the public, and, notwithstanding a decline of 10 to 15 per cent. and very ingenious arguments in some of the morning papers in favor of a rise, people will not buy. This condition of things will not last for ever, of course; but there is no sign of a change as yet.

CASH CAPITAL INCREASED TO - - - - - - - - $1,000,000
SURPLUS, JAN. 1, 1865, - - - - - - - - - 275,253

Losses equitably adjusted and promptly paid.

CHARTERED 1850.

Cash Dividends paid in fourteen years, 248 per cent.

P. NOTMAN, Secretary. JONATHAN D. STEELE, President.

THE MERCANTILE MUTUAL INSURANCE COMPANY.

OFFICE, 35 WALL STREET, NEW YORK.

Assets, January 1, 1866 . . . . . $1,366,699

ORGANIZED APRIL, 1844.

The Company has paid to its Customers, up to the present time, Losses amounting to over

EIGHTEEN MILLIONS OF DOLLARS.

For the past nine years the cash dividends paid to Stockholders, made from ONE-THIRD of the net profits, have amounted in the aggregate to

ONE HUNDRED AND TWENTY-ONE AND A HALF PER CENT.

Instead of issuing a scrip dividend to dealers, based on the principle that all classes of risks are equally profitable, this Company will hereafter make such cash abatement or discount from the current rates, when premiums are paid, as the general experience of underwriters will warrant, and the net profits remaining at the close of the year will be divided to the stockholders.

This Company continues to make Insurance on Marine and Inland Navigation and Transportation Risks on the most favorable terms, including Risks on Merchandise of all kinds, Hulls, and Freight.

Policies issued making loss payable in Gold or Currency, at the Office in New York, or in Sterling, at the Office of Rathbone, Bros. & Co., in Liverpool.

THE UNION MUTUAL LIFE INSURANCE COMPANY

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom, and disinterested philanthropy. It offers superior advantages to the life-ensuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies by receiving a note for one-half when the premium amounts to over $30.

THIS COMPANY offers PECULIAR ADVANTAGES to persons intending to ensure their lives.

Since its organization it has paid (chiefly to Widows and Orphans) for losses by death,

$912,342 00,

and

$412,748 00

in Dividends—a total of over

ONE AND A QUARTER MILLION

of Dollars, and now has, in its Capital and Accumulations, securely invested for the Payment of Losses and Dividends, a fund of

$1,400,777 16.

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the policy holders.

Cash on hand	18,042 34
Interest due	3,085 58
Premiums due	6,785 26
PRESENT LIABILITIES	$15,995 92
NET SURPLUS	198,733 26

This Company will continue, as heretofore, to insure respectable parties against DISASTER BY FIRE

At fair and remunerating rates; extending, according to the terms on its Policies, the advantage of the

PARTICIPATION PLAN OF THE COMPANY,

pursued by it for several years past, with such great success and popularity, and profit to its customers: whereby

(75) SEVENTY-FIVE PER CENT. (75)

of the Profits, instead of being withdrawn from the Company in Dividends to Stockholders, is invested as a "SCRIP FUND," and held for greater protection of its Policyholders; and Scrip, bearing interest, is issued to Customers therefor: thus, IN THIS COMPANY, those who furnish the business, AND PAY THE PREMIUMS, derive the largest share of advantages; and when the accumulations of the SCRIP FUND shall exceed

FIVE HUNDRED THOUSAND DOLLARS,

the excess will be applied to PAY OFF the Scrip IN CASH in the order of its issue.

☞ The liberal and prompt adjustment of Claims for Loss, WHEN FAIR AND SQUARE, is a specialty with this Company.

NOTE.—This Company does not insure on the hazards of RIVER, LAKE, or INLAND NAVIGATION; confining itself strictly to a legitimate FIRE INSURANCE BUSINESS.

BUYS AND SELLS INSURANCE SCRIP.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, of body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features: and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS,

PUBLISHER,

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars

They are more fire-proof.

They are more burglar-proof.

They are perfectly dry.

They do not lose their fire-proof qualities by age.

Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

Boulevard! Boulevard!! Boulevard!!!

The very mention of the wonderful Organ of Seville, in Spain, will cause a thrill of delight in the heart of every traveller who has been so fortunate as to listen to its wondrous tones. Its power over the senses and its effect on the mind cannot be described. At one moment it resembles the flute-like notes of the human voice, and again it bursts forth in a tempest of power, and resembles, more than words can convey, a raging storm at sea; and above, amid the wild refrain, the ear clearly catches, in sweetest notes, the singing of birds. Something like this has been the effect of the musical "Le Boulevard." From shore to shore, above the ocean's roar, is heard, in sweetest notes, "Le Boulevard." From the gay and beautiful capital of the world's fashions it comes to the ladies of the Meilleur Monde in America. Suddenly, as a flash from a cloudless sky, it has illumined the land. From every section, and even from the islands of the tropics, the reverberations resound, rolling back the call for "Boulevard." Ladies of America, it is a talisman. It is Thomson's crowning master-piece in crinoline! Its trade-mark is a royal crown. Its train is pronounced peerless. Ask at ARNOLD'S, in Canal Street, and at ELGER'S, 880 Broadway, for "Boulevard" en acier elastique. Merchants of America, send to the oldest and largest manufacturers of crinoline in the world for Boulevard, with patent French Yoke, to W. S. THOMSON, LANGDON & CO., Importers of French Corsets, and Manufacturers of the Crown Skirts, 391 Broadway, New York.

The Week.

THE constitutional amendment, as amended and passed last week, still fails to commend itself to our judgment, and, so far as we can see, to the common sense of the people. Its fate, meanwhile, is still doubtful, and a fair opportunity for considering its merits can be had by every Legislature to which it may come. The motives which induced the Republican opponents of the amendment to unite, most of them, with the majority on the final vote, are not clear. Perhaps it was simply an adhesion to the party; possibly the President's warning note excited the very opposition it was meant to intimidate. Neither reason was a good one. The amendment throws overboard the right of Federal military control in the conquered States, the right to regulate the suffrage there, and to make intelligence the qualification of suffrage. There seems to be a constantly strengthening popular demand that the last-named right should be exercised, if only for the sake of furthering the cause of education at the South.

SENATOR CHANDLER, of Michigan, has a grand plan for coercing England into payment of the *Alabama* damages, by putting an end to all commercial intercourse with her, and he declares he will keep urging it to his last hour. This scheme rises about to the level of Mr. Thaddeus Stevens's gold bill, which, as our readers may remember, that philosophical politician justified by appealing to the Middle Ages. If Senator Chandler will give himself the trouble to think and read a little on this great work of his life, he will find that he might as well try to dam up the Niagara as to stop commercial intercourse with any country with which intercourse will pay. Even if no American vessel were allowed to enter a British port, or a British vessel one of ours, trade would continue through the medium of some Continental country, if there was anything to be made by it. The thing has often been tried, and always with the same result. Every port in Russia was sealed up during the Crimean war, and yet there was little if any rise in the price of Russian commodities in the London market.

THE bill prohibiting the registry of any ship as an American vessel which during the war sailed under a foreign flag, has passed the House by a large majority. There was not a word said in favor of it except that it was a good way of punishing men who "deserted their flag" and filled their pockets with "British profits"—whatever that may mean. What service a man could render his country by having his ship burnt by a rebel privateer nobody explained. The fact is, that anybody who put a ship out of harm's way did serve the country very effectually. As regards the point of honor, it is easy for those to talk of it whose goods and chattels were all on dry land when Semmes was roving the seas. Why does not Mr. Thaddeus Stevens now bring in a bill for the punishment of all persons who, during the war, transferred their property to the English funds? They are far guiltier than the poor ship-owners, as they really did repudiate the protection of the United States Government, while the ship-owners asked for it in vain.

THE Seventh Regiment ball, of which so much was expected, was, the reporters to the contrary notwithstanding, a tolerably discreditable affair. The overcrowding was disgraceful, and converted the guests, at least at one period of the evening, into a disorderly mob. This result is now so common in all public entertainments given on a large scale, that it is assuming the proportions of a national scandal. The managers seem to have no sense of responsibility—we will not say of decency—about the number of tickets issued, and the consequence is that both ladies and gentlemen now go prepared for a personal struggle, many of the former, as is well known, wearing their old clothes, without the smallest expectation of playing their legitimate part by adding brilliancy to the scene, and with some fears of having their garments torn off their backs. This confusion has occurred now so often since large balls and receptions got to be the fashion, that it may seem hardly worth while to comment on it. But we are satisfied that the love of order and decorum and good manners is growing, and not declining in the community, and that if the public would only express its sense of these performances, the unscrupulous personages who issue tickets to twice as many persons as they are prepared to receive, with even common comfort, would be shamed into moderation. There is an art in getting up public entertainments. Won't some one or two men in each of the great cities cultivate it a little? The popular impression seems to be that when you have ordered an immense supper, a great deal of hangings and gas, and made a hole to put coats and hats in, you can bid the whole population take part in the feast. The street-cars are evidently producing their effect by developing a love of or indifference to crowding.

THE Chamber of Commerce last Thursday had urged upon them the importance of a scientific commission to China and Japan to study the agricultural economy of those countries. One argument was our want of information concerning the mode of crystallizing the products of sorghum. But according to the Rev. Justus Doolittle, whose book on the social life of the Chinese has just been issued by the Harpers, it is not in China that we may expect to obtain the desired instruction. He says:

> "The so-called Chinese sugar-cane, or sorghum, is grown very extensively in Northern China, and is known among foreigners as a kind of millet—*the Barbadoes Millet.* The Chinese name for it is *Kauliang.* . . . The Chinese do not express the juice from its stalks for the purpose of manufacturing molasses or sugar, and they manifest surprise when informed that such a use is made of it in the United States. They make a coarse kind of bread from the flour of the seeds of the Kauliang, eaten principally by the poorer classes. The stalks are used for fuel, for lathing in the partitions of houses, for slight and temporary fences, etc. . . . During a few years past, many enquiries have been made in regard to the manner in which the Chinese manufacture sugar and molasses out of the sorghum; but such information is vainly sought of them."

IN a lecture on the Indians in this city, last week, DR. D. J. Macgowan advocated the formation of an "Aboriginal Protective Society," whose special function should be to expose the frauds practised on the

Indians by the agents of the Government—frauds which, it is well known, have caused almost all the misery and provoked the bloody revenges of their victims. Such a society would, no doubt, accomplish a humane and much needed work, even if the better spirit in which the Indian question is now attempted to be solved pervades our new legislation. The plans to which we alluded in our recent articles on this subject are likely to be far better intended than executed.

THE diary of Congress which we publish from week to week is prepared at the Capital expressly for THE NATION, and in the most thorough and conscientious manner. To compress the essential proceedings of both Houses into such narrow compass, while aiming to secure perfect accuracy, is a task which requires much time, constant and careful attention, and no little labor; so that, in fact, it is very seldom attempted. Neither from the telegraphic reports nor from the summaries of the daily press can one ascertain with certainty the precise stage of business in our national legislature at the close of its day's or week's work.

SENATOR BROWN wants Congress to authorize the Post-office Department "to construct and operate telegraph lines along the principal mail routes," or otherwise to connect the mail service with telegraphic facilities. This union, we observe, has just been attempted on a small scale on the Continent, but we do not believe the time has yet come for it here. The present mismanagement of the Post-office, and the rotation by which its employees are periodically unsettled, forbid our charging it with an extra burden, and affording it another excuse for inefficiency. The system needs a thorough overhauling, and, until it gets it, we are opposed to its adding any more strings to its bow.

CAPTAIN SEMMES writes to the President that, "when America shall have a history, his (Semmes's) record and that of the gallant Southern people will be engrafted on it," and he begs Mr. Johnson not "to suffer it to be tarnished" by trying him for running away in the *Deerhound*. He adds another paragraph of a lengthy rhetorical character, from which it is evident that he thinks himself a very remarkable man. The fact is, however, that whenever Semmes's "record" comes to be "engrafted," the wonder will be that so much fuss was ever made by so insignificant a person. He won no distinction in the war to which a great many buccaneers could not lay claim. Many of the latter destroyed twice as much property in the Spanish Main as he did all over the world. As a naval officer, the man is hardly worth notice even by the "historian" Pollard. In his one fight with a foe of equal force he was dropped into the water after an hour's cannonading, which ought to condemn him to perpetual silence about his own career. His trial, however, will be a curious affair, as the legal arguments in it are sure to be at least original.

MR. TRUMBULL'S bill for the protection of civil rights has passed the Senate. Should it fare as well in the House it will, as Mr. Morrill observed, mark a new epoch in the history of American legislation, as it will be the first attempt of the national Government to enforce the constitutional provisions for the protection of life, liberty, and property in all parts of the Union.

Two of the ablest lawyers in England, Mr. Edward James, Q. C., and Mr. Fitzjames Stephen, have given a careful opinion upon the legality of Governor Eyre's proceedings in Jamaica. They say the assumption of absolute power by officers of the Government for the suppression of insurrection is lawful, but it must be justified by the necessity of the case, and any exercise of it beyond this is illegal; and what constitutes necessity it is for a judge and jury before whom they may be brought to trial to decide. Was Mr. Gordon's execution necessary? They hold not, inasmuch as Kingston, in which he was tried and put to death, was not even declared to be under martial law—showing that Governor Eyre did not consider that any ground existed for the assumption of extraordinary power in that place. And, finally, they advise that Governor Eyre may be either indicted for murder in Middlesex or impeached in Parliament. There would, we need hardly say, not be the slightest chance of his conviction before the House of Lords, but before a London jury the result might be different.

THE Confederate bondholders have held another meeting in London, the report of which is very amusing reading. They seem to have the lowest possible opinion both of Erlanger and of Schroder, the Confederate agents in London and Paris respectively, and rely mainly on the "great principles of international law" and the honor of the Southern States. By way no doubt of working on the feelings of the federal Government, it was mentioned by Mr. Chamberlayne that "the fact of the loan showed the intense sympathy" (felt in England) "for the South." Why do not these gentlemen send a committee to Washington with instructions to stay there for a month and report faithfully what they hear about themselves and their mission? This would shed more light on their chances of repayment than fifty meetings in London.

IT appears to be not so much a question of suppressing the insurrection in Spain as of running it down. Gen. Prim still held the lead at the latest accounts, and was heading for Portugal.

THE new Italian Ministry have begun their work vigorously. The War Minister has ordered the suspension of the levy already in progress, which embraced all citizens born in 1845. This action is not properly a disarmament, but a return to the law, which in ordinary times (*nei tempi normali*) holds those only liable to recruitment who have completed their twenty-first year in the year when the levy is ordered. The Minister of Finance intends benefiting the schools and universities, and the treasury, by cutting off unnecessary inspectors and professors.

ITALY has lost a many-sided man in the person of Massimo d'Azeglio, author, artist, and statesman, who died at Turin on the 15th of January. He effected much by his writings for the present unity of his countrymen, and sided latterly with the Government party rather than with the Liberals.

CONGRESS.

WASHINGTON, Feb. 3, 1866.

Two most important measures have this week passed the ordeal of a vote—one in the Senate, and the other in the House of Representatives. The first is the bill reported by Mr. Trumbull, from the Judiciary Committee, conferring upon all persons in the United States equal rights to make and enforce contracts; to sue and give evidence; to inherit, purchase, hold, and convey property; and to the full and equal benefit of all laws for the security of person and property, *any law, regulation, or custom to the contrary notwithstanding*. The bill confers upon the U. S. courts jurisdiction over offences in violation of its provisions, to the exclusion of the State courts, and enters, in much legal detail, into provisions and penalties for securing its full enforcement. There is no doubt that this act supplies the "appropriate legislation" which Congress is authorized in the terms of the late Constitutional Amendment to supply, in order to give effect to the prohibition of slavery. It has been fought with persistent determination by the whole force of Democratic senators, reinforced by the powerful aid of Mr. Cowan, of Pennsylvania, who was elected as a Republican four years ago. Although it may be fairly claimed that the enactment digs the grave of State rights, so far as class distinctions between citizens in respect to life and liberty are concerned, it does not go the length of equalizing the elective franchise. It is difficult to see how any sincere friend of the abolition of slavery can honestly object to it, since it only interposes a bulwark between the late slave and that "unfriendly legislation" which clings with tenacious grip to the superior rights of the master-class. It simply plants the slave on his manhood, as against his late condition of chattelhood, and maintains him there by the strong arm of the general Government, thereby merely keeping the promise held out in the Constitutional Amendment.

The passage by the House, on Wednesday, of the joint resolution proposing a constitutional amendment to base representation upon such

part of the population as is not denied the elective franchise on account of color, was a most unexpected thing. The way in which it was brought about is too well understood to require amplification; but it may be stated that the strong vote by which it passed was a proof not of unanimity, but of a fixed resolve to rebuke a supposed Executive dictation. That the unfriendly criticisms of the President upon constitutional amendments at this time were officially (though informally) promulgated through the telegraph, was well understood by every member of the House. That the object of that promulgation was to influence the legislation of Congress, although more doubtful, was generally believed. Another consideration which led to unexpected unanimity was the fact that, nothing else being generally agreed upon, the proposition of the Committee was as unobjectionable as any that could be offered, and, as speedy action was desirable for the sake of its moral effect upon the country, individual objections were almost universally surrendered. The only recusants among the strict Republicans were one Rhode Island and two Massachusetts members, who insist upon national negro suffrage, and Messrs. Hale and Raymond, of New York, who alone of the dominant party voted in accordance with the President's known views. Of the Border slave State members, ten voted for the amendment and sixteen against it, which, considering all the circumstances, is a splendid record. That the measure will also pass the Senate by a two-thirds majority is regarded as certain. Of course it is independent of the President's approval, and will go to the States with the sole endorsement of Congress.

Mr. Sumner has given notice of a joint resolution which he will offer as a "counter proposition" to this amendment. It declares the State governments in the States lately in rebellion to have "lapsed," and that all persons in those States shall have the right of suffrage and all other rights, civil and political, anything in the constitution or laws in such States to the contrary notwithstanding. It is surprising that Mr. Sumner should expect any good to be effected from the adoption by Congress of such vague legislation as this, in lieu of a constitutional amendment which would be binding, if adopted, upon all the States, or of statutory enactments like the Civil Rights and Freedmen's Bureau bills, both of which not only guarantee a right, but supply a remedy. Most of Mr. Sumner's bills and joint resolutions (and he has been very fruitful in both at this session) have the air of town-meeting resolves, reciting well-established and indisputable axioms, and re-enacting the phrases of the Constitution and the Declaration of Independence. So accomplished a student of history and jurisprudence should have found out that rights, in order to be maintained, must have a basis of specific law to rest upon, and that the "appropriate legislation" needful to enforce the constitutional abolition of slavery, is not to be supplied by a declaratory resolution of ten lines setting forth nothing but political truisms. It may be well enough to have an "orator of the human race" to deal with our foreign affairs in the Senate, but it is fortunate that a more practical intellect presides over the deliberations of the Judiciary Committee.

DIARY.

Monday, Jan. 29, 1866.—In the Senate, a message was received from the President, declining to communicate, as incompatible with the public interest, the correspondence of Major-General Sheridan, etc., relating to any violation of neutrality by the United States army on the bank of the Rio Grande. Mr. Harris introduced a bill to re-organize the Judiciary of the United States. Referred. Mr. Sherman offered a bill to promote military education, empowering the President to detail army officers to act as heads of established colleges for that purpose. Referred. Mr. Yates offered a bill prohibiting any State from making any distinction between citizens on account of race or color, and declaring that all citizens shall be protected in all rights, including the right of suffrage. Referred. Mr. Wilson offered a bill to increase the number of cadets in the Military Academy by two from each State, to be appointed by the President, and seventy-five additional cadets to be appointed from sons of those who have died in military service; also increasing the requirements for admission. Referred. A bill to restrict the charges for collecting soldiers' claims to $10 was passed. The bill reported by Mr. Trumbull from the Judiciary Committee, to protect all persons in the United States in their civil rights, was taken up. Mr. Trumbull explained and vindicated the bill as securing freedom in fact and equality of civil rights to all persons alike, and investing the courts of the United States, to the exclusion of the State courts, with power to enforce them. Mr. Saulsbury attacked the bill as dangerous, oppressive, unjust, unconstitutional, and subversive of State rights.

In the House, a resolution commending the refusal of the President to accept presents, and censuring the practice of Government officials in receiving presents from subordinates, was passed. Mr. Julian offered a resolution favoring the speedy trial of Jefferson Davis for treason, but the House refused to order the previous question upon it. The report of the Commission upon the revenue system was presented from the Secretary of the Treasury. Mr. Raymond spoke three hours upon the constitutional amendment fixing the basis of representation, diverging to the general questions in issue, affirming that the Southern States have resumed their functions of self-government in the Union, that they did not change their constitutional relations by making war, and that Congress should admit their representatives by districts, receiving only loyal men as members. Messrs. Julian and Johnson also made speeches.

January 30.—In the Senate, Mr. Sumner reported from the Committee on Foreign Relations a bill for payment of claims for French spoliations prior to 1801. The Judiciary Committee reported a resolution that J. P. Stockton is entitled to a seat as Senator from New Jersey. Mr. Brown offered a resolution of enquiry as to expediency of the Post-office Department constructing and opening telegraph lines. Referred. The bill for protecting all persons in their civil rights was debated.

In the House, a motion to admit to the privileges of the floor the representative elect from the State of Arkansas was refused—ayes, 64; nays, 94. The deficiency appropriation bill was reported, and made a special order for February 6. The constitutional amendment regarding the basis of representation was recommitted to the Joint Committee on Reconstruction. The resolution rejecting all claims for damages to property of loyal or disloyal citizens by our army within the rebel States was passed, the House having refused to table it by a vote of 36 to 118. The Senate bill to enlarge the powers of the Freedmen's Bureau was taken up and discussed by Mr. Eliot in its favor.

January 31.—In the Senate, Mr. Lane offered the petition of 124 women of Kansas praying for a constitutional amendment prohibiting the States from disfranchising women. A joint resolution of thanks to Admiral Farragut was passed. The bill to protect all persons in their civil rights was discussed by Messrs. Davis, Trumbull, Clark, and Johnson.

In the House, a bill was passed authorizing the sale of marine hospitals and revenue cutters. The Committee of Commerce reported a bill providing that no American vessel which sailed under a foreign flag during the rebellion shall be registered as an American vessel, or have rights and privileges as such, without act of Congress. Laid over. Mr. Stevens reported back the constitutional amendment yesterday recommitted to the Reconstruction Committee, with an amendment striking out the words "and direct taxes," so as to fix simply the basis of representation in Congress upon population, excluding those races or colors to which the elective franchise is denied or abridged. Mr. Schenck offered a substitute making "male citizens of the United States over twenty-one years" the basis of representation. Lost—yeas, 29; nays, 130. Mr. Stevens made a speech, severely reflecting upon the President for causing a manifesto of his opinions against constitutional amendments to be published, pending the deliberation of the representatives of the people; also rebuking Mr. Raymond for honoring the rebel dead, and declaring his opposition to Mr. Schenck's amendment, because it inserted the word "male" in the Constitution, excluded from the basis of representation large numbers of foreign-born citizens in the Northern States, and was practically certain to be defeated before the State legislatures. The House then adopted the constitutional amendment as reported by Mr. Stevens—yeas, 120; nays, 46; absent, 16. The Speaker declared the resolution proposing the amendment adopted by the constitutional majority of two-thirds. The Freedmen's Bureau bill was taken up, and opposed in speeches by Messrs. Dawson and Taylor. At the evening session, Mr. Kelley spoke four hours against free trade; Mr. Dennison made a speech against amending the Constitution; and Mr. Paine spoke against hasty reconstruction and for universal suffrage.

February 1.—In the Senate, Mr. Howard's resolution in favor of the trial by military commission of Jefferson Davis and C. C. Clay, on the charge of inciting assassination and violating the usages of war, was taken up. Mr. Howard defended it at length, taking issue with the opinion of the Attorney-General on the subject. The Senate proceeded with the bill to secure the civil rights of all persons. Messrs. Morrill, Davis, Trumbull, Henderson, and others made speeches. The bill was amended to provide that "all persons born in the United States, and not subject to any foreign power, excluding Indians not subject to tribal authority, are hereby declared to be citizens of the United States without distinction of color." Mr. Fessenden gave notice that he should call up the proposed constitutional amendment on February 5.

In the House, Mr. Morrill, from the Committee on Ways and Means, reported a bill for raising revenue for the support of the Government. Made a special order for February 8. The bill to prevent the issue of American registers to vessels which have sailed under foreign flags during the rebellion was passed. The Freedmen's Bureau bill was discussed by Messrs. Donnelly and Garfield in its favor, and by Mr. Kerr against it. Mr. Donnelly proposed an amendment, authorizing the Commissioner of Freedmen to provide common-school education for all. Laid over.

February 2.—In the Senate, Mr. Sumner offered a joint resolution as a counter-proposition to the proposed constitutional amendment. It declares that in the late rebel States there shall be no oligarchy, aristocracy, or caste with peculiar privileges, and no denial of rights on account of color, but that all persons shall be equal before the laws, in the courts, or at the ballot-box; and that this statute, made in pursuance of the Constitution, shall be the supreme law of the land. A joint resolution was passed, setting apart a room in the Patent Office for exhibition of gold and silver and other minerals, the product of the United States. The bill from the Post-office Committee, authorizing the sale of stamps on credit in the Southern States to persons not postmasters, who give bonds, was taken up. Mr. Sumner opposed it on the ground that the Postmaster-General was relaxing the test-oath of 1862 in his official appointments. Mr. Wilson favored the bill on the ground that it would accommodate the Southern people and be an advantage to the Government. The bill was passed. The bill to protect all persons in the United States in their civil rights was taken up. Mr. Garret Davis spoke three hours against the bill, denouncing it as "unconstitutional, unjust, despotic, oppressive, iniquitous, unwise, impolitic, outrageous, and diabolical, and calculated to keep up for ever a severance of the Union." Mr Trumbull replied that the bill thus characterized, being simply a bill to secure equal rights, must therefore be as bad as all these epithets indicated, in the eyes of the senator from Kentucky. Messrs. Guthrie, Hendricks, Cowan, and Saulsbury opposed the bill, and Messrs. Wilson and Lane advocated it, after which it was passed—yeas, 33; nays, 12. A message was received from the President, communicating a letter from the Chief-Justice of the United States declaring his reluctance to hold a circuit court in the State of Virginia for the trial of treason cases while martial law is extended

over that State and in advance of action by Congress on the whole subject of the rebel States. Also, a message recommending the appointment of a Minister to the Dominican Republic and recognizing its independence. Also, a message transmitting a letter of Major-General Sherman as to the condition and prospects of Arkansas. Adjourned to February 5.

In the House, Mr. Raymond introduced a bill providing for warehouses in New York for reception of goods from vessels subject to quarantine. Referred. Mr. Stevens offered the regular annual civil appropriation bill. Made a special order for February 12. A long debate arose on the contested election case of Dodge *vs.* Brooks, for the Eighth Congressional District in New York. Laid over, for the printing of testimony in the case. The Freedmen's Bureau bill was opposed in a speech by Mr. Kerr. The rest of the day was consumed on private bills.

February 3.—The Senate was not in session. In the House, the Freedmen's Bureau bill was discussed all the day and evening. Speeches in its favor were made by Messrs. Hubbard, of Conn., and Moulton, and against it by Messrs. Marshall, Ritter, Rousseau, Shanklin, and Phelps. Adjourned to February 5.

THE FREEDMEN.

THE report of Gen. Sprague, Assistant Commissioner for Missouri and Arkansas, for the quarter ending Dec. 31, pertains only to the latter State. He has found the system of employing trustworthy civilians as superintendents a success. Of the twenty-five superintendents in Arkansas, sixteen are citizen agents for the Bureau. In the southern and south-western portions of the State, the people still ignore their duties to the Government and the Bureau, and seem largely animated by the old rebel spirit. The Hon. E. W. Gantt, once an uncompromising rebel, but who long ago repented in words and works, has become one of the agents of the Bureau, and, through his fair dealing with the freedmen as well as considerable influence with the whites, has succeeded in initiating a much better state of affairs in Southern Arkansas. As he is a man of great intelligence, and a prominent citizen, his statements are entitled to consideration. He says, in a report to Gen. Sprague:

"I see by the act of Congress organizing the Bureau that its existence is limited to one year after the war. If it should not be extended there is no hope for the freedmen of Arkansas, Texas, and that portion of the South remote from railroads and telegraphs. They will be starved, murdered, or forced into a condition more horrible than the worst stages of slavery. Our people's wrath over defeat would be poured upon the heads of the helpless ones once their slaves. I say this sorrowfully of our people, yet I know it is but too true; their prejudices give way slowly; by extending the existence of the Bureau, what education and thought failed to do might be supplied by an influx of liberal-minded people."

General Sprague declares that the above statements are corroborated by all the testimony that reaches him from other parts of the State, and gives it as his deliberate opinion that if the military are withdrawn, not a school for colored children would be allowed in the borders of the State, and not an outspoken Union man be permitted to remain. Laborers are in great demand in Arkansas, and twenty dollars per month, with board, cabins, fuel, medicines, etc., are readily offered for first-class hands. Five thousand additional freedmen in the State could easily obtain employment.

General Tillson, Assistant Commissioner for Georgia, writes on the 23d ult. to the Commissioner, and complains that the troops have been withdrawn from Georgia to such an extent that the interests of the Bureau and of the freedmen have greatly suffered thereby; that so few troops remain that they are almost all needed to protect public property, and that, for want of a few troops to aid them in the performance of their duties, the efficiency of many of his agents is almost completely paralyzed. He says that nearly all the females and young men are open in their expressions of hatred for Yankees and negroes; that the only public opinion which makes itself felt is as bitter and malignant as ever, and that "unless we keep a firm, just, kind hand upon these people, all our past labor will be thrown away."

Letters from South Carolina show that General R. K. Scott, the new Assistant Commissioner for that State, is meeting with great success in the solution of the problems before him, and that the freed people are beginning to repose in him the same confidence given his predecessor, Gen. Saxton.

Superintendent Eberhart, at Augusta, Georgia, reports that there were in the State in December 57 schools with 67 teachers. The number of pupils was 4,351, of whom 2,117 could read. Of the 67 teachers, 31 are colored and natives of the South. In seven localities the freed people have contributed, since the close of the rebellion, $3,963 to the support of their schools; and, to all the schools established by Northern societies, they invariably contribute enough money to meet all contingent expenses. The societies laboring in this State are the American Missionary Association and the New England Freedmen's Aid Society. The former occupies, exclusivley, the cities of Augusta, Atlanta, and Macon, and, in conjunction with the latter, the city of Savannah. The latter society occupies Columbus, Americus, and Athens. There is persistent opposition on the part of the whites to negro education.

The freedmen of Georgia assembled in convention at Augusta on the 10th of last month. They passed resolutions claiming equal political rights, and formed an association, of which they made Capt. J. E. Bryant president. He accepted the office and endorsed their claims in a very sensible speech. Gen. Tillson also spoke, by invitation, somewhat more at length. He told the convention frankly that he thought neither white nor black should be allowed to vote unless qualified by a certain amount of intelligence.

—A correspondent writes us from Houston that during Gen. Gregory's tour through Texas he had occasion to address the freedmen in the neighborhood of one Judge Elmore, a Methodist slaveholder, who had not yet abandoned whips, chains, and hounds in the management of his plantation. This fact having been divulged by one of the hands who was present, and the judge confessing on the spot, Gen. Gregory at once ordered him to be arrested and taken to Houston. Here he sued out a writ of habeas corpus. The general asked for time, which was granted, and when the case came up responded that where the civil courts had failed in their duty, he claimed jurisdiction under the Bureau and had exercised it. He refused to obey the writ. Judge Caldwell sustained him, his opinion being, in substance, that the Freedmen's Bureau is for a good and legitimate purpose; that its officers have certain rights which both people and courts must respect; that one is the right to protect the freedmen from ill-treatment when the courts neglect to do so; that in this case the civil courts had been guilty of neglect, and Gen. Gregory therefore had concurrent jurisdiction. So the writ was dismissed.

—A correspondent of the New York *Times* writes from Jackson, Mississippi, that high wages prevail on many of the plantations in that vicinity. Very numerous contracts have been made with the freedmen for $15 a month, including lodging, clothing, and food. In the neighborhood of Vicksburg labor is very scarce, and $18 and $20 a month are not uncommon wages. A North Alabama paper says that "first-class hands, without encumbrance, are hiring for $200 per year, with rations, quarters, and wood, the negro to clothe himself and pay his doctor's bills." Another paper in the same State says: "The ruling prices paid first-class plantation hands is $10 per month, the negro furnishing his own clothes and paying his doctor's bills."

Minor Topics.

WHEN Mr. Archibald Peachblossom received his certificate of teacher, he felt a glow of simple, honest pride, and he took in his hard hand the little carpet-sack which his mother had so carefully packed, and came at once to New York to make his fortune. He had heard that, by the assistance of the Preceptors' Mutual Aid and Comfort Society, he should be able at once to find a place as teacher in a public school or tutor in a private family. Having amassed a handsome competence in one or other of these lucrative vocations, he could either retire to his village of Greenfields or go into business and become a millionaire. Riding down in the cars from Greenfields, he was unable to decide which of these things he should do, but he felt that the decision of the question might be safely deferred to another time.

The apartment in which the business of the Preceptors' Mutual Aid and Comfort Society was transacted was not so stately as young Peachblossom had figured in his own mind, and there were no Mutual Aiders and Comforters in council there, as he thought there might happen to be, when the candidate for their association should step in. The manner of the gentleman at the desk, however, was very cordial and reassuring. As soon as Peachblossom stated his wish to become a member of the society, this gentleman assumed towards him a tone in which

the pious father and the indulgent uncle were gracefully blended, and said that he would take a personal interest in finding him a suitable place; that he would advertise his application very carefully, and see that he got something to do immediately. In a word, he might consider the thing done. Mr. Peachblossom paid the fee of initiation—it was not great, but it came out of a fortune as yet but slender—and was bowed from the office, very proud and happy that his interests should be in the keeping of such an institution. He could hardly sleep that night thinking of his good luck.

After this he began to call every morning at the P. M. A. and C. Society office, and was too sensible to be hurt by a dawning abruptness in the address of the hard-worked manager. Even when this became downright coldness he did not much mind it, but he was rather angered when it grew to be a positive neglect, and he could scarcely get any answer from the manager concerning his prospects. Sometimes he met other Aiders and Comforters there on business similar to his own, and he thought them rather forlorn and anxious-looking for Aiders and Comforters. It appeared that places for tutors and teachers were hard to get, even through the society.

Mr. Peachblossom, walking down the street, observed a sign, "Intelligence Office," and glancing in at the window, he saw numbers of Bridgets of all ages and sexes sitting round the room in attitudes of hope or dejection, and looking extremely like the Aiders and Comforters he had just left. What—his heart almost stopped as he asked himself the question—what if the Preceptors' Mutual Aid and Comfort Society were, in spite of its flattering name, only an Intelligence Office, after all? What if the manager were, in fact, the whole concern, and there were little or no aid and comfort in it, except what the manager got?

After a long while answers began to be made to Mr. Peachblossom's advertisement—sometimes he was sent to confer personally with people seeking a teacher or tutor, and, under the auspices of the Mutual Aid and Comfort Society, he felt remarkably like Bridget going with a character from the Intelligence Office.

When he at last found a place, the Mutual Aid and Comfort Society exhibited itself in a new and interesting light. It claimed from him, as a member in good standing, the payment of six per cent. on the whole amount of his salary as tutor, and it exacted the payment for a term of months. Finding this system oppressive, Mr. Peachblossom reflected a little, and it occurred to him that if the members of the society were subjected to this onerous tax, he had better resign. He therefore wrote a letter to the manager, and resigned his membership. The manager answered that he could not resign. His membership, like allegiance to the British crown, could not be thrown off.

Nevertheless, Mr. Peachblossom persisted in his resignation, and utterly refused to pay the tax any more. The manager expostulated in vain, and then resolved to see the gentleman who had employed Mr. Peachblossom, and procure his dismissal. The gentleman, informed of the affair by Mr. P., was pleased to see the manager, and to talk with him; but the manager was somewhat embarrassed in opening the subject. It is possible that he had read "Nicholas Nickleby," and remembered Mr. Squeers. He regretted, however, to tell Mr. Peachblossom's patron that Mr. P. had treated him very ill; had refused to pay his dues as a member of the Mutual Aid and Comfort Society, and had attempted to resign. He advised our friend to dismiss Mr. Peachblossom.

"All this," said our friend, "does not concern me in the least. I find Mr. Peachblossom honest, faithful, and capable. If I dismissed him to-day on your society's account, I should engage him to-morrow on my own."

"Now, I will put it to you in the abstract and as a man of business," said the manager. "Suppose you had a porter whom you found in every way satisfactory, and this porter's former employer came to you and complained that he had been wronged by the porter; what would you do?"

Our friend having the case put to him in the abstract, felt absolved from the obligations of concrete politeness, and replied: he should tell the former employer to go about his business.

On this hint, the manager went, and poor young Peachblossom, secure from the clutch of that wicked despot, remained triumphing.

Dothemasters Institute is an establishment similar to the Preceptors' Mutual Aid and Comfort Society, and when Mr. Peachblossom retired from our friend's service (after having amassed the handsome competence before mentioned) the latter went to the institute and enquired for another tutor. He was supplied immediately, and told that a bill would be sent him for the institute's fee, which was small. In due time the bill came, a formidable broadside, covered on one side with certificates of the institute's probity and efficiency, and on the other with the items of the account specified in print. Among these our friend found a charge for one year's subscription to the "Quarterly Peruvian Pedagogue," a review published by the institute, and looking over the remarks with which the account was prefaced, he learned, for the first time, and to his great surprise, that he had been expected, on making application for a teacher at the institute, to subscribe for the "Quarterly Peruvian Pedagogue." This he considered a much more ingenious method of procuring subscriptions for a periodical than the system of those publishers who offer a Portable Steam Saw-mill, or a White Siamese Elephant, to any person sending them a club of one thousand subscribers; but, though he admired the device, he did not want the review, and he did not care to pay for it. The agent of the institute had evidently foreseen contingencies of this sort, for, on casting his eye at the bottom of the sheet, our friend found a note, requesting him to send the sum of the account, if correct, by next mail; and if *not* correct, to please to have the kindness to send what *was* right, and the agent would promptly return a receipt. This was strictly business-like, and our friend took advantage of the opportunity offered him to strike out the charge for the "Quarterly Peruvian Pedagogue," and then transmitted the balance.

He is a man of business, largely engaged in the artificial oyster and patent clam-soup trade, and he thinks of starting a journal to be called the *Bivalve's Friend*. When people make purchase of a bushel of artificial oysters, or a barrel of patent clam-soup, he will send in a bill for the *Bivalve's Friend*, with the observation that persons trading with him are expected to subscribe for the paper; but he will sagaciously add that if the account is not correct, the purchaser may return what *is* right. Having achieved these triumphs of impudence, he thinks he may yet be capable of making the young men in his service members of a Mutual Aid and Comfort Society, liable to an assessment of six per cent. on their salaries. In this society resignation will be impossible.

We have received the following article, with a request from the author to publish it if it should meet our approval. We think it might safely have been made longer (though we hope our contributors generally will not act upon this admission), but as far as it goes we find it so exhaustive of the subject that we cannot justly withhold it. Like Lessing's monograph on the Laocoon, it leaves nothing to be said, and we should not be surprised if the essayist had exhausted himself as well as his subject in this single effort of the intellect. We know that future productions can add nothing to the reputation which this will establish, and we warn our contributor that we shall feel hereafter obliged, out of a high regard for the interests of literature, as well as his own, to decline his contributions:

MUSIC.

Music is the science of combining sounds in such a manner as shall be agreeable and pleasing to the ear. There are very few people possessing the slightest pretensions to a good refined taste but have spoken of music in the highest terms of praise. The love of music seems to be, indeed, to a certain extent, inherent in our nature. The very rustics feel a sensation of gladness when they hear the simple melodies of the birds. It is also observable of music that all those fine and superior minds who have done honor to human nature by their immortal works, have given abundant evidence of their being powerfully affected by it. Milton seems to have been a perfect musical enthusiast, and Shakespeare makes the love and relish of music indispensable to moral goodness. He says:

"The man that hath not music in his soul,
Is fit for treasons, stratagems, and spoils;
Let no such man be trusted."

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of The Nation *should be addressed to the Editor.*

WENDELL PHILLIPS AS A WHIPPER-IN.

Mr. Wendell Phillips, in a speech made at the late annual meeting of the Anti-Slavery Society in Boston, took occasion, when denouncing the Freedmen's Aid Associations for what he considers their lukewarmness in the cause of the negro, to make the following observations upon The Nation:

"Look at this new journal, The Nation, which undertakes to represent these Freedmen's Associations, and which all the subscribers of anti-slavery papers are advised to take instead of the old anti-slavery journals. How uncertain is its sound! How timid, vacillating, and non-committal is its policy! Where has Mr. Sumner a more heartless and unfair critic? Are you willing such a neutral should represent us? I name Mr. Sumner not from personal friendship or partiality, or in blindness to whatever defects some may fancy to exist in his statesmanship, or anything else; but I say to-day his name is a fair symbol, the accepted symbol, to represent this claim on the part of a portion of the American people, that before one rebel State puts its foot inside the halls of Congress, they shall put the ballot into the hands of the negro."

Mr. Phillips is mistaken. The Nation has never "undertaken to represent the Freedmen's Aid Associations." No such intention has been announced in the columns of this journal, or in any prospectus or other document that has ever issued from this office. If anybody has been induced to subscribe to The Nation under the impression that it was to be either the official successor of the old anti-slavery journals or the organ or representative of any body or association whatever, he has been unquestionably deceived, and he has the remedy in his own hands. The Freedmen's Aid Associations are not in any way responsible for what we say in our columns. We have no connection with the Freedmen's Aid movement, except that connection which all patriotic men ought, in our opinion, to have with it—the connection of sympathy and good wishes. We lend it our hearty and cordial support, and do what we can to diffuse a knowledge of the work it is performing, because we believe it to be a great and Christian work, one in which all men and classes on this continent are equally interested, and on the success of which the future happiness and prosperity of the whole country will largely depend. We consider that work to be the great duty imposed on the Northern people by the war, a duty which they cannot shirk, not only without damning themselves to everlasting shame, but without laying up for their children and their children's children a great store of trouble and misfortune. And as long as it is done, we care not what organization is charged with it.

In so far as we devote ourselves to the consideration of the condition of the negro at the South, and to the discussion of the various means that are from time to time proposed for improving it, it is not as a "negro question," but as a national question vitally affecting the interests of the whole country. The freedmen of the South are to us not simply freedmen. They are a part of the American commonwealth; and we seek their education, elevation, and happiness not simply from pity, but because we believe the continued degradation of any portion of its people to be dangerous to the state and a scandal to free government.

Whether our policy be "timid, vacillating, and non-committal," Mr. Phillips is not competent to judge. One of the penalties of the successful cultivation of his style of oratory is, that the orator comes at last to lose all sense of the exact force of language. An habitual consumer of brandy thinks the finest Johannisberg or Château Lafitte very weak wishy-washy stuff. Mr. Phillips has so long indulged himself in the use of superlatives that he detects moral turpitude in every attempt at exact definition. No one has more respect than we have for the single-minded devotion with which he has served the anti-slavery cause. He has done everything for it that zeal and eloquence and high personal character can do. But then he has, in long and arduous campaignings, contracted certain bad habits, one of which is—we are sorry to have to use the word—unscrupulousness in the use of phrases and a strong love of exaggeration. He and his followers are afflicted, too, with that saddest of all forms of human conceit, which leaves no doubt in the minds of its victims that they have reached, by dint of talking and feeling, the pure truth on every social and political question. They have consequently ceased to discuss. If anybody differs with them, they simply, like the Holy Office, pass sentence upon him, strip him of all claims to consideration, and proceed to light up the fagots of their invective about him. The negro has been for generations robbed, and murdered mentally as well as physically. We have all stepped in to deliver him from the hands of his assailants. He is weak, bewildered, and demoralized. We are debating the question of restoratives. We think some nursing, some education, and, above all, the protection of the police, are amongst the first things he requires. Mr. Phillips wants to send him out in the street again armed with a pistol to protect himself, and accuses everybody who doubts the efficacy of this style of remedy of being in a league with the robbers, maintains that the question of medical treatment is a moral question, and that anybody who says tonics are of any use is a traitor and a blasphemer.

There is in the illustration of The Nation's misconduct cited by Mr. Phillips something both melancholy and amusing. Our criticism of Mr. Sumner, he says, is not only "unfair," but "heartless." Mr. Sumner's "name is a fair symbol, the accepted symbol, to represent this claim on the part of *a portion* of the American people, that before one rebel State puts its foot inside the walls of Congress," etc. What is the inference which Mr. Phillips would have us draw from all this? Is it not that journals like The Nation, laying claim to honesty, independence, and impartiality, must look on in respectful silence while Mr. Sumner gets up in his place in the Senate and accuses the President of the United States of a deliberate attempt to deceive the legislative body by misrepresenting facts of vital importance to the country and the Government, and does this in language of which even honest excitement could hardly excuse the coarseness? If we may not comment on an incident of this sort, when an advocate of negro suffrage happens to be the chief actor in it, on what *may* we comment? What is the use of the press if a man has only to become a "symbol to represent a claim," in order to make himself "legibus solutus," and impose silence even on those whose special business it is to watch the course of public men and speak their mind about it? Our criticisms on Mr. Sumner and everybody else may be ill-founded or ill-judged, but are always honest, and they shall certainly never be withheld; they shall go before our readers, like testimony before the courts, for what they are worth. Sensitive, charitable souls, who shrink from finding fault with anybody, and whose great care it is in all their public utterances to mete out exact justice to everybody, who love to impute the noblest motives even to the vilest sinners, and whose delicacy in the use of epithets is carried to the verge of fastidiousness, may think us sometimes, as in the case of Mr. Sumner, "heartless" and "unfair." But, then, in the rough and noisy world in which we live, we cannot always stop to consult the finer feelings of our nature. Mr. Sumner is a critic himself, and knows the difficulties of the office. What does he suppose Mr. Johnson thinks of his peculiar manner of filling it?

If there be one duty more than another which an upright and independent journal is called upon at the present crisis to discharge zealously, it is the duty of opposing by every means in its power the growing tendency to raise party leaders above the criticism of those who happen to agree with them as to general ends. We are fast getting into the habit of setting up political popes, and letting them compound dogmas and tests of orthodoxy for everybody who wants to serve the same cause with them. We are now called upon nearly every week to swallow some new article of faith, or stake all our hopes on some new expedient devised by this senator or that representative, in order to avoid being denounced as traitors or time-servers. And then, if anybody has the courage or honesty to express difference of opinion, even veteran masters of sarcasm and invective like Mr. Phillips, men who have spent a lifetime in lashing and denouncing what the rest of the world most delighted to honor, begin to whimper over the cruelty and "heartlessness" of the thing.

The Nation does not propose to make a trade of carping or fault-finding, but it ought to be well understood that it is not bound, and never will be, by the rules or regulations of any party. It will never recognize in any man, however eminent or able, the right to compound opinions, or prescribe lines of policy, for his fellow-citizens. All orators, and senators, and statesmen are mortal, and therefore imperfect, and if a fair review were made of their political career would be found to have been fully as often wrong as right, both in their prophecies and reasonings. What they say is to be weighed and considered, not swallowed on our knees. What they do, every man owes it to himself and to the country to judge deliberately, by his own standard of right or wrong or of expediency, and to say exactly what he thinks about it on every opportunity. This course we for our part certainly shall follow. Those who like thick-and-thin laudation of great "standard-bearers" and "symbols" can find plenty of newspapers to supply it. In The Nation they will always look for it in vain.

THE NEW SYSTEM OF TAXATION.

The report of the Revenue Commission is, in many respects, the most remarkable and valuable public document which has appeared in the United States for a long time. In the first place, it is the result of careful enquiry into a very difficult subject by a body of men selected for their peculiar fitness for the task, and not for their political opinions; and, in the next place, it discusses the national resources, and points out the best mode of making them available for the support of the public credit, in a calm, business-like, and argumentative tone, and with perfect freedom from the bombast by which nearly everything that is now written on the subject of finance, strange as it may seem, is more or less defaced. There is not a single allusion to the prospect of "paying the national debt twice over" with Colorado gold, or in fact to the possibility of getting rid of any of our burdens in any way but the ordinary and well-known one of working hard, developing our resources, and saving as much as we can.

The report starts by doing what everybody who knew anything of the Commission, or had ever given any attention to the subject before them, believed they would do—passing a sentence of unmitigated condemnation on the existing system of taxation. Nothing but the confusion and excitement of the period at which the present law was framed and afterwards amended, can possibly excuse its badness. Congress was at first culpably afraid of taxing at all, but when driven into it by the noble eagerness of the people, it taxed with a recklessness, an indifference to the public comfort and capacity, such as has rarely been witnessed. There is hardly a single principle of taxation, deduced either from the experience of other nations or the laws of human nature, which was not violated in it. It hence nearly equalled Colbert's regulations in the elaborateness and multiplicity of the trammels it imposed on manufacturing industry; and although the fluctuations in the value of the currency during the war made trade extraordinarily and almost ruinously uncertain, there was rarely any hesitation evinced in Washington about aggravating this uncertainty by sudden and violent changes in the tariff. One of these changes, at least, has not for suddenness and violence ever been equalled in the legislation of any constitutional country. It is only in the records of Oriental despotism that a parallel could be found for the act of June 30, 1864, which clapped on an extra fifty per cent. of duties at a week's notice.

Nor is it the weight of the taxes only, or even their multiplicity, or the extent to which they hamper manufacturers, that makes the present system objectionable. As an instrument of political and social corruption it has rarely been surpassed. In a country in which frequent elections render it desirable that the Executive should possess the fewest possible means of corrupting public opinion, it fills the land with a swarm of employees, without either training or experience or traditions, badly paid, holding their places at the will of the Government. The defect on which the Commission naturally comments with most reprehension is the enormous number of the taxes, and the number of times which they are levied on the same article by striking at different stages of the manufacture, so that not only is the total amount of the impost which the consumer has to pay on the finished work very heavy, but it is largely increased by the trouble and annoyance and delay occasioned by the indefinite duplication. The case cited in the report in illustration is that of umbrellas, in the construction of which ten or twelve different articles are employed, each of which pays a separate tax before reaching the umbrella manufacturer, and is then taxed in his hands over again.

Another cause of the weight with which the present system bears on the industry of the country is the entire absence of any adjustment of the internal taxation to the tariff on foreign goods. Some articles of domestic manufacture in this way enjoy enormous protection, others not only enjoy none, but are strongly discriminated against by the tariff. Amongst the latter are umbrellas, against which there is actually a discrimination of from fifteen to twenty-five per cent. in favor of the foreign article, so that an industry in which 5,000 persons are employed in Philadelphia and New York alone is threatened with destruction. Again, a pound of paper manufactured into a book is, if imported, taxed 5½ cents; if made here, 7½ cents, which, with other differences in cost makes it possible to sell the book made in England at 26½ cents, while the book made at home costs 59½ cents. One curious result of this state of things is that Webster's Spelling Book is now being printed in large quantities in London for the use of American schools. Nor is there anything too minute or too mean for the present system. Under the tax on wearing apparel, sums of a dollar and a dollar and a half are actually collected from poor milliners and tailors. No wonder the Commission sums up its defects by declaring that "such a system as this violates all the fundamental principles of taxation, inasmuch as the taxes are neither definite in amount, equal in application, nor convenient of collection. While this system prevails," they add, "it seems useless to talk of reducing prices to anything like their former level by reduction or contraction of currency."

Now for the remedy. Against any increase in the tariff the Commission pronounces positively for several reasons, of which one is all we need mention, and that is, that the country would not stand it. The report recommends, therefore, that the principle be adopted of leaving the home industry as free as possible, and raising revenue solely by imposing duties and taxes on the raw material, luxuries, and a few other articles which present unusual facilities for collection. The estimates would then stand as follows:

From Customs		$130,000,000
From Excise, viz.:		
Distilled Spirits	$40,000,000	
Fermented Liquors	5,000,000	
Tobacco and its Manufactures	18,000,000	
Cotton (raw)	40,000,000	
Coal-oil, Refined Petroleum, etc.	3,000,000	
Spirits of Turpentine and Rosin	2,000,000	108,000,000
Licenses	15,000,000	
Incomes	40,000,000	
Salaries	2,000,000	
Banks	15,000,000	
Stamps	20,000,000	
Gross Receipts	9,000,000	
Sales	4,000,000	
Legacies and Successions	3,000,000	108,000,000
Miscellaneous Receipts, 1866-7		21,000,000
Aggregate		$367,000,000

The estimates of the expenditure for the year ending June, 1867, made by the Secretary of the Treasury, including the interest on the public debt, amount to $284,000,000, so that, supposing the estimate of the receipts made by the Commission to be correct (and it is probably much under the mark), there would then remain a surplus of $83,000,000 available for the reduction of the debt.

The duties of which the Commission recommend the total abolition are those on wagons, watches, pianos, plate, yachts, etc.; on repairs of engines, carriages, cars, and ships; on wearing apparel, on pig iron, on coal, and on printed books, magazines, and similar printed publications One can see at a glance what infinite annoyance and vexation would have been attendant on the collection of taxes of this kind if they ever had been faithfully collected; but they never were. Their total yield to the revenue was only $15,000,000, and probably three times this sum was really due. The other reduction which the Commission recommends is one of fifty per cent. on all goods named in section 94 of the amended act of March 3, 1865—such as tobacco, cigars, gas

naphtha, sugar, gunpowder, bill-heads, photographs, hulls of vessels, sails, railroad chairs, boilers, gates, quicksilver, copper, patent leather, wines and liquors, cloth, diamonds, snuff, cider, vinegar, and hoop skirts. In the income tax they recommend that five per cent. be charged on all incomes, all under $1,000 be exempt, and that no allowance be made for house rents.

The Commission is opposed to the application for the present of any portion of the revenue to the reduction of the principal of the national debt, owing to the tremendous strain which the various liabilities, local as well as national, arising out of the war are imposing on the country. The nation must have a little breathing space, and trade and business have time to recover their natural course before we can attempt to do more than pay interest and expenses.

The Commission approach the Reciprocity Treaty in a temper which it is impossible to commend too highly, and which is well worthy of the attention of those orators and journalists who are disposed to use trade regulations as a means of punishing foreign nations for misconduct. In the commercial relations of nations there is no room for the gratification of feelings of like or dislike. The Commissioners, therefore, treat the past shortcomings of the Canadians as matters which have no bearing whatever, and ought not to have any, on the negotiations now pending for a renewal of the treaty, and they recommend that if any arrangement can be made by which the taxation in both countries can be equalized, and the trade thus preserved, and smuggling prevented, it ought to be entered into. In fact, freedom of trade with Canada is a virtual annexation of that province to the Union.

Upon that most important portion of the report which calls attention to the necessity for radical reform in the administrative department of the Government, we must postpone comment till next week. We may add that the able letter on the iron duties, which we publish elsewhere, was in type before the report of the Commission appeared. It will be seen that it takes the same view with regard to internal taxation on this branch of industry which the Commission take with regard to internal taxation on all.

THE CADUCITY OF PREJUDICE.

The genesis of prejudice is not far to seek. We mean prejudice against classes and races of men. It springs from the consciousness of injury inflicted upon them, which necessitates the discovery of a natural or divine occasion for its existence. Tacitus tells us that it is human nature to hate those we have injured: "Proprium humani ingenii est, odisse quem læseris," and Pope has put the same idea into verse:

> "Forgiveness to the injured doth belong,
> He never pardons that hath done the wrong."

It is not an amiable trait of human nature, but its existence cannot be denied. And it is always taken for granted that this is according to the nature of things, and that no one is to blame for it unless it be the common Father of all men. And it is assumed also that, as the prejudice is natural, it must be permanent. Happily the study of the natural history of prejudice shows that it is not immortal, that many such have given up the ghost, and are remembered only as curiosities of past experience. This circumstance gives us ground to hope that those in whose shadow we yet stand may likewise perish from off the earth.

Slavery being the greatest injury that one human being can inflict upon another, the hatred and contempt which it has generated have been proportionately deep and bitter. The most opprobrious terms of contempt and reproach in the ancient and modern tongues have some etymological connection with the condition of slavery. Villain, knave, varlet, were all originally mere names of description relating to certain classes of slaves, and so of many other terms of reproach in all languages. The trail of the serpent slavery is still over much of our daily lives, even where it has had no substantive existence for generations or for centuries. The bad odor which slavery left behind it still hangs around our households in the taint it has left on honest domestic or menial service—all words originating in slavery. Still the prejudice which formerly existed against the servile or menial races in countries where slavery has been long abolished has disappeared, and many a conservative citizen and Democratic politician would be surprised to learn that he is descended from an ancient line of slaves. Yet it is even so. The great house of Smith, the scarcely less celebrated lines of Bakers, Millers, Carpenters, and all which derive their names from trades; the Browns, and Whites, and Blacks, and all bearing the names of colors; the Johnsons, and Jacksons, and Dicksons, and the whole progeny of "sons," and a multitude beside, are all descended from chattels who had no name but such as accidents like those imparted to distinguish them from the herd of slaves. It is even affirmed that the premier peer and duke of England, in whose veins flows "all the blood of all the Howards," owes his illustrious name to the very humble occupation of his remote ancestor, by the omission of a single letter from the word "*hogward*." So that none of us need feel sore as to the condition of our Saxon ancestry, in view of the probability that at the time of the Conquest (only eight hundred years ago, the 14th of next October) the progenitor of the Duke of Norfolk may have been keeping swine along with Gurth in the forests of Hampshire, with a brass collar soldered round his neck. The prejudices arising from servile origin continued to exist long in England, but have died out in that form at least, strong as those of caste and class distinctions, to which they have given way, may still be.

The Jews also furnish an example of the effect of time and civilization in tempering the power of deep-seated prejudice. They were not only despised and evil-treated like our negroes, but they were the objects of a superstitious dread and hatred intense as it was obstinate. Considering the oppressions and massacres to which they were subjected for so many centuries, it is only strange that the whole race was not exterminated. And the fact of their having continued even to this day, and of the vast influence they now exercise in the world of finance and politics and literature and art, may give us hope that the prejudices and persecutions under which the most unfortunate class of our countrymen now suffer will fail to exterminate them, which some fear, or even to prevent their achieving prosperity and distinction in course of time, which few hope. It is a little odd that during the Middle Ages an offensive odor was attributed to the Jews, such as used to be one of the reasons for making slaves of the negroes. Sir Thomas Browne gravely pronounces this opinion "a fraudulent illation," and denies that "an unsavoury odor is gentilitious or national to the Jews." We will not affirm that all prejudice against the children of Israel is yet extinct, although they have made their way to the high places of the world. Even Walter Scott did not dare to marry Ivanhoe to Rebecca, but made him take up with the limp and washed-out Rowena instead. And Miss Edgeworth, in her novel of "Harrington," written expressly to combat this prejudice (at the suggestion, by the way, of a Jewish lady of Philadelphia), destroys the whole moral force of the story by making out the Jewish heroine to have been bred up a Christian from her birth before she ventured to marry her to the hero. Still, since their time, we believe there have been more than one instance of marriages between Christians of high rank in England and daughters of Israel, and that they are not more frequent we apprehend to be owing to scruples on the side of the Jews rather than of the Christians. But the fact that the abhorred race has won for itself political equality and social position is a proof of the mitigation which time works in widespread and deeply-rooted prejudice, and an encouragement to hope that other forms of this cruel mischief may be likewise mortal.

It is not much more than a century ago when England was agitated almost to sedition, and London to mob violence, by a bill passed by Parliament allowing the Jews to be naturalized. The excitement was so great that the Pelham Ministry had to yield and consent to making the condition of the Jews rather worse than it was before. The corporation and citizens of London were especially concerned for the integrity of the Christian religion and most active in urging the repeal of the Jew Bill. What would the orthodox Lord Mayor of that day have said could he have foreseen that his present successor would be an "Ebrew Jew!" For we need not go back to Mayor Fitz Richard, who gave the Jews up to the London mob to be plundered and slain six hundred years ago, for an instance of the activity of this particular prejudice of race. Alderman Phillips is by no means the first of the sons of Jacob that has occupied the civic throne. Alderman Salomans, who did not show the wisdom his name should imply in subscribing to the Confederate Loan, was lord mayor about ten years

ago, and we think there have been one or two other Jewish mayors. These functionaries are brought into curious concatenations occasionally in consequence of the necessity of their paying their respects officially to the Established Church. In the due exercise of civic hospitality, the Lord Mayor entertains the Archbishop of Canterbury and his suffragans at dinner, and sometimes joins eminent Dissenting ministers in the same company. The idea of a Jew proposing the health of the primate of England and the bench of bishops, whose predecessors had so bitterly persecuted his ancestors, is only less incongruous than that of the primate gratefully returning thanks for the compliment. Imagine Hubert or Lanfranc or Thomas à Becket sitting at meat and bandying compliments with Isaac of York! And yet, so gradual and imperceptible has been this change in men's opinions that its extraordinary character is scarcely noticed. It were no more strange, in fact, to see a negro governor ruling over South Carolina and Georgia and hobnobbing with Governor Aiken or Vice-President Stephens. And this very city of London it was, a century ago so fanatically anti-Judaic, that compelled Parliament to open its doors to Jews on equal terms with Christians, preferring to have one of its seats left vacant for years as a testimony against bigotry, until its chosen Hebrew champion, the Baron Lionel de Rothschild, could march triumphantly in and take possession of it. We live many more years in a given space of time than our ancestors did, and even something like these miracles may yet be seen amongst us. But it can only be wrought, as the Jewish marvel has come to pass, through the prudence, energy, and ability of the persecuted race. Fair play and a fair field are all that the black man asks for himself or his friends ask for him. The rest must depend on himself.

WORK AND PLAY.

If we should criticize the plea for repose presented on another page by a correspondent, we should say that, in combating those who seem to regard work as an end rather than a means, he is guilty of a similar error in regard to recreation. The human soul, to our thinking, is content to rest in neither. The real end is that "progress" which, as our correspondent remarks, cannot be "without much work;" and, as incessant work is no more possible than perpetual motion, we may add, without frequent opportunities for recuperation. The prince of the powers of the air, who, according to Goethe, is under an *ex-officio* obligation to keep busy—to maintain, in "T. D.'s" phrase, a "wicked industry"—partakes only of a universal constraint. The stamp of perfectibility which the Creator affixed to man is the great warrant and commission of unrest, not only in this life but, as far as we can see, in that also which is to come. It is not, therefore, a question how to shirk the labor which is the price of our advancement, but how to supplement it with repose in such a way as to make it most remunerative and pleasurable.

Rest may be broadly defined as a change in the direction of one's energies, and hence, comprehending active and even violent exertion. Its conditions vary with the occupation and temperament of individuals, and no man in regard to it can be law unto another. De Tocqueville attributed to our democratic institutions the slight which Americans put upon the "simple, turbulent, or coarse diversions in which the people in aristocratic communities indulge." We prefer, he said, "those more serious and silent amusements which are like business," and which do not drive business wholly out of our minds. Perhaps this characteristic is traceable in some measure to the Puritan influence, which still imparts to us that air of seriousness which foreigners proverbially remark; perhaps to Poor Richard's apothegm that "time is money." However derived, the notion that amusement pure and simple is a waste is gradually losing ground, and we are glad to interpret the eight-hour movement in this sense, and, so far, ready to second it most heartily. We could join in any proper appeal to employers to lessen, if possible, the hours of toil, either from humane or economical considerations, or from both—for we are far from pretending that the *juste milieu* is fixed, the same to-day that it was yesterday, the same to-morrow that it is to-day.

Our correspondent has vindicated the right of professional men to repose, and to amusements commonly regarded as unprofitable. He might have extended his argument to the laboring classes, whose case presents equal if not greater hardships. Dogs, guns, horses for pleasure theatre, and opera, are hardly for them; boat and ball-clubs only to a very limited extent. Leisure is the first requisite, and, after this, cheap and accessible enjoyments which shall also be innocent. Spare time in the shape of holidays seems to be least valuable to a people. Where these are most numerous, as in the Old World, they have been reckoned among the causes of national decay. It is certain that they interfere seriously with the regularity of business, which, in this utilitarian age, is a consideration not to be despised. They are apt to entail quite as much fatigue as they have afforded rest, and to be attended with a good deal of physical and mental dissipation. Much better is the hour or two granted daily from the workshop, or the Wednesday and Saturday afternoons of blessed school-boy memory. If the first consequence of such leisure should be a freer out-of-door life, it would be a decided moral, because a sanitary, gain for the people. The delights of the country, or, in large cities, of the public parks, would compete with the temptations of the bar-room. The short excursion, the idle stroll, the sports of field and river, would powerfully attract the multitude, and strengthen their better natures. Good music, in the open air and under cover, might be mustered into the same honorable service by a little wise municipal liberality. To concerts add gymnasia; to these your free libraries and reading-rooms; to these also free lectures. The lyceum system already extends everywhere, but it affects the small towns and cities far more than the great ones. It has social advantages of which books cannot boast, and we can imagine a tolerably attentive and appreciative audience listening to an *exposé* of "Mill on Hamilton," every one of whom might individually be too tired to keep awake over the works of either philosopher. If to the foregoing recreations we add public galleries of paintings and statuary, we shall by no means have exhausted the list. Enough that we have indicated some of the sources from which the people might obtain "repose," provided they had leisure, and provided, particularly, that they considered amusement in the light of a duty rather than of a sin.

CANOPUS.

Above the palms, the peaks of pearly grey
That hang, like dreams, along the slumbering skies,
An urn of fire that never burns away,
I see Canopus rise.

An urn of light, a golden-hearted torch,
Voluptuous, drowsy-throbbing 'mid the stars,
As, incense-fed, from Aphrodite's porch
Lifted, to beacon Mars.

Was it from songs and stories of the Past,
With names and scenes that make our planet fair,—
From Babylonian splendors, vague and vast,
And flushed Arabian air:

Or fresh from richer longings of the brain
And spices of the blood, this hot desire
To lie beneath that mellow lamp again
And drink its languid fire?

From tales of nights when watching David saw
Its topaz glimmer on Bathsheba's head;
Or Charmian stole, the golden gauze to draw
Round Cleopatra's bed?

Or when white-breasted Paris touched the lone
Laconian isle, where stayed his flying oars,
And Helen breathed the scent of violets, blown
Along the bosky shores?

Or Kalidasa's maiden, wandering through
The moonlit jungles of the Indian lands,
While shamed mimosas from her form withdrew
Their thin and trembling hands?

From each and all, the Spirit of the Star
Gathers his fragrant robes, his melting beams,
And binds ideal yearnings, pure and far,
To sense-begotten dreams.

For Fancy takes from Passion power to build
A brighter fane than bloodless Thought can rear,
And loves to see its painted chambers gild
A tropic atmosphere.

And, past those halls which for itself the mind
Builds, permanent as marble, and as cold,
In warm surprises of the blood we find
The sumptuous dream unfold!

There shines the leaf and bursts the blossom-sheath
On hills deep-mantled in eternal June,
Or swell in whispering silver, underneath
The rainbow-cinctured moon.

About the pillars of the palm-tree bower
The orchids cling, in rose and scarlet spheres;
Shield-broad the lily floats; the aloe-flower
Foredates his hundred years.

The summits of tumultuous verdure crown
Areca shafts, the fern's colossal frond;
The climbers fling their braided blossoms down
To richer dells beyond.

Along the lines of coral, white and warm,
Breaks the white surf; hushed is the glassy air,
And only mellower murmurs tell that storm
Is raging otherwhere.

The mansion gleams with dome and arch Moresque—
Ah, bliss to lie beside the jasper urn
Of founts, and through the open arabesque
To watch Canopus burn!

Or, in aerial couch, by breezes kissed
That drip with spices of the inland glade,
To see the land through hot vermilion mist,
And feel the dewy shade:

To sit at feasts, and fluid odors drain
Of daintiest nectar that from grape is caught,
While faint narcotics cheat the idle brain
With phantom shapes of thought;

Or, listening to the sweet, alluring voice
That finds the blossomed blood the thing divine,
To weigh delight unchallenged, making choice
Of other joy than wine!

Permit the dream: our natures twofold are.
Sense hath its own ideals, which prepare
A rosy background for the whitest star,
And make it doubly fair.

Not crystal runs, dissolved from mountain snow,
The poet's blood; but amber, musk, impart
Their scents, and gems their orbed or shivered glow,
To flood his tropic heart.

While Form and Color undivorced remain
In every planet gilded by the sun,
His Art shall forge the radiant marriage-chain
That makes them purely One!

BAYARD TAYLOR.

ON PAPERING ROOM WALLS.

WHEN a lady with a house of her own—or, in one of the rare cases in which a gentleman is interested in such matters, when a couple with a house of their own—would finish and furnish a room of it, many questions may arise as to the best way of doing so. If the lady interested (to take the more usual case) is content to follow the newest fashion, she consults the upholsterer, carpet dealer, and furniture dealer, who are essentially, and cannot well help being, preachers of new fashions. In that case no question arises. The tradesmen consulted fulfil their destinies, send chapters of the newest fashion to their customer's house, and follow them up with bills. There are no embarrassing doubts in anybody's mind. The newest mode being known, nobody asks if there could be a better mode.

Certainly this is very simple and easy, however open to the charge of undue costliness. Readers who find it also satisfactory and sufficient, had better not proceed with us in our examination, for we shall probably find no way so simple and easy. People who are not troubled by longings for the abstractly fit and beautiful had better not seek with us for those *ignes* commonly supposed to be *fatui*. The matter is not all in one way. It is not even all in two ways—one ours, and the other an opponent's. Partizanship is not possible, for there are no lines to draw. Criticism is not possible, for the very most serious difficulty is that there is nothing as yet to criticize. Strict definition is seldom possible. Nobody is going to agree with anybody else, except accidentally and by way of exception. There are, indeed, principles underlying this matter of decoration, but they had been long forgotten, when a very recent time witnessed a sort of attempt to rediscover them. And of the existence of these principles our people, taught by the upholsterers, have remained so unsuspicious that those who are properly conservative can hardly be expected to sympathize with any attempt to state and apply them.

Such an attempt can hardly be made in a formal and consecutive way. To look at the question from one point of view and then from another, to approach it as closely as possible from each side in succession—in this way only can a satisfactory answer be sought. And, to begin at a point of view from which the question looks simple: Suppose the room small and the money not abundant. Suppose a plain room, thirteen feet wide and eighteen feet long and ten feet high, with chimney-breast projecting eight inches not quite in the middle of one side, with two windows at one end, not symmetrically placed; with two doors in the other end, and two more doors in the side opposite the chimney; with common planked floor; with smooth white plastered walls and ceiling, and without the plaster cornice which more showily meant rooms have. This description is not a portrait of one room, but is a portrait of ten thousand in this city of New York. In considering how to decorate it, it is necessary to notice the mistake involved in the common notion that the carpet ought to be the principal feature with which other things must agree, for instance in color. The mistake is radical; no part of the room decoration ought to be the model, but all parts are to agree with the image of the whole room in the planner's mind. But, even if anything is to go first, if the imagination is not active enough, or if one thing from any reason must first be decided on, that one thing should be the wall decoration and not the carpet. Mr. Edgar Poe thought otherwise, as set forth in his essay on the "Philosophy of Furniture;" but then it appears from that essay that the author had no notion of what was possible or suitable by way of decoration on either walls or floor. Mrs. Stowe thinks the wall-paper should go first, as she says in one of the "House and Home Papers," and is at least as good an authority as Mr. Poe. But, indeed, the principle of the thing ought to be evident to us without the intervention of authority. The carpet is precisely that part of the room which ought to attract the least attention. We must not leave our wall decoration now to consider the floor, but it would be easy, if we should discuss carpets at any time, to show the reasons for their necessary subjection. For the present the walls are declared the principal thing, as, indeed, they actually are, when one enters a properly lighted room and looks about him.

How, then, shall we decorate our walls—white-plastered walls, ten feet high, without cornice? Wall-paper, every reader will say, is the cheapest and most available "finish." True; but the seeker for wall-paper, if he would have a pretty pattern and color, may seek long and yet fail to find. Our resources are limited, be it remembered, for decorating the room we have chosen. The outside limit of cost for paper for such a room ought to be, at the present high prices, two dollars a roll, "put up." Now, fashion so affects the demand and the supply in all such matters, that there is no certainty of finding to-day the pretty pattern that every dealer had last spring; no impossibility of finding to-day something pretty that was nowhere to be found last spring. You may look through a large stock of patterns and find nothing to answer your purpose—whatever that may be, as long as you are particular and "set" about it—you may return in a month and find a new "line" just come in, twenty patterns of papers all within your limit of price, and any one of which will serve you well. These things being so, it is very hard to be uniformly successful in fitting up rooms. One has need to be very obstinate about it, and fully prepared to let his walls wait, unfinished, six months, if necessary, rather than cover them with paper of colors and design other than his choice.

But what ought to be his choice? The variety of patterns among which we can choose at the low price fixed is not large; that is, there are plenty of different designs, but they do not differ widely. Thus, there are no panelled or pictorial or other so-called ornamental papers among them. But there is this difference, that many of the designs consist of or include flowers and fruit in relief, imitation of carved work with cast shadows, even imitation of stone and marble work (though these the dealer would not recom-

mend for a chamber, such not being the fashion), while others will be flat patterns without meaning, or else perfectly formal designs of conventionalized leafage. In most kinds of interior decoration by means of color, that is, of decoration usually so called, works of high artistic merit being excluded, it is a Medo-Persic law that there shall be no deceptive appearance of relief or projection. This applies strictly to our paper-hangings, and with this additional force, that the same paper must go on both sides of the room and the shadows on one side will fall toward the windows.

But there is another law limiting ornament, that it should never try to represent anything that it cannot represent perfectly. Observe the bouquet of flowers or the bunch of grapes on some wall paper; are they pretty? Do flowers or grapes look thus when you see them growing? Are there any of their peculiar beauties or characteristics represented in the pattern before you? So far as we know, there is never any sufficient representation of natural objects on paper commonly for sale in the stores. They pretend to give projection and gradation of color and shade, which from the nature of the case they cannot give. They seldom attempt properly formal suggestion of natural form, which they can fully give. It is a perfectly safe rule, and one which the judicious buyer of cheap papers will never be tempted to neglect: avoid all attempted representation of natural objects; limit your choice to wholly meaningless patterns of flat colors, with or without gold. In the spring of 1865 there were a large variety of such patterns to be bought on good American paper—red, and blue, and grey ground, with a small pattern of black running all over them, and gold stars or gold crosses, or else with gold patterns running over them and the stars and crosses black. This winter they are not to be found, but we have seen one with a good buff ground with quatrefoils of gold filled with green, cheaper than the others. In Boston, last autumn, there was for sale a very good paper—pale French grey was the only color of ground on hand—which was printed with lozenge-shaped outlines of gold, close together, but not touching. One near approach to natural form is allowable, the flower-de-luce, or its fellow, the giglio. Beautiful dark red giglios on light red ground we found once, the flowers almost exactly copied from that sempiternal silver blossom on the reverse of the Florentine "fiorino," pretty coin, driven out now by interloping "franchi."

But the "border." Of course, as there is no cornice in the room, there must be a border. Sydney Smith felt this need so strongly that, when he could not afford a plaster cornice, he put a border at top of his wall and another on the ceiling near the wall, and deceived himself into thinking it looked like a cornice. Now this desire for a cornice is natural, for there should be something to fill the angle. Soften off your right angles into something else, is a good rule for young designers, of general but not of universal application only because design requires occasional exceptions to every rule, and unmodified right angles now and then. The meeting of two lines or surfaces at a right angle is the most unpleasant meeting they could have. Soften off, then, your angle between ceiling and walls. But the usual plaster cornice, eight inches or more high, a foot or more wide on the ceiling, is too large, and is commonly ugly and ought to be painted. It will be better if, rejoicing that our room is without a cornice, we put up a strip of wood about two inches wide and high. Of what section ought it to be? Perhaps an ogee; most people know what that is; at all events we cannot give diagrams, and description of such a thing is hard to make clear in words. Choose, then, that form of those offered you which will best soften the angle. If there is gold in the paper, have the strip of gold; you may get it at the paper-hangers' shops. If there is no gold, perhaps it will be best to get the moulding from the carpenter and have it painted one of the colors in the paper. This is because of another primary law of decoration, the law of echo or repetition. A prominent color occurring once ought to recur in a somewhat different way again. Should you use a gold strip with a paper which has no gold in it, repeat it by another gold strip six inches lower down on the wall.

In preparing to decorate a room more expensively, the choice of paper will be somewhat more easy. That is to say, the buyer who is determined to have what he wants and nothing else, will not have to wait so long or go so far to find it. Flat patterns are numerous and prettily designed, although they are too seldom of one color or two colors on a full colored ground, and too exclusively in gold on a pale tint or on white. These are pretty, but they are akin to a fancy which is too general and too implicitly obeyed, that drawing-rooms ought to be finished in white and gold, or some very pale tint and gold. We have seen a very beautiful pattern of leaves a little too much shaded by means of gold lines, which give them a slight projection, but redeemed by the lively color, pure blue, lighter than ultramarine, just kept by the gold from being too uniform a tint. This was simple, though covered with gilding: but there were two which were rich, though without gilding—specimens of paper made for the Parliament Palace of Westminster, from designs by Pugin. One of them had blue squares set vertically with VR in them, and yellow squares set diagonally, with heraldic red lions in them, and hence not fit for domestic use. But the other, though crowns and fleurs-de-luce appeared in it, was not unfit for any citizen's parlor, and was very splendid, though in three colors only—scarlet, bright green, and buff.

There is a very general timidity about the use of color, shown especially in this matter of decorating and furnishing rooms. People love color; love it, even, on other people's walls if they chance to see it there, but hesitate to apply it to their own. A room is occasionally to be seen which glows with rich though subdued color, the effect of the mingled tints of the walls changing with the direction and force of the light. Pictures look well against brighter colors than they are generally trusted to; and the engravings and photographs which people hang up in rooms not their best are so chilling to the whole air of the room that they should always have some red or yellow glow behind them. It is pleasant to look through a doorway into a room which is a picture in itself, so bright and harmonious the mingled hues of its walls and ceiling. The affectation of white or nearly white chilliness for drawing-rooms sometimes culminates in white watered paper, like watered silk or *moire antique*. Sometimes, also, we have a white figure on a white ground, one being lustrous and the other dead; or, in a better case, we find a bluish-white figure on a yellowish-white ground (to use the popular expression), or the reverse. None of these are ugly, none unendurable; but why should we be denied color in the most expensively and carefully fitted rooms in the house when it is allowed elsewhere? There is a boudoir in Germany, in Frankfort-on-the-Main, entirely lined with chintz, printed with a simple pattern of three daisies in a cluster, flat, no shadows, on a pale purple ground. It is a pattern which might well be reproduced in paper, and is not too dark for the gayest looking parlor. Or, if daisies are too humble, and the whole cast of color too unpronounced and uncertain (pale purple, light green, and dull gold), while the Pugin patterns, on the other hand, are too bright and forcible, take a pattern which seems open to neither objection. This is a very formal sprig of leaves running into another, and this into another, and so on for ever; light-blue on a ground of yellow and orange in fine twisted vermiculations. This was copied from a Venetian brocade of the sixteenth century, and is very effective, though only one of a hundred equally good ones of the same character which could be copied from similar sources if the power of design fails us.

Of flock papers or velvet papers there is little need to speak, because they are generally used where there is especial need for them, as to set off pictures, for which they are well suited; also because they are usually either of a plain color, or else bearing a simple gold figure often repeated. They are very expensive, generally very dark, and therefore unfit for city houses and said to be unhealthy. They will, however, keep their popularity and their place until superseded by some true system of vigorous and meaning decoration.

The imitative papers, imitative of panels, of stone blocks, of Gothic tracery, etc., are but a humble imitation of imitative painting, and as such of no separate importance. The ingenuity with which some of these ignominious shams are contrived is, however, wonderful. In panelling a room in imitation of oak there is a roll of paper of straight grained wood, one of knots and beautifully twisted grain, one showing the "silver grain," one darker than the others, and one of wooden moulding. These are put together very skilfully, and the result is certainly surprisingly effective, and therefore not "beneath contempt," but utterly contemptible.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXVIII.

MONTGOMERY, Ala., January 24, 1866.

IT was four o'clock of a very dark morning when an omnibus came for me at my boarding-house in Columbus, and it was two hours later, after a slow circuitous drive about the city from one house to another, the driver and his companions kicking and shouting and thumping at many doors, that a load of passengers was picked up and carried across the Chattahoochie into Alabama to the Montgomery train. The rain was falling when we reached the station, there was no depot or ticket office, nobody had eaten breakfast or was wholly awake, and General Wilson became the subject of very acrimonious remarks. A great destruction of railroad bridges and buildings at Columbus was caused by his raid. We waited awhile, and when the fires beside the track and the car lanterns began to burn pale as the day was breaking, we got under way towards Opelika. Meantime I

paid attention to the voice of a lady sitting some four or five seats behind me, whom I could not see in the doubtful light, but who apparently had found an old acquaintance among her fellow-travellers, and was giving him an account of her life for the last few years.

It seemed like it was a century since she had seen him, she said, so many changes had taken place. It was befo' the war long enough. And what trials and distress had come upon their country since their last meeting! She was one of those who had shared in the downfall of their cause, for she was now, she reckoned, just as poor a woman as he ever did see. She had very little left but her health and strength, and she did n't feel any older than when he knew her before, but property—law! No, he had not been misinformed; she had married again, married a Mr. W. She lived with him eight years seven months and nineteen days. His death took place in 1864, and was a great loss to her, for he always acted the perfect gentleman, in every sense of the word. "He loved our country," she said, "and was as good a rebel as any man could be." His health never permitted of his going with the army, but the Confederates had his prayers, and he never was the man to speculate or make one dollar out of the war. That was n't his religion, and he was a true Christian if any man could be such. The curse of God, he always used to say,—the curse of God would follow money that was made at the expense of the country. All he raised he let the Government have at the regular prices. Oh, it would certainly have broken his heart if he had lived to see what she had seen, he had such faith in the cause. Indeed that was true, that there was too few like him. He treated her like a perfect gentleman. He gave her a deed of gift of thirty-five nigrahs, and told her them was to be hers and she should have land to put them on. She told him she wished no more than a child's share, but he said he would fix it this way; he would give her $38,000, and she should buy the homestead place. She always wanted the homestead place, so she consented, and it was arranged that way. After his death the South was defeated, the nigrahs was free of cou'se, and the $38,000 was worth nothing at all. Then the administrators fixed up a sale, and pretended to knock down the land to the highest bidder, but in reality they had an understanding with the company that bought it in, and it was sold for $3 an acre! One of the best tracts in the whole State. She said all she could, but that did n't matter to them, and she and the children were cheated out of their property. All her little fortune was already gone, for she had been compelled to make two or three journeys to see the administrators, and each time she had to live at a hotel for a fortnight, till they could be got together to do business, and travelling was so disgracefully expensive, and board four dollars a day—at them licks a person must be made of money to stand it.

At about this stage of the conversation her friend begged leave to drink rom a small flask which he had with him. Her consent was readily given, although, she said, she was in general very much opposed to drinking. She had always been used to seeing a great deal of it round at her own pa's house, and her first husband's, as well as at Mr. W.'s. It was very seldom indeed, however, that Mr. W. ever took anything, except when he was fatigued or unwell, or perhaps before going to church of a very cold day, particularly if he was n't feeling just right. Then he would allow himself. She hardly knew when she herself had tasted anything of the kind. The smell was extremely disagreeable to her. She could remember as well as if it was yesterday the time when she was intoxicated. They had visitors at home, and she was sent to the store-room to fill a decanter with peach brandy. As soon as the spirits began to run from the barrel she inhaled the smell, and it got up into her head directly. She became so giddy! She fell down, and when she got up she fell down again, and could n't walk straight at all. They thought she was in a faint, but her pa said no; she had inhaled the smell of the brandy, and it had been too much for her, and she was really intoxicated by inhaling it. He made her drink half a glassful.

By-and-bye she admitted that perhaps it might be well enough, when one was travelling, and had had no breakfast, to take a very little spirits as a stimulant; and soon afterwards the gentleman procured a tin mug, and we heard the lady say: "Would my friends believe it now if any one was to tell them that they saw Mrs. W. taking a dram of whiskey in a public kyar?"

At half-past nine we had ridden twenty-eight miles, and arrived at Opelika, which the inhabitants call Oppalacca. It is a wretched little village, which owes its consequence, and I should think its existence, to the crossing of the railroads there, and by its appearance recalls forcibly the typical South-western American city which is to be found in the books of English tourists. I saw it first in a cold drenching rain. There was a big pine hotel among the thirty or forty other buildings, a newspaper office, and half a dozen scattered bar-rooms, with mud between them and the wilderness close around. The bad breakfast, hastily devoured, was there too; the rough, lazy-looking men; and the long detention round the fire in the hotel, for the train going West was not due till three o'clock in the afternoon. Soon we learned that an accident had occurred near Montgomery, and that there was little chance of our reaching that city until the next day. A discussion of this probability kept us in intermittent conversation for almost an hour, and provoked much dissatisfaction. It was generally conceded that if a man 'd got to lie over, he could n't find a meaner place to lie over at than this yer Oppalacca.

"This lyin' over," one man said with a laugh, "by gosh, gentlemen, we can 't affo'd it now. Old Jeff paid yo' way befo', but now you must pull out yo' own greenbacks. Mighty hard on us po' Confeds."

"You 're right there," another said. "This is the first time I 've been able to leave Atlanta since we went up, and I could n't do it now but there 's somebody pays my expenses." Saying this he slapped his next neighbor on the knee, and asked him: "Did I ever tell you, Mr. L., what old W. says about us? I was in company with him in the hotel, and I was a-takin' on powerful about the sorry fix we was in. 'W.,' says I, 'we 're nothin' but old, whipped-out rebels,' says I. 'Oh, but a' n't we down?' says I. 'We done lost our niggers; we done lost our money; and the Yanks has whipped us pretty nigh *to* death,' says I. 'I 'll be squeezed to death,' says I, 'if I 'd ever fight again for any flag that ever was no more than I 'd fight for an old dish-rag. I 'm subjugated,' says I. You know old W., what a train of eloquence he can git on to when you git him stirred up. He got up, and says he: 'T., you lie! I know you, and you can 't tell that tale to me. Do you mean to say,' says he, 'that if France and England, or some o' them foreign powers, was to declare war agin the United States, and was to offer us our liberty and all our rights and our independence; was to land a million o' men right yer, and call on us to come out and help 'em lick the Yankees, do you mean to say that you would n't fight?' Well, he pictured it all out so fine, and the old fellow looked so earnest, you know how he can talk, and he spread himself out till he looked as big as a skinned hoss, that it worked on me, and I jumped right out of my chair I was sittin' in. I do n't never swear hardly, but I did that time. I just flung my hands up like this: 'Fight!' says I, 'may I may be d—d if I would n't fight while I had one drap o' blood left in my veins. I 'd fight till the last Yankee was the other side the Potomac.' I let out, and the thing of it was there was a Yankee there all the time. I did n't know it, you know, but there was a captain. He jumped up when I got done, and says he: 'My God! what sentiments,' and walked right out. I was caught. And it was the first time I 'd said anything wrong since the smash. But that warn't all. When the Yankee went out, W. says: 'Come up to my room, I 've got something pretty funny up there.' We went up supposin' he had some whiskey, and when we got into the room W. never looked round, he did n't know he 'd got anybody else there, and says he: 'Did n't I give that blue-bellied Yankee hell?' and squeeze me to death if there warn't another Yankee in bed right in the room! We had it on old W. The Yankee seemed to be a good kind of a fellow too; I met him afterwards, and he seemed a right clever fellow."

When the laughter which followed this story had ceased, a gentleman remarked: "The Yankees would be great fools to go into a foreign war, that 's certain."

"Why, sir," said another, "you do n't think they have any fears of us? They know that we 're whipped. They despise us more than we ever despised them. They consider us the most ignorant, low-down people on the face of this earth. They allow that a nigger is on the same equality with the most of us, and some of 'em will just about tell you so to your face."

"Yes, I have seen some that appeared to think so, but I think they very soon give up that idea. In my part of the country I believe they have less use for a nigger than we have."

This assertion called forth from different members of the company many corroborative stories, which were mostly related of negroes who had been beaten for impudence or knocked down by drunken soldiers merely on account of their color. One man even professed to know of six negroes that had been shot by soldiers during Christmas week.

"Well," said an old gentleman, "I am like you, sir; I feel that we have no flag and no country. How can we love the United States? We all know it to be an impossibility. When they ask me to be loyal, I ask, 'What for?' We live in troubled times, gentlemen, and I never expect to see peace again. It seems, sir, as if our times were the latter days which we are taught to expect, when there shall be wars and rumors of wars. I believe that we shall see the Jewish people led up to Jerusalem and gathered in from all the corners of the earth, according to the promise, and all

the other promises made to the chosen people will be fulfilled. But there will be no more peace for the rest of the nations. That 's the way it looks to me. I may be mistaken."

No one seemed prepared for this view of affairs, and a reply was not attempted. When the old man rose soon afterwards and went out, it was remarked that "he felt the thing powerful: broke him up, like."

Cotton-planting was of course discussed—two of the men around the fire asserting that without slavery there can be no cotton: on a well-regulated plantation, in old times, of course the niggers was made to work a heap harder than any man ought to work; well, a heap closer, anyhow; as for workin' harder, a nigger won't be drove to work more 'n so much, like a mule in that respect. Now a free nigger a' n't goin' to work from before daylight, from the time he can see a cotton-stalk, till nine o'clock at night, and a white man can 't stand it, and of course it stands to reason that cotton-raisin 's gone up.

Four or five other men maintained the other side of the question: Take a plantation where the hands get out just before sun-up and work till sundown, and you make a better crop than another plantation where you kill up your niggers with long hours and cuttin' and lashin'. Do with the freedmen as you did with 'em when we had slavery, and they 'll work just the same; you always had to have somebody with 'em before all the time they was in the field.

Yes, it was answered, no doubt a man could make a livin' that way; and the niggers used to be better off, so far as that went, on one o' them plantations spoken of, and lasted longer. But, dog-gone it, that warn't farmin'; that warn't makin' what you call a crop, not what 's called a crop in Alabama.

This provoked a Georgian to say that on a plantation where nobody worked before nor after daylight he could raise more bales of cotton than on a plantation where the other plan was followed. And as to white men not being able to work in the field, that was all a mistake. They could work; he 'd seen white men working cotton in Texas, and was mighty nigh being run out of his own town for saying so, and for telling 'em that the doom of slavery was written by them Germans. It would n't be long before you 'd see white men raisin' cotton in every State in the Confederacy.

Not our white men a' n't goin' to work, said the former speaker. But if you mean that there won't be any niggers very soon to do it, I believe you. Why, it 's estimated that in the last year or two more 'n a million has perished; and you 'll see in twenty years there won't be five hundred thousand, all told. They 're a-goin' faster 'n the Injins.

Upon this ground the disputants came together again, but I doubted if more than one of the party really had faith in the theory to which all, as a matter of course, publicly assented. One of them, a young planter from Western Alabama, shared my room, and freely communicated his agricultural plans and expectations.

He had been a soldier in the Confederate army, and when the war closed found himself in Georgia, wounded and without money. He had a horse, however, which he sold at a good price, and the money thus obtained enabled him to go to his relations in Alabama. His uncle knew he had been in the service, and was therefore disposed to help him as much as possible, and, though there was really nothing to do, gave him sixty dollars a month till Christmas for overseeing the place. He got into a little cotton transaction, too, and cleared about four hundred dollars by that. Then his uncle let him set up a store in the yard. It seemed mighty curious, but every nigger round there had some silver, and it did n't take long to clean out all the goods, and at a profit of about a hundred per cent., too. Then the niggers did n't know the difference between gold and greenbacks; in fact, they liked the "Yankee money" the best, and he made a pretty good pile selling the silver. Come Christmas, his uncle made him a first-class offer. He went to bed, and laughed; could n't help it, as soon as he 'd closed the bargain. He agreed to oversee the niggers and manage the place for one-half the crop. His uncle was to find corn and mules, and pay all the expenses. He intended to plant 800 acres in cotton, for there was corn enough there now to keep all the hands and stock at least two years. He had fifty-four niggers that belonged to his uncle, and was going to hire about twenty-one more. Three hundred acres were all ready for seed now, and he had more than thirty ploughs running, and plenty of seed on the place, so that he should get a very fair start. The niggers had promised to take up twenty acres a-piece, and he reckoned they would, for they were working as well now as they ever did, and they always used to work that much. The Alabama niggers were not like the Georgia niggers; they 're just as ready to wait on you now as they ever were, and there 's none of this impudence and independence. Then the planters in Georgia were letting niggers have land and giving them their own way, and perfectly spoiling them. There was none of that in this country.

I asked what wages he paid.

At first he had had some trouble, for they would n't contract; but an old nigger fellow, a driver, came to him and told him to leave it all in his hands; only let him promise each worker half a dollar a day, and he 'd agree to bring them all round before New Year's. The driver was to have six bits a day if he could do it. By Christmas they found that they were not going to get any land, and sure enough every nigger signed a contract on New Year's morning for half a dollar a day and rations. Every morning he gave the old driver about three gallons of whiskey, and he served out a drink all round before they went into the field.

I said I supposed he had to take his contract to the Freedmen's Bureau for approval.

Oh, yes; but they approved it very willingly. The Bureau in his part of the country let you do pretty much as you liked. They had a mighty good man there—let you whip a nigger if you liked. He would give me an instance. One of his uncle's niggers was in the loom-house, a nigger woman it was, weaving, and she kept breaking the thread. His aunt reproved her for it several times, but she kept on breaking, so careless, you know, and would n't take pains, and his aunt went up to her to strike her; but the woman made as if she 'd strike his aunt, who was obliged to find his uncle and report the facts to him. His uncle went to the loom-house, but the woman had left. He was in the store when he first heard of it, but he knew very well which way she would be likely to head, so he got his horse and followed after her. Sure enough, there she was going to town to complain to the Yankees. She did n't hide nor anything, and when he asked where she was off to, she spoke up as bold as brass, and said she was going to tell the Yankees how she was used. He showed her his pistol, and told her to march back, which she did, of course, and when his uncle got her he gave her the worst whipping she ever got. But she left in the night—she might as well have gone in the day-time, for nobody wanted her on the place; she was n't good for anything—and told what he and his uncle had done to her, and back she came with a note from the colonel. He supposed she thought something dreadful would be done to them, but when he read the note it just said: "I send back this woman, and advise you not to turn her away from the plantation. Make her behave herself and do her work, and if she needs correcting, correct her." That was all it said. The nigger left the place, for she said she would n't stay unless his uncle would agree not to whip her again. He did n't intend to whip her, for she got enough at first, but he told her "he 'd see about it," and she got scared and left, for she thought he 'd kill her sure.

The young man told me, furthermore, that he should still keep his store open, and expected to find it very profitable. Neither his uncle nor any of the neighbors intended to pay out much money to the hands till the crop was gathered, but he could arrange a system of certificates, he thought, and would be able to sell goods to the negroes upon credit and not lose anything by it. I congratulated him on the probability of his making quite a fortune from his store and the sale of his cotton, and enquired if he knew anything about another speculation which I had recently heard mentioned—the shipment of negroes to Cuba and selling them to Spanish planters? Yes, he said, he had been told about that, and if he had good luck he intended to get into it, for it was the biggest thing yet.

Half an hour after midnight our train was ready to start. In the darkness I missed the passenger carriage, and rode in a freight car, fitted up with benches for the conveyance of colored people. The weather had changed to cold and windy, and the box-stove full of pine wood failed to keep us warm. I could only see my fellow-passengers when at rare intervals the stove-pipe became red-hot. Then an old negro in front of it, nodding over a staff, would rouse himself, and poke the door till it opened and threw a flickering glare over the huddled figures, lying in every attitude of sleep and weariness. They looked like field-hands, and seemed to be all from one plantation, to which they were then returning. They seldom spoke, except now and then some impatient youngster set to "min' chil' " when he wished to sleep, or a woman hushing her baby. When the conductor appeared, however, he was assailed with complaints because colored folks were compelled to pay full fare now, though the accommodations were poorer than when only half price was charged. To this he replied: "You 're free now, ain't you? You 're as good as white folks, ain't you?" At half-past four I reached my journey's end, having consumed twenty-four hours in travelling about eighty five miles.

The city of Montgomery is the most beautiful that I have yet seen. The country around is undulating, and the city itself is built on several gentle hills, whose tops are now green with new grass. Standing behind the city and looking south and west to the horizon, a vast basin of wooded land can be seen, green near at hand and bluish in the distance, with the Alabama

flowing through it towards the Gulf. Its many trees and broad streets are beauties common to Montgomery and other Southern towns, but here the streets are clean and hard, and the elegance of the private residences is equalled by the handsome and substantial appearance of the business quarter.

ENGLAND.

LONDON, January 13, 1866.

THE other day some American friends of mine, who are visiting England for the first time, complained that it was never cold here. By to-day I should hope they are undeceived. Anything bleaker or more miserable than the weather of the last week it has never been my misfortune to remember. London is covered with a deep layer of dirty-brown sludge during the day, which reason tells one is snow, but which to ordinary vision appears utterly incompatible with the idea of whiteness. At nights it freezes hard, and during the morning hours the pavement is so slippery one can hardly walk. The streets are almost impassable, the railway trains are delayed for hours, the telegraph wires are broken by the weight of snow resting upon them, cabmen refuse to ply except for "sensation" fares, and everybody who has a roof to cover him stops at home and tries unsuccessfully to keep out the chill, deadly cold by enormous fires. I do not give you this account of our social discomforts to excite your compassion. If the winter during which I visited New York was at all an average one, we have no cause to envy you for exemption from our discomforts. I only dwell upon the weather to make you understand the full bearing of the fact that, during this very week, the police have found it necessary to make a sort of raid against the wretched women who sleep at night in the parks. Yesterday a whole batch were taken before the magistrates charged with the offence of "not having any visible means of subsistence, and not giving a satisfactory account of themselves." Of late the parks have been infested at night with these miserable outcasts; and, at last, the nuisance to "respectable people" has become so great that the police have received orders to put down sleeping in the open air with the thermometer below freezing and the ground covered with trodden snow. The culprits guilty of this breach of good manners were first taken to the workhouse, but the overseers refused to receive them, because they had been inmates there not long ago, and had discharged themselves; so they were removed to the police court, and were there, no doubt greatly to their delight, committed to prison for one month as vagrants.

About the moral fate of these unhappy creatures there is no particular cause for sentimentalism. They were no more seduced governesses or fallen milliners than they were angels of purity. They were simply the most degraded of common street-walkers, the lowest refuse of the criminal classes. But still, their abject, hopeless misery is, as it were, the index of the sufferings of a class but little removed above them. It is not only thieves and prostitutes who may be found in the parks at night, without home or food or shelter. What is to be done, I cannot tell clearly; but this much, I think, is certain, that there must be something radically wrong in a state of society where such things can be. To Londoners the sight of beggars and outcasts about our streets is so common that they hardly appreciate its significance; but those who like myself have lived much in countries where these sights are unknown, can hardly, I think, avoid a painful jar upon our sense of right that we are thus compelled to recognize the contrast between the misery and luxury of this overgrown metropolis. And it is not odd that a large and increasing section of sincere Liberals have grown to be almost indifferent to political reform in the presence of the social evils amongst us crying for redress. Questions about the franchise or the ballot or redistribution of seats vanish into insignificance compared with the consideration of the problems of labor; and I attribute no small share of the apparent indifference about electoral reform to a sincere, though I believe a mistaken, scepticism as to the power of any political agitation to remedy the real evils which beset the English laboring classes. Talking of pauperism, I am afraid that the trustees of the munificent Peabody donation, whose report has just been issued, have failed to carry out the wishes of the donor. As I have understood from persons acquainted with him, the desire of the great Anglo-American millionaire was to do something for the poor of London—for that especial class of the poor which abounds in the country of his adoption, and is scarcely to be found in the country of his birth—the class which has neither roof to shelter them, nor food to eat, nor work to do. The trustees have employed his bequest in building a number of model lodging-houses, which will afford excellent abodes for well-to-do mechanics at moderate rents. The Peabody Fund will thus serve a very excellent purpose, but not that for which it was designed. Moreover, the donor ought to have lived long enough in England to know what would be the fate of moneys bequeathed in trust. It is not in English nature to resist the temptation of having some tangible object in the way of bricks and mortar, secretaries and managers, to show for your money. If you want to do good here, give as freely as you like, but never leave money in trust for charitable purposes.

Meanwhile, the lull in politics still continues. Indeed, the one event of the week has been the appointment of Mr. Goschen to the vacant seat in the cabinet. I wrote to you some weeks ago about this gentleman's career. The Chancellorship of the Duchy of Lancaster, to which he has been raised from the comparatively insignificant office of Under-Secretary for the Board of Trade, to which he was appointed a few weeks ago, is a complete sinecure. It is an office which does not involve a seat in the cabinet, but to which a seat is generally attached, as it has been in the present instance. On the whole, the selection has given general satisfaction. Strange to say, it has done so not so much from Mr. Goschen's personal merits as from one quality of his—for which he can claim no especial gratitude—I mean his youth. We have had of late a perfect plethora of old ministers. Within my own recollection, I can recall no previous instance where a man under five-and-thirty, not the scion of a noble house, or favored with family interests, ever had a seat in the cabinet. We have no objection to old statesmen, as was testified by the popularity of Lord Palmerston, and perhaps still more by the public esteem for Earl Russell, but it is possible to have too much even of old men; and the country had long grown weary of the series of elderly baronets and grey-haired country magnates who of late years have been deemed the only available candidates for office under a Liberal administration. Mr. Goschen is in the very prime of life, has been trained out of the stereotyped official school, and will bring new blood into the Ministry. He represents, however, no very distinct party, and has no personal following; and I should doubt his adding much political strength to the Ministry. His accession will certainly not counterbalance the injury inflicted on the administration by the discovery that Mr. Cardwell, the Colonial Secretary, wrote a despatch congratulating Governor Eyre on his vigorous suppression of the Jamaica rising. This despatch was written before the full news of the bloodthirsty measures of reprisal taken by the whites had been received in England; and some excuse must be made for its being composed on insufficient data. But the awkward fact remains, that the colonial minister has more or less officially pledged himself to the approval of the very proceedings whose apparent enormity created the public demand for rigid enquiry. Mr. Cardwell would have stood much better with the world if he had frankly acknowledged his having already expressed an opinion on the matter when first he resolved to give way to the outcry for a commission. As it is, he is in a false position, and has offended Eyre's supporters by suspending him from his governorship, while he has alienated the opponents of the planter interest by identifying himself with the impugned officials. The fact that such a despatch existed explains a good deal of the apparent irresolution of the Ministry, because, unless they were prepared to throw Mr. Cardwell overboard, they are all more or less responsible for this expression of opinion. Whatever else happens, it is pretty certain that there must be a change in the colonial secretaryship. Mr. Cardwell is one of those men who are found in power under every representative government, who are in office simply because they have been there before. A man of singularly little ability—at least as far as the public knows—he has existed on the sort of collective reputation enjoyed by the Peelite party, to which he formerly belonged. There is nothing to be said against him, and as little for him; so that as long as he made no conspicuous blunder, there was no reason why he should not remain a minister; and with us the sense of any politician's "vested interest" in office is extremely powerful. But now that he has committed a gross error of policy, not to mention principle, his insignificance will fail to protect him.

Commercially, there is a sort of panic going on this week. The Bank has raised its rate of discount to eight per cent.; and there is an impression that the rates will go much higher. As far as an outsider can understand the mysteries of finance, it seems that the object of this commercial *coup d'état* is to stop the drain of gold from the country. Why the Bank of England should consider itself bound to regulate the course of trade, is one not only, as Lord Dundreary says, "no fellow can be expected to comprehend," but which, to my humble apprehension, no fellow does comprehend. However, it is a tradition in the City that some unknown calamity would occur if there was less than a certain reserve of bullion in the Bank cellars; and we worship our traditional maxims with the same unreasoning faith as the African does his "fetish." The *Times* took advantage of this rise in the Bank rates to deliver a tremendous protest against the dangers of our own trade with America, and the probability that our vast exports since the war would never be paid for in full. The article, granted the premises, was sound

enough. Unfortunately, it appeared on investigation that since the resumption of the cotton trade our imports from the United States greatly exceed our exports, and that, therefore, our solvency is more important to American merchants than theirs is to our own. Since the discovery of this fact the *Times* has been making various ineffectual efforts to explain that it only meant to counsel the public generally against the dangers of over-trading. Since I wrote to you, a week or two ago, about the rumored dissensions between the proprietors and managers of the "leading journal," the existence of any such dissension has been denied by one or two newspapers which profess to have private intelligence on the subject. For my own part, I can only repeat to you the current talk of the clubs and the newspaper world. On questions of this kind it is, as I told you at the time, impossible to arrive at positive truth.

Last Sunday a new movement of a somewhat remarkable kind was set on foot in London. At St. Martin's Hall there was given the first of a series of "Sunday services for the people." Professor Huxley delivered a lecture on "the desirableness of improving natural knowledge," and the lecture was followed by an oratorio, performed by professional paid singers. On the following Sundays discourses will be delivered by Sir John Bowring, Mr. Carpenter, Mr. Heywood, and others, all belonging to the advanced school of social and scientific reformers. The entertainment is not perhaps a very lively one, but the hall was literally crowded on the first night. Some years ago there would have been a furious outcry throughout the religious world against the desecration of the Sabbath contained in a series of secular lectures and concerts given at the very hour of evening service. But in religious matters we are far more tolerant than we used to be.

Talking of lectures, a Miss Emma Hardinge has just announced a course of orations in London, on America. I do not know whether, as is reported, she had any celebrity in the States. Some years ago she was an actress, and not a very successful one, at the Adelphi Theatre. I presume, from the number of Spiritualists I saw at her inaugural lecture, that she has a Spiritualistic connection. Women lecturers are not popular in England, and Miss Hardinge will scarcely, I think, create a sensation here.

PARIS GOSSIP.

PARIS, Jan. 12, 1866.

So long a succession of violent gales as that which has been afflicting the Atlantic and its shores for nearly a week, has rarely been known; and so numerous are the wrecks already reported that great fears are entertained for the safety of the ships of which no tidings have yet reached us. The violence of the wind has not been confined to the sea. Trees and chimneys have suffered severely in Paris, the wind being often almost more than a strong man could withstand; roofs have been lifted bodily off some of the houses in London, one which fell, entire, into the middle of the road in crowded Fleet Street doing no harm, strange to say, to man or beast in its formidable descent; in Antwerp, people have been lifted off the ground and carried for several yards through the air; and similar experiences are reported from other quarters. The prevalence of rainy weather has been a great disappointment to the lovers of skating, an amusement which has lately been brought into fashion here by the numerous Russian colony, aided also by the American residents, many of whom are as accomplished in the skater's art as the Russians themselves. The example of the Emperor, who is an accomplished skater, and always "goes on the ice" with the Empress and the court when there is any ice to go upon, has tended still further to make skating a "rage" here; so that one might almost suppose, on seeing the eagerness with which the fashionable world is looking out for a fall of the thermometer, that the rigors of a Northern winter were the most enviable of all possible windfalls. To satisfy this new passion, a group of the leaders of the gay world of Paris, with Prince Joachim Murat, Prince d'Hénin, and Marquis de Morny at their head, have founded "The Skaters' Club," an organization commenced last winter, but only now fully completed. The club has rented, from the municipality, the lake of the Bois de Boulogne, 750 metres long by 150 wide, with a broad walk round it, an elegant *chalet*, where dinners, suppers, and refreshments are to be provided by a high priest of the culinary art, and warm parlors kept ready for the use of the members; the whole encircled by a low wall, surmounted by a handsome railing, and entered by a lofty gate, surmounted by gilded candelabra. Here the members, who are only received under stringent conditions, will have the right to skate whenever the club committee declares the ice to be in good order, membership being withdrawn from any who should persist in going on the ice when the latter has not been proclaimed to be "in order." The club proposes to give several brilliant night-fêtes this winter, including balls, at which the guests will skate through cotillions and waltzes; the scene to be made gorgeous with electric lights and Bengal fires, and the buffets to be lavishly supplied with spiced wines and other defrigerating beverages. But, though the first snow of the season is coming down as I write, there are no indications of its being probable that the club will have any immediate opportunity of putting its programme into execution.

There being a great fancy just now for clubs, the wags are declaring that a number of the lady-leaders of the gay world, having determined to revenge themselves on the gentlemen for their exclusion from the favorite "circles" of the day, have held various meetings with a view to the formation of a female club, from which all males should be rigidly excluded; but that, owing to the preliminary adoption of a resolution declaring that the office of president should be held by the oldest member, and that of secretary by the youngest, the project has at last been abandoned, it having been found impossible to obtain a president, and every one of the members claiming the right to be the secretary.

As for the lectures which, under the name of "conferences," are just now so popular here, some little disappointment has been caused by the "oozing out," at the last moment, of George Sand's courage; the renowned novelist, who had engaged to be one of the lecturers, having just published "a card" ignominiously assuring the public that, "in her own opinion and that of the friends who know her best, it will be absolutely impossible for her to muster up the necessary nerve for facing an audience," but adding, to console the public for her defection, that "she will gladly do whatever the conference committee shall suggest to further the charitable aims of the society." The brilliant authoress is, in fact, like the rest of her contemporaries, obeying the fatal law which leaves us no alternative but to die or to grow old; and those who may have happened to see the recent photographs of her, of Lamartine, Thiers, Guizot, Hugo, and the rest of the writers of the same period, with whose names and whose younger faces the world is so familiar, and who have been struck by the unmistakable evidences of decay in their sharp and wizened features, will not wonder that the great novelist has shrunk from the trial which she had thought herself strong enough to undergo. A certain Miss Emma Hardinge, said to have been lecturing with great brilliancy and success on all possible topics in the United States, "from which she has just returned," is coming to this city, it appears, after giving the series of lectures which are being advertised in London. The lady's biography being unknown to the public of the modern Babel, and a very pretty and clever actress of that name, reputed to possess considerable literary talent, having vanished a few years since from the boards of the Adelphi, it is surmised that the lecturess may possibly be the ex-actress coming out in a new character and on a new stage.

Twelfth Night, "Old Christmas Day," "the Fête of the Kings," as it is called here, has been honored with the usual observance; the Russians lighting up Christmas-trees in great abundance, the French putting a bean in the Twelfth Night cake, and Anglo-Saxons keeping to the old tradition of "the ring," and all celebrating the occasion with family dinners or evening parties. At the Twelfth Night dinner given at the Tuileries the cake was cut by the Empress, as usual, the pieces being carried round to the guests on a tray. The bean fell to the lot of Princess Hohenzollern; she gave it to the Prince Imperial, who thus became king for the rest of the evening, and exercised his power by imposing his sovereign commands on all the guests. His little highness, moreover, presented to the Princess a diamond bracelet, which he begged her to accept as a *souvenir* of the royalty he owed to her.

One of the prettiest actresses of Paris, Mlle. Colombier, celebrated the evening by giving an entertainment so gay and so splendid that those of her acquaintances who were *not* invited to it have been made furiously angry at the exclusion, one or two of them going so far as to write vituperative letters, expressive of their views in regard to hostess and party, to the *Figaro* and other scandal-mongering papers of the capital. To these complaints Mlle. Colombier, who makes a large income ostensibly by playing the part of innocent girls in the anything but innocent plays so greatly in favor in Parisian theatres, writes back to say that "although certain pieces (naming those in which the complainants appear) may be very popular with the public, they may well alarm the mistress of a house who lives in a very limited circle; besides which," adds the lady, with the scratch of a genuine set of French nails, "I made it a point to have only young people at my party."

The public of Vienna have greatly enjoyed the joke that was played off, on the evening in question, on one of the highest dignitaries of the Austrian Government, who, in the midst of the brilliant entertainment he was giving on the occasion, was informed that Alexander Dumas had presented himself, asking admission to the soirée, and volunteering to deliver a portion of his famous "lecture" for the amusement of his excellency's guests. His excellency, so goes the story, delighted to receive so distinguished an illustra-

tion, promptly accepted the offer, and the brilliant author of "Monte Christo" —who is said to have gone to Vienna for the purpose of repeating the "lecture" that was so much admired in this city—was ushered into the drawing-room, where he made himself extremely agreeable, and recited fragments of his "lecture" amidst the enthusiastic applause of all present. It was not until the following day that the minister became aware that the brilliant guest of the preceding evening was a false Dumas, got up with wonderful skill, and equal success, and that the whole affair was a merry hoax, the result of a wager, contrived for the purpose of mystifying the minister and his guests. The supposititious Dumas, to atone for his audacity in "taking in" so exalted a personage as a minister, has made over the proceeds of his wager to the poor of the capital.

The Pope has celebrated the festival by the usual benediction of a hat and sword, which objects are afterwards sent to some one of the sovereigns of Europe in recognition of the recipient's services as a "defender of the faith." But as, just now, no one among the forty-three reigning sovereigns of Europe (counting the German rulers and the Prince of Monaco) has any claim to such a distinction, the objects in question, after receiving the Papal benediction, were carefully put away to await the return of happier times.

The Prince of Monaco, who rules as an independent sovereign, theoretically as much a monarch as the Emperor of the French, a tiny dominion of a few square miles, whose income is derived from the profits of one of the worst gambling-houses of Europe, has long been set down as the most infinitesimal of sovereigns. But it appears that there is one representative of royalty still more infinitesimal than that of Monaco, viz., the traditional "Roi d'Yvetot," immortalized by Béranger, and still extant in the person of his lineal descendant, the present Marquis d'Albou. The Kings of Yvetot are by no means the mythical personages they have generally been supposed to be. King Clothaire having, about the year A.D. 520, assassinated his vassal, Gaulthier of Yvetot, in the church of Soissons, was threatened by Pope Agapet with excommunication if he did not make some reparation for his crime. The King submitted to the Pope's orders and raised the estate of Yvetot into a sovereignty exempt from all vassalage. The descendants of the victim thus became kings, like his murderer. This state of things continued until 1681, when the parliament deprived the territory of a part of its privileges, but still left the inhabitants exempt from the payment of taxes. The Revolution at length swept away all distinctions; but there are dukes without duchies, and the Kings of Yvetot survived the loss of their kingdom. The present monarch has no children and only one brother, the Count d'Albou, a bachelor; and as the Salic law prevails in Yvetot, and the marquis's daughters could not inherit the king's title, the kingdom was in danger of becoming extinct. That difficulty, however, was got over by the count's doing, as so many uncles do in France, marrying one of his nieces, who, a week ago, gave birth to "a prince," presumptive heir to the royalty of Yvetot.

Correspondence.

HOW TO SECURE INDUSTRIAL SUPREMACY.

To the Editor of The Nation:

A motion was lately made in Congress to enquire whether additional legislation was not needed for the protection of some native manufactures. As this motion happened to be made by a senator largely interested in cotton spinning, the *Evening Post*, as the leading organ of the free-traders of this country, not unnaturally took advantage of the opportunity to point to the large dividends lately declared by several cotton manufacturing companies. But the inference drawn was anything but a fair one. It would not be possible to find amongst the factory owners, whatever some individuals may say or think, any large number in favor of increase in the present rate of duties or who would oppose any such reduction of them as would promise an increase of revenue to the Government, provided the tariff were so adjusted as to maintain that equality between the import duties and the internal taxes which economists of every school acknowledge to be both just and necessary. This done, they would certainly be content with such incidental protection as a well-adjusted tariff would give them, whether their special interests were kept in sight in forming it or not.

The cause of free trade cannot possibly be served by misrepresenting the state of opinion amongst the manufacturers. At the present moment, most of them are in favor of further enquiry as to the bearings of the present tariff upon their interests, for the simple reason that many branches of industry are really now only saved from absolute destruction by the premium on gold, the internal revenue taxes levied on them being so great as to exceed the duty on foreign imports of the same class if currency were at par. With currency constantly tending to par, the anxiety of those engaged in them is natural enough. I should like to know what commercial authority, native or foreign, has ever maintained that it is sound policy to extinguish branches of native industry by taxation from which foreign products are exempt.

One of the commonest of the arguments for protection is based on the alleged necessity of protecting our workmen from the competition of the "pauper labor" of England. Now the fact is that there is no such thing as "pauper labor" in any leading branch of manufacturing industry in England. There is pauper labor, or the next thing to it, in the agricultural districts. But if we place before the public a comparative statement of the wages of factory operatives and mechanics in England and in this country, and reduce our own wages to gold, it will be found that there is but little difference between them, and that in many branches of industry—metal-working, for example—the English artisan receives higher pay than the American. And even if it were not true that the wages in money are much more nearly equal than is commonly supposed, it certainly is true that the wages of English workmen will purchase more of the necessaries of life than those of the American workman—and this is after all the real test of the rate of wages.

But there is perhaps no branch of foreign industry which suggests so much food for reflection to any candid American, whether protectionist or free-trader, as the state of the English iron trade. The *London Economist* of January 6—the great English authority on this class of subjects—has a most significant and interesting article on the approaching exhaustion of the English coal mines. The great power of England as an industrial competitor of other countries has always lain, not, as is popularly supposed, in her cheap labor, but in her cheap machinery, and her machinery has been cheap because her beds of coal and beds of iron lay side by side and were easily worked. This advantage is now passing away, and the importance of this fact is really tremendous. It opens up a vista of changes, both social and political, so startling that I can here only allude to them. English writers admit the superiority of American iron and the cheapness of American coal, and do not shrink from glancing at the possible consequences of these two facts.

The article in the *Economist* of which I have just spoken says:

"Of 136,000,000 tons of iron now raised throughout the world, Great Britain produces eighty million, and the United States only twenty. But this is only because we have had the first start, and because our population is far denser, and because our iron and our coal lie conveniently for each other, and conveniently for carriage. *As soon as America is densely peopled, to America must both our iron and our coal supremacy—and all involved therein—be transferred*, for the United States are in these respects immeasurably richer than even Great Britain. Their coal fields are estimated at 196,000 square miles in extent, while ours are only 5,400. But this is not all: their coal is often better in quality and incomparably more accessible than ours, especially in the Ohio Valley. In some places the cost at the pits' mouth even now is two shillings per ton in America, against six shillings in England."

The *Economist*, while admitting our superiority, however, postpones the transfer of power until we have a dense population. But we should have to wait a century for this most undesirable consummation in the ordinary course of things. Let us rather transfer the supremacy of England in coal and iron, and all involved in it, by diminishing the density of her mining population and by raising the standard of wages in England to an entire equality with our own; then, with our higher standard of education for the mass of our people, we can compete with her in all the markets of the world.

We must bear in mind that we transfer supremacy in every branch of manufacture or commerce when we transfer supremacy in iron. On machinery built from cheap iron, England manufactures raw material drawn from every quarter of the globe, and in cheap iron vessels, propelled by cheap iron engines, she sends out her finished product. The place to attack her, therefore, is her mines. The discussions of the war have diffused knowledge of this country among her people; give them the means and organize emigration by spreading information among her miners, and they will flock to our shores. But how shall we give them the means? Reduce the multiplied taxes upon iron in this country, simplify our revenue system upon that, if upon nothing else, and then reduce the tariff upon iron.

Let our revenue be raised, either by tax or tariff, upon anything rather than coal or iron. Let us have cheap railroads, mills, machines, and implements. Tax the product, but not the iron tools. By thus cheapening iron you create a new demand upon England for more product, and certain results must follow. Her metal-workers are now paid higher wages than in this country, *but her miners are not.* Raise the wages of her miners by a

large and sudden demand for the coarser forms of iron, pig-iron bars, rails, etc., now so much needed for the extension of our railroads, then spread information among them by which they will be induced to use the means thus acquired to transfer themselves from the deep, unhealthy, and hardly-worked mines of England to the easily-worked surface-mines of this country. And when you have thus transferred a portion of the mining population, the metal-workers must follow. The mining industry of England is now pressed to its utmost; a very slight additional demand would raise wages even to an extravagant point, as the sudden demand upon Lancashire has raised the wages of the operatives in the cotton factories, and, with the means thus acquired, there cannot be a doubt that such emigration of miners might be induced as for ever to equalize the cost of iron in England and the United States. Remove ten per cent. of her mining population, and fifty years would not suffice for her to repair the loss.

A skilled miner cannot be made in a day. The ignorant, under-fed clod-hopper, who now tills the English farm, even though he may wish to do so, cannot become a miner. The miner of England is in some senses the product of the mine; his ability to bear the underground life and to perform the specific labor is the growth of generations. The children of English miners must be bred among the mines, they cannot be bred elsewhere. Remove the adults and we not only affect the present cost of English iron, but we affect it for all time, for we remove from a life which, in consequence of the depth of the English mines, has become almost unbearable those who would never have borne such a life had they not been born and bred to it, and to which, as it becomes worse and worse with increasing depth, no new class can ever be trained.

The course proposed here would be no injury to our iron-masters, but a positive benefit to them. They too are now struggling against an ill-adjusted tax and tariff bill; let them, instead of asking more protection, ask for less taxes. It has become evident that when the arrearages of the war are paid up, and the tax on spirits, tobacco, and cotton systematized, the industry of the country may be partly relieved; and the slightest investigation would bring every manufacturer or merchant to the aid of the iron-master if he would ask that the first relief may be extended to him. A tax upon iron is a tax upon every form of industry of the most injurious nature.

A Manufacturer.

January 28.

REPOSE.

To the Editor of The Nation:

All the influences of our climate, of our political institutions, of our social habits, tend to energetic action and immediate practical results. We have accepted the old saying, *Laborare est orare*, in its most literal sense, and made work a part of our religion. Naturally enough; for without much work there can be no progress, and the American is bound to "go ahead." And thus the railroad, symbol of progress, bids fair to supplant the eagle as our national emblem, if not on our coins at least in the mouths of our orators and lecturers. Some of these, indeed, take it for the type and representative of everything that seems to them good. Now it is man in general who is compared to the railway, now the American man particularly; at one time the age, at another Christianity itself. I assure your readers that I am not joking or exaggerating, and if there is any irreverence in the last comparison the fault is not mine, but that of the man who made it, the popular author, Dr. Timothy Titcomb Holland.

As yet, however, there have been an exception and a qualification, both pretty generally admitted. First, a tolerably wide exemption from the prevalent necessity was accorded to all women whose husbands or fathers occupied any position above that of the day-laborer; secondly, professional men were supposed to be absolved from any participation in the manual industry of the country: they were not expected to work with their hands because they worked with their heads.

Against the continuance of this exception and this qualification no less a writer than Mrs. Stowe declaims in a recent number of the "Atlantic Monthly." In the article above mentioned she distinctly recommends that ladies should be their own servants and gentlemen their own mechanics, not altogether, indeed (for that would set us back to Robinson Crusoe's island at once), but partially and on principle. Nothing better illustrates the difficulty of the "servant gal" problem than that a writer of Mrs. Stowe's ability, in attempting to solve it, should be led to revive Rousseauism in a slightly modified form, and recommend a retrograde movement toward the first elements of civilization.

Recreation, according to Mrs. Stowe, is an aristocratic device. It was adopted as a class distinction. The spirit of caste required that physical labor should be dishonorable; therefore when rich men had to perform some physical labor for the sake of their health, it must be useless (or unproductive, as a political economist would say), riding, shooting, and the like. According to democratic principles, manual labor is not dishonorable; but we shall never be complete democrats in practice till we prove our faith by all taking a share in it. Hand-work is just as good as head-work, and should be the only relief to head-work. The lawyer, for instance, we suppose, should cobble his own roof and shovel his own coal, instead of taking a "constitutional" in the park or a shooting excursion to the Adirondacks.

Of the many objections to this theory, each grave enough to be in itself fatal, I shall present but two, which seem to me so simple and obvious that were it not for the fact that we find them wholly overlooked by those who write most on the subject, and for the largest audiences, I should think it hardly respectful to your readers to engage in its discussion. The first is its inhumanity. To use a popular phrase, it is cruelty to animals. Children require some sort of play; that is pretty generally admitted. But men require play also, though they dignify it by the names of relaxation, diversion, recreation. And the more thoroughly serious the work, the more thoroughly recreative should the recreation be. It must be play, not the substitution of one sort of work for another. So much so, that when any species of manual labor is fancied as an amusement, the natural tendency is to expend it on objects not of immediate utility. Thus, a lad with a tool-chest will try to cut out a boat or build a sleigh; he rarely attempts to mend the front door—fortunately for all parties concerned, the door included. The result of all educational experiments goes to show that whenever not manual labor merely, but even a strict military or gymnastic drill, is substituted for amusement, one of two things happens, either the regular studies suffer, or the double work breaks down all the students except the picked specimens. West Point weeds out more than sixty per cent. of its cadets.

It is a poor rule that will not work both ways. Would Mrs. Stowe expect a mechanic after eight or ten hours' work to sit down contentedly to "Mill on Hamilton," or "Wheaton on International Law?" Yet she seems to expect the merchant, after his work, to solace himself with mending the kitchen wall where the Croton pipe has burst.

Such is the primary use of those recreations which Mrs. Stowe, in her mistaken zeal against everything that can be tortured into a connection with aristocracy, stigmatizes as useless. She might as well grudge the time spent in sleep, and call it wasted.

The second objection which I shall make to the theory that in an ideal state of society every man will hew his own wood and draw his own water, is that an advance in that direction can only be accomplished by forcing a retreat of civilization. In a primitive state each individual is his own factotum, except so far as his family can divide labor with him. The settlers at a new "diggings" realize the Irish advertisement, "Every man his own washerwoman." One of the first impulses of a forming and crystallizing society is to get rid of this state of things at whatever price, whence one cause of slavery as a rudimentary stage of civilization. The obvious economical motive is that we do work sooner, better, and more cheaply by distributing it into specialties.

It is a fundamental error of many of our popular lecturers and essayists to suppose work to be an end instead of a means, or, in other words, to be absolutely and invariably good in itself. Here we may turn against them their own pet illustration of the railroad, a most excellent and necessary thing when properly managed, but sometimes, as recent experience shows, fearfully abused. And the analogy holds good more ways than one, for the cause of our railroad mishaps is the tacit assumption that the road was made for itself—that is, for the directors and stockholders to put fat dividends into their pockets—and not for the public; in short, that it was an end, not a means. The error is parallel in the two cases. Or we may compare the working virtues with courage—an admirable and valuable property—the known absence of which renders man or nation contemptible, without which neither man nor nation is ever quite safe; yet we know that it is possessed by very noxious brutes and by men little above brutes. Energy, diligence, perseverance, these are very praiseworthy qualities, no doubt, in most of their combinations; yet, after all, these are qualities of the worst sensation editor, of many a conspirator and traitor and despot, of the prince of the powers of the air himself, so far as we know anything about him. There is no contradiction or solecism in the phrase *wicked industry*.

Besides, when work is expended on objects unobjectionable in themselves, the mere element of prematureness may render it an evil instead of a good. If a road or a street is opened before it is wanted, if a hotel is built in the fields (as we have often seen them) waiting for a town to come along and ook it up, all the intervening interest is a dead loss, and often the loss is

not confined to the interest. Premature work frequently becomes a fruitful cause of mischief by making itself accessory to the wildest speculations.

Again, there is a great error in making those work who are not fit to work. When a man cannot do any particular good, the next best thing is to keep him from doing any great harm. The popular prejudice is that this end will be secured by keeping him at work, *i. e.*, pushing him into some business, which very often is about as reasonable as it would be to put an idiot in charge of a powder magazine for fear he might run after the chickens. Our journalists often hold up for admiration and imitation the successful men of business; but who ever thinks of recording the unsuccessful? Year after year hundreds of young men with some patrimony of their own embark in commerce, seem to prosper for a time, and then there is a crash, and they drag to ruin with them friends, relatives, and business connections. Better, far better, for society had they been the nominal occupants of empty offices, like the briefless barristers of London; mere club and drawing-room loungers, professed drones. This is an everyday case; there is one somewhat less common and infinitely sadder, where a man of literary or artistic tastes is urged by his family or persuaded by his friends into the money-making mill, where he spends his best years only to come to financial grief at last.

And yet our popular moralists are for ever crying out to young and old, rich and poor, "Work, work, work! Idleness is the greatest of sins. Recreation is vice. All those who administer to the amusement of others are corrupt and profligate (*vide* Timothy Titcomb *passim;* he has certainly never made himself amenable to the charge). Go to the railroad, thou sluggard; consider its ways and be wise."

I have often thought of the consequences if these good people could have their way to the uttermost. I have often tried to image to myself what this great country would be with a total suppression of public amusements and popular recreations—no dogs, guns, or horses kept for pleasure, no boat or ball clubs, no theatres or opera, and, to make the reform complete, no fictitious writings without a moral, except the newspapers. Nor is this picture so visionary; we must remember that many conscientious and well-meaning persons object to all these things as desperately wicked, while many others, though not so convinced of their enormity, are inclined to regard them as wasteful and superfluous. And the result is not very difficult to guess at. Among the majority of our population, a huge increase of all manner of in-door vice; among men of property, an increased tendency to live abroad. Why is that tendency already so marked? We are never weary of asserting our superiority over Europe, and most of us really believe it. Yet there are few who have been there that do not long to return. A great many reasons are given for this, most of them partially true; but there is one of universal application, often familiarly expressed by saying that "you get more for your money abroad." There are more provisions for amusement and more opportunities for repose. Americans seek in Europe that relaxation and refreshment which they cannot easily obtain in their own country, but which come to them there without effort. That this is the principal reason one fact will show. There is a great European nation which, in its serious energy and absorbing devotion to business, nearly equals ours. True, it has an abundance of very decided national sports, but they are so strictly national and require so much special experience as to be inaccessible to the majority of strangers. And to that country not one of a hundred travelling Americans ever goes with any anticipation of pleasure, or willingly protracts his stay in it for a longer period than is necessary to gratify a traveller's curiosity.

There was a certain spice of truth in the irreverent New England jest about the final destination of good Bostonians. We cannot imagine Elysium as a place where the active virtues will be much in requisition. The necessity of work was a part of the primal curse, and though divine goodness has converted it into a blessing, still the blessing is not unmixed. *Labor vincit omnia*, but *labor* is sometimes *improbus*. T. D.

THE METAPHYSIC OF JOKING.

To the Editor of The Nation:

In a late number of your paper the questions of wit and humor have been discussed very sensibly, by example. Perhaps a metaphysical suggestion or two may not be undeserving of consideration.

Without referring to the Buddhistic dogma of emanation, or the Parmenidean unity, most people will admit that all things and facts take their source from one great first cause—be that cause law or person—and that, accordingly, all things are linked together by a certain rational bond, nay, have a certain identity and solidarity. Again, to us, at least, all things have a certain difference and separation. How these matters seem to an infinite mind, or even to an intellect correlative and equal with the whole creation, is the point where Platonists and Aristotelians differ; the common mind accepts the facts of two things being both alike and different.

Now, the human understanding, in dealing with the surrounding universe, finds it necessary, much for the sake of thought, and almost altogether for speech and action,—finds it necessary, I say, to work by means of classification, to rank things in order as well as it may by distributing them in class, order, species, and family. Indeed, all logical and scientific apprehension bases itself on this, and is a more or less sagacious arrangement into class. But, on the one hand our most imperfect apprehension of the nature of things, on the other the necessity of action and the necessity of classification accordingly, cause many, perhaps most, of our classifications to be in conflict with the deeper reason and nature of things, and all of them to be more or less imperfect.

Now, the human mind is now higher than its circumstances, and looks forward to still higher advance, and accordingly it, at least in favored instances, amuses itself by passing criticism and condemnation on even its own workings. One way is to detect similarities between things which it accepts as different, the other to notice difference in those things considered alike. The first of these qualities metaphysicians name wit, the second they entitle humor. A good illustration of the one is that treasure-house of brilliant and intense wit, "Hudibras," where, though there be much droll narrative and humorous conception, the great intellectual feat is its mass of *simile;* its richness in instances of discovery of similarity in things different. The lines,

> "When, like a lobster boiled, the morn
> From black to red began to turn,"

are a familiar and often-quoted example. On the other hand, when we consider the pre-eminent creations of humor, when we notice Falstaff, Don Quixote, Parson Adams, Lismahago, Trunnion, Bumble, Mrs. Glegg, we observe that all these persons are perfectly commonplace, and like other men, except in certain points, and the humorous power consists in the brilliant exposition of those characteristics whereby they are peculiar and different from those whom we class them with; they are, in short, cases of difference in things similar. Caliban and Ariel, on the other hand, have human characteristics, but are not human, and are creations of the opposite faculty. When we consider that master-work of humor, the "Adventures of Gulliver," it is observable that the humor lies in the insisting on the subordinate circumstance of differing bulk in creatures in all other points absolutely like Gulliver and each other, not merely in physique and intellect, but even in political, social, and generally material civilization. As for the much inferior third part, it is merely a description of a set of diseased minds, and only gratifies the lower portion of the intellect.

Meantime, it is observable that *jest* is something beyond these. People do not laugh much at Hudibras, and Gulliver might be mistaken for a grave and serious history. As Whately remarks, all jests are *fallacies;* the ludicrousness consists in the sophistical ingenuity. The point of likeness between the morning and a lobster is real and rational as far as it goes; but had it been fallacious it would have been jocose. In the question addressed to a man carrying a hare, "Is that your own hare or a wig?" there are three separate sophistications of sense, based on the varying meanings of a spoken sound. And in the saying of Pitcairn, who, on seeing a pious old bricklayer buried in the ruins of the chimney which he was building, and which had fallen with him, quoted the text: "Blessed (quere, blessés?) are the dead who die in the Lord, for they rest in their labors, and their works follow them"—in this *bon-mot* the intensity of the jest lies in the immensity of the fallacy obtruded upon us. So when Diogenes turned the stripped bird loose in the school, as an example of Plato's man (a "two-legged, unfeathered creature"), the jest lay in the assumption that a circumstance produced by art was equivalent to a characteristic of nature.

If we suppose, then, that what we laugh at in a repartee is its droll sophistry, it remains to consider what may be the equivalent in matters of humor. And here comes in Coleridge's remark, that humor consists in the ignoring the difference between the great and the little by comparing both with the infinite. Thus, the King of Lilliput's superior half-inch of stature *was* enough to strike awe into beholders, although we do not consider it as such; and Gulliver was not an infant, although the queen's women treated him as such. So great humorists bring out the peculiarities of their creations by contrasting them with something noble and normal therewith connected. Falstaff's intellect and Quixote's nobleness and generosity serve thus to show off their peculiarities; and Hawser Trunnion, with his love for Peregrine, his gratitude to Gauntlet's children, his anxiety for Emilia's happiness and honor, and his simple piety, showing the handiwork of a great humorist as opposed to Ben Foresight, who is in exterior as uncouth and droll as he.

If these ideas be correct, then—as finite minds dealing with an illimitable universe—we shall hereafter be still obliged to classify, and our classifications will be still imperfect, so that wit and humor will exist for us in another stage of being. Will fallacy and sophistication exist there? Probably, if moral evil does; so that it seems probable that jest exists hereafter. And we may make even deeper reflections. Pity and sympathy are evidently compulsions laid on us, and a just and benevolent nature would not need them, so that we may suppose that in a higher state of existence they disappear; perhaps the passionate hate of guilt may be lessened, too, in those no longer subject to temptation. In tragedy and comedy in this present life the consciousness of unreality lessens these emotions, and places us in a position akin to that which, perhaps, may be ours hereafter; and under such circumstances we view wickedness and misery, folly and vexation, with pleasure both serious and jocose. Shall it be so hereafter? Shall the vision of the evil world give us the sensation of a grand and interesting tragic show, not without comic scenes? And, as to an advancing moral insight crime must seem more and more the height of absurdity and abnormality, shall that vision steadily change more and more into an intense and tremendous farce? S. T.

SCIENCE AND AGRICULTURE.

To the Editor of The Nation:

Your remarks concerning the lessons taught us by the results accomplished by the agricultural schools of Germany, in your issue of the 18th ult., are timely. Plainly, there is a demand for a specific education in the sciences relating to agriculture; and this instruction should be demonstrative as far as practicable, just as the sciences relating to the treatment of the human system are taught by demonstration. But the popular notion that these schools should embrace practical farm labor and management, the actual manipulation of soils, is likely greatly to retard their usefulness and success. It is feared that too much will be attempted and too little accomplished. The attention of your readers is called to the following considerations, which are offered in no dogmatic spirit:

1. These agricultural schools should not attempt to teach the pupil what may be learned in our common schools and seminaries. A good English education should be required in the pupil before he is admitted to pursue the agricultural course of study. He should be familiar with the elementary principles of the sciences also. His knowledge of Latin should be such as to qualify him to understand scientific terms and names. To this primary education the agricultural schools should only aim to add a professional one. The physical sciences, in their especial relation to agriculture in its different departments, embrace the field of education now most needed and most neglected. Geology and chemistry as applied to the composition of soils; botany, analytic and descriptive, and the chemical physiology of plants; the anatomy and physiology of animals, embracing veterinary science; entomology, embracing especially the natural history of noxious insects and their enemies; ornithology and the natural history of our own birds; land surveying and the laws of business; these may be enumerated as constituting the proper work of an agricultural school designed to aid the American agriculturist.

2. These sciences should not be taught abstractly. In medical schools they are applied so far as to make them demonstrative. They should be so applied in the agricultural school. The adaptation of soils to the growth of the different roots, cereals, and grasses; the effect of the products of specific soils upon the physiology of animals; the geography, propagation, and hybridization of plants; the laws to be observed in the breeding of the various domestic animals; the effects of drainage upon the temperature of both soils and climate; the influence of forests upon the atmosphere and the productive capacity of a neighborhood—all these and more are topics which are suggested as growing out of the investigation of the natural sciences related to agriculture. The field is boundless, and as interesting as it is unlimited.

3. But the agricultural schools of America should not bestow their benefits exclusively upon pupils who are prepared to enter upon and steadily pursue the course of study prescribed. A large class of farmers' sons and young farmers would avail themselves of a winter course of demonstrative lectures who could not otherwise hope to receive any benefit from such schools. These should be provided and be made as practicable as possible. The scientific lecturer should be aided by the experience of practical men in each specialty. His theories should be submitted to the test of practical criticism. These schools must at first be adapted to the present wants and present acquirements of the agriculturists of this country. They must be placed within the reach of men greedy after knowledge, but whose education is that acquired by observation and experience, rather than in the schools. A scientific fact, a single law, practically demonstrated to their minds, will set in motion a spirit of enquiry which cannot fail to affect their professional character and ability most favorably.

The agricultural press of the country has done very much for American agriculture; but its chief work has been to illustrate the need there is of a more general diffusion of specific agricultural knowledge. The Congressional land grant is one of the results of this effort. There are few more important topics for discussion in your columns than the right use of that endowment—no educational question just now causing practical men so much thought and anxiety. C. D. B.

THE ORIGINAL MOTHER GOOSE.

To the Editor of The Nation:

My attention has been called to a paragraph in your journal of last week which may, perhaps, be construed as intimating a doubt of the trustworthiness of my account of the "Mother Goose" of nursery celebrity. I do not wonder that the statement should be received with some incredulity, but I am satisfied that it is correct. There is not only positive but strong negative evidence to show that this renowned lady was of New England origin. The article in my "Dictionary" was abridged from a communication to the Boston *Evening Transcript* for January 14, 1860, written in all good faith by a gentleman of undoubted veracity, residing in this vicinity. According to this authority—for he may surely be called so—"Mother Goose was not only a veritable personage, but was born and resided many years in Boston, where many of her descendants may now be found. The last that bore the ancient paternal cognomen died about the year 1807, and was buried in the Old Granary Burying-Ground, where probably lie the remains of the whole brood, if we may judge from the numerous gravestones which mark their resting-place. The family originated in England, but at what time they came to this country is unknown, but probably about the year 1656. This was the '*wealthy family of Goose*' (written also *Vergoose* and *Vertigoose*), which is immortalized by Mr. Bowditch in his book of 'Suffolk Names.' They were landholders in Boston so early as 1660. Nearly half the space between West and Winter Streets, on Washington Street, and extending westerly towards Tremont Street two hundred and seventy-five feet, belonged to this family, as did also a large tract of land on Essex, Rowe, and Bedford Streets, upon which now stand two churches and a large number of dwelling-houses. *So much for Mother Goose.* Now for her melodies. It is well known to antiquarians that more than two hundred years ago there was a small book in circulation in London, bearing the name of 'Rhymes for the Nursery; or, Lulla-Byes for Children,' which contained *many of the identical pieces* which have been handed down to us, and now form part of the 'Mother Goose's Melodies' of the present day. It contained also other pieces much more silly, if possible, and some that the *American* types of the present day would refuse to give off an impression [of]. The 'cuts' or illustrations thereof were of the coarsest description. The first book of the kind known to be printed in this country bears the title of 'Songs for the Nursery; or, Mother Goose's Melodies for Children.' Something probably intended to represent a goose, with a very long neck and mouth wide open, covered a large part of the title-page, at the bottom of which [was] 'Printed by T. Fleet, at his printing-house, Pudding Lane, 1719. Price two coppers.' Several pages were missing, so that the whole number could not be ascertained. This T. Fleet, according to Isaiah Thomas, was a man of considerable talent, and of great wit and humor. He was born in England, and was brought up in a printing-office in the city of Bristol, where he afterwards worked as a journeyman. . . . [Becoming implicated] in the riotous proceedings connected with the trial of Dr. Sacheverell, in Queen Anne's time, . . . [he] thought it prudent to put the ocean between himself and danger. He made his way to this country, and arrived in Boston, 1712. . . . It was not long before he became acquainted with the 'wealthy family of Goose,' a branch of which he had before known in Bristol, and was shortly married to the eldest daughter. By the record of marriages in the City Registrar's office, it appears that in '1715, June 8 was married, by *Rev. Cotton Mather*, *Thomas Fleet* to *Elizabeth Goose*.' The happy couple took up their residence in the same house with the printing-office in Pudding Lane," etc.

Another correspondent of the *Transcript*, writing under date of June 17, 1864, says: "That celebrated work, 'Mother Goose's Melodies,' . . . was printed by Thomas Fleet, under the title of 'Songs for the Nursery; or, Mother Goose's Melodies for Children,' and was partly a reprint of an English collection of songs. The new title was doubtless a compliment by the printer to his mother-in-law Goose, for her valuable contributions to this

immortal work; and as she was the mother and stepmother of sixteen children, we may easily trace the origin of the famous song of the

"——Old woman who lived in a shoe,
She had so many children she did n't know what to do!"

Our Mother Goose does not appear to be known in England. Halliwell has nothing whatever to say about her in his learned and well-known work on the "Nursery Rhymes of England," and I find that a correspondent of "Notes and Queries," who asked (March 26, 1864) for information as to her origin and history, obtained none that could be regarded as in any wise satisfactory. It seems, from one of the replies to his query, that there was an old flower-woman living in Oxford as late as 1818, who was popularly called Mother Goose; but she cannot, of course, have been the original Mother Goose. In 1806, a pantomime by T. Dibdin, called "Mother Goose, or the Golden Egg," was brought out at Covent Garden, and had a run of ninety-two nights, acquiring, as Dickens says ("Life of Grimaldi," ch. xii.), "a degree of popularity quite unprecedented in the history of pantomime." Our English cousins appear to have no acquaintance with any other Mother Goose than these and Perrault's. No English bibliographical work which I have consulted contains the name: it is not mentioned in any catalogue of chap-books, garlands, and popular histories, or of old or rare books, or the like.

The coincidence between the name of the imaginary relater of Perrault's fairy tales and that of the old lady whose verses charmed our infancy, though very curious, seems to have been merely accidental. But why did Perrault call his *eidolon* Mother Goose? This is a question which will, probably, occur to most who consult the "Dictionary of Fiction," and I ought to have answered it there rather than here; but, not having done so, I will repair the fault so far as I can by briefly stating Collin de Plancy's explanation, which is very plausible, and may be accepted as the true one: King Robert II. of France took to wife his relative Bertha, but was commanded by Pope Gregory V. to relinquish her, and to perform a seven-years penance for marrying within the forbidden degrees of consanguinity. Being excommunicated for disobeying the command and his kingdom laid under an interdict, everybody forsook him except two servants. Not long after, his wife having been confined, a *lusus naturæ*, somewhat resembling a deformed duck, or, as some say, a goose, was shown him, and declared to be the offspring to which she had given birth. The king, struck with horror, repudiated Bertha, and subsequently married Constance. It was further asserted that Bertha had one foot shaped like that of a goose, and the credulous populace, remembering how the wife of Pepin the Short was named "Bertha with the great foot," because one foot was larger than the other, called the divorced wife of their unhappy king "Goose-footed Bertha" and "Queen Goose." The French have a proverbial saying that any incredible tale belongs to "the time when Queen Bertha spun," and they call such a tale "one of Queen Goose's, or Mother Goose's, stories." Now, in all the vignettes which accompany the old editions of Perrault's "Contes de ma Mère l'Oye," "Mother Goose" is represented as using a distaff, and as surrounded with a group of children, whom she holds entranced by her wondrous tales.

I must add that *oie* means literally *bird*, the goose being considered as THE bird *par excellence* among domestic fowls. The word comes from the Latin *avis*, a diminutive form of which, in the barbarous Latinity of the Middle Ages, was *avica* or *auca*; in Spanish, Portuguese, and Italian, *oca*. This form is feminine, and the Romanic languages have no cognate word that properly designates a gander. Hence, to mark the sex, when the female is intended, the French say *La Mère Oie*, Mother Goose. Similarly we speak of a *hen-sparrow*, of *cock-robin*, of *Jenny Wren*, etc.

I remain, sir,

Very respectfully yours,

WILLIAM A. WHEELER.

ROXBURY, Mass., Jan. 31, 1866.

Literature.

LITERARY NOTES.

THE report of the Special Commission appointed to consider the subject of internal revenue in all its branches touches, as might be expected, on the burdens inflicted by the present system on the manufacture of books in this country. It is asserted, and no doubt with truth, that, including licenses and income tax, the printed book and its constituent materials pay from twelve to fifteen distinct taxes before it reaches the reader. Every separate item that enters into the book—paper, cloth, boards, glue, thread, gold leaf, leather, and type material—pays from three to six per cent. in the first instance and then five per cent. on the whole combined, and this not on the cost of the manufactured article, but upon the price at which it is sold—a tax upon knowledge which, in the language of the report, "can only be justified on the grounds of imperative necessity." The sum, after all, received from the internal taxation on "books, magazines, etc.," is so insignificant that no financial considerations can be urged for a moment to justify its continuance. The total amount is only $354,528 (one-third less than what is procured from the article "confectionery"), so that there is every prospect of the release of the trade from a vexatious and burdensome impost.

—The reprint of Cadwallader Colden's "History of the Five Indian Nations depending on the Province of New York," a fac-simile of William Bradford's New York edition of 1727, announced by Mr. T. H. Morell, of 134 Fulton Street, has just appeared, and does honor to the taste and enterprise of the publisher. It is undoubtedly the most valuable book that the present rage for privately printed and limited editions of rare books has produced. The scarcity of the original is so great that it was never seen by Mr. O. Rich, the American bibliographer, who passed a long life in searching out and recording the materials for American history. Of late years a copy, long considered unique, was in the library of Hon. H. C. Murphy, of Brooklyn; and more recently three others have rewarded the diligent search of collectors, from one of which the present reprint is made. The value of the original cannot be considered as less than one hundred and fifty dollars, and from that to as much more as the condition of the copy and the competition of buyers might carry it to. The reprint is confined to one hundred and twenty-five copies in octavo, and thirty on large paper in imperial octavo. It is accompanied with a fine portrait of Governor Colden, and an introduction and notes by John Gilmary Shea, including a memoir of the author and the curious literary history of the work. The circumstances of its publication in America and England give an ample justification, if any were needed, for the collecting of first editions, for reasons independent of mere considerations of scarcity. The editor shows that it is only since the discovery of this original impression that we are acquainted with the real production of Governor Colden, the unauthorized suppressions and alterations of the later editions, now for the first time evident, depriving them of all claim to authority. We understand the price of the few remaining copies of this book will be raised in a very short time, and would recommend all New Yorkers curious in the history of their native State to lose no time in securing one.

—Proposals have been issued for a new photo-lithographic impression of the first English book of emblems, a rare and curious work written by Geffrey Whitney, a native of Cheshire, and printed by Christopher Plantin, at Leyden, in 1586. It is entitled "A Choice of Emblems and other Devices," and contains two hundred and forty-seven emblematic engravings and devices on wood accompanied by quaint old verses. The edition is undertaken by the Rev. Henry Green, of Knutsford, Cheshire, who says, in a note to a friend in America, referring to the work: "The author, Geffrey Whitney, has, I understand, several of his name and some descendants from his family in the United States, and I am desirous, if I could, of being placed in communication with them, so as to secure their co-operation in the work." Should any of our numerous Whitneys respond to Mr. Green's wish, Messrs. Scribner & Co., of 124 Grand Street, New York, will take charge of anything intended for him. The reprint is undertaken on a very liberal and satisfactory scale. The number of copies printed, on tinted paper, the exact size of the original edition, is four hundred and fifty, at twenty-five shillings each, the price of which will be raised after publication to £2 2s., and fifty copies of a larger size in demi-quarto; all of these latter have been subscribed for. A general history of emblem books and the literature of the subject will be given, including a bibliography of all the English works of the kind, essays by the editor on their relations to our early literature, "Shakespeare's references to emblem books," etc., etc., illustrated with plates from the various earlier emblems, and every information requisite to form a complete work on an important and curious branch of artistic and ethical enquiry.

—A new spirited publishing firm, Messrs. Leypoldt & Holt, have established themselves at 646 Broadway, and boldly assert their intention to "devote themselves to the dissemination of what is best in literature, and to that alone." A business commenced on such a principle deserves to command success. Mr. Leypoldt's antecedents as a publisher give a pledge for his taste and enterprise on a wider field of action. Among other announcements of the firm is a series of poems representative of the literature of various remote nations, each one accompanied by an introduction to the literature of the country by competent and well-known scholars. Those already

determined on are, the Sanscrit "Sakuntala, or the Fatal Ring," by Calidasa, first made known to Europe by Sir William Jones; the Swedish "Frithiof's Saga," by Tegner; the Danish "King Renè's Daughter;" and the German "Nathan the Wise," by Lessing. Messrs. Leypoldt & Holt also propose to issue a translation of Dr. Carl Friedrich Neumann's "History of the United States of America," a work that has lately attracted the attention of the press among us, and has done more for the diffusion of correct views of American institutions in Europe than any book since that of De Tocqueville. It is undertaken by an American scholar of well-known acquirements, and will form three volumes octavo.

—Professor Masson has signalized the commencement of his Edinburgh academical career by a lecture on "Milton." It may be taken as a sign that he is still occupied with the subject of his great unfinished work on the life, times, and writings of that poet, the first volume of which appeared some eight or ten years since, without any subsequent hints of further progress. Among other facts he mentioned that Milton had carefully studied the Scriptures and the early British history with the object of discovering what subject afforded the greatest capabilities for a poem, and had selected no fewer than one hundred subjects from which to choose one for his great work, and amongst those taken from Scottish history was Macbeth, which he thought a possible subject to be treated even after Shakespeare. Prof. Masson's theory of the composition of "Paradise Lost" is that it was dictated bit by bit—a few lines a day—to any person who might call upon Milton. He entirely repudiates the charming domestic fictions of "Mary Powell" and "Deborah's Diary," which, thanks to Miss Manning's Defoe-like talent for giving an appearance of reality to fiction, bid fair to be mistaken for real history. On the contrary, the picture of "Milton dictating to his Daughters," who sit "rapt and reverential," he considers pure fantasy, and asserts that they pawned his books, wished him dead, and conducted themselves generally in the most uncomfortable manner possible. As Prof. Masson has carefully studied every existing particle of evidence relating to Milton, his opinion is no doubt worthy of confidence.

—The recent death of Miss Frederika Bremer will recall strongly to readers of twenty-two years' standing the lively sensation that was excited when her works first made people realize that the frozen North sheltered in its icy bosom men and women of flesh and blood akin to ourselves—actuated by the same little round of loves, jealousies, rivalries, affectations, and pretensions as our own. The combination of the great truths common to human nature with scenes and manners strange and unfamiliar gave a piquancy to her writings that was enhanced by the quick feminine eye for character, quiet humor, and capacity for the expression of deep feeling that gave Miss Bremer a high place among contemporary female writers. She was fortunate in owing her introduction to the English reading public to Mary Howitt, by whom her novels were translated from the German versions. They are still read, and retain their place among the world's standard works of fiction. Miss Bremer was born in 1802. After the immediate success of her novels, the latter portion of her life seems to have been as rambling and unsettled as its first half was retired and sedentary. She wrote and published books of travel in Germany, England, America, Greece, and Italy, scarcely to the increase of the reputation she had already obtained. To a stranger, few traces of the celebrated authoress were discernible in the outward appearance of the quiet, homely, and "dowdy" little lady who will be remembered as a visitor to the United States some fifteen years since, and who left a genial impression among all who penetrated beneath the exterior so as to become really acquainted with her.

—The new and greatly enlarged edition of Mr. Ferguson's "History of Architecture in all Countries" shows the progress recently made by the rising study of ethnology—in his words, "though the youngest, neither the least beautiful nor the least attractive of that fair sisterhood of sciences whose birth has rewarded the patient industry and inflexible love of truth which characterizes the philosophy of the present day." The work is preceded by and based upon a view of "Ethnography as applied to Architectural Art." This affords an excellent and powerfully written synopsis of the results of the science as respects the inherent differences in the religion, government, morals, literature, arts, and sciences of each existing race in the world's history. Mr. Ferguson varies slightly from the most generally received authorities by reckoning among the great primary stems of mankind—the Turanian, Semitic, and Aryan—the Celts, as a people distinguished by peculiarities so strongly marked, particularly in art and literature, as to constitute them a separate and distinct family. In its improved shape "The History of Architecture" will be more than double the dimensions of Mr. Ferguson's former book, for some time out of print, "The Hand-Book of Architecture," and is the most general and complete view of the science in our language. The indefatigable author gives a sketch of the remaining books that would be necessary to constitute the full and exhaustive treatment of the subject. They are an "Index of Buildings," or *catalogue raisonnè* of all the remarkable structures in the world, with particulars of their date, style, architect, etc.; a "New Parallel of Architecture," in about ten volumes, small folio, representing on the same scale the most striking examples of the different styles applied to similar uses; a popular "History of Military Architecture" among the nations of antiquity, the Middle Ages, and modern times; and the "History of Civil Engineering," which should include the great works, aqueducts, bridges, etc., where utility rather than beauty becomes the guiding principle of construction.

—A report to the Belgian Minister of the Interior, by Messrs. Van Beneden and Dupont, furnishes additional information regarding the curious researches in the primeval history of the human family that now occupy so large a portion of the attention of the scientific world. These gentlemen, who have long been engaged in the pursuit, have been rewarded by the discovery of what may be considered a model cave-dwelling on the banks of the river Lesse. It is described as well lighted, traversed by a spring, easy of access, and its situation most picturesque, in short, presenting every requisite of a "desirable family mansion" for our troglodytic ancestors. The evidences of occupation presented by this cavern are most numerous and important. The materials of the various stone implements found in immense numbers, fragments of minerals, flints, jet, sharks' teeth, etc., show that the inhabitants must have enjoyed extended commercial relations with other portions of Europe. Judging from the quantity of bones found in the cavern, the principal food of the cave-dwellers must have been horse-flesh, as the teeth of more than forty horses were found. The bones of the water-rat, badger, hare, boar, show that variety in diet was studied. The fore-arm of an elephant or mammoth found in the same dwelling is regarded by the discoverer rather as a fetish or idolatrous charm placed near the hearth, in the same manner as still practised by some African nations. The worked flints, in various stages of manufacture, collected are more than thirty thousand. The cave appears to have been abandoned so suddenly that the inhabitants left behind them their tools, ornaments, and the remains of their meals. According to M. Dupont's theory, this must have arisen from the approach of the sudden inundation which covered the whole of Belgium and Northern France, and swept away that generation of the cave people. Immediately after they had left it, the roof and sides of the cave fell in, the pieces detached covering the floor and thus preserving the remains from the action of the waters undisturbed to the present day. The writer reconstructs from the materials at hand, whose evidence seems incontrovertible, a striking picture of the condition and habits of the early races of men in Belgium, a state that seems to have prevailed over the greater part of Europe. The remaining unsettled point of investigation is the ancestral relation held by these primitive populations to the present race of man. It will need more extensive discoveries of human remains than have yet been made, for its final settlement.

—A help to students of etymology and philology, in any European language, of great value is furnished by the new "Sanscrit-English Dictionary" of Dr. Theodore Benfey, just published by Messrs. Longman & Co. Professor H. H. Wilson's "Sanscrit Lexicon" has hitherto been the only existing work of the kind. Its rarity and high price confined it to a small number of scholars, and the thirty years that have elapsed since its publication have increased the knowledge of the language so that it was not in all respects equal to the present standard of science. Prof. Wilson's "Lexicon" was in a large quarto volume, lately worth from £12 to £15. Dr. Benfey's "Dictionary" is published in an octavo of 1,200 pages, at the moderate price of £2 12s. 6d. It contains references to the best editions of Sanscrit authors, also etymologies and comparisons of cognate words, chiefly in Greek, Latin, Gothic, and Anglo-Saxon.

—The Oxford University Press is following up its splendid variorum edition of the "Wycliffite Early English Versions of the Bible" (which ranks, in the words of Honorable George P. Marsh, as "the golden book of English philology") by the publication of the other writings of the English Reformer. A plan has been proposed to and favorably entertained by the delegates for bringing out the most important of his works with all the aids of scholarly editorship. As a preparation necessary for the execution of this project, a "Catalogue of the Original Works of John Wyclif" has been prepared and printed by Dr. Shirley, University professor of ecclesiastical history. This list furnishes a vivid idea of the toils to be undergone by any editor of the works of a mediæval author who undertakes his task in a conscientious spirit. The number of Wyclif's writings still extant, enumerated by Dr. Shirley, after weeding from the list spurious and wrongly attributed books, is ninety-six in Latin and sixty-five in English.

The most important manuscripts of these treatises are spread abroad over Europe. The most valuable and interesting collection of them is in the Imperial Library at Vienna. Two libraries at Prague, in Bohemia, also contain rich materials, as well as the Imperial Library at Paris, and several of the university and cathedral libraries in England, so that the editorial function in the case of Wyclif must be anything rather than a sedentary one. To preserve from oblivion and destruction the stirring words that he used to awaken the dormant moral consciousness of the nation, is a debt England owes to the first of her band of reformers, and, though an undertaking of great labor and expense, it appears to be in a fair train for performance.

—It is strange that the prevailing fashion of translating Homer has not led before now to the production of a good modern library edition of the original text, with English notes, etc., presenting in a moderate compass as much critical disquisition as was necessary for the elucidation of the author, without overwhelming him beneath a mass of comment in the German style. Such an edition has long been a desideratum. It will probably now be supplied by the new volume of the "Bibliotheca Classica," a series of classical texts in course of publication in England, edited by various scholars, under the direction of Prof. George Long. It contains "The Iliad of Homer, Books I. to XII., with English Notes, by F. A. Paley, M.A.," whose editions of "The Greek Tragedians," "Hesiod," etc., in the same series, have been received with great favor. A similar volume, now in preparation, will complete the "Iliad."

—A new issue of the "English Cyclopædia" is announced, accompanied by supplements "bringing up to the most recent period every accession of knowledge connected with the rapid progress in geographical and scientific discovery, and embracing all the most desirable and important facts in regard to history and biography, and tracing in due order the changes of public affairs, either commercial, legal, or social." These supplements will be appended to each division in which the "Cyclopædia" is published—geography, natural history, biography, and arts and sciences. They will be prepared under the superintendence of Mr. Charles Knight, the original editor of the "Penny Cyclopædia," a recasting and revision of which work forms the "English Cyclopædia."

—Messrs. Rivington & Co. announce for speedy publication an "Annotated Book of Common Prayer," produced on an enlarged scale of critical research and comment, more thorough than any previous work of the kind, and worthy of the present state of liturgical knowledge, useful alike to the clergy and the laity. It is edited by the Rev. John Blunt, assisted by various writers of eminence. It will be carefully printed from the "Sealed Book." The original texts of all parts that have been derived from ancient sources, both Latin and old English, will be set side by side with the English of the Prayer Book. It will also contain historical ritual and expository foot-notes, separate essays on important subjects, historical introductions to each division of the Prayer Book, and illustrations of the last revision from the MSS. of Bishop Cosin and Archbishop Sancroft.

PHILOSOPHY IN POETRY.*

In the summer or autumn of 1589, Edmund Spenser, of Kilcolman, gentleman, was honored by a visit from Sir Walter Raleigh, whose acquaintance he had made some eight or nine years before when he was a captain in the army under Lord Grey of Wilton, whose secretary Spenser was. The particulars of the visit have not come down to us, except the single one that Master Edmund read to his good friend Sir Walter the first three books of "The Faerie Queene," which, or a portion of which, he had written as many as ten years before, and shown to his pedantic friend Gabriel Harvey, who liked them not. Sir Walter, however, was so taken with the poem, and so desirous of presenting its maker to the Queen, that he persuaded him to return with him to England for that purpose, which he was not loath to do, we may suppose, since he had, for a poet, rather a keen eye to the main chance. They arrived in England before the autumn was over, and the bard of fairyland was introduced to the famed Gloriana and her bevy of noble court dames, as well as the chief poets and scholars of the day. How long he remained in England cannot be definitely ascertained, but long enough to taste the bitterness of hope deferred, and to incur the dislike of my Lord Burleigh, who held such "metre ballad-mongers" as he in contempt, and who conveniently forgot for a time to pay him the one hundred pounds which the munificent Gloriana had commanded to be given him. He was back at Kilcolman in December, 1591, not enriched as he had expected, but with a pension of fifty pounds a year, which, with what he already possessed, in the shape of his Irish estate, was enough to keep the wolf from his door, and to entice the muses to his bower. The first thing that he did after his return was to write a pastoral poem descriptive of his voyage to England, his sojourn there, and its results, which he forthwith despatched to Raleigh, the letter which accompanied it, and which was printed before it four years later by way of dedication, being dated from his house at Kilcolman the 27th of December, 1591. Such, in brief, are the circumstances which led Spenser to write his "Colin Clout's Come Home Again."

So, at least, Spenser's biographers say, and it is to be presumed, knowing what Dryasdusts most of them are—Todd in particular—that they took some pains to arrive at the truth. They were mistaken, however, we now learn, or rather are taught, for whether we learn or no depends upon the amount of credulity which may have been infused into our compositions. Not that our writer disputes the facts we have stated—so far as we remember, he does not—but he maintains that the poem in question is not, and was not meant to be, a record of these facts. "The pastoral," he says, "entitled 'Colin Clout's Come Home Again,' was not designed to refer in the remotest degree to Queen Elizabeth; but the poem agrees, 'with truth in circumstance and matter' (as the dedication reads), with a mental journey by the poet himself, in the very spirit of Christianity, into what may be called the spiritual world—the Arcadia of the ancient poets; where the poet meets with the mystic Queen of Arcadia, the object of so much passionate devotion by a long succession of *spirituelle* poets, who, under the guise of addressing some Delia or Celia, or Lilia, Phœbe, Daphne, or Chloe, have cloaked a love which, because not generally recognized, except as addressed to some veritable woman, has been usually regarded as having no other object than woman; who, indeed, may become the true object of love, as represented in the drama of King Renè's Daughter, where her beauty and perfection are seen in the light of what must be called, for the sake of truth, divine love." This is a tolerably clear statement of his views, and had he rested his case upon them and the poem as a whole, instead of going over the latter and attempting to explain its details, he would have acted more wisely than he has done; for there is enough apparent plausibility in his "glittering generalities" to recommend them to the sentimental taste of a certain class of readers who regard poetry as a divine art, and poets as the most spiritual of mankind. That such has been the opinion of some few of the poets themselves we have reason to think, though it is not easy in these matters to tell where poetic pretence ends, and real belief begins.

The story of "Colin Clout's Come Home Again," as Spenser's biographers understand it, may be briefly summed up as follows: Colin, who is Spenser himself, is piping one day among his fellow-shepherds, when Hobbinal, who is supposed to be Gabriel Harvey, asks him to relate what befel him in his late voyage. He begins by telling them of the visit of Raleigh, whom he very aptly names the Shepherd of the Ocean, and how they sang ditties in emulation—he, in allegorical fashion, of the Mulla and the Bregog, two rivers which seem to have flowed near his place at Kilcolman; and Raleigh how "Cynthia, the Lady of the Sea," had debarred him from her presence. This done, he describes the voyage from Ireland to England, and, in answer to the questions of Cuddy, contrasts the two countries, to the disadvantage of the former. Then follows an account of his being presented to Queen Elizabeth, whose personal appearance is, of course, bepraised, after which sundry of the minor poets are mentioned, and several noble court ladies.

On being asked why he ever left the place, since he had found such grace

"With Cynthia and all her noble crew,"

Colin launches into a long description of the dangers that await simple shepherds in a court-life, which he paints as full of guile and deceit, after which he wanders off into a long rhapsody on love, and a reminiscence of his first flame, Rosalind, with whose praise the poem abruptly terminates.

How our author regards it as a whole we have shown above; let us see, now, what he makes out of its details. *Imprimis*, the shepherds of the poem are Shepherds of Arcadia, who are honest men, and sometimes poets, and are supposed to be true to Nature, their sovereign mistress. Their so-called "oaten pipe" is a figure for their musical or harmonious spirits. The Shepherd of the Ocean, who finds Colin by the banks of the Mulla, is the Spirit of Truth, and the ocean referred to is the great Ocean of Life, out of which there comes to some favored mortals, from time to time, a certain spirit here personified as a Strange Shepherd. The Mulla and the Bregog mean the true and the false in life, and what we had imagined was a mere poetic wedding of the two as rivers is a mystical account of the birth of man; Old Mole, the mountain-source of the Mulla, is a figure for Nature as the mother of all

* "Spenser's Poem, entitled Colin Clout's Come Home Again, Explained; with Remarks upon the Amoretti Sonnets, and also upon a few of the Minor Poems of other early English Poets. By the author of 'Remarks on the Sonnets of Shakespeare,' to which this volume is designed as a companion." New York: James Miller. 1865.

things, and figures, also, the father, who becomes visible in a mystic sense in the mother. The Allo, or Broadwater, who should have been the husband of the fair Mulla, signifies the universal life, to which individual life-streams, in the providence of God, were destined, the union being compared to a marriage, as it is in Scripture. The wedding of Mulla and Bregog represents our mother Eve as eating the fatal apple. The great stones which Old Mole rolled down upon Bregog, when the marriage was made known to him, indicate solid principles by which the false is destroyed; and, finally, for a little of this sort of thing goes a great way, Cynthia, the Queen of the poem, is Truth itself; or Truth and Reason, if the reader chooses, for the two will be found together bathing in the mystic love-bath!

Such is the scheme of this astonishing pastoral, so far as we can get at it through the rather muddy commentary of its present editor, who is not always consistent with himself, though as much so, we dare say, as we have any right to expect in an expounder of the hermetic philosophy. We have not the pleasure of knowing what the hermetic philosophy is, but from the glimpse we have obtained of its method of interpreting poetry, it must be as large as it is indefinite, which is saying a great deal. To our ignorant comprehension, the faculty of finding books in the running brooks, sermons in stones, and so forth, is nothing to it. It is expansive enough to embrace all other systems of philosophy, falsely so-called, and profound enough to fathom all mysteries, be they never so cunningly concealed. It can put arrow-head inscriptions, cuneiform characters, hieroglyphics, into the writing of to-day, and can put the writing of to-day into these ancient scribblements. It turns fact into fiction and fiction into fact so bewilderingly that one is at a loss to know which is which. Or, to borrow an illustration from the race-course, it displays such sleight of hand in shifting the pea of truth under the thimbles of fancy, that only the player knows where the little joker lies. In the present game it strikes us as being pretty equally distributed through the volume, the volume itself being the joke.

AGRICULTURE IN ITALY.*

This volume, a quarto of nearly 300 pages, with several maps and plans, is an official report on the improvement of flooded and wet lands, on the rice-grounds, and on irrigation in the kingdom of Italy. It contains many important statistical details, most of which are presented in a condensed form, in tables appended to the text, and other interesting information is to be gathered from the separate returns of the prefects of the different provinces.

The total continental and insular surface of the kingdom, excluding, of course, the Austro-Italian provinces and the States of the Church, amounts to about sixty-four millions of acres, or one hundred thousand square miles. Upon a rough comparison, then, we may say that the kingdom of Italy is about once and a half as large as New England, about equal to New York and Pennsylvania taken together, little more than half as large as California, considerably less than half the size of Texas, and but one twenty-ninth part as extensive as the United States of America.

The great lakes occupy a surface of rather less than half a million acres. About 925,000 acres are covered with small lakes, shallow pools, and other stagnating waters, more than half of which, it is thought, could be drained with advantage. The extent of originally boggy and marshy lands is estimated at 1,300,000 acres, of which 500,000 have been already reclaimed, and 200,000 are in process of improvement by draining.

The soil devoted to the growth of rice amounts to 450,000 acres. Of these grounds, about two-thirds are flooded at pleasure from perennial streams, the remainder being supplied from reservoirs of rain water and other sources qualified as "adventitious." It is a fact of interest, that not more than one-tenth part of the rice-grounds of Italy lie *south* of the parallel of forty-four degrees north latitude, while in the United States little rice is grown *north* of the thirty-fifth degree. In other words, the *southern* limit of profitable cultivation of this grain in Italy is nine degrees, or six hundred miles, *north* of the *northern* limit of the same branch of agriculture in the United States. This difference is by no means due wholly to climatic causes; for, though the summer temperature of our Atlantic and Valley States would not admit much extension of rice culture northwards, there is nothing in the climate of Italy to prevent the growth of rice in any part of the peninsula, except in the mountainous districts. The cause of the difference lies in the special geographical character of Northern, Central, and Southern Italy respectively. In the former division, there is a far greater extent of gently sloping plain, admitting easy flooding, and therefore suited to the cultivation of rice, than in the two latter, and the Alps and the northern scarp of the Apennines afford much more abundant supplies of water than the middle and southern ridges of the latter chain. Besides, rice culture would be much more prejudicial to health in Southern than in Northern Italy, and the habits of the population are less favorable to so severe and disagreeable a branch of agricultural industry in the former than in the latter provinces.

The regularly irrigated lands in the Italian kingdom already amount to not less than 3,350,000 acres, or more than five thousand two hundred square miles. The Canal Cavour, now very near completion, will add 250,000 square miles to this quantity, and numerous other canals for the same purpose are in course of construction, or, at least, projected with prospect of success. It is computed that in Lombardy a proper supply of water increases the annual product of lands by about twenty dollars per acre at the present prices of agricultural growths. There are few crops which are not irrigated when the means are at hand, and even chestnut, walnut, and forest trees are not unfrequently watered, with manifest advantage. In the Alps irrigation is carried up to the very foot of the glaciers, and on the southern slope of those mountains water is applied to meadows which lie further northward than the city of Montreal and higher than the highest peak of the White Mountains. About half the Italian rice-fields are supplied with water by means of artificial canals, often large enough for boats of considerable burden, and furnishing a great amount of power for driving machinery; the residue are flowed by small conduits from rivers, reservoirs, springs, and wells. There is in Italy unquestionably a very great extent of soil valuable for pasturage and the growth of timber, but too rugged and broken in surface for irrigation, and there are large districts which have no means of obtaining sufficient water. There are also regions where, from the constitution of the superficial and the sub-soil, from peculiarities of local climate, and from other circumstances, irrigation is neither practised nor needed, and some of the lands of this description sell at high prices; but, in Italian husbandry generally, water is almost as necessary as solar heat to profitable agriculture. The stimuli of necessity and of profit are encouraging great efforts for the extension of the system of irrigation, and in all probability the day is not very far distant when the current of every spring and brook and river in Italy will have been at least once utilized for irrigation, for hydraulic machinery, or for navigation.

A very considerable proportion of the Italian peninsula and islands being covered by barren mountains, and much of the lowlands being so unhealthy as to be scarcely habitable, the amount of land which can be made to produce food for man or for domestic animals, or vegetable growths required for other human use, is relatively small, and the twenty-two millions of souls that compose the population must draw their nourishment from an extent of territory which seems insignificant to eyes familiar with the vast expansion of our own arable soil. Hence, while the wages of the farm-laborer are low, probably not much exceeding on the average a franc a day, without board, the price of land is high, and it is only under exceptional circumstances that he who inherits no patrimony can hope to own the smallest portion of the soil he tills. The landed proprietors of Italy, like those of France, are tenacious of their acres, and sales of real estate are much less common in those countries than in our own, where lands and houses pass from hand to hand almost as readily as personal property. So rare are transfers of land in Italy, in fact, that a stranger can gather from his own observation or from personal enquiry very little information as to the current market value of real estate. The report under consideration attempts to give from local returns the average prices of meadow and arable ground, and, in many cases, of woods, vineyards, heaths, and marshes in each province. The range of discrepancy in price between dry and irrigable land is very great; for while in some situations pastures or meadows without water are not worth more than twenty or over ten dollars an acre, there are irrigated lands which command not less than six hundred dollars an acre. I do not refer to market garden grounds in the immediate vicinity of large towns, or vineyards planted with favorite growths, which are sold at fancy prices, but to lands devoted to ordinary cultivation. Besides original character of soil and convenience to high roads and markets, the value of irrigated lands is much affected by the quality and usual temperature of the water supplied to them. A warm rivulet, which brings down and deposits vegetable slime or enriching mineral substances, may double or even decuple the price of the land it waters, while cold glacier streams, charged with silicious sediment, add very little to the price of the soil over which they are conducted. So far as the writer of this notice can judge from the returns before him and from a good deal of enquiry, he thinks that lands of the same relative value as those which compose the bulk of New England and New York farming grounds are worth in Italy from seventy-five to two hundred and fifty dollars an acre. Marshes often have but a nominal value, but

* "Relazione al Ministro di Agricoltura, Industria e Commercio sulle Bonificazioni, Risaie ed Irrigazioni del Regno d'Italia, per Raffaele Pareto." Milano. 1865. 4to.

where they are suited for producing the basket-willow, canes, certain species of reeds, rushes, and other aquatic or semi-aquatic plants, they sometimes sell as high as good arable soil. G. P. M.

GOVERNMENT, AND OUR GOVERNMENT.*

THE plan and contents of the volume before us are as follows: After a brief introduction, the general subject of the Origin and Constitution of Government is discussed, in seven chapters, comprising nearly half the volume. As to its origin, the following theories are examined:

1. Government originates in the right of the father to govern his child. 2. It originates in convention, and is a social compact. 3. It originates in the people, who, collectively taken, are sovereign. 4. It springs from the spontaneous development of nature. 5. It is from the immediate and express appointment of God. 6. From God through the Pope, as visible head of the spiritual society. 7. From God through the people. 8. From God through the natural law.

These several theories are learnedly discussed, and with unusual strength and fairness. Rejecting the first five as insufficient, and even erroneous, and passing the sixth (which derives government from God through the Pope) with a qualification, our author leads through the seventh, which comes nearly right, to the eighth, which he holds to be the true conclusion, and states, succinctly, to be, that the right to govern, or political authority, is derived by the collective or organic people from God through the natural law. This is Dr. Brownson's fundamental position, from which he argues, ingeniously, in favor of legitimate governments, whether monarchical or republican, and against all manner of rebellion against constituted, as distinguished from usurped, authority. Proceeding from this point, he declares the constitution of every people to be twofold — the constitution of the state, and the constitution of the government. The latter is the written declarative instrument, the former antecedent and unwritten, and, as our author calls it, providential, out of which the latter must grow, or to which, at least, it must be exactly fitted, or be worthless. This unwritten constitution—which is something like what Coleridge calls the "ideal contract," to which, he says, "the real and formal state contract, the bill of rights, for instance," stands related "as a sort of *est demonstrandum* in politics"—belongs to a nation, as an organism, and is exemplified by the individual physical constitution, to which, as it has grown up, and as it is in point of fact, every code or written constitution for its physical or moral regulation must correspond, or be impertinent and useless. Necessarily and prominently connected with this idea is that of "solidarity of race," which Dr. Brownson strongly asserts, discriminating between "pure individualism on the one hand, and pure socialism or humanitarianism on the other," but utterly rejecting Kossuth's notion of a "solidarity of peoples," as "a falsehood destructive of all government and of all political organization." Of Kossuth, Mazzini, and Garibaldi, it may be added in passing, Dr. Brownson speaks with almost angry contempt, as of men of "nefarious designs and mad dreams," and as "inflicting on us the deep humiliation of their congratulations."

The reader is thus brought to the consideration of the Constitution of the United States, the sources of our national sovereignty, the relations of the General and State Governments, the causes of the rebellion, and the questions arising from reconstruction. Dr. Brownson believes our constitution of government to be quite a perfect adaptation to the antecedent or unwritten constitution of the state. He now denies the doctrine of State sovereignty, as he held it for more than thirty years, and up to the time when the logical consequence of false opinions on this subject plunged us into war in 1861. Indeed, he rejects the term State sovereignty as historically improper, holding that the original States never exercised sovereign powers, and could not, therefore, be said to have ceded them. They declared and won their independence jointly, not severally, having been alike colonies of one mother country, and have existed and exercised sovereignty since as States sovereign only in their union. This of itself—if proven—as Dr. Brownson justly observes, is decisive of the whole question involved. He goes still further, and declares that the States, so far from ceding to the general or central Government any portion of their sovereignty, *derived* all their capacity in this respect from the Union, and became, by the consent and act of the Government, co-ordinate powers. Moreover, the "instinct of unity" in the people has twice rejected the false notion of an original or pre-obligatory State sovereignty—in 1787, when the Articles of Confederation were exchanged for the Constitution; and in 1861, when this groundless pretension, having rejected constitutional adjudication, was put down by force of arms, and for ever.

So far, we can substantially agree with our author. In the more particular considerations, opinions, and applications which follow, however, he will encounter much diversity of opinion, and will probably fail to reason the "instinct" of the people into an accordance with his views, or to convince them that the principles for which they have been contending are identical with those by which the governments of King Bomba, or the Pope, or the Kaiser, or Napoleon, are defended and maintained. This disagreement will not arise from intolerance of the opinion expressed by Dr. Brownson upon slavery, that it was not the main cause of the war; or upon negro suffrage, that it is inexpedient, and should be left to the decision of the several States; or upon the acts of the Government, that they were illegal, or extra-constitutional; or upon the course of the Executive in reconstruction, that it was a blunder. Nor will it come from the mere fact of his assertion that the American democracy is properly a territorial rather than an individual democracy; or that the war was a conflict between these two forms of opinion; or from the somewhat fanciful notion that the seceded States committed political suicide, and being dead to the Union must be somehow galvanized or raised up into organic life again; nor, indeed, upon the statement that the great danger of the times is from the preponderance of the humanitarian (in other words, abolitionist) feeling of the Northern people. All these opinions and assertions will find sympathy and acceptance somewhere, and, however erroneous they may be, will not separately provoke a definite and desperate antagonism.

After asserting the doctrines of an unwritten and imperative constitution, and of a "solidarity of race," to which, in its organism, our Constitution belongs, by a natural order, Dr. Brownson proceeds, as already stated, to assert that nationality is always territorial, and never personal, and that this is eminently true of the American system. From these positions he derives the opinion, that the people of the United States are represented in its Government *not as individuals, but as States.* While this opinion enables Dr. Brownson to form a consistent theory as to the reconstruction of the States, and affords him ground for his disapproval of the course of the Government in that respect, it is difficult to see how we can ever hope to answer the arguments of the secessionists under it, or to satisfy those popular "instincts of unity" which have so often proved superior to theories. Although it may be true that a majority of our soldiers did not know precisely, or philosophically, what they were fighting for, as Dr. Brownson asserts, yet there was a sufficient *practical* apprehension of the issues involved in the mind of the people that furnished the soldiery, and, in a large measure, composed it. And although there may be no such thing as nationality, strictly speaking, without territory as well as population, yet common sense assures us that it is the man who makes the territory, and not the territory the man. If the abolition of slavery was not the conscious object of the Unionists in the late national vindication, it is certain that their object was still less the defence of the territorial idea against the popular idea. Dr. Brownson asserts that this was the only issue—it was the territorial democracy, on the part of the Unionists, against the popular or individual-rights democracy, on the part of the secessionists. We apprehend that the sense of the people and the verdict of history will reverse this assertion. The people of the United States had, indeed, no notion of parting with the common territory; but those who fought the battle fought it for their brethren, and for their brethren's rights, trampled on with theirs. Nothing is more demonstrable than that the Southern rebellion was *not* a popular movement—all Dr. Brownson's sophisms to the contrary notwithstanding. It was the struggle of an aristocracy to sustain itself—of an aristocracy numbering less than half a million, which had appropriated both the territory and its twelve millions of inhabitants, holding the whole in vassalage by superior knowledge and skill.

HARPER'S WEEKLY.*

IT is, perhaps, in vain to question the desirableness and value of the modern army of illustrated books and journals. It is, perhaps, better to bow—except in the most private and unspoken meditation—to the inevitable tendency of the time, and try to make the best of it. And the question being dismissed whether we want an illustrated weekly at all, we are left to consider what an illustrated weekly, existing, ought to be. During the war it was plain what an American illustrated weekly ought to be—a newspaper giving news in a way in which the dailies could not give it. There was then no doubt what the people wanted most to be told, and just

* "Harper's Weekly. A Journal of Civilization. Vol. IX., for the year 1865." New York: Harper & Bros.

as little what they ought to be told in pictures. Now that peace is come, there is more doubt about it. It is not just to blame the conductors of an illustrated weekly for the dulness of their journal, unless one is prepared to show how a constant succession of interesting subjects for cuts can be obtained at the rate, be it remembered, of from ten to twenty per week.

During the war, *Harper's Weekly*, as an illustrated diary of events, was of great importance. There was constant elucidation, by means of its wood-cuts, of matter which to most stayers-at-home needed elucidation. There were, especially during the last two years of the war, many very accurate, interesting, and useful representations of scenes in the camp and in the field. If the people at home studied these with any care, they must have learned much from them which it was well they should know.

According to the almost universal testimony of officers, so far as we have heard it given, the best illustrated record of the war was in the pages of *Frank Leslie's Illustrated Newspaper*. There was, indeed, in the pictures of that journal extreme carelessness of execution and a common disregard of artistic effect and of beauty; in comparison, the *Harper's Weekly* cuts were delicate and highly finished. But this defect was more than compensated by the more purely military character of the illustrations. For the gratification of those who followed and loved the trade of arms, Frank Leslie's paper was the best suited.

But in almost all other respects the journal whose name stands at the head of this article is the better. It is particularly fortunate in the frequent appearance in its columns of the spirited and original designs of Mr. Thomas Nast. Not that Mr. Nast has confined his talent to this one weekly; his work is to be seen in many places. He contributed the single ray of light by which *Mrs. Grundy* shone for awhile. He works a great deal and works well, and we wish him better engraving than is generally vouchsafed him. But it is in the volumes of *Harper's Weekly* for 1863, 1864, and 1865 that his most numerous and, on the whole, most powerful and patriotic and poetical designs have appeared. This source of interest is one which does not stop with the return of peace. If every number of the paper should have a Nast design with the regularity with which *Punch* once presented weekly a Leech cartoon, the paper would be oftener bought without examination.

But, otherwise, the piping times of peace are hard times for the special artist. Views of new buildings, interiors of ball-rooms, panoramas of horse fairs, and pictures borrowed from the better furnished European illustrated papers, take up too many of the pages; so that the latter half of the volume for 1865 is notably inferior in interest to what had gone before. There are good pictures, though, among the less good ones. For instance, "Shipwrecked Passengers and Crew of Brig Titania" on the raft made of two spars lashed together to make a V, and planks secured across the opening between them, at the base of the triangle; a whale lying alongside, as a whale really did lie, for twenty-four hours—that is a good picture, which we are glad to see, and Captain Frame has done us good by making the sketch and sending it. It would seem that more such veritable-seeming and instructive pictorial narratives might be procured. As it is, there are few which one cares to see again, now the war is over, except the portraits; and these, though often very good (as in the cases of Gen. Grant, p. 772, and Mayor Hoffman, page 801), have this common defect, that people who need them most, that is, who do not know the persons represented, never can rely upon their faithfulness.

Of course there is much left to be desired in the execution of the wood-cuts—we may even say a radical change—so that the subjects shall be all worth the pictures, the drawings shall all be accurate and careful, the wood blocks selected with some reference to the quality of the wood and skilfully engraved, the printing of the cuts done as well as it can be at the necessary speed. But also, of course, this is by no means to be hoped for. We have no doubt the conductors find it difficult to get their work done even as well as it is done at present. It is hard to get skilled workmen in any department of labor here in America, where various other pursuits pay better or are thought to pay better than labor. It would, probably, be quite impossible to get the illustrated work of a weekly journal as well done in New York as that of the *Illustrated London News;* and yet we are not accustomed to think the latter a model of what an illustrated paper should be. It is probable that improvements could be made in the New York journal, but there would be great difficulties attending them.

It is to be regretted that there are not more of our artists who are willing to make designs for wood engraving and for a weekly. There are many painters living and annually exhibiting in New York who would appear to much better advantage in black and white, and in the comparatively imperfect medium of wood-engraving, than they do in color and on canvas. It is, perhaps, even more to be desired for their own sakes than for the sake of the periodicals that they should consent to help the latter. These would not at first show so great improvement as would the artists themselves. But after a little practice and considerable gain in facility, the new recruits would benefit decidedly the weekly.

The only real blots upon the character of *Harper's Weekly* as an illustrated journal are the "Comicalities" on the last page of the several numbers. These, if selected from Punch as they often are, and nearly always without acknowledgment, are invariably spoiled in the reproduction; if original, are seldom witty or amusing, and never even tolerably drawn. The character of the journal would at once be raised if they were omitted.

After all, it is not as an illustrated journal that *Harper's Weekly* is most worthy of respect. It is singular, by the way, that the title, long as it is, nowhere mentions illustrations. It is rather the fashion for pictorial papers to announce that they are so, in plain English, or French, or German, or Yankee. But *Harper's Weekly* makes no such announcement of itself. And, in accordance with this reticence, we find indeed that the written words are better than the pictured thought. The short editorial essays of the second and third pages of each number are admirable. They stand with the very best newspaper writing of the time, American or European. In political discussion especially they are models of popular treatment of difficult topics, always on the right side, always clear and independent, always well put. The title "A Journal of Civilization" is well worn by so potent a civilizer, and friend and advocate of human progress.

THE PILGRIM'S WALLET.*

As a traveller, Mr. Gilbert Haven has many merits, among which we may name as chief the art of telling what he has seen rather than what he went to see. He passed over a great part of Great Britain on foot ("pedestrianated" it, he says), and, being a well-read man, he knew what to look for in the leisure afforded by his method of travel. He went abroad with that generous enthusiasm for the old which most Americans feel in first visiting Europe, and he neither takes his disillusion ill-naturedly nor tries to feign that the old was all he expected to find it. He is all sorts of a pilgrim, and visits every shrine at which men worship; goes to the English lake country, and tells what it is like, and talks with the peasantry about the great poets who once haunted it, about Wordsworth, about Coleridge, about Hartley Coleridge, inevitably, and contrives, by dint of downright hard questioning, to draw something rather interesting out of those well-squeezed sources of information. The pilgrim goes also to the whereabouts of Burns, to Coventry, to Oxford, to London, to Westminster Abbey, to the Tower, to all those places, and recounts the things he heard and saw with an unfailing frankness and an excellent simplicity. He thinks that what most surprised and entertained him will most surprise and entertain the vastly greater number of his readers; and he has not the *mauvaise honte* to refrain from speaking of a thing because literature is already vocal with it. He thus makes a book in which there is really something very fresh and authentic, and if one who has already "done" the objects of interest on which Mr. Haven dwells with so much earnestness should find him just a little tedious at times, that is the fault of the reader's previous knowledge.

The simplicity of our pilgrim is full of a curious shrewdness, which sometimes, however, fails it, and lets it lapse into actual indiscretion. This happens when he comes to tell of his visit to Mr. Tennyson, an incident which most tourists would scarcely have amplified from their note-books for the pleasure of the public. Mr. Haven, being on the poet's grounds, resolved to see him if possible. He says:

"I had loaded my gun at the village of Yarmouth, for the purpose of bringing down the shyest of game. It missed, as was not unlikely with so poor a marksman. A card accompanied a note, stating in a few words my nationality, admiration, and desire for a brief interview. I approach the door, enquire if Mr. Tennyson is at home, and am answered in the affirmative. I requested the lad to hand him the note, and soon receive the compliments of Mrs. Tennyson, with the less agreeable conclusion that Mr. Tennyson is not in. Who was right, the boy or the mistress, I had no means of learning; enough for me was the last word. Perhaps both; for he may have been 'in' bodily, and yet on some Pegasean flight; so that though in the body he was out of the body—'a disembodied thought.' Perhaps that 'American' was the reason of my failure—his aristocratic sympathies making him repellant of too great familiarity with the representatives of ideas that he prefers to sing rather than to practise; for quite a worshipper of titles is the author of 'Locksley Hall,' 'Lady Clara Vere de Vere,' and 'Maud.' Perhaps he was not really in; and most likely, with commendable good sense, though in, he disliked being pen-and-inked by this unknown wandering gamester from foreign shores, and did precisely what we should all be likely to do under like circumstances. Everybody hates to be made a spectacle, especially to mere curiosity-seekers; and the only right way, also a feasible way, is to get introductions from friends, that will en-

* "The Pilgrim's Wallet; or, Scraps of Travel Gathered in England, France, and Germany. By Gilbert Haven." New York: Hurd & Houghton.

sure you not merely a sight of the outer, but of the inner man; not only a sight, but a feeling; an acquaintance, perhaps an intimacy. This can be readily secured, if you have an acquaintance with any of their acquaintance; if not, you can easily follow up the trail till you strike it. A true explorer of earth or man can always, if patient and persistent, win his prize. Lack of time and opportunity prevented any further strategy to reduce this fortress of Mansoul; so I must content myself with the outer aspects—the house, the place, the landscape—which last are partakers and representatives of his innermost spirit."

We remember nothing in literature quite so delicious as this: the cheerful but not confident impudence of the resolution to see the poet; the *naïveté* of the doubt whether Mr. Tennyson was in or not; the only human resentment, on high political grounds, of a snub to individual vanity, chastised immediately by the freely expressed conviction that the snub was merited; the advice to readers how to avoid snubs of the kind; and the intimation that if he had but had time, he would have tried again to see Mr. Tennyson—is it not all perfectly exquisite? It would be very ill-natured of us not to say that this is the silliest thing in Mr. Haven's book. When he gets upon the Continent, he is not betrayed into such indiscretions, and is a very pleasant travelling-companion, sympathetic, sensible, and hearty. We like him very well on the swindling river Rhine, about which so much absurdity has got into literature. It is fine to have a man out with it and say that there is not a castle on every hill, nor, indeed, more than twenty castles on the whole romantic course of the Rhine, from Mainz to Cologne. Why could not Mr. Haven go further, and say how remarkably like potato-patches those vine-clad heights look?

Perhaps a fair enough notion is given of Mr. Haven's style of thought and observation by the paragraph quoted. As to his spirit, it is that of an evangelical democratic American. He is shocked by Sabbath-breaking; he believes that the countries through which he travels will one day be republics, and he loves our own republic with an affection that patronizes and puts down the rest of the world, in which, however, he sees some obvious merits.

Old New York; or, Reminiscences of the Past Sixty Years. By John W. Francis, M.D., LL.D. With a Memoir of the Author, by Henry T. Tuckerman. (W. J. Widdleton, New York.)—The present edition of a discourse delivered in 1857 before the New York Historical Society is probably not the last that the public will call for. We say the public, because these reminiscences are largely of men and events by no means of local interest or local renown. Not so much, probably, by design as by the instinct of a genial, affable nature, Dr. Francis indulged very little in statistics, in the quoting of old records, or in valuable but dull attempts to fix the site of this or that ancient building, the original course and names of streets, or the dates of the multifarious changes in the aspect of Manhattan. Some readers may even be disappointed because more attention was not given to topography in particular; but when we reflect how intimate are the physician's relations with families and with individuals, we ought to expect, what we really find in this discourse, that the author's recollections of the past would be principally of persons. A glance at the index shows it, in fact, to be almost wholly an *index nominum*. The duties of his profession brought Dr. Francis in contact with all classes of society, and enriched his gossip with a singular variety. He was not exactly

> —"nella chiesa co' santi,
> Ed in taverna co' ghiottoni,"

but his friendship embraced Edmund Kean as well as Dr. Channing. With the former he obtained permission of Bishop Hobart to erect a monument over the remains of George Frederick Cooke, the actor, in the churchyard of St. Paul's, though had it been question of a mural tablet, "I hardly knew," said the bishop, "how we could find a place inside the church for him." Dr. Channing owed to the same broad-heartedness his first hearing in New York, in 1819, when all the churches were shut against him, and with difficulty at last the College of Physicians and Surgeons, on Barclay Street, was obtained for a Unitarian service. When we mention such names as Burr, Thomas Paine, Lafayette, Cobbett, Fulton, Irving, Abernethy, Macready, and omit as many more well known to fame, it will be seen that the fascinating retrospect of Dr. Francis is wider than the limits of this metropolis. Mr. Tuckerman has undertaken in the preface to add to the other protraitures of the volume that of the lamented author himself. His essay has the fault, however, of unnecessary diffuseness, and is evidently rather the work of an admiring and perhaps indebted friend than of an historical artist.

Mr. Dunn Browne's Experiences in the Army. (Nichols & Noyes, Boston.)—Capt. Fiske's letters to the Springfield *Republican* were those of a man to whom correspondence was not (in this instance) a profession, but a recreation from the duties of the camp or field. They are not, therefore, specially valuable as a contribution to the history of military operations during the late war. To be sure, the writer, transplanted suddenly from a Connecticut pulpit to a Connecticut regiment, counted Antietam, Fredericksburg, Chancellorsville, and Gettysburg among his "experiences;" was captured also and confined in Libby Prison, and gave up his ardent life for his country in the bloody strife of the Wilderness. Yet, as he himself remarked in one of his early letters: "It is astonishing, the ignorance of us who are actually playing the soldier's part here, of what is going on around us! We cannot get any information anyhow. . . . What we see with our own eyes is all that we can believe, as a general thing, and sometimes scarcely that." As vivid photographs of army life, as contemporary criticism on army movements and exploits, as the record of the feelings, aims, endurance, courage, patriotism of an American citizen (one out of many), this collection has a genuine and permanent value. They are written with the correctness of a man who to a liberal education had added extensive travel in foreign lands, and whose style is constantly enlivened by rare native humor. The brief sketch of his career which precedes the correspondence exhibits well his excellent qualities, and embalms the witty response which he made, on being examined for ordination, to a theologian who insisted on his declaring whether the Lord healed the man with the withered hand, or the man healed himself. "I always supposed," said the badgered candidate, "that the man had a *hand* in it."

Poems. By Edna Dean Proctor. (New York: Hurd & Houghton.)—The governor of this feast has not kept the best wine till the last, but has poured it out for us at once. None of the poems which we have read in this volume seem to us so good as the first, which is called "The Mississippi," and in which there is a fine feeling for description, and a sense of the poetry of the events in the history of the great river, from the time when the French priest Marquette descended its current, to those days when our victorious arms at Memphis, Vicksburg, and Port Hudson freed it at once from the dominion of slavery and rebellion. This poem is followed by others, inspired by great political and military occurrences, and marked by the same characteristics of fervent sentiment and language. Miss Proctor's civic verse is eloquent, if we may distinguish that quality from poetical. It appeals and moves as oratory does, and, coming warm upon events, has an influence not to be despised. But cooled and hardened with time, it seems to have no very pungent taste, and it reads much like old speeches. It is good of its kind, and like the vegetables which are best eaten green, would have gained nothing, probably, from being left to ripen before production in print. Its literature is always respectable, and it has doubtless carried comfort and courage to many true hearts in time of trouble. For this reason we must honor and value it; but not even for this reason can we call it poetry, nor do we find much in the non-political poems to modify the estimate in which we hold it.

Shakespeare's Mental Photographs. (Hurd & Houghton, New York; E. P. Dutton & Co., Boston.)—This is a game of character or fortune, elucidated by twenty answers to each of ten questions, making Shakespeare the oracle. Neither wit nor method is exhibited in the selection and arrangement, and persons who are driven to this amusement must be in melancholy need of diversion. As specimens of the questions may be cited for unintelligibleness—"What quality or qualities in others among you?" and for ineptitude (because addressed to an individual), "Where was, or will be, your first meeting?"

Poems. By Mrs. Anna Marie Spaulding. (New York: James Miller.)—We should be a very cruel critic, indeed, if, after reading the modest and sensitive preface to this pretty little volume, we could condemn it harshly; and we should be a very dishonest critic if, after reading the contents of the volume, we feigned to have found it a book of poetry.

SCIENTIFIC NOTES.

From various sources we make the following abstract of the arguments urged in favor of the use of petroleum, or coal oil, as fuel. Although the absolute heating power of crude petroleum, or coal oil, is considerably greater than that of an equal weight of coal, it is, nevertheless, true that crude petroleum would be a much more costly fuel than coal if the combustion were equally complete, and the heat obtained could be equally well applied and utilized in the two cases. The advocates of petroleum maintain that the combustion of the oil is much more perfect than that of coal; that the heat generated can be more economically applied; and, finally, that its manifest fitness and convenience as fuel cannot fail to outweigh eventually any probable excess of cost. Petroleum is all fuel. It contains no inert and worse than useless ashes. The ash of ordinary coal is to be counted once as pure loss and tare in the weight of the coal, and yet again several times as an impediment to combustion, an obstruction which not only clogs the fire and

necessitates constant labor in removal, but also carries away all that portion of heat which has been used up in bringing it to the temperature of the fire from which it is poked out.

A coal fire always requires more air than would be necessary for the consumption of the pure fuel, and this excess of air carries up chimney a very considerable portion of heat. If from any cause the amount of air supplied to the fire be insufficient, then a part of the gases from the coal will escape combustion and go to waste as smoke. Moreover, from the very necessity of the case, coal must be burned upon a grate, through whose bars small pieces of coal are continually dropping into the ash-pit, and so are lost. Some of the hot-air engines, in which the feed-air is taken through the fire, obtain a very complete combustion. Thus, in the Union Hot-Air Engine of Mr. Shaw, it is claimed that good anthracite coal yields only nine per cent. of ashes—a quantity very close to the real percentage of ash in such coal. Twenty or thirty per cent. of ash is not uncommon from good coal beneath the boilers of steam-engines. English engineers have estimated that, of every five tons of steam coal purchased to be put on ship-board, not more than four tons are ever realized in the production of heat capable of being converted into power.

For every kind of coal and for each particular furnace there exist special conditions under which the consumption of the coal is the most economical and efficient. This remark applies to petroleum as well, and with this addition, that it is, from the very nature of the case, vastly less difficult to hit upon these precise conditions of best possible effect in the case of petroleum than in that of any coal whatsoever. For the proper combustion of petroleum, and the application of the heat obtained from it, radical changes must, of course, be made in the construction of furnaces and boilers. No one of the existing varieties of boilers or furnaces can well be altered so as to meet all the requirements of the new problem. Special appliances must be invented not only for burning the oil, but also for the immediate application or absorption of the intense heat which is generated during its combustion. The petroleum, brought into a state of vapor, must, at the point of ignition, be met by a current of air, the volume and velocity of which can be so regulated as to ensure perfection and uniformity of combustion. The presence of smoke on the one hand, and of a needless excess of air upon the other, should equally be avoided. In so far as this part of the problem is concerned, we have only to modify and improve upon the practices which have prevailed for ages in the oil regions of the Caspian Sea, where, in order to utilize petroleum as fuel, porous clay is impregnated with the combustible liquid and then thrown upon the fire. In experiments conducted at the Woolwich dock-yard, the petroleum was burned through a porous material placed in an iron chamber, which was immersed in a water-vessel also of iron. The oil rose upon the porous substance by capillary attraction, and was burned upon its surface as upon a wick.

As for the application of the heat produced, it may be said, in general terms, that boilers adapted for the economical consumption of petroleum fuel must be so contrived that a large surface of flue or tubular space may be kept constantly filled with the flame of the petroleum; the arrangements being such, that while the flame shall be brought into intimate contact with the metal of the boiler—shall be made to "lick around" the boiler, as the firemen say—there may be no impediment to the free, rapid, and regular exit of the products of the combustion, and the nitrogen of the spent air. Corresponding to the great receptive surfaces of the boiler, which shall quickly take in the intense heat of the flame, the interior of the boiler and the steam-pipes must be so constructed that there shall always be free escape for the enormous volumes of steam which will be delivered from these surfaces. As bearing upon this point, it may be mentioned that in the Woolwich experiments, the effect of the petroleum flame was so great that with a small apparatus of only two feet superficial area, which was affixed to the boiler, as much heat was utilized as would be equal for steam purposes to that obtainable from five tons of coal. The small apparatus employed in the experiments having been placed under the boiler of a seventeen horse-power engine, steam of ten pounds pressure was raised in the course of two hours. In fact, as soon as petroleum comes to be used as a steam producing fuel, it will follow as an inevitable consequence that boilers much better adapted for economizing heat than those now in use will be constructed. Another improvement which will be likely to accompany the introduction of petroleum as fuel will be a more philosophical management of the draught in all fires. The present style of chimney or smoke-flue will probably disappear altogether as an appurtenance of boiler furnaces, and draughts produced by blowers driven by steam-power will be used to replace the irregular, unmanageable, and wasteful currents which are inevitable with the chimney system now in use. Instead of sending a large amount of hot air up chimney, for the sake of thereby inducing a brisk current of fresh air through the fire, it will be found vastly cheaper to take all the heat out of the escaping air, transfer it to the boiler, and so into steam-power, and then use, in a methodical and reasonable way, as much of this power as may be necessary to drive such fans, bellows, or other blowers, as will give the fire the necessary fresh air. This system would even now be applicable in many cases where coal is employed, though, in the case of an impure solid fuel like coal there are inherent difficulties which do not exist in the case of the liquid fuel. Wherever these power-blowers are employed in connection with boilers, the spent air and gaseous products of combustion will be so entirely under control that they may be made to circulate through and about the tanks and pipes which contain the feed-water until their temperature has been reduced to that of this water, and may be then thrown overboard, or out of the window, or into the common sewer, as may seem best, since they are now nothing more than a cold, invisible gas which may be carried off through comparatively small flues.

Steam-vessels which run short trips with intervals of rest, like ferry-boats, would advantageously use petroleum as fuel. Coal fires, though banked up, burn to great waste during these intervals of rest, but the petroleum flame could be turned down, like a gas flame, to the point at which it should be just sufficient to keep up the steam. Again, in the light steam-wagons for roads which will, assuredly, come into use in the course of the next ten years, the employment of petroleum fuel will probably be an absolute necessity. It is asserted, as a result of the Woolwich experiments, that one ton of petroleum will do as much work as five tons of coal. But, without insisting upon this strong claim, let it be admitted that petroleum possesses, weight for weight, only twice the efficient value of coal, still a war steamer using the liquid fuel could keep her station twice as long without replenishment as if she were burning coal, or she could chase or run away from an adversary twice as far. Moreover, there would be neither column of smoke nor prominent smoke-stack to attract or alarm the foe. The perfection of stowage which could be obtained with a liquid fuel is an important point in its favor. A ship using petroleum as fuel would have more room for profitable freight than a vessel of like size which should carry the coal necessary to supply an equal amount of steam-power for the same time.

It will be observed that the question as to whether or no petroleum can ever come to be used as steam fuel is in no sense one which can be settled by a mere comparison of the relative heating powers of petroleum and coal, as depending upon their chemical composition. A discussion of the actual first cost and theoretical proportionate value of petroleum and of coal will not settle the practical question. Cost is not the only consideration affecting the value and success of new inventions and processes. Porcelain costs more than pottery; the plumbing of a modern house is more expensive than the old well-sweep; in most places gas-light costs more than the same amount of light from petroleum lamps; yet these things are used.

Now, in some cases actual economy might attend the use of petroleum; but in every case there must be considered not only the capacity of each fuel to produce steam, but also the comparative rapidity and ease with which the result is effected, the amount of waste in either case, and a multitude of other incidental circumstances which have little or no connection with the theoretical power, or even the first cost of the two sources of heat.

Many of the arguments for petroleum as fuel are based upon the easy management of this fluid, as well as upon the compact nature of the apparatus in which it can be stored and used. Stokers, firemen, coal-heavers, and passers would disappear with coal, as would also a mass of dust, dirt, smut, and grime. The petroleum would be pumped out of tight barges or carts into tight tanks, whence it would flow through pipes to the fire. The engine might easily be made to regulate the supply of its own fuel—like man, to proportion its food to the work it has to do.

—In a note to the French Academy M Boudin gives some curious statistics concerning death by lightning. In 1864 eighty-seven persons, of whom sixty-one were males and twenty-six females, were killed within the limits of France. In 1863 one hundred and three persons were killed within the same limits. M. Boudin believes that his statistics establish also the fact that at least four persons are wounded for every one killed. The mortality varies very much in the different departments of France, being thirty-three times as great in the Lozère as in the Manche. But the most curious fact is the inequality between the two sexes. From 1854 to 1864 inclusive nine hundred and sixty-seven persons were killed in France, of whom six hundred and ninety-eight were males and two hundred and sixty-nine females. This comparative immunity of females extends even to children of less than fifteen years, and is the more singular inasmuch as in a great number of cases the lightning fell upon groups of men and women together. M. Boudin

thinks that this difference is not to be explained by the assumption that more men than women work out of doors, which is hardly the case in France; he believes that there is some hidden cause yet to be discovered.

—The ordinary colorless modification of phosphorus, when kept under water in the usual way, becomes covered as is well known with a thin, opaque, white crust, commonly called white phosphorus. Concerning the nature of this white body several different opinions have been held. Baudrimont, of Paris, has recently studied this crust with care, and has arrived at the conclusion that it is neither a hydrate nor an allotropic modification of ordinary phosphorus, nor yet a result of devitrification. It is nothing but ordinary phosphorus, irregularly corroded upon its surface—roughened or ground, as it were, by the oxidizing action of the air dissolved in the water. This slow combustion is more rapid in diffused daylight than in the dark, and ceases altogether as soon as the water is completely deprived of oxygen.

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening, February 3, 1866.

THE Committee of Ways and Means reported, on the 1st inst., a bill substantially the same as that which is known as the Morrill bill, empowering the Secretary of the Treasury to sell at any price, for any kind of money or securities, any quantity of United States bonds, bearing any rate of interest not over 6 per cent., and running for any number of years not over forty; authorizing him further to sell such bonds either at home or abroad, but limiting the interest payable on foreign bonds to 5 per cent., and requiring him to withdraw and destroy all Treasury notes or money received in payment of such bonds, so that no increase in the public debt can by any possibility be effected. The newspapers are full of rumors touching the probable action of Congress upon the bill. Some predict that the foreign clause will be stricken out, others that the unlimited power placed in the Secretary's hands will be somewhat curtailed, and that restriction will be laid upon the amount of bonds to be sold, the price at which they may be disposed of, and the money to be received in payment. We are led to believe that these rumors are uniformly baseless, and that Congress will adopt the measure substantially in the form in which it has been reported by the Committee. It is claimed by Mr. McCulloch's friends that nothing short of the unlimited power granted by the bill will enable him to negotiate bonds to advantage; that if he were limited either as to price, or as to amount, or as to the kind of money received in payment, speculators would traffic upon his position and defeat his aims. And it is urged, that as in our political and military crisis we cheerfully committed despotic powers to the men who controlled our political and military destinies, so now in the hour of our financial crisis we should place equal trust in the man who is set over our financial concerns. This reasoning is not satisfactory to the mercantile class, as a rule. Merchants generally object to investing on any pretext the Secretary of the Treasury for the time being with arbitrary control over the money market. It is urged, with obvious force, that the adoption of the proposed measure will lead to a series of fluctuations in prices, a succession of speculations and panics, which will prove extremely injurious to business, ruinous to individuals, and deleterious to the public morals. There is, however, very little prospect that objections to the Committee's scheme will be heeded. Were

the Secretary of the Treasury a cautious man personally he would decline to be invested with responsibilities which will infallibly lead to his being hereafter charged with being himself concerned in the speculations which are sure to grow out of his policy. With such power as the bill gives him, Mr. McCulloch might easily make a million a month. And though no one who knows him believes he will so speculate, it must be clear to every experienced person that, pure as he may be, and securely as he may keep his secrets, it will by-and-bye be generally believed that he is speculating and making his own and others' fortunes. Mr. McCulloch is probably so sure of himself as to defy calumny, and as for Congress they will simply register his behests.

Gold has advanced during the week in the face of a fall in exchange. It has sold as high as 141¼, closing this afternoon at 140. The advance is exclusively due to the excessive short sales by the bears, and the large accumulation in the Treasury, which held on 1st inst. $51,443,000 in coin. Gold is so scarce for delivery that it has been worth from 1-32 to ⅛ of 1 per cent. per day. Every one understands that it must fall, and every one is accordingly selling for the decline. Sterling exchange is very weak—say 108 to 108¼ for bankers' bills—over one per cent. below the rate at which specie can be shipped to Europe. In view of the fact, the nonsensical diatribes of some foreign journals about the indebtedness of the United States to foreign countries are rather refreshing. Much uneasiness, not to say embarrassment, prevails in mercantile circles. A heavy decline has taken place during the week in dry goods and in all articles of general merchandise which are bought and sold for currency. Yet goods do not move any the more briskly. The notion is general that we are going to witness a general shrinkage of prices, and dealers buy "from hand to mouth."

Notwithstanding an accumulation of nearly $100,000,000 of money of all kinds in the Sub-Treasury in this city, money continues to rule at 5 to 6 per cent. on call. In former days, when the Sub-Treasury accumulated $25,000,000, appeals were made to Congress to legislate this enormous balance into the ordinary channels of circulation, and United States bonds were bought at 116 for the purpose of depleting the Treasury. There is now, however, so much money afloat, and capitalists are so averse, in view of impending contraction, to embark their means in enterprises involving time, that the rate of interest tends downward, in spite of an accumulation in the Sub-Treasury equal to fifteen months' national expenditure on the old scale. Of the balance in the Treasury on 1st inst., $114,000,000 were on temporary deposit at 4, 5, and 6 per cent. So long as this amount lies in the hands of Government on call, a tight money market is out of the question. It is presumed that Mr. McCulloch's first step, on the passage of the loan bill, would be to fund these temporary deposits. So long as he retains them he is at the mercy of the banks. Sound financiers anticipate early action by the Department on this subject, as, otherwise, it would be difficult to explain why Mr. McCulloch should pay 5 to 6 per cent. for money which he does not seem to want, and which lies idle in the Treasury.

The following table will show the course of the stock, exchange, gold, and money markets during the week:

	Jan. 27.	Feb. 3.	Advance.	Decline.
United States Sixes of 1881	103¾	103¾	....	....
5-20 Bonds, old	102⅞	103	⅛	....
5-20 Bonds of 1865	101¾	102	¼	....
10-40 Bonds	92⅞	94⅛	1¼	....
7.30 Notes, second series	98¾	99⅛	⅜	....
New York Central	91¼	87¾ ex d.	....	1
Erie Railway	81⅛	77	....	4⅛
Hudson River	101⅛	99¾	....	1¼
Reading Railroad	99¼	99¾	....	....
Michigan Southern	68¼	68¼	....	....
Cleveland and Pittsburg	78¾	82	3¼	....
Chicago and North-western	28⅛	27⅛	....	⅞
" " " Preferred	54¾	54⅛	....	⅝
Chicago and Rock Island	98¼	99⅛	1⅛	....
P., Fort Wayne, and Chicago	93⅛	92¼	....	1¼
Canton	44⅛	43⅛	....	1
Cumberland	44⅛	44¾	¾	....
Mariposa	13	10⅝	....	2⅜
American Gold	139¾	140	¼	....
Bankers' Bills on London	108¾	108⅝	....	⅛
Call Loans	6	6	....	....

The stock market continues feverish and variable, with a general downward tendency, counteracted in special cases by the efforts of cliques. The Erie clique, which forced up the price just a month ago to 97 per cent., and whose influence in the Board of Direction led to the declaration of the usual dividend of 4 per cent., in spite of the large floating debt of the Company, has come to condign grief. It is estimated that this party held between 40,000 and 50,000 shares of Erie, costing not less than 90. They began to sell, owing to intestine divisions, some ten days ago; they have now forced down the price to 77, and it is calculated that they have not disposed of one-half their stock. The loss on the operation will not fall far short of a million. So much for cornering speculations in the face of the natural current of prices. The next great fall will be in Cleveland and Pittsburg. We noticed, last week, the brilliant operation of a clique in that stock, by which $175,000 had been made in a week. It seems that their success has turned their head. They have been buying again, and no one being willing to sell the stock short, they are gradually becoming owners of all the floating shares, and when they try to sell, a decline of 15 to 20 per cent. will be inevitable. A clique has been buying Michigan Southern too, and had, until this evening, when it broke to 68¼, kept the price pretty steadily between 69 and 70. These operators seem to ignore the first principles of trade. If a man buys up all the boots or beef in a country, he may feel pretty sure of selling them at some price or other, because people cannot do without beef and boots. But people can get along famously without either Pittsburg or Michigan Southern, and if anybody buys them up he runs a fair chance of owning them for an indefinite period. The last quoted sale of Harlem was 280, and of Prairie du Chien 100; nobody would now give 50 for either of them. It will be the same with Pittsburg and every other stock that is bought up by a clique. Rock Island has recovered somewhat from the depression of last week, partly in consequence of an increase in the receipts for the fourth week in January. At this time last year the weather was execrable, and railway business consequently poor. Fort Wayne continues to drag. Hudson River, the last of the great dividend-paying stocks to fall below par, was down as low at one time during the week as 98½. The only instance of an advance, based on substantial grounds, which we can quote this week, is on Chicago and Alton, which has risen five per cent., selling at 115. It is unquestionably one of the most valuable and best managed railroad properties in the country, and is mainly held for investment. Governments are generally better, notwithstanding the unfavorable financial news from abroad. People have got over the idea that a tight money market in England is going to lead to shipments of U. S. bonds to this side. It is now understood that so long as we pay the interest on our bonds regularly, foreign holders will not sell, but will buy more. It is not unlikely that the market for new five-twenties and ten-forties is being gently manipulated to some extent by the Government agents with a view to prepare the way for a new loan. But of this there is as yet no official intimation.

THE UNION MUTUAL LIFE INSURANCE COMPANY

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom, and disinterested philanthropy. It offers superior advantages to the life-ensuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies by receiving a note for one-half when the premium amounts to over $30.

THIS COMPANY offers PECULIAR ADVANTAGES to persons intending to ensure their lives.

Since its organization it has paid (chiefly to Widows and Orphans) for losses by death,

$912,342 00,

and

$412,748 00

in Dividends—a total of over

ONE AND A QUARTER MILLION

of Dollars, and now has, in its Capital and Accumulations, securely invested for the Payment of Losses and Dividends, a fund of

$1,400,777 16.

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the policy holders.

COMPETENT AGENTS WANTED.

" " U. S. Treasury Note Currency		310,551 78
Total Amount of Assets		$12,199,975 17

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday, the Sixth of February next.

Fifty per cent. of the outstanding certificates of the issue of 1864 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the Sixth of February next, from which date interest on the amount so redeemable will cease. The certificates to be produced at the time of payment, and cancelled to the extent paid.

A dividend of Thirty-Five per cent. is declared on the net earned premiums of the Company, for the year ending the 31st December, 1865, for which certificates will be issued on and after Tuesday, the Third of April next.

By order of the Board,

J. H. CHAPMAN, Secretary.

THE MERCANTILE MUTUAL

INSURANCE COMPANY.

OFFICE, 35 WALL STREET, NEW YORK.

Assets, January 1, 1866 . . . . . $1,366,699

ORGANIZED APRIL, 1844.

The Company has paid to its Customers, up to the present time, Losses amounting to over

EIGHTEEN MILLIONS OF DOLLARS.

For the past nine years the cash dividends paid to Stockholders, made from ONE-THIRD of the net profits, have amounted in the aggregate to

ONE HUNDRED AND TWENTY-ONE AND A HALF PER CENT.

Instead of issuing a scrip dividend to dealers, based on the principle that all classes of risks are equally profitable, this Company will hereafter make such cash abatement or discount from the current rates, when premiums are paid, as the general experience of underwriters will warrant, and the net profits remaining at the close of the year will be divided to the stockholders.

This Company continues to make Insurance on Marine and Inland Navigation and Transportation Risks on the most favorable terms, including Risks on Merchandise of all kinds, Hulls, and Freight.

Policies issued making loss payable in Gold or Currency, at the Office in New York, or in Sterling, at the Office of Rathbone, Bros. & Co., in Liverpool.

TRUSTEES.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

This journal will not be the organ of any party, sect, or body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features: and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

THE BEST SEWING-MACHINES IN THE WORLD.
THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.
Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

WEED SEWING-MACHINE CO.,
STORE, 506 BROADWAY, N. Y.

GROVER & BAKER'S
SEWING MACHINES
WERE AWARDED THE HIGHEST PREMIUMS
At the State Fairs of

New York,	Illinois,	Virginia,
New Jersey,	Michigan,	N. Carolina,
Vermont,	Wisconsin,	Tennessee,
Pennsylvania,	Iowa,	Alabama,
Ohio,	Kentucky,	Oregon,
Indiana,	Missouri,	California,

And at numerous Institute and County Fairs, including all the Fairs at which they were exhibited the past three years.

The GROVER & BAKER ELASTIC-STITCH SEWING MACHINE is superior to all others, for the following reasons:

1. The seam is stronger and more elastic than any other.
2. It is more easily managed, and is capable of doing a greater variety and range of work than any other.
3. It is capable of doing all the varieties of sewing done by other machines, and, in addition, executes beautiful embroidery and ornamental work.

Agents wanted.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars

They are more fire-proof.

They are more burglar-proof.

They are perfectly dry.

They do not lose their fire-proof qualities by age.

Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

Saleratus.—B. T. BABBITT'S SALERATUS, 70 Washington Street, N. Y. If you want healthy bread, use B. T. Babbitt's best medicinal Saleratus, made from common salt. Bread made with this Saleratus contains, when baked, nothing but common salt, water, and flour. B. T. BABBITT, 64, 65, 66, 67, 68, 69, 70, 72, and 74 Washington Street, N. Y.

JESSUP & MOORE,

27 NORTH SIXTH STREET, PHILADELPHIA,

128 WILLIAM STREET, NEW YORK,

PAPER MANUFACTURERS,

Have on hand, or make to order at short notice, all qualities of Book and News Printing Papers at current market prices.

The Horace Waters

Grand, Square, and Upright PIANOS, MELODEONS, HARMONIUMS, and CABINET ORGANS. Wholesale and retail, at reduced prices. To let, and rent allowed if purchased. Monthly payments received for the same. Second-hand Pianos at bargains, prices $60, $75, $100, $125, $150, $175, $200, and $225. Factory and Warerooms, 481 Broadway. Cash paid for second-hand Pianos.

NEW YORK

LIFE INSURANCE COMPANY,

112 AND 114 BROADWAY.

This is one of the oldest institutions of the kind in America, having been chartered in 1841, and commenced business in May, 1845.

EVERY ONE SHOULD ENSURE.

While we live we may protect those dependent upon us; but when death severs the tie of all others most dear, it is a consolation to know that our prudence and foresight have made provision for the wants to which we can no longer minister; and the man who has the power, and neglects the opportunity, of providing in this way for the comfort and independence of his family, fails in the duty which he owes to them and himself. Therefore let every one who has not obtained a policy of Insurance upon his life no longer neglect this imperative duty. GREAT CARE SHOULD BE MANIFESTED IN THE SELECTION OF A COMPANY.

The

NEW YORK LIFE INSURANCE CO.

Offers the following highly important essentials:

It is a strictly Mutual Company;

It has had Twenty Years' Business Experience;

It has large Accumulated Assets;

It gives Liberal Assistance in the payment of Premiums;

Its Dividends are declared Annually;

It is prompt in the Payment of all Losses.

IN FACT,

Special care in the selection of its risks, strict economy, and a safe and judicious investment of its funds, emphatically characterize the management of this Company.

Assets over

$4,500,000.

Annual Dividend, January 1, 1865,

50 PER CENT.

Amount Returned Premiums (Dividends) paid,

$1,700,000.

Amount Claims by Death paid,

$3,500,000.

During its existence it has issued

Over 36,000 Policies.

TEN-YEARS NON-FORFEITING POLICIES.

The *New York Life Insurance Company* originated, and was the first to bring before the public, the *Ten-Year Non-forfeiting Plan*, which has so fully commended itself to the judgment of thinking men that it has become the most popular mode of assurance, and is rapidly superseding the old method of life-long payment. It has received *THE UNQUALIFIED APPROVAL OF THE BEST BUSINESS MEN OF THE LAND*, large numbers of whom have taken out Policies under it as an investment.

TEN-YEARS NON-FORFEITING PLAN.

A Party ensuring by this table, after the second year, cannot forfeit any part of what has been paid in, and his policy becomes a source of income to him while living.

ANOTHER NEW FEATURE.

TEN-YEARS NON-FORFEITURE ENDOWMENT POLICIES.

A party ensuring by this table the amount is received by the assured himself, upon his attaining a specified age, while full provision is made for death occurring prior thereto. As a sure and profitable investment for one's declining years, they deserve the attention of all. These policies are coming into general request. *The New York Life Insurance Company* have recently prepared *A NEW TABLE BY WHICH THE PREMIUMS CAN ALL BE PAID IN TEN YEARS AND THE NON-FORFEITURE BENEFIT ALSO SECURED.*

POLICIES ISSUED IN ALL THE USUAL FORMS.

MORRIS FRANKLIN, President.

ISAAC C. KENDALL, Vice-Pres't.

WILLIAM H. BEERS, Actuary.

☞ Parties desirous of acting as Agents will please apply personally or by letter.

RAVEN & BACON'S PIANO-FORTES.

(ESTABLISHED 1829.)

A full assortment of these Instruments, which have been well known in the New York market for more than thirty years, constantly on hand. We are continually adding improvements to our Pianos, and our facilities enable us to furnish them at terms and prices satisfactory to purchasers. Pictorial circulars sent by mail.

Wareroom, 135 Grand St., near Broadway, New York.

DECKER & CO.,

MANUFACTURERS OF PIANO-FORTES,

419 BROOME STREET,

One Block East of Broadway, N. Y.

These Pianos stand unrivalled in regard to their singing quality; volume and purity of tone; sympathetic, elastic, and even touch; and durability of construction, which enables them to remain in tune much longer than ordinary Pianos.

Bradbury's Pianos "the Best."

Pronounced "THE BEST" by the most renowned artists. SUPERIOR in tone, touch, power, DURABILITY, and elegance of finish." Warerooms 425 and 427 Broome Street, corner of Crosby. Call or send for circular.

WM. B. BRADBURY.

Light Biscuit made in fifteen minutes with T. B. BABBITT'S STAR YEAST POWDERS, 70 Washington Street, N. Y.

UNITED STATES STEEL PEN WORKS,

FACTORY, CAMDEN, N. J.

R. ESTERBROOK & CO.,

STEEL PEN MANUFACTURERS,

WAREHOUSES, { 403 ARCH STREET, Philadelphia. / 42 JOHN STREET, New York.

Samples and prices on application. Lots made to order of any pattern or stamp required.

CAUTION.

These Pens are of genuine American manufacture, and equal in finish, elasticity, and fineness of point to the best imported. They are, therefore, sure to gain the confidence of the American public. The fac-simile of our signature is sufficient security against foreign imitation.

R. ESTERBROOK & CO.

JOSEPH GILLOTT'S STEEL PENS.

OF THE OLD STANDARD QUALITY.

TRADE MARK: Joseph Gillott, Warranted.

or Descriptive Name, and Designating Number, *New Series, Good and Cheap, from No. 700 to No. 761.*

TRADE MARK: Joseph Gillott, Birmingham. With Designating Numbers.

For sale by

JOSEPH GILLOTT & SONS,

91 John Street, New York.

HENRY OWEN, Sole Agent.

STEINWAY & SONS'

GRAND, SQUARE, AND UPRIGHT PIANO-FORTES

Have taken Thirty-two First Premiums, Gold and Silver Medals, at the Principal Fairs held in this country within the last ten years, and in addition thereto they were awarded a First Prize Medal at the Great International Exhibition in London, 1862, in competition with 269 Pianos from all parts of the World.

That the great superiority of these instruments is now universally conceded is abundantly proven by the FACT that Messrs. Steinways' "scales, improvements, and peculiarities of construction" have been copied by the great majority of the manufacturers of both hemispheres (AS CLOSELY AS COULD BE DONE WITHOUT INFRINGEMENT OF PATENT RIGHTS) and that their instruments are used by the most eminent pianists of Europe and America, who prefer them for their own public and private use, whenever accessible.

STEINWAY & SONS direct special attention to their

PATENT AGRAFFE ARRANGEMENT,

which, having been practically tested in all their grand and highest-priced Square Pianos, and admitted to be one of the greatest improvements of modern times, will hereafter be introduced in EVERY PIANO MANUFACTURED BY THEM WITHOUT INCREASE OF COST to the purchaser, in order that ALL their patrons may reap its benefits.

STEINWAY & SONS' PIANOS are the only American instruments exported to Europe in large numbers, and used in European concert-rooms.

WAREROOMS, 71 & 73 EAST FOURTEENTH ST., between Union Square and Irving Place, New York.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

MR. SUMNER delivered, last week, a long and elaborate speech on the right of suffrage. A large portion of it was devoted to showing that the phrase, "republican form of government," as used in the Constitution, must be interpreted not by the aid of European publicists and philosophers, but by reference to "the early and constant postulates of the fathers, the corporate declarations of the fathers, the avowed opinions of the fathers, and the public acts of the fathers;" that the American idea of a republic is "that all are equal in rights, and that governments derive their just powers from the consent of the governed;" and he declares that "we might as well reject the Decalogue in determining moral duties, or the multiplication table in determining a question of arithmetic." This being the idea of the Constitution, he deduces from it the right of Congress to enforce equal suffrage by legislation, under the duty of guaranteeing a republican form of government. The argument is able and forcible, but if it fail to produce its due effect on the public mind it will be owing to the fact that, admitting his account of the theories of the fathers to be correct, their practice in establishing a form of government which was not republican in Mr. Sumner's sense, fell far below their theories. They established a bad precedent, and in now asking the nation to mend its ways, we fear we shall make almost as much progress by arguing from the necessity of the case as from authority. Therefore, that portion of his speech which goes to show that equal suffrage is essential to our safety and prosperity will, we think, make more impression than that which goes to show that our ancestors meant us to have it. Where Mr. Sumner fails, if he can be said to fail, at the present juncture, is in expecting that men like Mr. Johnson, who is perhaps a fair representative of the average intellect of the country, will be much affected by appeals to the authority of the fathers, in which more importance is attached to opinions expressed by them in essays and disquisitions and debates than opinions embodied by them in actual legislation.

THERE is a Health Bill, as our country readers are perhaps aware, now pending before the Legislature at Albany, the object of which is to prepare this city for the cholera visitation next summer, and the main virtue of which, apart from the summary powers it confers on the commissioners, lies in the fact that persons named in it for the office are not now, and never have been, connected with party politics. Everybody who is familiar with the history of the New York city government knows perfectly well that the great source of all city troubles is the extent to which municipal affairs are managed by active politicians, or the nominees of politicians. Mr. Greeley has, however, thought well to treat it as a party measure because he suspects Thurlow Weed—his wretched squabbles with whom have so long disgusted the public—of being one of its supporters, and has done his best to deprive it of all efficacy by having it so amended as to give Governor Fenton the nomination of the commissioners. Governor Fenton, whatever his excellences, is a politician, and, if not greatly misunderstood, an aspirant to the honors of a senatorship, in attaining which Mr. Greeley can, of course, greatly assist him. The motive which would mainly influence him in the selection of commissioners may therefore be guessed at. His nominees would probably be "sound" on the question of negro suffrage, and have decided views as to the character and aims of "T. W.," but perhaps be as competent to arrest cholera, and as likely to do so, as any of their predecessors. So that the real upshot of the matter will probably be that many thousands of unfortunates will be sacrificed next summer to prevent Thurlow Weed getting the better of Horace Greeley in lobby conflict in Albany. "Quidquid delirant reges, plectuntur Achivi"—which, being freely translated for the benefit of unlearned readers, means that, when politicians wrangle, poor men perish. What makes the matter all the more atrocious is that the men whose names have been inserted in the bill by its promoters are persons who have given the whole question of sanitary regulations for New York thorough and protracted study. They know where the bad drainage, the bad ventilation, and the overcrowding exist, and they have maturely considered what ought to be done by way of reform, and there now remain barely two months for them to carry out their plan, for according to the best authorities we may fairly expect the cholera by the middle of May. The persons whom Governor Fenton will put in their places have, on the other hand, most probably had their attention concentrated during the past winter on President Johnson's plan of reconstruction and the nefarious conduct of Thurlow Weed, and would, after their appointment, bring their great minds for the first time to the humble subject of bad smells and foul rooms. So that the early summer would probably find them either without a plan at all or with a very bad one.

Two Democratic conventions were in session on Wednesday of last week—one in New Hampshire and another in Connecticut. Both agreed that Congress has no power to regulate suffrage in any State. Both pledged their support to President Johnson—the former, because of the efforts he is making to secure immediate representation in Congress for the revolted States, with full restoration of their rights as members of the Union; the latter, because of his "statesmanlike resistance to negro suffrage" and to "the majority in Congress." The New Hampshire Democracy totally disapprove of any amendment of the Constitution. Their Connecticut brethren bid Congress "attend to the interests of the white man, who formed the Government, assured that in this the African race will have a sufficient guaranty of their protection and welfare." But we should like better grounds for this assurance than have been furnished by a State that disfranchises its colored citizens, and, *à la* Deacon Button, advises them, when abused, to go where their presence does not violate "the usages of society and the laws of decency."

THE passage relating to a "Special Committee" in the letter from our correspondent at the South, will interest those who are concerned to know how much security a Northern man may reasonably expect who goes there. From what follows may also be learned the precise

connection between liberty of speech and expression and Federal bayonets in the same quarter. *Per contra*, a private letter from Alabama, published in the *Times* of Monday, makes a fair, because an apparently candid, statement of personal experience favorable to the temper and behavior of the Southern people. The writer's testimony would have been more valuable if he could have vouched not only for the "Republican" and "radical" characters of certain persons known to have been unmolested, but for their habitually expressing their views without reserve.

A CORRESPONDENT, in a letter which we publish elsewhere, furnishes us a few of the opprobrious epithets which Mr. Phillips has from time to time bestowed not simply on pro-slavery men, but on some of the foremost advocates of the anti-slavery cause. The list might, if the game were worth the candle, be indefinitely extended. It is only Mr. Phillips's recent claim to be considered a mild, indulgent, and polite critic that renders the matter worth further notice. If he enjoys the use of "bad language" in public towards everybody who happens to differ with him, he is perfectly welcome to it. But we warn him that as long as he allows himself this luxury, he is estopped from giving lessons in the art of criticism either to THE NATION or anybody else. And we warn the whole school of politicians and reformers to which he belongs that there is no occult virtue in the "cause of the negro" which enables its supporters to dispense with the observance of the rules of decency to which the advance of civilization has, we are thankful to say, subjected the intercourse of white Christians. That cause has to be advocated just like any other cause, with a proper amount of respect for the character and feelings of their fellow-citizens, even by those who are wanting in proper respect for themselves. A champion of negro suffrage raving, ranting, and calling names, and blackening the character of his opponents, is as offensive a spectacle as can well be conceived of. The better the cause, the nobler ought to be the port of those who sustain it.

WE believe that the interpretation put by THE NATION upon the term "whitewash" in Mr. Sumner's speech upon the President's message regarding the condition of the South, was that at first put upon it by all of Mr. Sumner's friends and by the public generally, nor do we see how any other interpretation of it could be expected. It was upon the assumption that this interpretation was just that the article was based which drew forth Mr. Wendell Phillips's comments. Mr. Sumner having denied, however, that his intention, in using that term, was what we had supposed, and as every person has an undoubted right to put any construction he pleases upon his own words, we are bound to acquit him of all blame in the matter except for carelessness, or lack of judgment, in the choice of phrases under circumstances which made well-weighed words the only ones to which scholars and statesmen should have resorted.

SOME remarkable facts are brought out in our financial article this week. One is that foreign exchange has not been so low since 1861, when the war was impending. The news of this in England will probably give the finishing blow to the delusion set afloat by the *Times* that the financial stringency there is due to the largeness of our credits, and will reveal the plain truth—that capital is beginning to flow from all parts of the world to New York rather than to London.

A GALVESTON paper is disturbed by the reflection that the bulk of European emigrants to the South must first pass through the hands of "Northern fanatics, wire-pullers, and politicians," and so be disqualified from becoming identified with the Southern people. This unfortunate necessity it proposes should be remedied by the South establishing its own emigration agencies abroad, with corresponding agencies in its own ports; and by this sort of moral or political quarantine it hopes the importations will be effectually secured from infection. We hardly know what European state whose stock is worth having would offer the best material to the fastidious South. The Germans in Texas before the war were driving slave labor out of fashion by the sheer force of comparison, and the civilization of the South will as certainly give way before that introduced by colonies from the Continent, no matter who manipulates them on the passage.

AFTER all, if we seek the pure well of English undefiled, we must go South for it. Senator Wade unwittingly sounded it when he said in Congress he could never by his vote surrender the freedmen to be destroyed by their enemies. The Georgia *Weekly Telegraph* gushes out at him in this fashion:

"O fanatic! O blockhead! O numskull! O base calumniator! . . . Base vilifier! . . . Dog of a slanderer, etc., etc."

A NUMBER of "merchants and residents of the city of Matamoras" have signed a strong protest against the conduct of the United States officials on the Mexican frontier, accusing them of affording active aid to the Juarists and the guerrillas, and with encouraging filibustering, and having connived at the capture and pillage of Bagdad. General Weitzel replies that people in Matamoras were guilty of gross breaches of neutrality during the war, which is a very poor kind of *tu quoque*. United States officers do not stand on the same footing with Matamoras traders as regards neutrality laws, and if, as General Weitzel admits, United States officers and men may have been guilty of giving material aid to one of the belligerents in Mexico, we suspect he can hardly be acquitted, as he desires to be, of all responsibility for it. As regards the capture of Bagdad, it is undoubtedly not General Weitzel's duty to guard Mexican towns, but it is his duty to see that United States troops are not amongst the number of those who sack them. The protest is, probably, a bundle of gross exaggerations and calumnies, but we cannot say we consider the reply to it either happy or conclusive.

THE evidence on which Gordon was convicted has reached England, and proves to be such as no magistrate there would have considered sufficient to warrant a commitment for trial. And the court, it must be remembered, was composed of three young officers, the oldest of whom only got his commission in 1859. We fell into the error in our last number of speaking of Kingston as the place in which he was tried and hanged. He was arrested in Kingston, but the proceedings and execution took place in Morant Bay.

GENERAL PRIM, and the Spanish revolution with him, has passed out of public interest into Portugal. The Spanish nation is determined, however, to keep itself before the world, by continuing its unjust course towards Chili with all possible circumstances of aggravation. On the other hand, Peru has united with Chili, and it is possible that nearly all the Spanish forces on the Pacific may yet be driven to commit suicide.

THE commercial treaty recently concluded between Italy and the Zollverein awaits, before going into effect, the full concurrence of the latter. This, it is not doubted, will be obtained in time. Hanover, however, is stubborn, and wishes to adhere to the treaty without committing herself to the recognition of the kingdom—a course which is not only in its nature an absurdity, but is expressly removed by the terms of the treaty itself.

WITH the new year still further separation of church and state takes place in Italy. The latter henceforth by law takes cognizance only of civil marriages. The bishops prudently recommend the faithful to avoid the unpleasant consequences of "contracting a religious marriage which should afterwards lack the formalities demanded by the civil law, and would not be recognized by the public authority." They make bold to add that without the marriage sacrament there can be no Christian union, but only concubinage.

THEY have established at Liege in Belgium a sort of mechanics' institute and lyceum, called the *Franklin Society*. A school teacher of Leghorn cites a maxim of "Beniamino" in support of an appeal for a public library in that city.

BY a recent order of the Russian Emperor, persons of Polish descent are forbidden to acquire real estate in nine western provinces. Two years are allowed those who have been exiled and their goods sequestered to sell their property to orthodox Russians.

THERE is a rivalry of the Alpine passes for the honor of the projected railway between Switzerland and Italy. Cantons declare, and engineers write books, for the Simplon, Saint-Gothard, or Lukmanier, according to their respective predilections.

RECONSTRUCTION does not go uncontested in Switzerland. Six cantons have favored by their votes the revision of the federal constitution, nine have pronounced against it, and six hang fire.

THE Porte has notified the European Powers through their representatives that the international conference concerning the cholera will shortly assemble at Constantinople. It has also added that the deliberations of this body must not extend beyond the domain of science, nor be in any sense of a diplomatic character. The French ambassador has responded that this was not exactly the motive of his Government in appointing a minister plenipotentiary delegate on its part. The Porte is evidently apprehensive of intermeddling with its concerns, and, besides this warning, is said to have resolved to send a Turkish medical commission to Jidda two months in advance of the pilgrimages, to take precautionary measures against the pestilence.

DURING the last quarter the receipts from visitors at Pompeii were only 400 francs, against 40,000 in the same period of the year before. The cholera made the difference.

CONGRESS.

WASHINGTON, Feb. 10, 1866.

CONSIDERABLE progress has been made during the week in the public business, although no measure of great national importance has passed either House. The naval appropriation bill occupied much of the time of the House, and the policy advocated by Gen. Banks, Mr. Washburne, and others, of postponing the expenditure of public money upon the Southern navy yards at Norfolk and Pensacola until those regions are in a settled condition, was adopted by the House, against the desire of the Naval Committee and of the Department.

The measure which passed the House, providing for the sale of all the public lands in the late rebel States to actual settlers, including the freedmen, in small parcels of 80 acres or less, at $1 25 per acre, is an extension of the beneficent provisions of the Homestead act, from which much good may result. Still, it will be absolutely necessary to have the law backed up by the power of the federal Government, as, in the present state of prejudice against the freedmen throughout the South, no policy will be more unpopular and more violently resisted than the independent ownership and settlement of land by the negro.

The reconsideration and amendment of the Freedmen's Bureau bill, as it came back from the House, gave opportunity to Senator Guthrie, of Kentucky, to utter one of the most deliberately disloyal sentiments ever heard in Congress. He said, "You will have to acknowledge these States, and let them in, or you will have to do worse. . . . The passage of this system of bills is a dissolution of this Union, and you cannot help it. It is impossible for you to carry on this Government under any such system. Do you suppose there will ever come a time under this bill that they will desire to become members of this Union once more? . . . There were rebels in all the States in the beginning, and there will be again if you drive these people to desperation."

Had this language emanated from Mr. Guthrie's colleague, Garrett Davis, it might have passed as the vaporing of a common political scold. But from Senator Guthrie, a man of wide influence, immense wealth, and unimpeached honor and integrity, it sounds very ominous indeed. It has long been seen that Kentucky is more fanatically wedded to slavery than any Southern State—not excepting South Carolina. One of her (Union) representatives in the House said, the other day, that Kentucky was not only one of the most disloyal States in the Union, but was the only State which had practically succeeded by her legislation in carrying out the doctrine of secession. Are we to have a second war of rebellion, Kentucky taking the lead?

Another and a better border State—Missouri—claims the credit not only of a voluntary abolition of slavery, but of establishing (alone of all the States) a government purged of rebellion by the utter disfranchisement of all her citizens who took part in that great treason. Her two senators and all her representatives, save two, are "radicals" to the core, and to Senator John B. Henderson, of that State, belongs the honor of proposing the substitute for the constitutional amendment of the Committee of Fifteen, which prohibits any State from making any discriminations between its citizens on the ground of race or color.

This last proposition has gained an accession of strength this week, not only from the exposure of the difficulties, inconsistencies, and anti-republican admissions of the amendment before the Senate, but from the unexpected adhesion to the principle of universal suffrage of Senator Lane, of Indiana, heretofore reckoned, with several other Western senators, as opposed to negro voting. While planting himself, by his powerful speech on this subject, in advance of the public sentiment of his State, Mr. Lane forecasts the future sufficiently to have assured himself that absolute political equality is the only safe or tenable ground for securing the rights of the emancipated race. He turned the argument of "a war of races," recently reiterated by the President as an objection to equal rights, against its champions, by the assertion that justice alone is a stable foundation for reconstruction, and that a war of races is to be prevented by so constituting our political system as that no race shall be denied its rights.

The Senate debate upon the Constitutional Amendment is likely to last at least another week, and meanwhile several State legislatures will, undoubtedly, adjourn. The prospect of its ultimate adoption by twenty-seven States is very remote, and the most discerning judges share the opinion that even its adoption by the Senate is daily growing more uncertain. The stimulus of party unity and the resentment of Executive dictation is felt less strongly here than in the popular branch of Congress, where the "previous question" carries through measures often distasteful to the very men who vote for them. Besides, the partial and illogical reform of the Constitution proposed in this amendment lends strength to the champions of absolute and universal suffrage, who oppose anything short of a reform that can be completely justified on grounds of principle. Still, there is far more prospect that the amendment reported will pass than that any other will be agreed upon at the present session of Congress. Should no amendment pass, the friends of impartial and universal suffrage would go to the people, and Congress at its next session, if not intimidated by too severe a popular "rebuke of radicalism" at the fall elections, will propose a constitutional amendment such as will not need to be amended.

DIARY.

Monday, Feb. 5, 1866.—In the Senate, the House bill prohibiting American vessels which sailed under foreign flags during the rebellion from being registered or enjoying the privileges of American vessels, was taken up and laid over. The House joint resolution proposing a constitutional amendment to regulate the basis of representation was taken up. Mr. Sumner spoke five hours against the amendment, concluding his speech on Tuesday. He argued that the proposed amendment would introduce discord and defilement into the Constitution, by admitting that rights could be "denied or abridged on account of race or color;" that by its adoption Congress would prove derelict to its constitutional duty to guarantee a republican form of government to each State; and that having already legislated to protect the colored race in civil rights, it is bound to secure to them political rights also.

In the House, Mr. Blaine offered a bill providing for a census of the United States, to be taken in 1866. Referred. Bills were introduced to amend the indemnity act of March 3, 1863; to improve the Mississippi River; to fix the standard of weights and measures; to amend the *habeas corpus* act; to prescribe an oath for public officers and members of the bar; and to amend the Homestead act; all of which were referred. The Senate resolution for distributing 500 copies of Madison's Writings was passed. The Senate bill to protect all persons in the United States in their civil rights was referred. Mr. Ross offered a resolution setting apart one day in each week to the public business, to be known as "white man's day." Laid on the table. Mr. McClurg, of Missouri, offered a resolution looking toward levying contributions on the seceding States to support the standing army and protect loyal citizens. The House refused to table it by 41 to 65. Laid over. Mr. Blow, of Missouri, offered a resolution looking to employment of colored troops, with their consent, in the construction of railroads. Referred. A resolution instructing the Joint Committee of Fifteen to report upon the expediency of removing the national capital was adopted. The House passed the Senate amendments to the pension appropriation bill. The Freedmen's Bureau bill of the Senate was discussed by Messrs. Trimble, Grinnell, McKee, Eliot, and Stevens. Speeches were also made on reconstruction by Messrs. Hubbell, Randall, Lawrence, and Stillwell.

February 6.—In the Senate, Mr. Sumner reported from the Committee on Foreign Relations a bill to authorize the President to appoint a diplomatic representative to the Dominican Republic. Passed to a second reading. A resolution was passed, instructing the Judiciary Committee to report on the expediency of paying loyal citizens in rebel States for supplies furnished the army of the U. S. The Senate took u House joint resolution proposing a constitutional amendment regulating the ba

representation. Mr. Doolittle offered an amendment basing representation upon the number of male electors over 21 years qualified by existing State laws.

In the House, the Senate resolution of thanks to Vice-Admiral Farragut was passed. The Freedmen's Bureau Bill was taken up. Mr. Smith, of Ky., offered an amendment, exempting Kentucky from its provisions. Lost—yeas, 34; nays, 131. Mr. Stevens offered a substitute, striking out the limitation to three years of the possessory titles acquired by freedmen under Sherman's field orders; providing that freedmen may acquire title both to public lands and confiscated lands: and that all these titles shall be perpetual. Lost—yeas, 37; nays, 126. The bill was then passed—yeas, 136; nays, 33; absent, 13. Mr. Stevens reported a bill making appropriations for fortifications for the fiscal year ensuing. Made a special order for Feb. 15. The joint resolution giving consent of Congress to the transfer of Berkeley and Jefferson Counties from Virginia to the State of West Virginia was passed—yeas, 112; nays, 24.

February 7.—In the Senate, a bill to increase soldiers' pensions from $8 to $12 per month was passed to a second reading. A bill to revise and consolidate the statutes of the United States was reported from the Committee on the Judiciary. The House bill providing that no vessel which sailed under protection of a foreign government during the rebellion shall be deemed or registered as an American vessel except by special act of Congress was passed—yeas, 31; nays, 12. Mr. Wilson's resolution proposing a constitutional amendment prohibiting any payment by the United States or any State on account of the emancipation of slaves, or on account of debts incurred in aid of rebellion, was referred to the Joint Committee of Fifteen. The consideration of the House constitutional amendment was resumed; Mr. Fessenden defended it, and replied to Mr. Sumner, arguing that universal suffrage is not now a practical measure, and that although he (Mr. F.) was for amending the Constitution so as to secure equal political rights to all, yet it cannot be carried by the requisite number of States. He criticized Mr. Sumner's proposed substitute as amounting to this: "Whereas, it is provided in the Constitution that the United States shall guarantee to every State in the Union a republican form of government; therefore, we declare that there shall be a republican form of government, and nothing else." The bill reported from the Committee on Public Lands, granting one million acres for the support of schools in the District of Columbia without distinction of race or color, was discussed and recommitted.

In the House a bill was passed to declare the meaning of the internal revenue act, so as to collect a larger amount from corporations. Mr. Stevens reported a bill making appropriations for the diplomatic service. Made a special order for February 15. The House passed a resolution instructing the clerk to prepare an index to Executive documents and House reports from 1839 to 1867. Mr. Brooks presented credentials of six representatives from Alabama. Referred to the Reconstruction Committee. Also, a petition from women asking the right to vote. Sent to the same committee. Mr. Julian, from the Committee on Public Lands, reported the bill for the disposal of the public lands in Alabama, Louisiana, Mississippi, Arkansas, and Florida to actual settlers only, without distinction of color, in parcels not exceeding 80 acres. An amendment to include in the privileges of the bill all persons pardoned by the President for participation in rebellion was defeated—yeas, 37; nays, 104. The Senate bill granting the franking privilege to Mrs. Mary Lincoln was passed. Also, Senate resolution extending the time for completion of the Burlington and Missouri River Railroad. Also, Senate resolution to pay the expenses of the Joint Committee on Reconstruction. A resolution was passed asking the Secretary of the Treasury to inform the House how much revenue has been derived from the late rebel States since April, 1865. The naval appropriation bill was considered and amended. Messrs. Walker, Henderson, and Kelso made speeches on reconstruction.

February 8.—In the Senate, Mr. Doolittle presented the credentials of John Pool as senator from North Carolina. Laid on the table. Mr. Sumner presented a petition from the State Convention of colored men of Mississippi praying Congress to establish a republican form of government. Mr. Lane, of Indiana, spoke two hours on reconstruction, arguing that Congress alone has power over the subject, that the late rebel States are not now fit for full membership in the Union, and that their governments can only be made republican in form by the admission of the freedmen to citizenship and the right of suffrage The Senate considered the House amendments to the Freedmen's Bureau bill, and non-concurred in the one restricting its operation to the States in which the *habeas corpus* is now suspended. The other amendments were concurred in. Mr. Guthrie, of Kentucky, spoke against the bill, declaring it a degradation of Kentucky, a measure to create rebellion, and a dissolution of the Union. Mr. Henderson, of Missouri, rebuked such sentiments, and declared himself in favor of its extension to all the States, but predicted it would be ineffectual without the ballot, which should be extended to the negro by constitutional amendment.

In the House, the bill for disposing of the public lands in the late rebel States to actual settlers, without distinction of color, in parcels of eighty acres, was passed—yeas, 112; nays, 24. The naval appropriation bill was considered and amended, the House reducing the appropriation for the Pensacola Navy Yard from $200,000 to about $50,000. The bankrupt bill was considered, debated, and amended.

February 9.—In the Senate, the credentials of Geo. S. Houston, as senator from Alabama, were presented and laid on the table. The House bill for the disposal of public lands in the late rebel States to actual settlers was referred. A resolution was passed directing the Secretary of War to communicate a compendium of medical statistics collected during the war. Mr. Davis offered a resolution for a select committee to investigate frauds by cotton agents of the United States. Laid over. The Senate took up the House resolution proposing a constitutional amendment to regulate the ratio of representation. Mr. Johnson argued against it as unfair to the States having large negro populations, as diminishing their representation, while increasing their taxation, and as calculated to lead to discord and disunion. Adjourned to February 12.

In the House, the Senate amendment to the Freedmen's Bureau bill, extending its operation to all the States, was concurred in. A message was received from the President declining to communicate, as incompatible with the public interest, the grounds or accusations upon which Jefferson Davis, C. C. Clay, and D. L. Yulee are held in confinement. The naval appropriation bill was resumed and many amendments made, among which was one striking out nearly $300,000 for the Norfolk Navy Yard, and appropriating $20,000 to keep it in repair. A proviso was added to the bill that no moneys appropriated by it shall be paid in violation of the test oath of 1862. The bill was then passed. The House resumed the consideration of the bankrupt bill, making sundry amendments thereto.

February 10.—The Senate was not in session.

In the House, speeches upon reconstruction were made by Messrs. Ward, Delano, and Williams. Mr. Rogers gave notice of a bill to repeal all acts exempting Federal securities from State and Federal taxation. Adjourned to February 12.

THE FREEDMEN.

According to the latest advices from Gen. Tillson the people of Georgia, who generally at first were strongly opposed to giving reasonable wages, now, influenced by the judicious course of the Bureau, are exhibiting much greater readiness to pay the freed people fair wages, while many of them declare that their prospects were never so good before, and that the freed people are doing admirably.

From Mississippi we receive the intelligence that the disproportion between the demand for labor and the supply ensures the freedmen a good price for all they do, and makes them quite independent. To meet the demand for labor in the Mississippi bottoms large numbers of laborers have been transported from the interior and poorer parts of the State to the rich lands, where they will be well treated, fed, and paid by kind employers. A very bitter feeling exists in the State against Government lessees, who are using property that has been restored.

In Virginia, the need for some of the troops that have been recently withdrawn or mustered out makes itself seriously felt among the officers of the Freedmen's Bureau. In some of the counties justice cannot be strictly enforced, and returned rebel soldiers maltreat freedmen at their good pleasure. The forces in Virginia are scarcely enough to guard public property.

—Lieut. Wood's disclaimer of any participation in the cruel outrages on the freedmen at Beach Branch, S. C., and denial that they even occurred, should have been addressed, our special correspondent informs us, to anybody rather than himself. He only quoted from the report of Gen. Saxton, which embodied charges against "the officer at Beach Branch," and of which he forwards us an official copy. The language is exactly reproduced in his twenty-first letter to The Nation.

—The difficulty experienced by the Bureau in obtaining detailed officers as permanent agents is not likely to be diminished by the recent fate of many of them. One was murdered in his bed at Pontotoc, Mississippi, according to a telegraphic despatch of the 6th. A Newbern (N. C.) paper of the same date reports that Capt. Horace James, superintendent for that district, went to the neighboring town of Washington on freedmen's business, where he was assailed by rowdies and most shamefully beaten. A detachment of ten men, under a lieutenant, was sent from headquarters to the scene of the outrage, and on the road thither was waylaid, the lieutenant being shot.

—The Maryland Legislature adjourned on the 8th. The House bill to admit colored testimony to the courts was laid on the table by the Senate; thus justifying the wisdom of Congress in extending to that State the authority of the Freedmen's Bureau.

Minor Topics.

In this country, where the effective and simple invention of *avertissement* is unknown, the press has a liberty not bounded even by the dictionary, but limited only by the imaginations of the people who write for it. A certain check upon journalistic fancy once existed, when nearly all the writers for the press were known; for then, individuals aggrieved by a newspaper had the means of personal satisfaction in their own hands, and there was nothing in public opinion to restrain a citizen from beating an editor if he liked. This means of satisfaction is still the resort of injured innocence in the remoter districts, but it must be confessed that it is liable to sad abuses, and that an editor may now and then be flogged for upholding a great principle, as well as for defaming private character. In this metropolis—where some characteristics of our civilization have found their ripest growth—the *argumentum ad hominem* is difficult of application in most cases

of editorial offence; for the journalists are nearly all sheltered under the cloak of impersonality, which, like charity, covers a multitude of sins, and the public has come to look with a sentimental disfavor upon the device of beating the responsible editor.

In Italy, where the Government exercises a certain control over the press, it is the custom for each journal to maintain as its *gerente responsabile* a stout laboring man, who, for a stipulated salary, consents to be cast into prison in atonement for such offences as the journal may commit. Consequently, this honest fellow spends half his days in arrest; the journalists pay the fines, and write what they please. This would be the true principle on which to make the journalists personally responsible in this country. For a very slight consideration, a newly arrived emigrant, or an able-bodied freedman, or one of those Constitution-as-it-was people, who believe that slavery is a fine thing and flogging a privilege, could be induced to represent the editor of any leading journal, and take those beatings which can now no longer be given to the real offenders.

Lacking, however, this more perfectly organized means of satisfaction, the victim of journalism must still turn for redress to the courts of law, as Mr. A. T. Stewart has lately done, with a success which must surprise the public. This gentleman had been defamed in a journal which is devoted to the exposure of crime on the principle of a thief set to catch a thief, and he courageously brought suit for criminal prosecution. The suit was very lamely defended, on the ground that Mr. Stewart was not the person intended in the libellous article; although his standing and circumstances were so described that those who knew the story to be false could not mistake the direction of the slander. Mr. Stewart, having proved that the article was utterly unfounded, accepted an apology from the defendants, and withdrew his suit.

He has since caused the arrest of the New York correspondent of a St. Louis journal, who had similarly defamed him, and has sued the proprietor of the paper for libel. It seems probable that he will succeed in this case, as in the former; and certainly the good wishes of the community are with him in his defence of private reputation against unprincipled writers for the press.

We Americans, who have so much civil liberty, have singularly little individual freedom, and it is to be acknowledged that the palladium of our liberties is often made to bear rather heavily upon us. From thrones, and crowns, and usurpations of political power we are tolerably safe; but we have our tyrants, nevertheless. The number of chiels among us taking notes with a view to printing them is out of all proportion to the census, and the

"Sweet little cherubs who sit up aloft"

in the fifth stories of the daily newspaper offices, writing articles, have a sharper tooth for private character than could be wished. There are laws for libel on our statute-books, but they have heretofore been of very difficult and infrequent application. Now that Mr. Stewart, however, has heroically illustrated the fact that they do afford certain redress, we hope the lesson will be lost neither upon our professional brethren nor their victims. It was, of course, Mr. Stewart's unfathomable purse which contained his success; but then, it is usually rich and prominent men who are assailed, and these have the means of defence made known to them. We imagine that if they pursued and prosecuted their enemies in the press, and exposed the factitious quality of their romances, they would do much to protect public as well as private reputation. We have grown to have a sad character for morals, or the want of them, in our large cities, by virtue of just such stories as Mr. Stewart has shown to be false. The ginger is now and then hot in the mouth, it cannot be gainsayed; but in many cases the salacious *contes* with which New York correspondents, and lewd journalists of the baser sort, enrich the newspapers are utter fiction. Unless the tendency to scandal is in some way checked, we shall have, with a really not very wicked civilization, such a state of things as exists in some European countries, where unspotted reputations are unknown, and purity of life is no safer from infamy than its opposite.

Upon the whole, we imagine that the merit (such as it is) of the most distinguished of the recent railroad accidents must be given to New Jersey. Not the most populous or most extensive among the States of this Union, she has far excelled her sisters in efforts to raise the public horror by the destruction of the travelling community, and she has just made another appeal to our somewhat toughened sensibilities by a casualty of certain appalling circumstances. The people who rode over a bridge near the village of Bloomfield, last Thursday, on the Bloomfield and Newark Railroad, must have been alarmed, but could hardly have been surprised, by the breaking of the bridge and the precipitation of their train into the stream below, with the well-known picturesque effects of the cars heaped in wild ruin, one upon another, and the equally familiar dramatic interest of the cries and moans of the sufferers buried in the wreck. We say these people could hardly have been surprised, for it was a matter of common fame that the bridge in question was rotten and unsafe, and it had more than once been reported to the company as exceedingly dangerous. These facts, indeed, were so public in the region through which the Bloomfield and Newark Railroad runs, that we should think the accidental insurance company, in which the young man who was killed held a policy for ten thousand dollars, might reasonably refuse to pay the insurance, on the ground that to pass over the Bloomfield bridge was an attempt to defraud the company. Their decision is still to transpire. In the meantime a coroner's inquest has been held on the victim's remains, and the jury have found that he came to his death through the gross and culpable neglect of the railroad officers, who failed to put the bridge in repair when informed of its insecurity.

Now, we tell New Jersey that all this will not do. The public may be willing to acknowledge her primacy in railroad accidents, but the public really does not care any longer for this sort of distinction, and does not in the least honor it. The truth is, the whole business of casualties by land and water is utterly stale, and people are simply bored by your absurd railroad slaughters and your foolish steamboat assassinations. These stories of trains off the track, and through bridges, and driven one into another, are all twice and thrice and thirty times told tales, and we turn from them with a feeling akin to disgust. Is our interest to be any longer awakened by the fact of some scores of wretched travellers daily burnt, and crushed, and beheaded, and disembowelled, and dismembered?

"Every minute dies a man,
Every minute one is born."

And we have learnt to consider that if these things happen, neither death's measure nor pain's is overflowed, but merely filled from unusual sources. People thus hurriedly put out of the way, are spared from lingering long and expensively in bed, and from suffering with disease.

Then, as to the coroner's inquest and verdict and all that, is it not the most tiresome part of the whole tedious farce? We know very well about these things: how the jury is empanelled, and great numbers of witnesses are examined, and indignation is manifested, and the proceedings printed in the newspapers, and there an end. No; if New Jersey has really an ambition to figure in the public view, she must either invent some novelty in horror, or else strike chords of sensation, never yet swept, by executing justice in some such familiar case as the present. The latter would probably be the more difficult of achievement (though we are by no means ready to say that the former would be easy), but then the triumph would be vastly greater. Let New Jersey reflect what renown she might win by convicting the officers of the Bloomfield and Newark Railroad, for example, of manslaughter; by shaving their highly respectable heads; by putting their influential persons into prison stripes, and by teaching their universally esteemed legs the lock-step! But we dare say New Jersey will not do anything of the kind. At least we cannot take courage to hope for such greatness from New Jersey, in view of the fact that her Governor has just declined to re-nominate one of her judges, because he decided that New Jersey had no right to sell a monopoly of the public carriage of passengers, over her territory, to any one railroad company.

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

THE WAY THE GOVERNMENT IS SERVED.

Want of space did not allow us, last week, to do more than allude to the comments made by the Revenue Commission, in their report, on the present condition of the principal Custom House in the country—that of this city—and on the whole administrative system of the Government. The loss sustained through the frauds and waste and incompetency of the employees at the New York Custom House was estimated as ranging from $12,000,000 to $25,000,000 annually, and the wonder is that it is not greater. Only a very small minority of the officers are persons who had experience of their duties before the incoming of Mr. Lincoln's administration. The proportion of them that were originally selected for their office because of any special fitness for their duties is still smaller. The large majority are men who have been unsuccessful in various other pursuits; and the cases are rare, indeed, in which these pursuits have been of a nature to furnish them with either the kind of knowledge or kind of training called for by the Custom House. In nine cases out of ten they were appointed on purely political grounds, for services rendered to the party either by themselves, or more generally by their friends; and apart from this, their only claim on the Government is based on the fact that there is nothing under the sun by which money may be made for which they are fitted. It is only, in fact, owing to the almost accidental intrusion into office of a few men possessed of some commercial experience, and the retention by each new administration of a few men of official experience, that the business of the establishment can be carried on at all. Every known guarantee against plunder and waste is thus, one might almost say, studiously removed. Select a man for office without reference to his fitness; retain him in it without reference to his efficiency, and make his tenure dependent on the ups and downs of politics, and you have hit upon the best known mode of promoting corruption, negligence, and malfeasance, short of actually offering a full pardon for thieving and idleness, with a percentage on the amount stolen.

But it would be a great mistake to suppose that the bad effects of this system are witnessed only in the Custom House. There is, perhaps, nothing on which the operations of the commercial world, as well as the happiness of individuals, are so much dependent in this new country of ours as on the officering of the post-office. And yet we have the worst post-office in the civilized world—the one in which most letters are lost and delayed, and in which least attention is paid to public convenience in the despatch of mails. We are not now talking of the sparsely settled States of the border, in which distance, badness of roads, absence of bridges, and wide diffusion of population naturally offer insurmountable obstacles, for the present, to the accurate or regular working of the postal system. We are talking of this system as it exists in the old and densely populated States of the East, whose cities, in wealth, numbers, intelligence, and letter-writing, may vie with those of any country in the world. In all these the post-offices are mostly presided over by mere politicians, men without the smallest knowledge of, or liking for, their duties, and who pay little or no attention to them. The New York Post-office is one of the most important in the world; the postmaster is an illiterate person, who has passed his life in ward politics, and still devotes a large portion of his attention to them. Of his subordinates, a few, of course, have to be retained from term to term in order to prevent the machine stopping altogether; but the mass are the nominees of politicians, and are of even a lower class in character and intelligence than the denizens of the Custom House; and, in order to make them, if possible, still more inefficient, they hold their places at will, are poorly paid, and have to submit, as have the Custom House officers, to have their poor pittance docked nearly every year to assist in the payment of the electioneering expenses of their party. The result is, that there is about the whole establishment a laxity and absence of responsibility which deprives it of all public confidence, leads to enormous losses every year, mars social intercourse, sets a bad example to the community, and makes every American blush when he reads of or experiences the wonderful accuracy and regularity of the English and French post-offices.

Now, this disgraceful mode of carrying on the civil administration of the Government is no necessary part of the democratic system. It is, on the contrary, intensely oligarchical. Cynical contempt for the public and indifference to the public convenience run through the whole of it. If an aristocrat were seeking means to accomplish the overthrow of democracy or to bring it into disrepute, he could hardly hit upon anything better than this mode of filling the public offices; and, in point of fact, it does at this moment furnish to European writers one of their favorite illustrations of the worthlessness of purely popular governments. Nor is it of ancient date. It was inaugurated by Andrew Jackson, a man who, in spite of the brilliancy of his military career, was, as a civil administrator, one of the worst enemies the country has ever had, and he introduced it for the not inappropriate purpose of gratifying personal spite against Henry Clay.

One has not to go far to find the remedy. Congress has but to pass an act applying to all branches of the public service the rule suggested by the Revenue Commission with regard to the Custom House—throwing open all places in the public service, except the highest, to everybody, male or female, above a certain age, possessed of a good character, capable of standing the test of a competitive examination both as to physical and intellectual qualifications. The whole system of nomination by members of Congress is a monstrous abuse. This done, Government officers should be paid as well for working for the United States as any private person would pay them, unless, indeed, a small deduction were made for the greater permanence and security which the public service ought to offer. Their places ought to be dependent on good behavior; promotion, within certain limits, ought to be by seniority; and there ought to be pensions for the superannuated. True, this would deprive politicians of one valuable source of excitement, and would drive large numbers of the lower grades into other employments, but the public would certainly be no loser by their disappearance.

If we said, however, that we anticipated an immediate realization of our hopes on this subject, we should be guilty of deceit. We do not. It will, we fear, be a long time before any party acquires enough conscience and public spirit to use its power to deprive itself as well as its adversaries of the means of rewarding its underlings out of the public purse. But if Congress acts on the suggestion of the Revenue Commission with regard to the Custom House, we shall at least have inserted the narrow end of the wedge.

THE IMPERIAL SPEECH.

The speech of the French Emperor, which opens the legislative session, was expected this year with more than usual impatience. The Mexican question had become of prime solicitude to the nation, and it was expected that Napoleon III. would announce the withdrawal of his troops from the ill-fated empire of Maximilian. The last steamers had brought the message of President Johnson and the documents which accompany it; the official press could no longer conceal from the French people that the intervention in Mexico was looked upon by the American people as a disguised attack upon the United States, and a violation of the Monroe Doctrine. The opinions expressed by Gen. Grant on the Mexican war had also found their way to Paris, and had created much sensation. Under these circumstances we may imagine with what impatience the words of the Imperial oracle were expected. In the speech pronounced in the *Salle des Etats* by Napoleon, the lion has become a lamb. Nothing is left of the oriental and pompous style to which we were accustomed; nothing of the dogmatic and dictatorial tone; nothing of the Napoleonic impudence and pride. *Quantum mutatus ab illo!* The nephew of Bonaparte no longer wishes to interfere in the affairs of Europe; Bismark may do as he likes; the Emperor of France only means to preserve, in the face of new events, of new complications, usurpations, and conquests, the right "*de nous affliger ou de nous réjouir*" (of being satisfied or sorry), a right which it would be very hard to deny him.

Mexico is mentioned in only ten lines of a speech which occupies three full columns of the *Moniteur*. We are taught that the government founded there on the will of the people is consolidating; that the rebels are dispersed and have no longer a chief; that the expedition approaches its close, and that Napoleon is negotiating with Maximilian to fix the time of the withdrawal of his troops, in order that they may return to France without compromising the French interests which they have gone to defend in those distant parts.

This programme would have been more promising if those "French interests" had been defined a little. Frenchmen have not forgotten, if the Emperor has, that he once wrote that he "meant to re-establish across the seas the strength and the prestige of the Latin race." They have not forgotten, if he has, that he wrote on the 3d of July, 1862, to Marshal Forey: "Our *interest* is that the United States should be powerful and prosperous, but that this republic should not conquer the whole Gulf of Mexico, dominate the West Indies as well as South America, and become the only dispenser of the products of the New World." If the Emperor Napoleon resolved upon the Mexican expedition to check the growing power of the United States and to re-establish the prestige of the Latin race, and considers that the interests of France are bound up in this double object, we do not see very clearly how he has given to these *interests* a sufficient satisfaction. Such a lofty mind can, of course, not be thinking of the Jecker debt alone when he speaks of interests; France has not spent millions and sacrificed thousands of her soldiers in order that a naturalized Swiss banker should get satisfaction from his Mexican creditors.

The pleasure at first experienced by the French people on hearing the Mexican paragraph of the Emperor's speech, must have been even more diminished by recurring to last year's paragraph on the same subject:

> "Thus all our expeditions are drawing to an end. Our troops have evacuated China; . . . the army of Mexico already returns to France (*rentre déjà en France*); and, while shutting the temple of war, we shall, with pride, inscribe on a new triumphal arch these words: 'To the glory of the French armies for their victories in Europe, in Asia, in Africa, in America.'"

What a fine image this, and how sublime a sentence! But has the door of the Temple of Janus really been shut by the modern Augustus? If the army a year ago was leaving Mexico, we wonder where it will be a year from this day. Will it then have left Mexico, or be leaving it, or be on the eve of leaving it? Janus only knows.

The *Yellow-book* (the French name for a Blue-book) is even more modest than the Imperial speech. The Emperor's only object in going to Mexico was to obtain suitable reparations; once there, he could not refuse his support to the men who conceived the project of establishing a monarchical government, as a guarantee of order; he had no desire to make a crusade against republican institutions; the new empire once established, he was only to claim for its protection the principle of non-intervention, and then to withdraw his forces. Such is the language of the *Yellow-book*, but no undue importance ought to be attached to it, as the Emperor never considers himself bound by any words but his own, and not always by them. The real state of the case is this: the Mexican war is unpopular—unpopular in itself, unpopular on account of its evident complication with the United States. The Emperor means to get out of his difficulties as well as he can, and is willing to sacrifice Maximilian in the end; for the present he cannot, or thinks he cannot, withdraw his troops without getting from our Government the recognition of the emperor of his own choice and making. That recognition would be a screen for his vanity; it would allow him to retire from the contest; he would say to Maximilian and to the Mexican people, "I have done for you all I could; the recognition guarantees you against the only dangerous interference you have to fear, that of the American government. You must take care of the rest." His pride would be safe, if Maximilian's crown was not. There is an evident desire all through his speech to win the good graces of the American people. He speaks of Mr. Lincoln's death with as much feeling as if, during Mr. Lincoln's presidency, he had not done his best to obtain the recognition of Jefferson Davis's confederation from the governments of Europe, and as if his official press had not for three years represented Mr. Lincoln as a vulgar, coarse, ignorant tyrant, unworthy of his high position and incapable of sustaining the Union. He no longer professes a platonic love for English liberty, but now admires American liberty. He has just discovered a certain analogy between the French and American constitutions. To be sure, in both countries the responsibility falls directly on the executive, and the ministers are not responsible. But here the responsibility of the President is real; in France this responsibility of the executive is merely theoretical. The descendants of Napoleon III., if they are ever to be emperors, will hold their throne with the same hereditary title as the Czar of Russia or the Emperor of Austria. It would be idle to show in detail how widely the functions of the executive and the legislature differ in the two countries; but above all these constitutional questions shall we not place liberty itself, which the political institutions have no other legitimate aim than to protect and to maintain? What sort of parallel can the Emperor draw between a country which enjoys the most absolute freedom and that in which he has destroyed all liberty; where twenty-nine citizens cannot hold a meeting without the permission of his police; where Prévost Paradol, a member of the French Academy, is not allowed to lecture on Molière; where no one is at liberty to issue a paper without his permission; where any paper can be suppressed at his pleasure; where a book can be seized in the bookseller's shop even before a copy has been sold?

The very flatteries of the Emperor to the United States, however sincere and timely, serve him as a pretext for refusing Frenchmen any new liberties. He alludes to ministerial responsibility, and rejects it as un-American. He is quite satisfied with the working of his system. His speech reads more like that of a philanthropist than that of an emperor; trade, agriculture, co-operative societies, etc., fill more than half of it. "L'Empire c'est la paix" is again the order of the day. The army is diminished, a diminution which amounts to a saving of twelve millions of francs a year. All is for the best in the best pos sible empire. France is happy, respected, "sans détenus politiques dans ses prisons, sans éxilés hors de ses frontières." We wonder what Victor Hugo and Louis Blanc and Ledru Rollin, what the Orleans princes, will think of this last phrase. They are summarily put out of existence—a generous proceeding on the part of a man who was once himself an exile. The property of the Orleans family was confiscated by Napoleon III. ten years ago. Is it not strange that, in 1866, he knows nothing about that same family, and forgets its existence? "There are no exiles." What if one of these men, taking the Emperor at his word, should show himself in Paris? Can they forget the words once pronounced in the Senate by Prince Napoleon, in view of such an eventuality: "Nous les fusillerions bel et bien?" Not only are these persons exiled, but their very names are not allowed to be mentioned in the French papers; their books are confiscated, if they try to publish any; while Napoleon, in prison as well as in exile, was freely allowed to be a contributor to the "Progrès du Pas de Calais." Either his memory or his magnanimity is at fault. The world is not as ignorant as he thinks, and will give him little credit for declarations which it is too easy to refute.

THE PRESIDENT AND THE COLORED DEPUTATION.

The interview of the President with the colored deputation last week had some curious features about it. The President spoke at some length, though, as is not uncommon with his speeches to negroes, with a good deal of repetition. He argued strongly against negro suffrage on two grounds—the one that it would irritate the poor whites horribly, and the other that the majority in every State has the right to decide in whose hands political power should be lodged. We must, however, earnestly protest against his considering himself, as he evidently does all through this reconstruction process, as the special champion and protector of the poor whites of the South, or in fact of any class in particular. The poor whites of the South have no peculiar claims on his consideration, and, whether negro suffrage be a good or a bad thing, their feeling about it is only of importance so long as it seems likely to lead to a defeat of the law. But the Chief Magistrate of the United States has no right to acknowledge that it is in the power of any class in the community to defeat the law. He has no right to reply to any class of men seeking equality of rights, that it cannot be granted because it would hurt the feelings of another class

To call this democracy is an abuse of language. If it were true that the poor whites would resent the exercise of the franchise by the negroes, it would be the business of the Government to protect them in it. One of the objects, in fact the great object, of the existence of government, is to protect people in the enjoyment of rights against the attempts of their neighbors to deprive them of them. All aristocracy is based on a simple prejudice, and the great reason why every country in the world is not democratic is that a portion of the population would be annoyed by seeing the remainder sharing in the government. The negroes of the South have precisely the same claims on President Johnson's sympathy, and thoughtfulness, and regard as the poor whites—no more and no less. He may have a strong personal preference for the poor whites; he has a right to have it, and if he has it we do not blame him; but political preference he ought neither to have nor to express. He is just as much the organ or officer of the one as the other, and this in virtue of the simple fact that both are freemen, and live in the United States. Therefore, when he replied to the deputation as if he was bound to see that the poor whites, in particular, should suffer no annoyance, he wandered from the point.

Nor is the argument that the suffrage would do the negroes no good any better than the argument that their possession of it would vex their white neighbors. *That* is not a reason for refusing a man anything which is his due. We may think many a rich man would be better without his riches, but we never hear this brought forward as a good reason for despoiling him. Large numbers of white men who possess the franchise at the North certainly *seem* to be the worse for it, but would this justify us in disfranchising them? The true democratic theory is that every man will be sooner or later the better for sharing in the Government; that even if his belonging to the governing body does not at once improve him, its influence is educating, and will sooner or later make him worthy of it; but whether it would or would not be a good thing for him personally to have it, if he was on general grounds entitled to it, is something with which other people have nothing to do. Mr. Johnson might very well refuse to consider whether the bestowal of the franchise on the negroes would or would not benefit the negroes as a class, and direct his attention solely to the consideration of the effects of their possessing it on the nation at large; but of this he says nothing whatever. The feelings of the poor whites seem uppermost in his mind.

His next objection—that the people of each State are alone entitled to decide in whose hands the local government shall be lodged—is, with certain qualifications, a just one. But then he knows very well that this principle is limited in its operation. The people may not lodge power, for instance, in so few hands as to change the character of the Government. They have to preserve its republican form. They may not lodge power in hands that will use it against the Union; this is treason, as has been demonstrated by the war. Mr. Johnson never thought of respecting the decision of the majority in the various States when they lodged the governing power in the hands of the rebel legislatures. The great question remains still unsettled whether a part only of the people has a right to lodge it anywhere. The freed negroes are certainly part of the Southern people, in our political nomenclature, but when Mr. Johnson called the Southern people together, after the rebellion was over, to decide afresh how political power should be distributed, he expressly provided that the negroes should not be consulted. If all had been allowed to vote for the conventions which revised the existing Southern constitutions, and the majority had then decided that color ought to deprive men of the franchise, there would have been a show of fairness in the argument which he used to the deputation. But after all that has happened, it is simply a begging of the question. When he uses it against the claims of the colored men, he not only knocks them down, but kicks them for falling, a proceeding which has always been considered, though no doubt very vigorous, the acme of absurdity.

The grand secret, however, of Mr. Johnson's difficulties about the negro and his rights was revealed, unwittingly perhaps, in his address on Thursday, when, in giving his reasons for having opposed slavery, he mentioned "first the fact that it was a great monopoly," and only secondly that it was wrong in principle. No man to whom its evils present themselves in this order is likely to reason rightly as to what the nation which abolished it owes to those who have been its victims. No mind to which the moral iniquity of the thing does not appear so monstrous and overwhelming that every other objection to it sinks into comparative insignificance, is ever likely to have that ardent love of liberty for its own sake which casts out all fear or misgiving, which is in all countries the best and surest foundation for statesmanship, and in a democratic country the only one. Mr. Johnson's weakness on this point is perhaps natural in a man born and bred in a slave State. But he has made prodigious advances in political education within the last five years, and we may fairly look for advances still more remarkable in the next three. It may be that the very two-sidedness of his mind may be one of the most powerful aids to perfect reconstruction.

STORMS AND EPIDEMICS.

From the last annual report of the Secretary of the Smithsonian Institution, we are glad to learn that there is reason to hope for the speedy re-establishment of that organized system of simultaneous meteorological observations over the whole United States which was inaugurated as early as 1849, and which, previous to its partial interruption by the war, had done so much for the development of the science of meteorology. The method and manner in which problems so vast and so exceedingly difficult as those of the laws of storms, and of the progress of the seasons and their variability from year to year, have been attacked, and in good part mastered, by the Smithsonian Institution, are alike creditable to American science and honorable to the founder and directors of the institution. One simple item of practical fact, which has resulted from the labors in question, ought to be reiterated in the ear of every intelligent citizen, until the strange apathy or ignorance which now prevails with regard to it shall have been for ever done away with. The officers of the institution, as they sit quietly in their chairs at Washington, possess the power of predicting, sometimes a day or two in advance, the approach of great storms, and of spells of severe cold weather—in a word, of foretelling the advent of any of the larger disturbances to which the atmosphere is subject.

In view of the many advantages which would accrue to commerce, and of the great comfort and convenience which would result to the general public, if there were to be adopted some system of regularly foretelling the weather in the daily prints, it seems hardly credible that no society of merchants or underwriters has as yet arisen to take the matter in charge, or that the Associated Press, or even Congress, have so long abstained from making a systematic use of the materials which are in the possession of the institution and at the free disposal of every one. It would be no very difficult task to impart in each of our cities such information of the coming storm or cold as would prevent the shipment or exposure of perishable merchandise, the premature uncovering of buildings, the unseasonable journeying of invalids or of persons in pursuit of pleasure. It would be a comparatively easy matter to give warning, by hoisting signal-balls by day or by flashing fire by night, at the capes of the Chesapeake or the Delaware, at Sandy Hook, Cape Cod, and Cape Sable, along the Sound and at the Vineyard, and at every appropriate promontory along the Atlantic sea-board, of the coming of the great north-east snow-storms which periodically line our coast with wrecks, and to indicate to all inward-bound vessels that it would be well for them to make an offing at once, or else run for an anchorage under the nearest hook or in the next best hole, there to hold on until the almost inevitable north-wester shall come up to succeed the snow.

But in illustrating as they do most forcibly the value of united and concerted action in scientific research, the meteorological results attained by the Smithsonian have a far higher significance than would appear from the considerations just now alluded to. They show us upon a higher level the transcendent efficiency of a skilfully organized, well equipped, and thoroughly disciplined regiment, as contrasted with an equal number of isolated malcontents, or guerrillas, working always at cross purposes, often quarrelling among themselves, and of little or no use in war, excepting when employed as auxiliaries to regular troops. The chemist Dalton, after long and laborious study of meteorological

matters, is reported to have exclaimed in despair: "In this thing there is no law!" Considering his stand-point, as one man upon that little island which, according to observations of the Autocrat of the Breakfast Table, if stirred into the Mississippi at Natchez would all be handsomely settled out between that and the Balize, we can but sympathize with Dalton in his despair and admit that his conclusion appears to have been correctly drawn from the premises. But his exclamation is in strange contrast with the attitude of modern science. We quote from Prof. Henry's report:

"Meteorology has ceased to be a mere record of isolated facts. The special characteristic of modern efforts in this line consists in extended co-operation, and in determining the simultaneous condition of the atmosphere over extended regions of country. It is only by this means that the laws which govern the occurrence, motion, direction, and propagation of the disturbances of the atmosphere can be ascertained. By comparisons of this kind isolated observations of otherwise little value become important, and afford an ample field in the cultivation of which any person who will take the trouble to record the direction of the wind, the beginning and ending of rain, snow, hail, the time of blossoming of trees, appearance of birds, insects, etc., may render valuable services." . . . "The advantages possessed by the Smithsonian Institution for investigations of this kind will be evident when it is recollected that a large portion of its observers are stationed west of Washington, that the phenomena approach us over a large extent of land, and can be critically noted through every part of their passage eastward, while the phenomena which are presented to the meteorologists of Europe traverse in reaching them a wide expanse of ocean, from which only casual observations can be gleaned." . . . "No other part of the world has offered such facilities for the collection of meteorological data, the system extending over so large a portion of the earth's surface; the observers, with few exceptions, all speaking the same language, and many of them being furnished with full sets of compared standard instruments."

In regarding this admirable system, the question is at once suggested, Why has not something similar been adopted in many other departments of science besides that of meteorology? We have, for example, as a parallel to the effort of Dalton, the following extract from the writings of the famous Doctor Sydenham. He says:

"I have carefully examined the different constitutions of different years as to the manifest qualities of the air, yet I must own I have hitherto made no progress, having found that years, perfectly agreeing as to their temperature and other sensible properties, have produced very different tribes of diseases, and *vice versa*. The matter seems to stand thus: There are certain constitutions of years that owe their origin neither to heat, cold, dryness, nor moisture, but upon a certain secret and inexplicable alteration in the bowels of the earth, whence the air becomes impregnated with such kinds of effluvia as subject the human body to distempers of a certain specific type."

In these days of approaching cholera and cattle-plague Sydenham would find no lack of adherents to his doctrine of the "certain secret alteration." We should now say that diseases like the cholera and Rinderpest probably depend upon cosmical and infrequent causes, and not immediately upon local and constantly recurring causes, though there is nothing which would lead us to suppose, with Sydenham, that this "alteration" is "inexplicable." So far from this, we cannot help believing that a comparatively small amount of concerted action around a definite rallying point, such as the Smithsonian Institution has proved itself to be in the matter of meteorology, would be sufficient to bring order out of the chaos of medical information which has already been collected by individuals and local associations throughout the length and breadth of the land, and to explain many points with regard to the transmission and communication of disease which are now shrouded in obscurity. We would invite the attention of that profession, the members of which have in all ages shown themselves ready to advance the cause of science and of humanity by word and deed, by time and by money, to the question, whether there could not be raised, by subscription among the physicians of the country, if in no better way, a fund sufficient to support—in connection, perhaps, with the Smithsonian Institution—a competent permanent secretary, who should do for the laws of disease what Prof. Henry and his assistants have done for the law of storms, and Prof. Baird and his coadjutors for the natural history of our country.

AN AUTOBIOGRAPHY OF THE REBELLION.

It has been remarked by Montesquieu that it was victory alone that decided whether "Punic faith" or "Roman" should become the proverb of the world. There are people who affect to believe, many who no doubt sincerely believe, that the judgment of posterity concerning the late controversy between North and South would have been reversed if the Confederate battalions had outweighed the Federal. We mean such is the notion of a large and even respectable number of foreigners. The people of the South themselves, we need hardly say, are all of this way of thinking, and for our part we do not care to disturb them in it. Let them, if they choose, look forward to that epoch of retributive justice, when, as in a German print we once saw, the wood-sawyer and the tree change places. If the present generation shall die before that time, no one meanwhile ought to grudge them the consoling illusion.

We observe in a Texas newspaper a spirited exhortation to the citizens of that State not to suffer the history of the war to be written by their victorious adversaries alone, or from the materials furnished by the latter. Scarcely, it is affirmed, have their statements "done us justice in regard to a single battle." Leave the whole matter to the Federals, and "we may expect nothing but a complete self-justification on their part, and to have the responsibility of the four years of bloodshed and suffering thrust upon ourselves." It is shown how this misrepresentation may be avoided by a little pains in collecting and preserving facts; how the captain might write the history of his company, and the colonel the history of his regiment; how the ladies might form societies in aid of this laudable undertaking, reserving, if they please, the brightest pages for a "faithful transcript of their own noble actions;" and how this one yielding of his memory, and that one of his documents, the honorable tale would grow apace, until, each county having rendered in its account, the whole should be bound with tape and deposited in the State archives, there to await the impartial historian of the future to which we have alluded.

Far be it from us to call this industry misdirected, or to protest against it. We do, indeed, attach a peculiar infamy to rebellion and treason in the interest of slavery, and we should have been more than pleased if the South had manifested a disposition to forget its high crime and misdemeanor. We must, nevertheless, acknowledge that its present mood is a better guaranty that we shall some day have a veritable history of the recent struggle. However reputations may suffer, or theories be affected, on either side, it is of the highest importance that mankind should have the exactest information of what occurred in these past four years—what occurred, and why it occurred—what were the issues and how many were decided, and what were the lessons of each and all. It is superfluous to assert that nothing of the sort can be accomplished without a fair amount of frankness on the part both of conquerors and vanquished, but especially of the latter. For it cannot be merely prejudice to conceive that they would have of the two the greater reluctance to be unreserved. They were incontestably engaged in a conspiracy whose origin antedated many years its violent outbreak, and which yet was sought to be invested, for outside effect, with an air of spontaneity. South Carolina's revelations, to be honest, must begin at least thirty years before her ordinance of secession. However righteous the plot to take possession of this Government, it has never been distinctly avowed in all its length of duration and breadth of purpose, and it is safe to say it never will be. We shall be only too thankful if the South will unlock her secrets. Hitherto the rebel archives have been admirably concealed from loyal researches. Dr. Lieber presides over a parcel of rubbish at Washington; there have been various captures from time to time of "invaluable papers;" but we do not penetrate the rebellion to the core. Shall we ever?

If we cannot obtain an *exposé* of motives, let us have military statistics, and be thankful for them. Ask Mr. Secretary Stanton how many Confederates under Lee confronted and overwhelmed McClellan, Burnside, Hooker; how many disputed with Grant the passage from the Wilderness to Richmond. He will not tell you—the facts would be humiliating; perhaps he is not able. Then welcome the Southern historians. Already Early and Sheridan are renewing their little differences, and this time, with that backwoods indifference which characterizes the seeker after truth, we do not care which whips. Gen. Jordan found a Northern vehicle and a Northern audience for his views on the probable fate of the Confederacy if Jefferson Davis could have been laid on the shelf. Pollard has written history from a Southern point of view, and threatens to write more if his life is spared; to which end we advise his continuing to assail only unarmed newspaper correspondents. The ex-President himself may possibly indulge either in a confession or a vindication, and the opening of his lips

would remove the scruples of many who are dumb while he is in peril of his life.

In bidding these historians of every degree to the witness-stand, we cannot deceive them by pretending that our credence will be equal to our satisfaction in seeing them appear. We shall listen respectfully to their statements and arguments, without, however, expecting to place entire faith in them. They shall be treated as we are willing they should treat the freedmen in their courts; we will not exclude them from a hearing, but we shall exercise the right of sifting their evidence. It would be presuming too much on Southern equanimity to request that they shall receive our histories as gladly and freely as we shall receive theirs; and that any one of their fellow-citizens who may happen to conclude, after balancing the sheet, that the credit is on our side and the debit on theirs, may be unmolested in his opinion and in the expression of it, nor be denounced as low-minded, unchivalrous, unpatriotic, and be chased from the community or lynched instanter.

CONVICT LABOR.

SEC. 1. No male convict who shall hereafter be sentenced to imprisonment in either of the State Prisons of this State, shall be permitted to work therein at any other mechanical trade than that which, as shall appear by the certificate of the clerk of the court in which he shall be convicted, such convict shall have learned and practised previous to his conviction, except that the convicts at Sing Sing may be employed in the cutting and manufacture of stone, and the convicts at Clinton in the manufacture of iron from the ore, and except also that convicts may be employed in such branches of manufacture as are not elsewhere carried on in the State of New York.

Mr. Brandreth, of Westchester, who seems to have made himself the especial champion of laboring men, spoke at length in favor of the bill. The great argument for the foregoing section is that convicts who have learned other trades are put at work under contractors or iron moulders; and, after serving out two or three years' time, compete with journeymen who have served a regular apprenticeship to the trade. It is urged that the State should not bring its prison labor into dangerous competition with honest industry. Progress was reported on the bill, which will probably pass.—*Albany Correspondence of the N. Y. Times.*

The majority of convicts are thieves of various degrees of demerit; men who prefer preying upon the labor of others to working for a living themselves. The State seizes them and shuts them up, not merely to punish and prevent crime, we are told, but to reform the criminal, and dismiss him at the end of his term a useful, or at least a harmless, member of society. How can this be accomplished unless the criminal is made to work, and is taught some kind of mechanical labor by which he can earn his livelihood in the outside world without too much difficulty; for his antecedents will always place him in a worse position than that of others seeking for employment? Mr. Brandreth might object to religious teaching in Sing Sing just as reasonably, because it might bring conscientious and pious prison labor "into dangerous competition with honest industry." But in spite of Mr. Brandreth, it can hardly be denied that it is the duty of the State to give the convict every chance of reform. Let him be taught both to work and to pray; and particularly to work—even if it should be true that a few individuals might lose something by his gain.

It will be answered: "There are the iron mines and the stone quarries; let the prisoners work in them." Unless miners and quarrymen have not the same right to protection as other workmen, which Mr. Brandreth is not likely to assert, it is evident either that there are comparatively few mines and quarries in the State, or that this kind of labor is not considered an attractive way of earning one's bread. Indeed, we all know that it is a very hard way. "Condemned to the mines" was long a punishment, and has almost become a proverb. How many of the eight hundred convicts of Sing Sing, if turned out upon the world, hampered by their past, and beset by temptation, would find a life in the mines a sufficient inducement to good conduct—even if it were possible for them to seek out the remote places where this kind of work is carried on? And we may add that not more than half of the eight hundred have the physical ability to get their living in this way.

"Then let the prisoners be employed at the trade they have learned and practised previous to their conviction." But many of them have never learned a trade, or, having learned it in early life, have long ceased to practise it and have forgotten it. It is the dislike to steady work that leads them to jail. This is the moral malady to be cured.

The mechanic has no right to complain that prisoners compete with him. So do his neighbors who carry on the same business. The whole community would rejoice if there were no convicts in Sing Sing; but, instead, eight hundred honest men working hard for wages, and competing with him. That would be a model state of society. Unluckily, the eight hundred are incarcerated because they preferred forcing honest men to support them. Why should not the State, then, make them do their duty, and repair by their labor the damage they have caused, and not run up an additional bill of expenses?

When the convict leaves the public institution, he will either be honest and work, or he will not. If he is honest and industrious, we have succeeded in our object—reform; society is the gainer; there is one more producer to add to the public prosperity. If he relapses into crime, the mechanic will have no competition to complain of. But his loss will be far greater than if he had a dozen competitors. A rogue or ruffian at large preys upon the labor of working-men. They are the class that suffer. The rich man's loss is a trifle, and he is able to take care of himself.

This is by no means the first time that a bill to this effect has been presented to the Legislature. It is protection carried to an absurd and selfish extent. Stated simply, it amounts to this: All the inhabitants of this State shall be taxed to support convicts, because if convicts are made to support themselves, a few mechanics outside of the prison walls may possibly receive lower wages. The selfishness and absurdity of the proposition are inversely as the number of mechanics interested is to the whole population of the State. We say "may possibly receive lower wages" advisedly; for the amount of any article furnished by prison labor is so small when compared with the total product of the community as to be of little account. But if the facts were otherwise, it would make no difference in the principle. There is no reason why a thousand farmers should be taxed to help one mechanic, and there are many unanswerable reasons why prisoners should be taught to labor intelligently, effectively, and to pay their own expenses.

MASSIMO D'AZEGLIO.

THE distinguished man who died in Turin, on the 15th of January, was akin in universality of mind to the great Italians of other times, to Dante, to Leonardo da Vinci, to Buonarotti, to Galileo; and it would be hard to say whether Italy has most to mourn the statesman, poet, or painter in the loss of the Marquis Massimo Taparelli d'Azeglio. To recount fully the story of his life would be to rehearse the political annals of Italy during the last twenty-five years, to describe the rise of the romantic school in literature, and to enter upon the discussion of modern Italian art. It is by no means necessary to do this here; and no doubt most of our readers will be satisfied with such a sketch of the career now ended as shall place within the range of actual knowledge the facts of a life already vaguely known in its three-fold claim upon their interest.

Massimo d'Azeglio was born at Turin in 1801, when French domination had succeeded the misrule of the Piedmontese princes. His father was a general officer of the Piedmontese army, and his blood was of the noblest and best in the always aristocratic little kingdom. It was the boy's good fortune to be taken to Florence, where the first seven years of his life were spent, and where he learned, what was impossible in Turin, pure Italian speech and manners not provincial. How detestable were the accent and ideas of his native city at that time, we have all been told by Alfieri, and it is said that d'Azeglio, who had been treated like any other idle urchin in Florence (*come un birichino qualunque*), was astounded at the immense bows and sounding titles with which he was received in Turin. He never outlived the liberal notions early imbibed in the Tuscan capital, and his religion was of no severer quality than his politics. He tells how, in his fourteenth year, the priest who acted as his tutor punished him for some offence by the infliction of a pretended excommunication from the Bishop of Turin, and how heartily he enjoyed his exclusion from the functions of the church, and especially the use of his rosary, which had always bored him.

The ancient rulers of Piedmont came into their own again, after Napoleon's fall, and young d'Azeglio became one of the king's guard; but his father being sent to Rome to congratulate Pius VII. on his return, his mother begged the general to take "that unmanageable boy" with him, and to Rome he went, and saw all those wonders of the old and new civilization, and became more and more Italian, and less and less Piedmontese.

After the embassy was concluded, he returned to Turin with his father,

and there entered upon a course of severe and earnest study. He learnt many things, but chiefly that he was meant by destiny to be a painter. His father scarcely agreed with him on this point; he told him he might go back to Rome and lead his artist life, if he would, but he must expect for his full support no more than the pocket-money he would receive in Turin. D'Azeglio went very gladly, and spent the happiest days of his life in the world's capital. He gives a delightful account of it all in some sketches which he contributed to a friend's journal. He was full of health and hope and good humor, and he enjoyed everything. He loved the adventure and vagabondage of the life, and one does not esteem the statesman less because the student played wild pranks. He tells how one day he went into the country with two comrades and bargained to paint an altar-piece for a dinner, and how they all set to work upon it, painting each as the muse inspired, without regard to one another's labors. D'Azeglio did a sea with certain galleys on it; one friend painted a group of pines and some sheep feeding in a meadow; and the other depicted a line of palaces with the cupola of St. Peter's in the background. Their patron was charmed, and dined them like princes. This jolly life of painter was once interrupted by a summons to appear before the Governor of Rome under suspicion of political conspiracy. There was nothing whatever to inculpate d'Azeglio, and the governor, ashamed, made him excuses: "Cavalier, I am sorry; these are unpleasant things; but what would you? What can we do? *Austria compels us*—the Duke of Modena sends us notes—you know—we cannot do otherwise. *They are stronger than we!*" "The Governor of Rome," says d'Azeglio, "taught me to blush for my country."

In time he went back to Turin, where people believed him a great painter. He was too wise, it seems, ever to fall into this delusion himself, after the flush of youthful aspiration had passed away, although he continued to paint great numbers of pictures, and sold them not only in Italy but in Paris and London. He relates very pleasantly how he followed to the French capital three pictures which he had sent thither for exhibition, and how he was induced by his friends to cultivate the acquaintance of a journalist, for criticism's sake, although the search for this sort of protection was made against his own good sense. When the journalist's opinion appeared, d'Azeglio found it brief and pointed: "Whoever would see how far facility can go should look at the pictures of M. d'Azeglio." "The journalist," says d'Azeglio, "was right in his way, and I in mine; we made peace and were better friends than ever." It is probable that the critic was right; but the pictures were sold to the Duke of Devonshire, and are now in his house in Scotland. Many of d'Azeglio's paintings were taken to Milan, whither the painter himself at last went. The Italian connoisseurs admired them for their heroic size, the poetic character of their subjects, and their bold and ardent manner; and compared him to Claude and to Rosa.

In Milan he lived from 1831 to 1841, painting pictures and getting fame and money. He had married the daughter of Manzoni, the great author of "I Promessi Sposi," and he formed part of the brilliant literary circle of Milan, for he had already published his "Ettore Fieramosca," and had commenced his "Nicolò de' Lapi." Of these two romances the latter has by far the largest popularity in Italy, and must be praised as one of the best historical novels in any language. Indeed, it seems to us that d'Azeglio's chances of remembrance rest rather with this romance than with his heroic pictures, or his political acts. Dealing with the same period of Florentine history as Guerrazzi, in his "Assedio di Firenze," d'Azeglio turns to more purely artistic account the incidents of the famous and lamentable siege which restored the Medici to Florence; and while he interests us scarcely less than Guerrazzi in the fate of the city, he interests us far more in the fortunes of the individual characters. The hero of Guerrazzi's book is the people of Florence, as Marc-Monnier acutely observes; and in choosing a hero of this collective grandeur, the author is unable to centre our interest upon anything but the political destiny of a state. D'Azeglio's hero, Nicolò de' Lapi, is himself bound up in the fortunes of Florence, but a patriot must naturally be more interesting than patriotism, especially a patriot of the stalwart virtue and unselfish pride of Nicolò. Few figures in romance are so grand as his, and it is pleasant to know that its proportions are not exaggerated in the fiction, for Nicolò shows not less noble in history. Grouped around this central character, subordinately as they would have been in the man's household, are the other persons of the romance, whose fate is almost as inseparably as his united to that of Florence; his sons, the brave, strong, obedient warriors; his friends, the gentle Dominican friar, and the austere, religious magistrates of the city; his daughters, one clandestinely wedded to the traitor who betrays the city, and the other betrothed to the faithful and high-hearted Lamberto; Fanfulla, ex-scape-gallows, ex-condottiere, ex-friar, true friend and fearless soldier, and one of the most enjoyable and original creations of fiction. The story is episodic, and its best interest is the study it affords of the old Florentine life and character. In Nicolò we behold a Puritan of Cromwell's days, full of faith in God and country, upright, stern, and strong, cherishing the memory and prophecies of Savonarola to the end, and dying grandly on the scaffold. His household, also, is Puritan, and there dwells the rigorous spirit as unmistakably as ever it dwelt in any New England household. In Florence we see a city sustaining itself against a long and cruel siege by force of popular virtue, and so strongly grounded in its own sense of right that the banded wrong of half Europe hardly sufficed to shake it. Without the wall lies the camp of the besiegers, the motley hosts of the empire, Spaniard and German, Catholic and Lutheran, full of riot, ambition, intrigue, cruelty, and corruption. In this siege of Florence the evil was matched against good, and triumphed, as evil will now and then in this world, and the salvation of Italy was postponed three centuries. "Nicolò de' Lapi" is a very sad book, for, though not all the characters come to sad ends, though virtue is rewarded and vice punished as far as the author can contrive without violating history, yet Florence falls, and the reader's heart sinks with it.

The story is told with an exquisite grace, with a pathos often relieved by graceful and quiet humor, and with unfailing good sense and good principle. The author, in suggesting the relation of events to the destiny of his country, has a sharp irony and sarcasm for her oppressors, and a tenderness for herself, all the pleasanter for never being suffered to find that bolder expression which would have constituted a political crime in the days when the book was written. At times d'Azeglio has the touch of Cervantes, and his humor is like the Spaniard's, especially in those passages relating to Fanfulla. We think that the manner of the poor old *condottiere's* end is one of the finest things in literature, when considered in relation to his life of battles and repentances; and we relish exceedingly the German *Landsknecht's* manner of confessing; how Fanfulla, desiring to do penance, procured him to deal him certain blows, which, being given with too great fervor, brought on the fight ending in Fanfulla's death. Perhaps the most touching and original effect of the book lies in the character of the poor soul, Selvaggia: a woman born to infamy, in the rude camp-life of those embattled days, and who, following in the train of Giovanni de' Medici, falls in love with his young lieutenant Lamberto. He seems to deride her passion, and she devotes her life to revenge; but in the supreme moment of retribution she relents, saves his life, and knows her sole happiness in his union with the daughter of Nicolò.

D'Azeglio was never concerned in the plots of the *carbonari* for the liberation of Italy; but in 1844 he left Milan, and took up his home on the highway, as he says. His mission was to visit patriots in different parts of Italy, and to endeavor to bring about that state of things which ripened into revolution in 1848, and resulted in the temporary expulsion of the tyrants and the establishment of short-lived republics. The dream of Italian patriots up to this time was of an Italy united under the Pope; but this dream was rudely dispelled when Pius IX. abandoned the popular cause. One by one the patriotic governments fell before the reaction—Rome, Lombardy, Venice—and for a time all hope was extinguished in that disastrous battle of Novara, where the Piedmontese were beaten by the Austrians, and Carlo Alberto abdicated in favor of his son, Victor Emanuel. D'Azeglio had taken part in the fighting, and had been wounded at the battle of Vicenza, and he was now called to the far more difficult task of shaping the policy which was to preserve life and liberty to Piedmont. On the one hand, treaties were to be made with Austria, and on the other the republican elements of Piedmont—most violent in Genoa—were to be tranquillized. D'Azeglio, as prime minister of the young king, succeeded in not only quelling the Genoese, but in persuading his countrymen to acquiesce in the treaty ratifying the defeat of Novara; and by skilfully temporizing with the enemies of peace without and within, he restored the kingdom to security and quiet. To him was due in a great measure the preservation of the only constitution of the many granted in 1848, and his Fabian policy was the only real hope of Italy. The press remained free in Piedmont, and the inviolability of political asylum was maintained. Patriots were attracted from all parts of the peninsula to Turin, and that sentiment of national unity created which, when Cavour came to relieve d'Azeglio, was made foundation of the new Italian kingdom. D'Azeglio's administration had the defects of passivity: liberty was not its own excuse for being anywhere, in the eyes of reactionary and Imperial France, and the Piedmontese minister's dispatches to Paris were full of excuses for it. At last, after the attempt of Orsini upon Louis Napoleon's life, d'Azeglio felt constrained to propose a law repressive of injurious language against foreign sovereigns. "It was a necessity," says Signor Camerini, the writer to whom we are indebted for our biographical information concerning d'Azeglio, "a sacrifice to the infernal gods, that they might not harm us. Lord Palmerston, after the

Orsini attempt, had condescended to devise means for protecting the Imperial life and good name, and the press had beaten him. But England could have even the liberty of insult, Piedmont hardly liberty at all." It was d'Azeglio's great error; he had at last carried his temporization too far, and he fell under the load. Cavour withdrew from his ministry; d'Azeglio formed another cabinet without Cavour, and then, yielding to fortune, retired from his place, which Cavour immediately took.

D'Azeglio, after the fall of his ministry, was sent to England on a special embassy, and he held a public office in Milan when the new kingdom was formed. Withdrawing, finally, from this trust, he spent the greater part of his last years in that pleasant Tuscan capital which he loved so well, with no other labor to employ him but the preparation of his memoirs, which he has left only half completed. These will, no doubt, add greatly to the riches of a literature already opulent in autobiography, and will form a most precious contribution to the history of the most important events of our time.

The immediate cause of the Marquis d'Azeglio's death was a fever taken by remaining too late in the season at his villa near Turin. He aggravated the disorder, after returning to the city, by writing constantly on his memoirs, but his case was not considered alarming until within a week before his death. A few days later he was visited by the Prince of Carignano and the Admiral Persano, whom he recognized, saying, "Thanks, thanks! I have been a faithful servant to the house of Savoy." Others of the great and noble from every part of Italy came to take leave of him, and although suffering acutely, he received all graciously, and was in such perfect possession of his faculties as to be able to speak to each in the dialect of his province.

It is related that one morning, shortly before his death, he heard the rehearsal of music for a mass in a chapel near his house, and observed quietly: "They are preparing for me the music of the mass; very well! It is beautiful and well done." Among his latest words were: "*Non posso far niente per l'Italia!*" (I can do nothing more for Italy.) He might rest, having given his whole life to her glory.

THE LIMITS OF THE IMPROBABLE IN FICTION.

NOTHING is easier in the opinion of many *littérateurs* than to criticize a novel. Few things are in reality more difficult. We really believe that Grote's Plato, Mill on Hamilton, Anybody on the Steam-engine, Brillat-Savarin on the Philosophy of Grub, Science, History, Philosophy, what you will, are easier to appreciate and discuss *properly* than even a fair second-class tale or romance. The reason lies in the essential character, the *differentia*, of the novel. It is fictitious, avowedly in most cases, really in all, yet it must resemble truth. In some species there need be less of this resemblance than in others; a romance, to take an obvious case, has more license than a novel of manners; but verisimilitude cannot be altogether dispensed with. Even when the characters belong wholly or in part to an imaginary class of beings, there must be a conventional probability. A fairy tale must have a certain "keeping" if it would avoid being sheer burlesque or sheer nonsense.

Now, at the very first step we take, as soon as we ask what is natural or unnatural, probable or improbable, in a given situation of certain characters, we are involved in an almost boundless field of speculation. Suppose, for instance, your friend Smith says to you *apropos* of the last novel in vogue, "I don't think the hero in his affair with So-and-so behaves exactly as a gentleman ought to." You disagree with him. Here are the materials for an immense discussion at once. What your standard of a gentleman is, whether the English, or the Continental, or the American, or neither, but some ideal compounded of them all; what the standard finally agreed on would require of a gentleman in that particular contingency; how far it is probable that a gentleman would deviate from the standard under certain provocations and temptations, and how far he would be permitted to do so without forfeiting his character as a gentleman; what has been the conduct of gentlemen in similar or analogous circumstances, etc., etc., etc., almost *ad infinitum*. Or take a purely physical, matter-of-fact question. You say, "The hero rides his horse so many miles; any horse ought to have dropped long before. When the horse does break down, he proceeds a-foot, and, after a long run, climbs a wall which would puzzle a professed gymnast." Then Smith, who is well up in equestrian and pedestrian statistics, quotes *Bell's Life* or Pierce Egan to prove that horses have carried men a greater distance in less time, and men have surmounted greater obstacles. You perhaps rejoin that the horses were regularly trained, and the men Indians or Borderers, whereas, etc., etc. To which again Smith, "But under pressure of strong excitement," etc., etc.; thus you may keep bandying the question back and forward half an hour. As to the naturalness and probability of certain representations of manners and society, the field of controversy is equally fertile. Are Balzac's novels correct pictures of French life or are they utterly extravagant and imaginary? Are such books as "Wuthering Heights" and "The Tenant of Wildfell Hall" gross caricatures of Yorkshire or slightly exaggerated sketches? The discrepancies in the accounts of countries by different travellers show that having gone over the ground is no sure criterion of accuracy in narratives professing to be veracious. When the very facts are so difficult to determine, how much more puzzled must we be with the inferences!

Some critics think they have found a very general solution in human nature, "which is the same everywhere and in all ages." But this guide will not lead us into particulars. There are broad motives at work all over the world—love, avarice, ambition, and the like—but all their details are so modified by a thousand influences of law and government, custom and tradition, that they no more help you to determine how certain persons will act under certain circumstances than the knowledge that all men require food will help you in deciding whether a particular people (say the Chinese) really eat rats. Can an American understand why an Englishman objects to another Englishman's marrying his deceased wife's sister? Can an Englishman understand how a certain kind of sensation newspaper has attained its circulation among respectable and even religious Americans? Can you make a Frenchman understand how the most frightful consequences do not result from allowing Anglo-Saxon young ladies to "wander at their own sweet will?" Human nature does not manifest itself in the same way everywhere, whatever its potentialities may be; and as to the difference of its manifestations in different ages, any historical knowledge beyond the most superficial will settle that point. Even the proposition that human nature is the same in the same age and country must be taken with qualifications, as we shall see.

There is a strong tendency in the best English journals and reviews (shared by such of our own periodicals as have any coherent ideas on the subject of criticism) to condemn the incidents of a novel as physically or morally impossible according to some very limited standard of the critic's own, standards which, if carried out rigorously, would render all fiction, except what we may call the Dutch school, impossible, and confine us to a vista bounded at one end by Miss Austen and Anthony Trollope, at the other by the "Pumplighter" and all those works which Charles Kingsley relegates to the purgatory of stupid books.

This tendency was strikingly exemplified a few years ago on the appearance of "Les Misérables," a production sufficiently open to criticism. Nothing could be weaker than its pseudo-philosophical speculations on government and society, at which Louis Napoleon must have laughed in his sleeve to see his own rule strengthened by the self-*exposé* of his brilliant and bitter enemy. But the magnificent romance, so independent of the speculative rubbish that all the latter might easily have been eliminated from it, was generally approached by its reviewers in the spirit of very small mice nibbling around a very large cheese. They saw in it all manner of improbabilities. How could Jean Valjean climb a garden-wall with a child on his back? How could he elude the vigilance of the police? Why did Fantine, who had walked from Paris, never think of walking back to look after her child instead of trusting to the reports of the Thenardiers? And so on *ad nauseam*.

Now, if these English reviewers had but looked back to the current history of their own country, they might easily have found events as abnormal and startling as any of the incidents in Hugo's book. There was the unfathomed mystery of the Waterloo Bridge murder—if murder it was—with its carpet-bag of mangled remains. There was the attempted assassination of officer Murray by usurer Roberts, a crime which moved half the newspapers and magazines to exclaim: "If this had been represented in fiction, how we should have cried out against its monstrous improbability." If hair-breadth escapes were required, there was no need to go back to Jack Sheppard's prison-breaking or the well-authenticated case of the man who had a gig-shaft run through him and lived thirty years after. The officer was then living—and for aught we know is still—who rode over a precipice more than a hundred feet high, breaking every bone in his horse's body, but escaping himself without serious or permanent injury. So much for English life. Let us look a moment nearer home. Suppose some novelist of our own had, previous to any of those occurrences, introduced to his readers a Burdell-Cunningham murder or one of those *causes célèbres* which so recently scandalized—or ought to have scandalized—our public, should we not have cried *haro!* on him as a social, if not a national, libeller? In short, whether we look at physical or moral phenomena, or at combinations of both, the more we consult history and experience, the more must we be impressed with the

truth of the adage, *Le vrai n'est pas toujours le vraisemblable.* Why, then, blame the novelist for introducing improbabilities which are so often actualities? Do we expect fiction to be more natural than nature herself? Probably the error springs from a confusion of ideas, clumsy enough, yet easily fallen into.

There is a class of novels, already referred to, of which Miss Austen used to be, and Mr. Trollope bids fair to become, the type. They are novels of manners, *romans de société*, and their whole value depends on their fidelity to the everyday life which they represent. They may have an elaborate and artistic plot; they do not exclude striking situations; but the plot and the situations are secondary matters. In such works abnormal events have no place. They represent everyday life, and not only are extraordinary accidents repugnant to their character, but the most trivial error or incongruity in petty details is fatal to their pretensions. If, for instance, in a story of American life, a young gentleman and lady not betrothed or related were represented walking down the Fifth Avenue *arm-in-arm*, this slight inaccuracy would be sufficient to condemn the book at once.

But a romancer, a writer like Hugo or Dickens or Reade, not only has liberty to make use of the abnormal and improbable, but may be said to possess this as his peculiar province. His dealings with everyday routine are only episodical, by way of relief. The romantic, in other words, the unusual, is his staple.

Is there, then, no limit to his license? Certainly there is; but only the impossible, the absurd, and the indubitably false are on the further side of it. Sue's "Juif Errant" overstepped the *certos fines* because it was a tissue of monstrous absurdities. The whole story of the treasure which furnished the motive of action was, from beginning to end, in its final destruction as well as its long preservation, not improbable but impossible. Again, it should not be allowable for the novelist to arrange the laws of his country according to his own vague ideas of them, although half the recent English writers of fiction, from Dickens down to Mrs. Wood and lower, seem to consider themselves above law, as the old German potentate was above grammar.

With such exceptions, and provided he preserves that consistency and individuality which will render his characters lifelike, we think the romancer should have full swing in his romance, and his readers should modify the old theological dogma just a little, and believe, or, at any rate, read, because it is improbable.

MEN AND MANNERS ON THE WAY FROM FERRARA TO GENOA.

I.

In our visits to the different churches in Ferrara we noticed devotion in classes of people who are devout nowhere else in Italy. Not only came solid-looking business men to say their prayers, but gay young dandies, who knelt and repeated their orisons and then rose and went seriously out. In Venice they would have posted themselves against a pillar, sucked the heads of their sticks, and made eyes at the young ladies kneeling near them. This degree of religion was all the more remarkable in Ferrara, because that city had been so many years under the Pope, and His Holiness contrives commonly to prevent the appearance of religion in young men throughout his dominions.

Valery speaks of the delightful society which he met in the grey old town; and it is said that Ferrara has an unusual share of culture in her wealthy class, which is large. With such memories of learning and literary splendor as belong to her, it would be strange if she did not in some form keep alive the sacred flame. But, though there may be refinement and erudition in Ferrara, she has given no great name to modern Italian literature. Her men of letters seem to be of that race of grubs singularly abundant in Italy: men who dig out of archives and libraries some topic of special and momentary interest and print it, unstudied and unphilosophized. Their books are material, not literature, and it is marvellous how many of them are published. A writer on any given subject can heap together from them a mass of fact and anecdote invaluable in its way; but it is a mass without life or light, and must be vivified by him who uses it before it can serve the world, which does not care for its dead local value. It remains to be seen whether the free speech and free press of Italy can re-awaken the intellectual activity of the cities which once gave the land so many literary capitals.

What numbers of people used to write verses in Ferrara! By operation of the principle which causes things concerning whatever subject you happen to be interested in to turn up in every direction, I found a volume of these dead-and-gone immortals at a book-stall, one day, in Venice. It is a deliciously yellow and uncomfortable volume of the year 1703, printed all in italics. I suppose there are two hundred odd rhymers selected from in that book, and how droll the most of them are, with their unmistakable traces of descent from Ariosto, Tasso, and Guarini! What acres of enamelled meadow there are in the volume! There are purling brooks enough to turn all the mills in the world. I should say some thousands of nymphs are constantly engaged in weaving garlands there, and the swains keep such a piping on those familiar notes—*Amore, dolore, crudele*, and *miele*. Poor little poets! they knew no other tunes. Just as now, weak voices twitter from a hundred books, in unconscious imitation of the hour's great singers.

II.

I think some of the pleasantest people in Italy are the army-gentlemen. There is the race's gentleness in their ways, in spite of their ferocious trade, and an American freedom of style. They brag in a manner that makes one feel at home, immediately; and met in travel, they are ready to render any little kindness.

The other year at Reggio (which is not far from Modena), we stopped to dine at a restaurant where the whole garrison had its coat off and was playing billiards, with the exception of one or two officers, who were dining. They rose and bowed as we entered their room, and when the waiter pretended that such and such dishes were out (in Italy the waiter, for some mysterious reason, always pretends that the best dishes are out), they bullied him for the honor of Italy, and made him bring them to us. Indeed, I am afraid his life was sadly harassed by those brave men. We were in deep despair at finding no French bread, and the waiter swore with the utmost pathos that there was none; but as soon as his back was turned, a tightly-laced little captain rose and began to forage for the bread. He opened every drawer and cupboard in the room, and finding none, invaded another room, captured several loaves from the plates laid there, and brought them back in triumph, presenting them to us amid the applause of his comrades. The dismay of the waiter, on his return, was speechless.

Three officers, who dined with us at the *table d'hôte* of the *Stella d'Oro* in Ferrara (and excellent dinners were those we ate there), were visibly anxious to address us, and began not uncivilly, but still in order that we should hear, to speculate on our nationality among themselves. It appeared that we were Germans; for one of these officers, who had formerly been in the Austrian service at Vienna, recognized the word *bitter* in our remarks on the *beccaficchi*. As I did not care to put these fine fellows to the trouble of hating us for others' faults, I made bold to say that we were not Germans, and to add that *bitter* was also an English word. Ah! yes, to be sure, one of them admitted; when he was with the Sardinian army in the Crimea, he had frequently heard the word used by the English soldiers. He nodded confirmation of what he said to his comrades; and then was good enough to display what English he knew. It was barely sufficient to impress his comrades; but it led the way to a good deal of talk in Italian.

"I suppose you gentlemen are all Piedmontese?" I said.

"Not at all," said our Crimean. "I am from Como; this gentleman, il signor Conte (il signor Conte bowed), is of Piacenza; and our friend across the table is Genoese. The army is doing a great deal to unify Italy. We are all Italians now, and you see we speak Italian, and not our dialects, together."

My cheap remark that it was a fine thing to see them all united under one flag, after so many ages of mutual hate and bloodshed, turned the talk upon the origin of the Italian flag; and that led our Crimean to ask what was the origin of the English colors.

"I scarcely know," I said. "We are Americans." (It was bad enough to be thought German, but the imputation that we were English was insufferable.)

Our friends at once grew more cordial. "Oh, Americani!" They had great pleasure of it. Did we think Signor Leencolen would be re-elected? I supposed he had been elected that day, I said. Ah! this was the election day, then. *Cospetto!*

At this the Genoese frowned superior intelligence, and the Crimean gazing admiringly upon him, said he had been nine months at Nuova York, and that he had a brother living there. The poor Crimean boastfully added that he himself had a cousin in America, and that the Americans generally spoke Spanish. The count from Piacenza wore an air of pathetic discomfiture, and tried to invent a transatlantic relative, as I think, but failed.

I am persuaded that none of these warriors really had kinsmen in America, but that they all pretended to have them, out of politeness, and that they believed each other. It was very kind of them, and we were so grateful that we put no embarrassing questions. Indeed, the conversation presently took another course, and grew to include the whole table.

There was an extremely pretty Italian present with her newly-wedded husband, who turned out to be a retired officer. He fraternized at once with our soldiers, and when we left the table they all rose and made military obeisances. Having asked leave to light their cigars, they were smoking—the sweet young bride blowing a fairy cloud from her rosy lips with the rest. "Indeed," I heard an Italian lady once remark, "why should men pretend to deny us the privilege of smoking? It is so pleasant and innocent." It is but just to the Italians to say that they do not always deny it; and there is, without doubt, a certain grace and charm in a pretty *fumatrice*. I suppose it is a habit not so pleasing in an ugly or middle-aged woman.

III.

We had intended to stay only one day at Ferrara, but just at that time the storms predicted on the Adriatic and Mediterranean coasts, by Mathieu de la Drome, had been raging all over Italy, and the railway communications were broken in every direction. The magnificent work through and under the Apennines, between Bologna and Florence, had been washed away by the mountain torrents in a dozen places, and the roads over the plains of the Romagna had been sapped by the flood, and rendered useless, where not actually laid under water.

On the day of our intended departure we left the hotel, with other travellers, gaily incredulous of the landlord's fear that no train would leave for Bologna. At the station we found a crowd of people waiting and hoping, but there was a sickly cast of doubt in some faces, and the labelled employees of the railway wore looks of ominous importance. Of course the crowd did not lose its temper. It sought information of the officials running to and fro with telegrams, in a spirit of national sweetness, and consoled itself with saying, as Italy has said under all circumstances of difficulty for centuries: *Ci vuol pazienza!* At last a blank silence fell upon it, as the *Capo-Stazione* advanced towards a well-dressed man in the crowd, and spoke to him quietly. The well-dressed man lifted his forefinger and waved it back and forth before his face:

The Well-dressed Man.—Dunque, non si parte più? (No departures, then?)

The Capo-Stazione (waving *his* forefinger in like manner).—Non si parte più. (Like a mournful echo.)

We knew quite as well from this pantomime of negation as from the dialogue our sad fate, and submitted to it. Some adventurous spirit demanded whether any trains would go on the morrow. The capo-stazione, with an air of one who would not presume to fathom the designs of Providence, responded: "Who knows? To-day, certainly not. To-morrow, perhaps. But—" and vanished.

It may give an idea of the Italian way of doing things to say that this break in the line was only a few miles in extent, that trains could have approached both to and from Bologna, and that a little enterprise on the part of the company could have passed travellers from one side to the other with very small trouble or delay. But the railway company was as much daunted by the inundation as a peasant going to market, and for two months after the accident no trains carried passengers from one city to the other. No doubt, however, the line was under process of very solid repair meanwhile.

There was little to interest us in the country over which we rode to Bologna from Ferrara. It is perfectly flat, and I suppose the reader knows what quantities of hemp and flax are raised there. The land seems poorer than in Lombardy, and the farm-houses and peasants' cottages are small and mean, though the peasants themselves, when we met them, looked well-fed and were certainly well-clad. The landscape lay soaking in a dreary drizzle the whole way, and the town of Cento, when we reached it, seemed miserably conscious of being too wet and dirty to go in-doors, and was loitering about in the rain. Our arrival gave the poor little place a sensation, for I think such a thing as an omnibus had not been seen there since the railway of Bologna and Ferrara was built. We went into the principal *caffè* to lunch—a *caffè* much too large for Cento, with immense red-leather-cushioned sofas, and a cold, forlorn air of half-starved gentility, a clean, high-roofed *caffè* and a breezy—and thither the youthful nobility and gentry of the place followed us, and ordered a cup of coffee, that they might sit down and give us the pleasure of their distinguished company. They put on their very finest manners, and took their most captivating attitudes for the ladies' sake; and the gentlemen of our party fancied that it was for them these young men began to discuss the Roman question. How loud they were, and how earnest! And how often they consulted the newspapers of the *caffè!* (Older newspapers I never saw off a canal-boat.) I may tire sometime of the artless vanity of the young Italians, so innocent, so amiable, so transparent, but I think I never shall.

The great painter, Guercini, was born at Cento, and they have a noble and beautiful statue of him in the piazza, which the town caused to be erected with the contributions of all the citizens. Formerly, his house was kept for a show to the public; it was full of the pictures of the painter and many mementoes of him; but recently the paintings have been taken to the gallery, and the house is now closed. The gallery is, consequently, one of the richest second-rate galleries in Italy, and one may spend much longer time in it than we gave, with great profit. There are some most interesting heads of Christ, painted, as Guercini always painted Christ, with a great degree of humanity in the face, and to almost the exact likeness of Lucius Verus as you see him in busts at Rome. It is an excellent countenance and full of sweet dignity, but quite different from the conventional face of Christ.

IV.

At night we were again in Bologna, of which we had not seen the gloomy arcades for two years. It must be a dreary town at all times: in a rain it is horrible; and I think the whole race of arcaded cities, Treviso, Padua, and Bologna, are dull, blind, and comfortless. The effect of the buildings vaulted over the sidewalks is that of a continuous cellar-way; your view of the street is constantly interrupted by the heavy brick pillars that support the arches; the arcades are not even picturesque.

I always like to leave Bologna as quickly as possible, and, on this occasion, learning that there was no hope of crossing the Apennines to Florence, we made haste to take the first train for Genoa, meaning to proceed thence directly to Naples by steamer. It was a motley company that sat down at breakfast in Hotel Brun the morning of our arrival in Bologna, and a bad breakfast it was, of murky coffee and furry beefsteaks, associated with sleek, greasy, lukewarm fried potatoes. I am sure that if each of our weather-bound travellers had told his story, we had been as well entertained as those at Canterbury. However, no one thought fit to give his narrative but a garrulous old Hebrew from London, who told us how he had been made to pay fifteen guineas for a carriage to cross the Apennines, and had been obliged to walk part of the way at that price. He was evidently proud, now the money was gone, of having been cheated of so much; and in him we saw that there was at least one human being more odious than a purse-proud Englishman—namely, a purse-proud English Jew. He gave his noble name after a while, as something too precious to be kept from the company, when recommending one of the travellers to go to the Hotel d'Angleterre in Rome: "The best 'otel out of England. You may mention my name, if you like—Mr. Jonas." The recipient of this favor noted down the talismanic words in his pocket-book, and Mr. Jonas, conscious of having conferred a benefit on his race, became more odious to it than ever. An Englishman is of a composition so uncomfortably original that no one can imitate him, though many may caricature. I saw an American in London once who thought himself an Englishman because he wore leg-of-mutton whiskers, declaimed against universal suffrage and republics, and had an appetite for high game. He was a hateful animal, surely, but he was not the British lion; and this poor Hebrew at Bologna was not a whit more successful in his imitation of the illustrious brute, though he talked, like him, of nothing but hotels, and routes of travel, and hackmen and porters, and seemed to have nothing to do in Italy but to get through it as quickly and abusively as possible. The English have settled the topics at the *tables d'hôte* of the Continent, and you may hope to hear of nothing but these things in lands where the very stones have speech for him who heeds.

We were very glad to part from all this at Bologna and take the noon train for Genoa. In our car there were none but Italians, and the exchange of *La Perseveranza* of Milan for *Il Popolo* of Turin with one of them quickly opened the way for conversation and acquaintance. (*En passant:* I know of no journal in the United States whose articles are better than those of the *Perseveranza*, and it was gratifying to an American to read in this ablest journal of Italy nothing but applause and encouragement of the national side in our late war.) My new-made friend turned out to be a Milanese. He was a physician, and had served as a surgeon in the late war of Italian independence; but was now placed in a hospital in Milan. There was a gentle little blonde with him, and at Piacenza, where we stopped for lunch, "You see," said he, indicating the lady, "we are newly married," which was, indeed, plain enough to any one who looked at their joyous faces, and observed how great disposition that little blonde had to nestle on the young man's broad shoulder. "I have a week's leave from my place," he went on, "and this is our wedding journey. We were to have gone to Florence, but it seems we are fated not to see that famous city." He spoke of it as immensely far off, and herein greatly amused Americans who had outgrown distances. "So we are going to Genoa instead, for two or three days." "Oh, have you ever been at Genoa?" broke in the bride. "What magnificent

palaces! And then the bay, and the villas in the environs! There is the Villa Pallavicini, with beautiful gardens, where an artificial shower breaks out from the bushes, and sprinkles the people who pass. Such fun!" and she continued to describe vividly a city of which she had only heard from her husband; and it was easy to see that she walked in paradise wherever he led her.

They say that Italian husbands and wives do not long remain fond of each other, but it was impossible in the presence of these happy people not to believe in the eternity of their love, and it was hard to keep from "dropping into poetry" on account of them. Their bliss infected everybody in the car, and in spite of the weariness of our journey, and the vexation of the misadventures which had succeeded one another unsparingly ever since we left home, we found ourselves far on the way to Genoa before we thought to grumble at the distance. There was with us, besides the bridal party, a lady travelling from Bologna to Turin, who had learned English in London, and spoke it much better than most Londoners. It is a matter of constant surprise to me how thoroughly Italians master a language so alien to their own as ours, and how frequently you find them acquainted with English. From Russia the mania for this tongue has spread all over the Continent, and in Italy English seems to be prized first among the virtues.

As we drew near Genoa, the moon came out on purpose to show us the superb city, and we strove eagerly for a first glimpse of the proud capital where Columbus was born. To tell the truth, the glimpse was but slight and false, for railways always enter cities by some mean level, from which any picturesque view is impossible.

Near the station in Genoa, however, is the weak and ugly monument which the municipality has lately raised to Columbus. The moon made the best of this, which stands in a wide open space, and contrived, with an Italian skill in the arrangement of light, to produce an effect of undeniable splendor. On the morrow, we found out by the careless candor of the daylight what a uselessly big head Columbus had, and how the sculptor had not very happily thought proper to represent him with his sea-legs on.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXIX.

MOBILE, Ala., January 31, 1866.

ON the journey from Montgomery to Mobile I formed a slight acquaintance with two men who seemed to me, as I heard them talking, very fair specimens of two large classes of people that I not infrequently meet with in the South, and, therefore, I describe them.

One, who walked heavily into the car just as the train was starting, was a tall man in the Federal uniform, a staff officer, apparently, and perhaps thirty years old. He carried in his hand, rather ostentatiously, a bundle of official documents. Taking off a military cape, he laid it down, remarking in a loud voice that he had one objection to living in the South—the climate was too fine. Then the documents received each a brief, rustling examination and were placed one by one in his pocket; but, meantime, having discovered that one of two gentlemen sitting near was known to him, he leaned forward, and, shaking hands with him, was introduced to the other, whom I understood to have been a despatch-bearer or envoy of the Confederacy who had never got nearer Europe than Fort Warren. By-and-bye I heard this officer making known his opinions upon the war and the state of the country.

"Oh, sir, the fact that your Government selected you for that position is a guarantee. We shall not differ, sir, I 'm sure. When I meet with a Southern gentleman, like yourself, sir, I never find that we can 't agree. Some of the warmest and most intimate friends that I 've got I 've made in the South; some of the people that I have the very highest respect for. It 's far from being a recommendation for a man, in my eyes, to disown his cause. You Southern men believed you were right; in some things I sympathized with you myself; why should n't you fight for your opinions? Pleased to meet you, sir."

Cigars were then offered and accepted, and the major went on:

"I speak out myself, and I like to meet a man who expresses his sentiments just as he feels them. Though mine are at variance with yours, I can understand how you should feel as you do. Of course you are proud of your record in the war. You fought us honorably, nobly; no people ever fought better in all history, and I hope I can honor a brave man whenever I find him. I fought you, I confess, as hard as I knew how, and I know I 'm proud of my record. And I consider that the glory of this war, the glory of each side, belongs to both. Look at the valor, the endurance, the way our people fought in this struggle, the military resources we have developed, the skill and generalship and strategy of Generals Lee, and Johnston, and Grant! They have never been equalled in the history of ancient or modern times. Where will you find such a long, bloody war recorded in history? We are invincible. Yes, sir; I consider the United States more than a match for France and England and all the foreign nations of Europe combined. What's Mexico?"

Ah, his hearers did n't know about that; they doubted it.

"Oh, certainly. Of course, I mean in defensive warfare. With the South and the North united, if the powers of Europe were to attack us they would be whipped. That 's what I mean. Of course, both sections are too much exhausted for us to think of bringing on an unnecessary war. I 've seen enough of fighting. I have been in the army more than four years, and I 've been at the front all the time. I would n't part with my experience for any money. A wonderful experience for a man. There is only one thing I missed: I never was a prisoner. I should like very much to look back now on two or three months spent in Libby. During the war I did n't think so, for it would have taken me away from the front. That was my only objection, however. I never was afraid you 'd starve me if you got hold of me. Too many of my friends, ha! ha! received your hospitality for me to think that."

Both the gentlemen joined in the laugh. No, he need n't have been afraid of that.

"Oh, no. You told such stories about us and we told the same about you. Some suffering, of course."

"Of course; the life of a prisoner could n't be made very pleasant. But," said one of the gentlemen, "from my experience of prison-life I congratulate you, major, that you got through without being captured; at any rate, that they did n't get you into Fort Warren."

"Yes, that was a hard place, undoubtedly. But now it 's all over, a' n't you glad that you have that experience to look back on?"

No; the gentleman could n't say that he was. Of course he had the satisfaction of knowing that he had suffered for his country. But it had been his wish to serve her in some more active way.

"Yes; but you did serve her. I consider it a great misfortune to any man, especially to any young man, North or South, if he has n't done something on one side or the other. The leading men of the country in the future will all be taken from among the soldiers. You of the South are not going to trust your pretended Union men, those who did n't prove true to your cause; we do n't expect it of you; and we are not going to give office to our cowards and stay-at-homes. If a young man has any aspirations, it is a great misfortune to him if he did n't serve on one side or the other."

He himself had no aspirations, he explained. It was not for rank or promotion that he entered the army, and he did not look forward now to civil rewards. He simply wished to discharge gallantly his duties as a soldier. Not that he was gallant either—his duties as a soldier and citizen. He fought because he thought the Constitution should be maintained. He honestly differed in opinion from the Southern leaders in regard to secession, though he had acted with them politically. If he had been born in the South he would, probably, have fought as hard for secession as he had fought for the Union. As for the Abolitionists, they were his detestation. Indeed, it was the Abolitionists who brought on the war.

And Thad. Stevens and that gang, one of the gentlemen said, were just as bad to-day as they were ten years ago.

The major assented. Thaddeus Stevens he knew personally. He was deficient in the first qualities of a statesman. Able, very smart indeed; but no statesman. He and Sumner, however, were only fanatics; they could not lead the people. In his own opinion, the people of the South since the surrender had furnished an example of good sense and sincere loyalty unparalleled in ancient or modern history. Sumner and Stevens and the Abolition party were now the only disloyalists left. But the men who had fought who knew the Southerners because they had met them on the field of battle, were willing to trust the South and let the war end, and, if it should be necessary, to put down the fanatics.

There was much conversation of this sort, and all the major's remarks were well received by the two gentlemen. It was gratifying, one said, to hear such sentiments expressed; and the other said that they reflected honor upon the man who felt them. But among two or three young men across the aisle looks and smiles were now and then exchanged which the speaker would not have considered flattering. Just before going to sleep, for we left Montgomery in the night, I heard him replying to an enquiry about some buildings in Mobile which were seized by the Government some months ago and have since been used for the public service. Certainly they ought to be restored, he said, or else the rents ought to be paid. If he had his way

the back rents should be paid at once and the buildings turned over to the owners. But, unfortunately, if he had been correctly informed, very recent orders from Washington forbade it, and of course the United States Quartermaster had no option but to keep the buildings and withhold the rents. It was a great hardship. For his own part, he would like to see the Government magnanimous to the South in every particular; magnanimity was the true policy, and the one that would have to be adopted; but still they would admit that it was the duty of a good soldier to obey his orders, although they might be such as he could not help considering wrong, and such as it was painful to his feelings as a gentleman to carry into effect.

This personage belongs to the South of to-day; the other figure that I attempt to describe belongs to the South which has just passed away. It is that of a man who throughout the rebellion was a loyalist in Georgia. He is a small, pale man, of very unobtrusive manners, and with the look of an artizan, so that I was not surprised when he said he was a cotton-carder and spinner from Rochdale. He came to America when he was twenty years old and had since then lived in the Southern States, following his trade in one factory and another and earning good wages. When the war broke out he was in Columbus, but he determined to get himself out of the city, where everybody was in a tumult, and they were all "through other" with their secessionism, and this and that, and therefore with his savings he bought a small farm two or three miles out in the country, where he could be quiet like. He avoided all public gatherings, gave a civil word to every one, and never spoke about politics or Abe Lincoln except in secret and to those that he knew were of his way of thinking. The Union men in those days knew each other a deal better than the secessionists, and had a good understanding together. For a time this quiet, inoffensive life kept him out of trouble, though once in a while he 'd know that there was talk of making him come out with his opinions; but still he never was visited till they began to enlarge the State militia and to drag in the old men as well as the young. His name he knew would be put down, for his age was within the limit; but he had decided in his own mind that he never would lift a hand for the rebellion, and he set about finding a plan for escaping the draft. He began to wear the oldest clothes he could get, and a pair of shoes that the blacks themselves would n't have demeaned themselves to pick up in the streets. He put such a stoop into his shoulders, too, that he was bent almost two double; he did n't shave either, and altogether he looked dreadful decrepit. Often the neighbors passing him at dusk, or riding by quick in the day-time even, would call to him, "Hello, Mr. N." or "How d' ye do, Squire N.," mistaking him for Squire N. that lived near him, a man eighty year o' age. But they put down his name and served him with a notice to be at the mustering place on such a day. He just stayed at home and looked after the ploughing, stooped over a little more very like, but paid no attention to the summons otherways. So in the evening a whole committee of them waited on him and wanted to know if he did not know he was enrolled, and why he had not made his appearance. He put them off with some indifferent answer; they would n't be wanting men of his age for the militia. His name was on the roll, they said, and he was to appear at the next meeting or take the consequences. Well, he did n't know how ever he 'd be able to get there. He could n't take the mule out of the field. But he told them, shuffling his old shoes and clapping one leg over the other so they could see them, he 'd see if he could get something to wear that he could walk in. They said he 'd best mind and be on hand, and with that they rode off. He had been careful not to say that he would go, but only to say that he would look up a pair of shoes to walk in, for it never was in his mind to go at all. And he never did. On the morning of the muster the captain of his company, a man that he had known pretty well for some years, rode past his place and said, "Come, Mr. F., are you going to town?" "Well, no, captain," he told him. "It 's younger men than me you want for your company." Then the captain asked how old he was; his name was down, and there had been some talk before because he was absent. "Captain," he asked, "you 're a man that has known me for years; what would you set me at?" Well, the captain considered, and looked at him, and all this time the old clothes were on him and the old shoes, and at last he said, "Well, sure enough, Mr. F., I reckon you 're rising sixty. How near have I come to it?" But he would n't tell him; he only said, "Captain, you 're near about the thing; I 'm not that old as I look, but you 're near about the thing." So, after a bit, the captain rode along; and he was informed afterwards that when the roll was called and they came to T. F., and some of the men cried out that he was not there and never had been there, the captain said that man was too old for duty, and they might just strike out his name. That was the last of his troubles except that he lived under a miserable tyranny, without daring to open his mouth, until the United States Government conquered them and put them down. It sickened him of the South, and he intended to leave it for good and all. He was only waiting for the winter to pass and then he would seek work in Louisville or St. Louis.

I asked if he thought it would be unsafe for him and other men of his political opinions to live in Georgia and Alabama now.

No; he would n't say that. He could get along with them. He had lived with them through all the war; and they were far humbler now than then. The wild young men would bluster, but the most of the people would let a man alone if he went about his business.

The other day I put the same question to a gentleman living in Mobile, Mr. A. G., who is perhaps better qualified to give an opinion on this matter, showing him at the same time the anonymous letter of which I give a copy below. It is one of those that are known to have been sent to many different persons within the last fortnight.

"MOBILE, Ala., Jan. 25, 1866.

"SIR: We, the undersigned citizens of Mobile, Ala., give you one week from date to leave the place, and if found within the limits of the city or State after the time specified as above, you and your traitorous offspring will be wiped into eternity as sure as there is a God above you.

"By order of SPECIAL COMMITTEE.

"To the traitor, Francis Lyons, late Commandant of Florida Renegades."

In answering my question, Mr. G. related an illustrative passage in his own history. Before the war his father, a Northern man, published a newspaper in Macon, Ga., in which town Mr. G. lived from the time when he was three years old till the autumn of 1855. In that year he was waited upon one day by a number of his fellow-citizens, who charged him with being an anti-slavery man and with having made anti-slavery speeches in New York. He admitted that he was opposed to the continuance of slavery, if any safe method for getting rid of it could be devised, but denied that he had made speeches of any kind during his visit to the North. He was ordered to leave the town within twenty-four hours. At first he thought of disobeying this command. He went about to the shops to purchase a knife or a pistol and ammunition, but no one would sell anything of the kind to him or any member of his family; his friends being called on to aid him, durst not, and pronounced the idea of resistance utter folly; the power and authority of the mayor were invoked for the protection of a peaceable citizen, and the mayor replied that he should be protected up to the expiration of the twenty-four hours. Nothing remained, therefore, but submission, and he left Macon on the next train. None of the usual accessories of such a departure were omitted. He was accompanied to the depot by a tumultuous escort, who cursed, gibed, and flung rotten eggs; one of the newspapers noticed the occurrence in a short local article, headed "Served him right," setting forth that a young man, whose youth and weak head alone preserved him from a severer punishment, had been summarily sent out of Macon for using offensive language in reference to the peculiar institution, and was on his way to the North and the society of more congenial spirits; a telegram was sent to Savannah informing the citizens that an abolitionist might be expected in their city by the next train, and bespeaking a warm reception for him. Going North by way of Augusta, he escaped the tar and feathers prepared for him in Savannah.

One man, Mr. G. said, caused all this. He felt confident that if the question of his expulsion had been voted upon by the people of Macon, more than three-fourths of them, even then, in 1855, would have voted in his favor. The manner of his banishment was the same with that of nine-tenths of all the men who in those days were driven out of the South. Some one man, a personal enemy perhaps, would take advantage of the soreness of public feeling in reference to slavery to use the ruffianism of the community in furtherance of his private ends. Free speech was not punished in every instance, though it was in his case; he had known many men whose dislike of slavery was as well known as his who were never molested. But let it once become worth any one's while to attack such a man, and he could not consider himself safe; for though, as he believed, the majority of the people in no Southern community would have borne a part in such outrages, yet as they knew that slavery could not bear free handling in the light, they willingly permitted others to commit them. Now, however, there is no peculiar institution to be conserved, the great reason for hating Northerners has disappeared, and the prominent and influential men whose countenance of these lawless conservators alone made them dangerous, recognize the changed state of affairs. It was not at all his opinion that the memories of the war could furnish a reason for hating Northerners strong enough to take the place of the old reason of slave-holding times. He would be willing to work at his trade in any Southern community and vote the Union ticket. Yes, and read the New York *Tribune* openly. No; perhaps he would not like to avow himself in favor of

negro suffrage. And he readily admitted further that he would by no means consent to continue his connection with *The Nationalist* (a newspaper published in the interest of the colored people of Alabama) a day after the Federal troops should be withdrawn from Mobile. The same people who might concede to a white man the liberty of holding such opinions as seemed good to him, were very far from willing to allow that right to negroes or to see anything done for their instruction.

I may say that the Assistant Commissioner for Alabama, General Swayne, is of opinion that Northern men may now settle in Alabama without fear of being molested by their neighbors. He inclines to think that such settlers are apt to exaggerate the bluster of a comparatively small number of men into the threatening voice of the whole people. At the same time he would not wish to be understood as denying that quite possibly their view is the correct one. They see in detail, while he gets but a general view, and there may be good ground for the apprehensions which they do undeniably entertain, for it is certain that the Northerners in the vicinity of Montgomery, his headquarters, are unanimous in believing the presence of the Federal troops essential to their comfort and safety.

I am informed by the officers of the Bureau that the freedmen in this part of Alabama have almost all found work for the year, and already entered upon the performance of it. In the immediate neighborhood of Mobile the turpentine business forms the chief employment of the people; and for working in the orchards the men receive some ten, some fifteen, and some even twenty-five dollars a month. Women, engaged in the same occupation, get from six to eight dollars a month; and food, shelter, and medical attendance are furnished at the expense of the employer. This statement is to be understood of the wages of able-bodied hands. The demand for labor both in the turpentine region and in the cotton country, further from the coast, exceeds the supply.

The newspaper which I mentioned above, *The Nationalist*, is conducted by white men, but is owned by an association of colored people, and of course relies mainly for support upon that class of the population. I may remark, in passing, that the publisher announces that he finds it difficult, "owing to some cause connected with the post-office department," to supply the paper to his more distant subscribers. From its columns I quote a report of the number of rations issued to destitute citizens of Mobile, and of the number of cases tried in the Freedmen's Court, during the week ending Jan. 27, 1866:

Total number of applicants for justice from among colored citizens, 335, viz.:

For collection of wages from white employers	301
For whipping and other brutal treatment from the hands of white citizens	18
From the hands of colored citizens	4
For protection rom white mobs in the streets while employed in their daily labor	3
Total	335

Number of rations issued to destitute citizens for the past week, 5,194, as follows:

Number of white persons drawing rations	624
Number of colored persons drawing rations	51
Number of persons in hospital at Dog River, of both classes, drawing rations	67
Total	742
Number of days	7
Total number of rations	5,194

Besides their attempt to establish a newspaper, the colored people here, in their desire to elevate themselves, are making efforts in other directions that merit a favor and encouragement little likely to be given them by the white citizens of Mobile. The books of a branch bank of the National Freedman's Savings and Trust Company have within a month been opened, and the deposits made already exceed $4,000. By means of a fair recently held in the Medical College building they succeeded in raising $1,200, to be devoted to the founding of an asylum for orphan children. Six hundred children are under instruction in the schools, which are to a considerable extent self-supporting, the scholars buying their own books and paying the salaries of two teachers out of eight. In these schools the scholars were well behaved, and the lessons were recited very well. The teachers, who have been engaged in the schools since they were first opened in May last, speak in high terms of the docility of their pupils, and say that it is seldom necessary to resort to punishment. Here I saw, fort he first time in the Southern States, colored boys reciting in the same class with white. The latter, however, were children of the teachers, and not natives of Alabama. I saw, too, among the children one old white-headed man, who, when I asked him why he was there, told me with great earnestness that he would n't trouble the lady much; but he must learn to read the Bible and the Testament. He and his grandchild attend the same school, and the old man supports them both by what work he can do in the morning and evening.

As everywhere else, except in Port Royal, the teachers of these negroes are bitterly disliked by the white people around them, and complain of many insults.

ENGLAND.—THE WORK BEFORE PARLIAMENT.

London, January 20, 1866.
